The first and highest form of the state and of the government and of the law is that in which there prevails most widely the ancient saying, that 'Friends have all things in common.' Whether there is anywhere now, or will ever be, this communion of women and children and of property, in which the private and individual is altogether banished from life, and things which are by nature private, such as eyes and ears and hands, have become common, and in some way see and hear and act in common, and all men express praise and blame and feel joy and sorrow on the same occasions, and whatever laws there are unite the city to the utmost (compare Republic),—whether all this is possible or not, I say that no man, acting upon any other principle, will ever constitute a state which will be truer or better or more exalted in virtue. Whether such a state is governed by Gods or sons of Gods, one, or more than one, happy are the men who, living after this manner, dwell there; and therefore to this we are to look for the pattern of the state, and to cling to this, and to seek with all our might for one which is like this. The state which we have now in hand, when created, will be nearest to immortality and the only one which takes the second place; and after that, by the grace of God, we will complete the third one. And we will begin by speaking of the nature and origin of the second.

Let the citizens at once distribute their land and houses, and not till the land in common, since a community of goods goes beyond their proposed origin, and nurture, and education. But in making the distribution, let the several possessors feel that their particular lots also belong to the whole city; and seeing that the earth is their parent, let them tend her more carefully than children do their

mother. For she is a goddess and their queen, and they are her mortal subjects. Such also are the feelings which they ought to entertain to the Gods and demi-gods of the country. And in order that the distribution may always remain, they ought to consider further that the present number of families should be always retained, and neither increased nor diminished. This may be secured for the whole city in the following manner:—Let the possessor of a lot leave the one of his children who is his best beloved, and one only, to be the heir of his dwelling, and his successor in the duty of ministering to the Gods, the state and the family, as well the living members of it as those who are departed when he comes into the inheritance; but of his other children, if he have more than one, he shall give the females in marriage according to the law to be hereafter enacted, and the males he shall distribute as sons to those citizens who have no children, and are disposed to receive them; or if there should be none such, and particular individuals have too many children, male or female, or too few, as in the case of barrenness—in all these cases let the highest and most honourable magistracy created by us judge and determine what is to be done with the redundant or deficient, and devise a means that the number of 5040 houses shall always remain the same. There are many ways of regulating numbers; for they in whom generation is affluent may be made to refrain (compare Arist. Pol.), and, on the other hand, special care may be taken to increase the number of births by rewards and stigmas, or we may meet the evil by the elder men giving advice and administering rebuke to the younger—in this way the object may be attained. And if after all there be very great difficulty about the equal preservation of the 5040 houses, and there be an excess of citizens, owing to the too great love of those who live together, and we are at our wits' end, there is still the old device often mentioned by us of sending out a colony, which will part friends with us, and be composed of suitable persons. If, on the other hand, there come a wave bearing a deluge of disease, or a plague of war, and the inhabitants become much fewer than the appointed number by reason of bereavement, we ought not to introduce citizens of spurious birth and education, if this can be avoided; but even God is said not to be able to fight against necessity.

Wherefore let us suppose this 'high argument' of ours to address us in the following terms:—Best of men, cease not to honour according to nature similarity and equality and sameness and agreement, as regards number and every good and noble quality. And, above all, observe the aforesaid number 5040 throughout life; in the second place, do not disparage the small and modest proportions of the inheritances which you received in the distribution, by buying and selling them to one another. For then neither will the God who gave you the lot be your friend, nor will the legislator; and indeed the law declares to the disobedient that these are the terms upon which he may or may not take the lot. In the first place, the earth as he is informed is sacred to the Gods; and in the next place, priests and priestesses will offer up prayers over a first, and second, and even a third sacrifice, that he who buys or sells the houses or lands which he has received, may suffer the punishment which he deserves; and these their prayers they shall write down in the temples, on tablets of cypress-wood, for the instruction of posterity. Moreover they will set a watch over all these things, that they may be observed;—the magistracy which has the sharpest eyes shall keep watch that any infringement of these commands may be discovered and punished as offences both against the law and the God. How great is the benefit of such an ordinance to all those cities, which obey and are administered accordingly, no bad man can ever know, as the old proverb says; but only a man of experience and good habits. For in such an order of things there will not be much opportunity for making money; no man either ought, or indeed will be allowed, to exercise any ignoble occupation, of which the vulgarity is a matter of reproach to a freeman, and should never want to acquire riches by any such means.

Further, the law enjoins that no private man shall be allowed to possess gold and silver, but only coin for daily use, which is almost necessary in dealing with artisans, and for payment of hirelings, whether slaves or immigrants, by all those persons who require the use of them. Wherefore our citizens, as we say, should have a coin passing current among themselves, but not accepted among the rest of mankind; with a view, however, to expeditions and journeys to other lands,—for embassies, or for any other occasion which may arise of sending out a herald, the state must also possess a common Hellenic currency. If a private person is ever obliged to go abroad, let him have the consent of the magistrates and go; and if when he returns he has any foreign money remaining, let him give the surplus back to the treasury, and receive a corresponding sum in the local currency. And if he is discovered to appropriate it, let it be confiscated, and let him who knows and does not inform be subject to curse and dishonour equally him who brought the money, and also to a fine not less in amount than the foreign money which has been brought back. In marrying and giving in marriage, no one shall give or receive any dowry at all; and no one shall deposit money with another whom he does not trust as a friend, nor shall he lend money upon interest; and the borrower should be under no obligation to repay either capital or interest. That these principles are best, any one may see who compares them with the first principle and intention of a state. The intention, as we affirm, of a reasonable statesman, is not what the many declare to be the object of a good legislator, namely, that the state for the true interests of which he is advising should be as great and as rich as possible, and should possess gold and silver, and have the greatest empire by sea and land;—this they imagine to be the real object of legislation, at the same time adding, inconsistently, that the true legislator desires to have the city the best and happiest possible. But they do not see that some of these things are possible, and some of them are impossible; and he who orders the state will desire what is possible, and will not indulge in vain wishes or attempts to accomplish that which is impossible. The citizen must indeed be happy and good, and the legislator will seek to make him so; but very rich and very good at the same time he cannot be, not, at least, in the sense in which the many speak of riches. For they mean by 'the rich' the few who have the most valuable possessions, although the owner of them may quite well be a rogue. And if this is true, I can never assent to the doctrine that the rich man will be happy—he must be good as well as rich. And good in a high degree, and rich in a high degree at the same time, he cannot be. Some one will ask, why not? And we shall answer—Because acquisitions which come from sources which are just and unjust indifferently, are more than double those which come from just sources only; and the sums which are expended neither honourably nor disgracefully, are only half as great as those which are expended honourably and on honourable purposes. Thus, if the one acquires double and spends half, the other who is in the opposite case and is a good man cannot possibly be wealthier than he. The first—I am speaking of the saver and not of the spender—is not always bad; he may indeed in some cases be utterly bad, but, as I was saying, a good man he never is. For he who receives money unjustly as well as justly, and spends neither nor unjustly, will be a rich man if he be also thrifty. On the other hand, the utterly bad is in general profligate, and therefore very poor; while he who spends on noble objects, and acquires wealth by just means only, can hardly be remarkable for riches, any more than he can be very poor. Our statement, then, is true, that the very rich are not good, and, if they are not good, they are not happy. But the intention of our laws was, that the citizens should be as happy as may be, and as friendly as possible to one another. And men who are always at law with one another, and amongst whom there are many wrongs done, can never be friends to one another, but only those among whom crimes and lawsuits are few and slight. Therefore we say that gold and silver ought not to be allowed in the city, nor much of the vulgar sort of trade which is carried on by lending money, or rearing the meaner kinds of live stock; but only the produce of agriculture, and only so much of this as will not compel us

in pursuing it to neglect that for the sake of which riches exist—I mean, soul and body, which without gymnastics, and without education, will never be worth anything; and therefore, as we have said not once but many times, the care of riches should have the last place in our thoughts. For there are in all three things about which every man has an interest; and the interest about money, when rightly regarded, is the third and lowest of them: midway comes the interest of the body; and, first of all, that of the soul; and the state which we are describing will have been rightly constituted if it ordains honours according to this scale. But if, in any of the laws which have been ordained, health has been preferred to temperance, or wealth to health and temperate habits, that law must clearly be wrong. Wherefore, also, the legislator ought often to impress upon himself the question—'What do I want?' and 'Do I attain my aim, or do I miss the mark?' In this way, and in this way only, he may acquit himself and free others from the work of legislation.

Let the allottee then hold his lot upon the conditions which we have mentioned.

It would be well that every man should come to the colony having all things equal; but seeing that this is not possible, and one man will have greater possessions than another, for many reasons and in particular in order to preserve equality in special crises of the state, qualifications of property must be unequal, in order that offices and contributions and distributions may be proportioned to the value of each person's wealth, and not solely to the virtue of his ancestors or himself, nor yet to the strength and beauty of his person, but also to the measure of his wealth or poverty; and so by a law of inequality, which will be in proportion to his wealth, he will receive honours and offices as equally as possible, and there will be no quarrels and disputes. To which end there should be four different standards appointed according to the amount of property: there should be a first and a second and a third and a fourth class, in which the citizens will be placed, and they will be called by these or similar names: they may continue in the same rank, or pass into another in any individual case, on becoming richer from being poorer, or poorer from being richer. The form of law which I should propose as the natural sequel would be as follows:—In a state which is desirous of being saved from the greatest of all plagues—not faction, but rather distraction;—there should exist among the citizens neither extreme poverty, nor, again, excess of wealth, for both are productive of both these evils. Now the legislator should determine what is to be the limit of poverty or wealth. Let the limit of poverty be the value of the lot; this ought to be preserved, and no ruler, nor any one else who aspires after a reputation for virtue, will allow the lot to be impaired in any case. This the legislator gives as a measure, and he will permit a man to acquire double or triple, or as much as four times the amount of this (compare Arist. Pol.). But if a person have yet greater riches, whether he has found them, or they have been given to him, or he has made them in business, or has acquired by any stroke of fortune that which is in excess of the measure, if he give back the surplus to the state, and to the Gods who are the patrons of the state, he shall suffer no penalty or loss of reputation; but if he disobeys this our law, any one who likes may inform against him and receive half the value of the excess, and the delinquent shall pay a sum equal to the excess out of his own property, and the other half of the excess shall belong to the Gods. And let every possession of every man, with the exception of the lot, be publicly registered before the magistrates whom the law appoints, so that all suits about money may be easy and quite simple.

The next thing to be noted is, that the city should be placed as nearly as possible in the centre of the country; we should choose a place which possesses what is suitable for a city, and this may easily be imagined and described. Then we will divide the city into twelve portions, first founding temples to

Hestia, to Zeus and to Athene, in a spot which we will call the Acropolis, and surround with a circular wall, making the division of the entire city and country radiate from this point. The twelve portions shall be equalized by the provision that those which are of good land shall be smaller, while those of inferior quality shall be larger. The number of the lots shall be 5040, and each of them shall be divided into two, and every allotment shall be composed of two such sections; one of land near the city, the other of land which is at a distance (compare Arist. Pol.). This arrangement shall be carried out in the following manner: The section which is near the city shall be added to that which is on the borders, and form one lot, and the portion which is next nearest shall be added to the portion which is next farthest; and so of the rest. Moreover, in the two sections of the lots the same principle of equalization of the soil ought to be maintained; the badness and goodness shall be compensated by more and less. And the legislator shall divide the citizens into twelve parts, and arrange the rest of their property, as far as possible, so as to form twelve equal parts; and there shall be a registration of all. After this they shall assign twelve lots to twelve Gods, and call them by their names, and dedicate to each God their several portions, and call the tribes after them. And they shall distribute the twelve divisions of the city in the same way in which they divided the country; and every man shall have two habitations, one in the centre of the country, and the other at the extremity. Enough of the manner of settlement.

Now we ought by all means to consider that there can never be such a happy concurrence of circumstances as we have described; neither can all things coincide as they are wanted. Men who will not take offence at such a mode of living together, and will endure all their life long to have their property fixed at a moderate limit, and to beget children in accordance with our ordinances, and will allow themselves to be deprived of gold and other things which the legislator, as is evident from these enactments, will certainly forbid them; and will endure, further, the situation of the land with the city in the middle and dwellings round about;—all this is as if the legislator were telling his dreams, or making a city and citizens of wax. There is truth in these objections, and therefore every one should take to heart what I am going to say. Once more, then, the legislator shall appear and address us:—'O my friends,' he will say to us, 'do not suppose me ignorant that there is a certain degree of truth in your words; but I am of opinion that, in matters which are not present but future, he who exhibits a pattern of that at which he aims, should in nothing fall short of the fairest and truest; and that if he finds any part of this work impossible of execution he should avoid and not execute it, but he should contrive to carry out that which is nearest and most akin to it; you must allow the legislator to perfect his design, and when it is perfected, you should join with him in considering what part of his legislation is expedient and what will arouse opposition; for surely the artist who is to be deemed worthy of any regard at all, ought always to make his work self-consistent.'

Having determined that there is to be a distribution into twelve parts, let us now see in what way this may be accomplished. There is no difficulty in perceiving that the twelve parts admit of the greatest number of divisions of that which they include, or in seeing the other numbers which are consequent upon them, and are produced out of them up to 5040; wherefore the law ought to order phratries and demes and villages, and also military ranks and movements, as well as coins and measures, dry and liquid, and weights, so as to be commensurable and agreeable to one another. Nor should we fear the appearance of minuteness, if the law commands that all the vessels which a man possesses should have a common measure, when we consider generally that the divisions and variations of numbers have a use in respect of all the variations of which they are susceptible, both in themselves and as measures of height and depth, and in all sounds, and in motions, as well those which proceed

in a straight direction, upwards or downwards, as in those which go round and round. The legislator is to consider all these things and to bid the citizens, as far as possible, not to lose sight of numerical order; for no single instrument of youthful education has such mighty power, both as regards domestic economy and politics, and in the arts, as the study of arithmetic. Above all, arithmetic stirs up him who is by nature sleepy and dull, and makes him quick to learn, retentive, shrewd, and aided by art divine he makes progress quite beyond his natural powers (compare Republic). All such things, if only the legislator, by other laws and institutions, can banish meanness and covetousness from the souls of men, so that they can use them properly and to their own good, will be excellent and suitable instruments of education. But if he cannot, he will unintentionally create in them, instead of wisdom, the habit of craft, which evil tendency may be observed in the Egyptians and Phoenicians, and many other races, through the general vulgarity of their pursuits and acquisitions, whether some unworthy legislator of theirs has been the cause, or some impediment of chance or nature. For we must not fail to observe, O Megillus and Cleinias, that there is a difference in places, and that some beget better men and others worse; and we must legislate accordingly. Some places are subject to strange and fatal influences by reason of diverse winds and violent heats, some by reason of waters; or, again, from the character of the food given by the earth, which not only affects the bodies of men for good or evil, but produces similar results in their souls. And in all such qualities those spots excel in which there is a divine inspiration, and in which the demigods have their appointed lots, and are propitious, not adverse, to the settlers in them. To all these matters the legislator, if he have any sense in him, will attend as far as man can, and frame his laws accordingly. And this is what you, Cleinias, must do, and to matters of this kind you must turn your mind since you are going to colonize a new country.

CLEINIAS: Your words, Athenian Stranger, are excellent, and I will do as you say.

BOOK VI.

ATHENIAN: And now having made an end of the preliminaries we will proceed to the appointment of magistracies.

CLEINIAS: Very good.

ATHENIAN: In the ordering of a state there are two parts: first, the number of the magistracies, and the mode of establishing them; and, secondly, when they have been established, laws again will have to be provided for each of them, suitable in nature and number. But before electing the magistrates let us stop a little and say a word in season about the election of them.

CLEINIAS: What have you got to say?

ATHENIAN: This is what I have to say;—every one can see, that although the work of legislation is a most important matter, yet if a well-ordered city superadd to good laws unsuitable offices, not only will there be no use in having the good laws,—not only will they be ridiculous and useless, but the greatest political injury and evil will accrue from them.

CLEINIAS: Of course.

ATHENIAN: Then now, my friend, let us observe what will happen in the constitution of out intended state. In the first place, you will acknowledge that those who are duly appointed to magisterial power, and their families, should severally have given satisfactory proof of what they are, from youth upward until the time of election; in the next place, those who are to elect should have been trained in habits of law, and be well educated, that they may have a right judgment, and may be able to select or reject men whom they approve or disapprove, as they are worthy of either. But how can we imagine that those who are brought together for the first time, and are strangers to one another, and also uneducated, will avoid making mistakes in the choice of magistrates?

CLEINIAS: Impossible.

ATHENIAN: The matter is serious, and excuses will not serve the turn. I will tell you, then, what you and I will have to do, since you, as you tell me, with nine others, have offered to settle the new state on behalf of the people of Crete, and I am to help you by the invention of the present romance. I certainly should not like to leave the tale wandering all over the world without a head;—a headless monster is such a hideous thing.

CLEINIAS: Excellent, Stranger.

ATHENIAN: Yes; and I will be as good as my word.

CLEINIAS: Let us by all means do as you propose.

ATHENIAN: That we will, by the grace of God, if old age will only permit us.

CLEINIAS: But God will be gracious.

ATHENIAN: Yes; and under his guidance let us consider a further point.

CLEINIAS: What is it?

ATHENIAN: Let us remember what a courageously mad and daring creation this our city is.

CLEINIAS: What had you in your mind when you said that?

ATHENIAN: I had in my mind the free and easy manner in which we are ordaining that the inexperienced colonists shall receive our laws. Now a man need not be very wise, Cleinias, in order to see that no one can easily receive laws at their first imposition. But if we could anyhow wait until those who have been imbued with them from childhood, and have been nurtured in them, and become habituated to them, take their part in the public elections of the state; I say, if this could be accomplished, and rightly accomplished by any way or contrivance—then, I think that there would be very little danger, at the end of the time, of a state thus trained not being permanent.

CLEINIAS: A reasonable supposition.

ATHENIAN: Then let us consider if we can find any way out of the difficulty; for I maintain, Cleinias, that the Cnosians, above all the other Cretans, should not be satisfied with barely discharging their duty to the colony, but they ought to take the utmost pains to establish the offices which are first created by them in the best and surest manner. Above all, this applies to the selection of the guardians of the law, who must be chosen first of all, and with the greatest care; the others are of less importance.

CLEINIAS: What method can we devise of electing them?

ATHENIAN: This will be the method:—Sons of the Cretans, I shall say to them, inasmuch as the Cnosians have precedence over the other states, they should, in common with those who join this settlement, choose a body of thirty-seven in all, nineteen of them being taken from the settlers, and the remainder from the citizens of Cnosus. Of these latter the Cnosians shall make a present to your colony, and you yourself shall be one of the eighteen, and shall become a citizen of the new state; and if you and they cannot be persuaded to go, the Cnosians may fairly use a little violence in order to make you.

CLEINIAS: But why, Stranger, do not you and Megillus take a part in our new city?

ATHENIAN: O, Cleinias, Athens is proud, and Sparta too; and they are both a long way off. But you and likewise the other colonists are conveniently situated as you describe. I have been speaking of the way in which the new citizens may be best managed under present circumstances; but in after-ages, if the city continues to exist, let the election be on this wise. All who are horse or foot soldiers, or have seen military service at the proper ages when they were severally fitted for it (compare Arist. Pol.), shall share in the election of magistrates; and the election shall be held in whatever temple the state deems most venerable, and every one shall carry his vote to the altar of the God, writing down on a tablet the name of the person for whom he votes, and his father's name, and his tribe, and ward; and at the side he shall write his own name in like manner. Any one who pleases may take away any tablet which he does not think properly filled up, and exhibit it in the Agora for a period of not less than thirty days. The tablets which are judged to be first, to the number of 300, shall be shown by the magistrates to the whole city, and the citizens shall in like manner select from these the candidates whom they prefer; and this second selection, to the number of 100, shall be again exhibited to the citizens; in the third, let any one who pleases select whom he pleases out of the 100, walking through the parts of victims, and let them choose for magistrates and proclaim the seven-and-thirty who have the greatest number of votes. But who, Cleinias and Megillus, will order for us in the colony all this matter of the magistrates, and the scrutinies of them? If we reflect, we shall see that cities which are in process of construction like ours must have some such persons, who cannot possibly be elected before there are any magistrates; and yet they must be elected in some way, and they are not to be inferior men, but the best possible. For as the proverb says, 'a good beginning is half the business'; and 'to have begun well' is praised by all, and in my opinion is a great deal more than half the business, and has never been praised by any one enough.

CLEINIAS: That is very true.

ATHENIAN: Then let us recognize the difficulty, and make clear to our own minds how the beginning is to be accomplished. There is only one proposal which I have to offer, and that is one which, under our circumstances, is both necessary and expedient.

CLEINIAS: What is it?

ATHENIAN: I maintain that this colony of ours has a father and mother, who are no other than the colonizing state. Well I know that many colonies have been, and will be, at enmity with their parents. But in early days the child, as in a family, loves and is beloved; even if there come a time later when the tie is broken, still, while he is in want of education, he naturally loves his parents and is beloved by them, and flies to his relatives for protection, and finds in them his only natural allies in time of need; and this parental feeling already exists in the Cnosians, as is shown by their care of the new city; and there is a similar feeling on the part of the young city towards Cnosus. And I repeat what I was saying—for there is no harm in repeating a good thing—that the Cnosians should take a common interest in all these matters, and choose, as far as they can, the eldest and best of the colonists, to the number of not less than a hundred; and let there be another hundred of the Cnosians themselves. These, I say, on their arrival, should have a joint care that the magistrates should be appointed according to law, and that when they are appointed they should undergo a scrutiny. When this has been effected, the Cnosians shall return home, and the new city do the best she can for her own preservation and happiness. I would have the seven-and-thirty now, and in all future time, chosen to fulfil the following duties:—Let them, in the first place, be the guardians of the law; and, secondly, of the registers in which each one registers before the magistrate the amount of his property, excepting four minae which are allowed to citizens of the first class, three allowed to the second, two to the third, and a single mina to the fourth. And if any one, despising the laws for the sake of gain, be found to possess anything more which has not been registered, let all that he has in excess be confiscated, and let him be liable to a suit which shall be the reverse of honourable or fortunate. And let any one who will, indict him on the charge of loving base gains, and proceed against him before the guardians of the law. And if he be cast, let him lose his share of the public possessions, and when there is any public distribution, let him have nothing but his original lot; and let him be written down a condemned man as long as he lives, in some place in which any one who pleases can read about his offences. The guardian of the law shall not hold office longer than twenty years, and shall not be less than fifty years of age when he is elected; or if he is elected when he is sixty years of age, he shall hold office for ten years only; and upon the same principle, he must not imagine that he will be permitted to hold such an important office as that of guardian of the laws after he is seventy years of age, if he live so long.

These are the three first ordinances about the guardians of the law; as the work of legislation progresses, each law in turn will assign to them their further duties. And now we may proceed in order to speak of the election of other officers; for generals have to be elected, and these again must have their ministers, commanders, and colonels of horse, and commanders of brigades of foot, who would be more rightly called by their popular name of brigadiers. The guardians of the law shall propose as generals men who are natives of the city, and a selection from the candidates proposed shall be made by those who are or have been of the age for military service. And if one who is not proposed is thought by somebody to be better than one who is, let him name whom he prefers in the place of whom, and make oath that he is better, and propose him; and whichever of them is approved by vote shall be admitted to the final selection; and the three who have the greatest number of votes

shall be appointed generals, and superintendents of military affairs, after previously undergoing a scrutiny, like the guardians of the law. And let the generals thus elected propose twelve brigadiers, one for each tribe; and there shall be a right of counter-proposal as in the case of the generals, and the voting and decision shall take place in the same way. Until the prytanes and council are elected, the guardians of the law shall convene the assembly in some holy spot which is suitable to the purpose, placing the hoplites by themselves, and the cavalry by themselves, and in a third division all the rest of the army. All are to vote for the generals (and for the colonels of horse), but the brigadiers are to be voted for only by those who carry shields (i.e. the hoplites). Let the body of cavalry choose phylarchs for the generals; but captains of light troops, or archers, or any other division of the army, shall be appointed by the generals for themselves. There only remains the appointment of officers of cavalry: these shall be proposed by the same persons who proposed the generals, and the election and the counter-proposal of other candidates shall be arranged in the same way as in the case of the generals, and let the cavalry vote and the infantry look on at the election; the two who have the greatest number of votes shall be the leaders of all the horse. Disputes about the voting may be raised once or twice; but if the dispute be raised a third time, the officers who preside at the several elections shall decide.

The council shall consist of 30 x 12 members—360 will be a convenient number for sub-division. If we divide the whole number into four parts of ninety each, we get ninety counsellors for each class. First, all the citizens shall select candidates from the first class; they shall be compelled to vote, and, if they do not, shall be duly fined. When the candidates have been selected, some one shall mark them down; this shall be the business of the first day. And on the following day, candidates shall be selected from the second class in the same manner and under the same conditions as on the previous day; and on the third day a selection shall be made from the third class, at which every one may, if he likes vote, and the three first classes shall be compelled to vote; but the fourth and lowest class shall be under no compulsion, and any member of this class who does not vote shall not be punished. On the fourth day candidates shall be selected from the fourth and smallest class; they shall be selected by all, but he who is of the fourth class shall suffer no penalty, nor he who is of the third, if he be not willing to vote; but he who is of the first or second class, if he does not vote shall be punished;—he who is of the second class shall pay a fine of triple the amount which was exacted at first, and he who is of the first class quadruple. On the fifth day the rulers shall bring out the names noted down, for all the citizens to see, and every man shall choose out of them, under pain, if he do not, of suffering the first penalty; and when they have chosen 180 out of each of the classes, they shall choose one-half of them by lot, who shall undergo a scrutiny:—These are to form the council for the year.

The mode of election which has been described is in a mean between monarchy and democracy, and such a mean the state ought always to observe; for servants and masters never can be friends, nor good and bad, merely because they are declared to have equal privileges. For to unequals equals become unequal, if they are not harmonised by measure; and both by reason of equality, and by reason of inequality, cities are filled with seditions. The old saying, that 'equality makes friendship,' is happy and also true; but there is obscurity and confusion as to what sort of equality is meant. For there are two equalities which are called by the same name, but are in reality in many ways almost the opposite of one another; one of them may be introduced without difficulty, by any state or any legislator in the distribution of honours: this is the rule of measure, weight, and number, which regulates and apportions them. But there is another equality, of a better and higher kind, which is not

so easily recognized. This is the judgment of Zeus; among men it avails but little; that little, however, is the source of the greatest good to individuals and states. For it gives to the greater more, and to the inferior less and in proportion to the nature of each; and, above all, greater honour always to the greater virtue, and to the less less; and to either in proportion to their respective measure of virtue and education. And this is justice, and is ever the true principle of states, at which we ought to aim, and according to this rule order the new city which is now being founded, and any other city which may be hereafter founded. To this the legislator should look,—not to the interests of tyrants one or more, or to the power of the people, but to justice always; which, as I was saying, is the distribution of natural equality among unequals in each case. But there are times at which every state is compelled to use the words, 'just,' 'equal,' in a secondary sense, in the hope of escaping in some degree from factions. For equity and indulgence are infractions of the perfect and strict rule of justice. And this is the reason why we are obliged to use the equality of the lot, in order to avoid the discontent of the people; and so we invoke God and fortune in our prayers, and beg that they themselves will direct the lot with a view to supreme justice. And therefore, although we are compelled to use both equalities, we should use that into which the element of chance enters as seldom as possible.

Thus, O my friends, and for the reasons given, should a state act which would endure and be saved. But as a ship sailing on the sea has to be watched night and day, in like manner a city also is sailing on a sea of politics, and is liable to all sorts of insidious assaults; and therefore from morning to night, and from night to morning, rulers must join hands with rulers, and watchers with watchers, receiving and giving up their trust in a perpetual succession. Now a multitude can never fulfil a duty of this sort with anything like energy. Moreover, the greater number of the senators will have to be left during the greater part of the year to order their concerns at their own homes. They will therefore have to be arranged in twelve portions, answering to the twelve months, and furnish guardians of the state, each portion for a single month. Their business is to be at hand and receive any foreigner or citizen who comes to them, whether to give information, or to put one of those questions, to which, when asked by other cities, a city should give an answer, and to which, if she ask them herself, she should receive an answer; or again, when there is a likelihood of internal commotions, which are always liable to happen in some form or other, they will, if they can, prevent their occurring; or if they have already occurred, will lose no time in making them known to the city, and healing the evil. Wherefore, also, this which is the presiding body of the state ought always to have the control of their assemblies, and of the dissolutions of them, ordinary as well as extraordinary. All this is to be ordered by the twelfth part of the council, which is always to keep watch together with the other officers of the state during one portion of the year, and to rest during the remaining eleven portions.

Thus will the city be fairly ordered. And now, who is to have the superintendence of the country, and what shall be the arrangement? Seeing that the whole city and the entire country have been both of them divided into twelve portions, ought there not to be appointed superintendents of the streets of the city, and of the houses, and buildings, and harbours, and the agora, and fountains, and sacred domains, and temples, and the like?

CLEINIAS: To be sure there ought.

ATHENIAN: Let us assume, then, that there ought to be servants of the temples, and priests and priestesses. There must also be superintendents of roads and buildings, who will have a care of men, that they may do no harm, and also of beasts, both within the enclosure and in the suburbs. Three

kinds of officers will thus have to be appointed, in order that the city may be suitably provided according to her needs. Those who have the care of the city shall be called wardens of the city; and those who have the care of the agora shall be called wardens of the agora; and those who have the care of the temples shall be called priests. Those who hold hereditary offices as priests or priestesses, shall not be disturbed; but if there be few or none such, as is probable at the foundation of a new city, priests and priestesses shall be appointed to be servants of the Gods who have no servants. Some of our officers shall be elected, and others appointed by lot, those who are of the people and those who are not of the people mingling in a friendly manner in every place and city, that the state may be as far as possible of one mind. The officers of the temples shall be appointed by lot; in this way their election will be committed to God, that He may do what is agreeable to Him. And he who obtains a lot shall undergo a scrutiny, first, as to whether he is sound of body and of legitimate birth; and in the second place, in order to show that he is of a perfectly pure family, not stained with homicide or any similar impiety in his own person, and also that his father and mother have led a similar unstained life. Now the laws about all divine things should be brought from Delphi, and interpreters appointed, under whose direction they should be used. The tenure of the priesthood should always be for a year and no longer; and he who will duly execute the sacred office, according to the laws of religion, must be not less than sixty years of age—the laws shall be the same about priestesses. As for the interpreters, they shall be appointed thus:—Let the twelve tribes be distributed into groups of four, and let each group select four, one out of each tribe within the group, three times; and let the three who have the greatest number of votes (out of the twelve appointed by each group), after undergoing a scrutiny, nine in all, be sent to Delphi, in order that the God may return one out of each triad; their age shall be the same as that of the priests, and the scrutiny of them shall be conducted in the same manner; let them be interpreters for life, and when any one dies let the four tribes select another from the tribe of the deceased. Moreover, besides priests and interpreters, there must be treasurers, who will take charge of the property of the several temples, and of the sacred domains, and shall have authority over the produce and the letting of them; and three of them shall be chosen from the highest classes for the greater temples, and two for the lesser, and one for the least of all; the manner of their election and the scrutiny of them shall be the same as that of the generals. This shall be the order of the temples.

Let everything have a guard as far as possible. Let the defence of the city be commited to the generals, and taxiarchs, and hipparchs, and phylarchs, and prytanes, and the wardens of the city, and of the agora, when the election of them has been completed. The defence of the country shall be provided for as follows:—The entire land has been already distributed into twelve as nearly as possible equal parts, and let the tribe allotted to a division provide annually for it five wardens of the country and commanders of the watch; and let each body of five have the power of selecting twelve others out of the youth of their own tribe,—these shall be not less than twenty-five years of age, and not more than thirty. And let there be allotted to them severally every month the various districts, in order that they may all acquire knowledge and experience of the whole country. The term of service for commanders and for watchers shall continue during two years. After having had their stations allotted to them, they will go from place to place in regular order, making their round from left to right as their commanders direct them; (when I speak of going to the right, I mean that they are to go to the east). And at the commencement of the second year, in order that as many as possible of the guards may not only get a knowledge of the country at any one season of the year, but may also have experience of the manner in which different places are affected at different seasons of the year, their then commanders shall lead them again towards the left, from place to place in succession, until they

have completed the second year. In the third year other wardens of the country shall be chosen and commanders of the watch, five for each division, who are to be the superintendents of the bands of twelve. While on service at each station, their attention shall be directed to the following points:—In the first place, they shall see that the country is well protected against enemies; they shall trench and dig wherever this is required, and, as far as they can, they shall by fortifications keep off the evil-disposed, in order to prevent them from doing any harm to the country or the property; they shall use the beasts of burden and the labourers whom they find on the spot: these will be their instruments whom they will superintend, taking them, as far as possible, at the times when they are not engaged in their regular business. They shall make every part of the country inaccessible to enemies, and as accessible as possible to friends (compare Arist. Pol.); there shall be ways for man and beasts of burden and for cattle, and they shall take care to have them always as smooth as they can; and shall provide against the rains doing harm instead of good to the land, when they come down from the mountains into the hollow dells; and shall keep in the overflow by the help of works and ditches, in order that the valleys, receiving and drinking up the rain from heaven, and providing fountains and streams in the fields and regions which lie underneath, may furnish even to the dry places plenty of good water. The fountains of water, whether of rivers or of springs, shall be ornamented with plantations and buildings for beauty; and let them bring together the streams in subterraneous channels, and make all things plenteous; and if there be a sacred grove or dedicated precinct in the neighbourhood, they shall conduct the water to the actual temples of the Gods, and so beautify them at all seasons of the year. Everywhere in such places the youth shall make gymnasia for themselves, and warm baths for the aged, placing by them abundance of dry wood, for the benefit of those labouring under disease—there the weary frame of the rustic, worn with toil, will receive a kindly welcome, far better than he would at the hands of a not over-wise doctor.

The building of these and the like works will be useful and ornamental; they will provide a pleasing amusement, but they will be a serious employment too; for the sixty wardens will have to guard their several divisions, not only with a view to enemies, but also with an eye to professing friends. When a quarrel arises among neighbours or citizens, and any one whether slave or freeman wrongs another, let the five wardens decide small matters on their own authority; but where the charge against another relates to greater matters, the seventeen composed of the fives and twelves, shall determine any charges which one man brings against another, not involving more than three minae. Every judge and magistrate shall be liable to give an account of his conduct in office, except those who, like kings, have the final decision. Moreover, as regards the aforesaid wardens of the country, if they do any wrong to those of whom they have the care, whether by imposing upon them unequal tasks, or by taking the produce of the soil or implements of husbandry without their consent; also if they receive anything in the way of a bribe, or decide suits unjustly, or if they yield to the influences of flattery, let them be publicly dishonoured; and in regard to any other wrong which they do to the inhabitants of the country, if the question be of a mina, let them submit to the decision of the villagers in the neighbourhood; but in suits of greater amount, or in case of lesser, if they refuse to submit, trusting that their monthly removal into another part of the country will enable them to escape—in such cases the injured party may bring his suit in the common court, and if he obtain a verdict he may exact from the defendant, who refused to submit, a double penalty.

The wardens and the overseers of the country, while on their two years' service, shall have common meals at their several stations, and shall all live together; and he who is absent from the common meal, or sleeps out, if only for one day or night, unless by order of his commanders, or by reason of

absolute necessity, if the five denounce him and inscribe his name in the agora as not having kept his guard, let him be deemed to have betrayed the city, as far as lay in his power, and let him be disgraced and beaten with impunity by any one who meets him and is willing to punish him. If any of the commanders is guilty of such an irregularity, the whole company of sixty shall see to it, and he who is cognisant of the offence, and does not bring the offender to trial, shall be amenable to the same laws as the younger offender himself, and shall pay a heavier fine, and be incapable of ever commanding the young. The guardians of the law are to be careful inspectors of these matters, and shall either prevent or punish offenders. Every man should remember the universal rule, that he who is not a good servant will not be a good master; a man should pride himself more upon serving well than upon commanding well: first upon serving the laws, which is also the service of the Gods; in the second place, upon having served ancient and honourable men in the days of his youth. Furthermore, during the two years in which any one is a warden of the country, his daily food ought to be of a simple and humble kind. When the twelve have been chosen, let them and the five meet together, and determine that they will be their own servants, and, like servants, will not have other slaves and servants for their own use, neither will they use those of the villagers and husbandmen for their private advantage, but for the public service only; and in general they should make up their minds to live independently by themselves, servants of each other and of themselves. Further, at all seasons of the year, summer and winter alike, let them be under arms and survey minutely the whole country; thus they will at once keep guard, and at the same time acquire a perfect knowledge of every locality. There can be no more important kind of information than the exact knowledge of a man's own country; and for this as well as for more general reasons of pleasure and advantage, hunting with dogs and other kinds of sports should be pursued by the young. The service to whom this is committed may be called the secret police or wardens of the country; the name does not much signify, but every one who has the safety of the state at heart will use his utmost diligence in this service.

After the wardens of the country, we have to speak of the election of wardens of the agora and of the city. The wardens of the country were sixty in number, and the wardens of the city will be three, and will divide the twelve parts of the city into three; like the former, they shall have care of the ways, and of the different high roads which lead out of the country into the city, and of the buildings, that they may be all made according to law;—also of the waters, which the guardians of the supply preserve and convey to them, care being taken that they may reach the fountains pure and abundant, and be both an ornament and a benefit to the city. These also should be men of influence, and at leisure to take care of the public interest. Let every man propose as warden of the city any one whom he likes out of the highest class, and when the vote has been given on them, and the number is reduced to the six who have the greatest number of votes, let the electing officers choose by lot three out of the six, and when they have undergone a scrutiny let them hold office according to the laws laid down for them. Next, let the wardens of the agora be elected in like manner, out of the first and second class, five in number: ten are to be first elected, and out of the ten five are to be chosen by lot, as in the election of the wardens of the city:—these when they have undergone a scrutiny are to be declared magistrates. Every one shall vote for every one, and he who will not vote, if he be informed against before the magistrates, shall be fined fifty drachmae, and shall also be deemed a bad citizen. Let any one who likes go to the assembly and to the general council; it shall be compulsory to go on citizens of the first and second class, and they shall pay a fine of ten drachmae if they be found not answering to their names at the assembly. But the third and fourth class shall be under no compulsion, and shall be let off without a fine, unless the magistrates have commanded all to be present, in consequence of

some urgent necessity. The wardens of the agora shall observe the order appointed by law for the agora, and shall have the charge of the temples and fountains which are in the agora; and they shall see that no one injures anything, and punish him who does, with stripes and bonds, if he be a slave or stranger; but if he be a citizen who misbehaves in this way, they shall have the power themselves of inflicting a fine upon him to the amount of a hundred drachmae, or with the consent of the wardens of the city up to double that amount. And let the wardens of the city have a similar power of imposing punishments and fines in their own department; and let them impose fines by their own department; and let them impose fines by their own authority, up to a mina, or up to two minae with the consent of the wardens of the agora.

In the next place, it will be proper to appoint directors of music and gymnastic, two kinds of each—of the one kind the business will be education, of the other, the superintendence of contests. In speaking of education, the law means to speak of those who have the care of order and instruction in gymnasia and schools, and of the going to school, and of school buildings for boys and girls; and in speaking of contests, the law refers to the judges of gymnastics and of music; these again are divided into two classes, the one having to do with music, the other with gymnastics; and the same who judge of the gymnastic contests of men, shall judge of horses; but in music there shall be one set of judges of solo singing, and of imitation—I mean of rhapsodists, players on the harp, the flute and the like, and another who shall judge of choral song. First of all, we must choose directors for the choruses of boys, and men, and maidens, whom they shall follow in the amusement of the dance, and for our other musical arrangements;—one director will be enough for the choruses, and he should be not less than forty years of age. One director will also be enough to introduce the solo singers, and to give judgment on the competitors, and he ought not to be less than thirty years of age. The director and manager of the choruses shall be elected after the following manner:—Let any persons who commonly take an interest in such matters go to the meeting, and be fined if they do not go (the guardians of the law shall judge of their fault), but those who have no interest shall not be compelled. The elector shall propose as director some one who understands music, and he in the scrutiny may be challenged on the one part by those who say he has no skill, and defended on the other hand by those who say that he has. Ten are to be elected by vote, and he of the ten who is chosen by lot shall undergo a scrutiny, and lead the choruses for a year according to law. And in like manner the competitor who wins the lot shall be leader of the solo and concert music for that year; and he who is thus elected shall deliver the award to the judges. In the next place, we have to choose judges in the contests of horses and of men; these shall be selected from the third and also from the second class of citizens, and three first classes shall be compelled to go to the election, but the lowest may stay away with impunity; and let there be three elected by lot out of the twenty who have been chosen previously, and they must also have the vote and approval of the examiners. But if any one is rejected in the scrutiny at any ballot or decision, others shall be chosen in the same manner, and undergo a similar scrutiny.

There remains the minister of the education of youth, male and female; he too will rule according to law; one such minister will be sufficient, and he must be fifty years old, and have children lawfully begotten, both boys and girls by preference, at any rate, one or the other. He who is elected, and he who is the elector, should consider that of all the great offices of state this is the greatest; for the first shoot of any plant, if it makes a good start towards the attainment of its natural excellence, has the greatest effect on its maturity; and this is not only true of plants, but of animals wild and tame, and also of men. Man, as we say, is a tame or civilized animal; nevertheless, he requires proper

instruction and a fortunate nature, and then of all animals he becomes the most divine and most civilized (Arist. Pol.); but if he be insufficiently or ill educated he is the most savage of earthly creatures. Wherefore the legislator ought not to allow the education of children to become a secondary or accidental matter. In the first place, he who would be rightly provident about them, should begin by taking care that he is elected, who of all the citizens is in every way best; him the legislator shall do his utmost to appoint guardian and superintendent. To this end all the magistrates, with the exception of the council and prytanes, shall go to the temple of Apollo, and elect by ballot him of the guardians of the law whom they severally think will be the best superintendent of education. And he who has the greatest number of votes, after he has undergone a scrutiny at the hands of all the magistrates who have been his electors, with the exception of the guardians of the law,—shall hold office for five years; and in the sixth year let another be chosen in like manner to fill his office.

If any one dies while he is holding a public office, and more than thirty days before his term of office expires, let those whose business it is elect another to the office in the same manner as before. And if any one who is entrusted with orphans dies, let the relations both on the father's and mother's side, who are residing at home, including cousins, appoint another guardian within ten days, or be fined a drachma a day for neglect to do so.

A city which has no regular courts of law ceases to be a city; and again, if a judge is silent and says no more in preliminary proceedings than the litigants, as is the case in arbitrations, he will never be able to decide justly; wherefore a multitude of judges will not easily judge well, nor a few if they are bad. The point in dispute between the parties should be made clear; and time, and deliberation, and repeated examination, greatly tend to clear up doubts. For this reason, he who goes to law with another, should go first of all to his neighbours and friends who know best the questions at issue. And if he be unable to obtain from them a satisfactory decision, let him have recourse to another court; and if the two courts cannot settle the matter, let a third put an end to the suit.

Now the establishment of courts of justice may be regarded as a choice of magistrates, for every magistrate must also be a judge of some things; and the judge, though he be not a magistrate, yet in certain respects is a very important magistrate on the day on which he is determining a suit. Regarding then the judges also as magistrates, let us say who are fit to be judges, and of what they are to be judges, and how many of them are to judge in each suit. Let that be the supreme tribunal which the litigants appoint in common for themselves, choosing certain persons by agreement. And let there be two other tribunals: one for private causes, when a citizen accuses another of wronging him and wishes to get a decision; the other for public causes, in which some citizen is of opinion that the public has been wronged by an individual, and is willing to vindicate the common interests. And we must not forget to mention how the judges are to be qualified, and who they are to be. In the first place, let there be a tribunal open to all private persons who are trying causes one against another for the third time, and let this be composed as follows:—All the officers of state, as well annual as those holding office for a longer period, when the new year is about to commence, in the month following after the summer solstice, on the last day but one of the year, shall meet in some temple, and calling God to witness, shall dedicate one judge from every magistracy to be their first-fruits, choosing in each office him who seems to them to be the best, and whom they deem likely to decide the causes of his fellow-citizens during the ensuing year in the best and holiest manner. And when the election is completed, a scrutiny shall be held in the presence of the electors themselves, and if any one be rejected another shall be chosen in the same manner. Those who have undergone the scrutiny shall

judge the causes of those who have declined the inferior courts, and shall give their vote openly. The councillors and other magistrates who have elected them shall be required to be hearers and spectators of the causes; and any one else may be present who pleases. If one man charges another with having intentionally decided wrong, let him go to the guardians of the law and lay his accusation before them, and he who is found guilty in such a case shall pay damages to the injured party equal to half the injury; but if he shall appear to deserve a greater penalty, the judges shall determine what additional punishment he shall suffer, and how much more he ought to pay to the public treasury, and to the party who brought the suit.

In the judgment of offences against the state, the people ought to participate, for when any one wrongs the state all are wronged, and may reasonably complain if they are not allowed to share in the decision. Such causes ought to originate with the people, and the ought also to have the final decision of them, but the trial of them shall take place before three of the highest magistrates, upon whom the plaintiff and the defendant shall agree; and if they are not able to come to an agreement themselves, the council shall choose one of the two proposed. And in private suits, too, as far as is possible, all should have a share; for he who has no share in the administration of justice, is apt to imagine that he has no share in the state at all. And for this reason there shall be a court of law in every tribe, and the judges shall be chosen by lot;—they shall give their decisions at once, and shall be inaccessible to entreaties. The final judgment shall rest with that court which, as we maintain, has been established in the most incorruptible form of which human things admit: this shall be the court established for those who are unable to get rid of their suits either in the courts of neighbours or of the tribes.

Thus much of the courts of law, which, as I was saying, cannot be precisely defined either as being or not being offices; a superficial sketch has been given of them, in which some things have been told and others omitted. For the right place of an exact statement of the laws respecting suits, under their several heads, will be at the end of the body of legislation;—let us then expect them at the end. Hitherto our legislation has been chiefly occupied with the appointment of offices. Perfect unity and exactness, extending to the whole and every particular of political administration, cannot be attained to the full, until the discussion shall have a beginning, middle, and end, and is complete in every part. At present we have reached the election of magistrates, and this may be regarded as a sufficient termination of what preceded. And now there need no longer be any delay or hesitation in beginning the work of legislation.

CLEINIAS: I like what you have said, Stranger; and I particularly like your manner of tacking on the beginning of your new discourse to the end of the former one.

ATHENIAN: Thus far, then, the old men's rational pastime has gone off well.

CLEINIAS: You mean, I suppose, their serious and noble pursuit?

ATHENIAN: Perhaps; but I should like to know whether you and I are agreed about a certain thing.

CLEINIAS: About what thing?

ATHENIAN: You know the endless labour which painters expend upon their pictures—they are always putting in or taking out colours, or whatever be the term which artists employ; they seem as if they would never cease touching up their works, which are always being made brighter and more beautiful.

CLEINIAS: I know something of these matters from report, although I have never had any great acquaintance with the art.

ATHENIAN: No matter; we may make use of the illustration notwithstanding:—Suppose that some one had a mind to paint a figure in the most beautiful manner, in the hope that his work instead of losing would always improve as time went on—do you not see that being a mortal, unless he leaves some one to succeed him who will correct the flaws which time may introduce, and be able to add what is left imperfect through the defect of the artist, and who will further brighten up and improve the picture, all his great labour will last but a short time?

CLEINIAS: True.

ATHENIAN: And is not the aim of the legislator similar? First, he desires that his laws should be written down with all possible exactness; in the second place, as time goes on and he has made an actual trial of his decrees, will he not find omissions? Do you imagine that there ever was a legislator so foolish as not to know that many things are necessarily omitted, which some one coming after him must correct, if the constitution and the order of government is not to deteriorate, but to improve in the state which he has established?

CLEINIAS: Assuredly, that is the sort of thing which every one would desire.

ATHENIAN: And if any one possesses any means of accomplishing this by word or deed, or has any way great or small by which he can teach a person to understand how he can maintain and amend the laws, he should finish what he has to say, and not leave the work incomplete.

CLEINIAS: By all means.

ATHENIAN: And is not this what you and I have to do at the present moment?

CLEINIAS: What have we to do?

ATHENIAN: As we are about to legislate and have chosen our guardians of the law, and are ourselves in the evening of life, and they as compared with us are young men, we ought not only to legislate for them, but to endeavour to make them not only guardians of the law but legislators themselves, as far as this is possible.

CLEINIAS: Certainly; if we can.

ATHENIAN: At any rate, we must do our best.

CLEINIAS: Of course.

ATHENIAN: We will say to them—O friends and saviours of our laws, in laying down any law, there are many particulars which we shall omit, and this cannot be helped; at the same time, we will do our utmost to describe what is important, and will give an outline which you shall fill up. And I will explain on what principle you are to act. Megillus and Cleinias and I have often spoken to one another touching these matters, and we are of opinion that we have spoken well. And we hope that you will be of the same mind with us, and become our disciples, and keep in view the things which in our united opinion the legislator and guardian of the law ought to keep in view. There was one main point about which we were agreed—that a man's whole energies throughout life should be devoted to the acquisition of the virtue proper to a man, whether this was to be gained by study, or habit, or some mode of acquisition, or desire, or opinion, or knowledge—and this applies equally to men and women, old and young—the aim of all should always be such as I have described; anything which may be an impediment, the good man ought to show that he utterly disregards. And if at last necessity plainly compels him to be an outlaw from his native land, rather than bow his neck to the yoke of slavery and be ruled by inferiors, and he has to fly, an exile he must be and endure all such trials, rather than accept another form of government, which is likely to make men worse. These are our original principles; and do you now, fixing your eyes upon the standard of what a man and a citizen ought or ought not to be, praise and blame the laws—blame those which have not this power of making the citizen better, but embrace those which have; and with gladness receive and live in them; bidding a long farewell to other institutions which aim at goods, as they are termed, of a different kind.

Let us proceed to another class of laws, beginning with their foundation in religion. And we must first return to the number 5040—the entire number had, and has, a great many convenient divisions, and the number of the tribes which was a twelfth part of the whole, being correctly formed by 21 x 20 (5040/(21 x 20), i.e., 5040/420 = 12), also has them. And not only is the whole number divisible by twelve, but also the number of each tribe is divisible by twelve. Now every portion should be regarded by us as a sacred gift of Heaven, corresponding to the months and to the revolution of the universe (compare Tim.). Every city has a guiding and sacred principle given by nature, but in some the division or distribution has been more right than in others, and has been more sacred and fortunate. In our opinion, nothing can be more right than the selection of the number 5040, which may be divided by all numbers from one to twelve with the single exception of eleven, and that admits of a very easy correction; for if, turning to the dividend (5040), we deduct two families, the defect in the division is cured. And the truth of this may be easily proved when we have leisure. But for the present, trusting to the mere assertion of this principle, let us divide the state; and assigning to each portion some God or son of a God, let us give them altars and sacred rites, and at the altars let us hold assemblies for sacrifice twice in the month—twelve assemblies for the tribes, and twelve for the city, according to their divisions; the first in honour of the Gods and divine things, and the second to promote friendship and 'better acquaintance,' as the phrase is, and every sort of good fellowship with one another. For people must be acquainted with those into whose families and whom they marry and with those to whom they give in marriage; in such matters, as far as possible, a man should deem it all important to avoid a mistake, and with this serious purpose let games be instituted (compare Republic) in which youths and maidens shall dance together, seeing one another and being seen naked, at a proper age, and on a suitable occasion, not transgressing the rules of modesty.

The directors of choruses will be the superintendents and regulators of these games, and they, together with the guardians of the law, will legislate in any matters which we have omitted; for, as we said, where there are numerous and minute details, the legislator must leave out something. And the

annual officers who have experience, and know what is wanted, must make arrangements and improvements year by year, until such enactments and provisions are sufficiently determined. A ten years' experience of sacrifices and dances, if extending to all particulars, will be quite sufficient; and if the legislator be alive they shall communicate with him, but if he be dead then the several officers shall refer the omissions which come under their notice to the guardians of the law, and correct them, until all is perfect; and from that time there shall be no more change, and they shall establish and use the new laws with the others which the legislator originally gave them, and of which they are never, if they can help, to change aught; or, if some necessity overtakes them, the magistrates must be called into counsel, and the whole people, and they must go to all the oracles of the Gods; and if they are all agreed, in that case they may make the change, but if they are not agreed, by no manner of means, and any one who dissents shall prevail, as the law ordains.

Whenever any one over twenty-five years of age, having seen and been seen by others, believes himself to have found a marriage connexion which is to his mind, and suitable for the procreation of children, let him marry if he be still under the age of five-and-thirty years; but let him first hear how he ought to seek after what is suitable and appropriate (compare Arist. Pol.). For, as Cleinias says, every law should have a suitable prelude.

CLEINIAS: You recollect at the right moment, Stranger, and do not miss the opportunity which the argument affords of saying a word in season.

ATHENIAN: I thank you. We will say to him who is born of good parents—O my son, you ought to make such a marriage as wise men would approve. Now they would advise you neither to avoid a poor marriage, nor specially to desire a rich one; but if other things are equal, always to honour inferiors, and with them to form connexions;—this will be for the benefit of the city and of the families which are united; for the equable and symmetrical tends infinitely more to virtue than the unmixed. And he who is conscious of being too headstrong, and carried away more than is fitting in all his actions, ought to desire to become the relation of orderly parents; and he who is of the opposite temper ought to seek the opposite alliance. Let there be one word concerning all marriages:—Every man shall follow, not after the marriage which is most pleasing to himself, but after that which is most beneficial to the state. For somehow every one is by nature prone to that which is likest to himself, and in this way the whole city becomes unequal in property and in disposition; and hence there arise in most states the very results which we least desire to happen. Now, to add to the law an express provision, not only that the rich man shall not marry into the rich family, nor the powerful into the family of the powerful, but that the slower natures shall be compelled to enter into marriage with the quicker, and the quicker with the slower, may awaken anger as well as laughter in the minds of many; for there is a difficulty in perceiving that the city ought to be well mingled like a cup, in which the maddening wine is hot and fiery, but when chastened by a soberer God, receives a fair associate and becomes an excellent and temperate drink (compare Statesman). Yet in marriage no one is able to see that the same result occurs. Wherefore also the law must let alone such matters, but we should try to charm the spirits of men into believing the equability of their children's disposition to be of more importance than equality in excessive fortune when they marry; and him who is too desirous of making a rich marriage we should endeavour to turn aside by reproaches, not, however, by any compulsion of written law.

Let this then be our exhortation concerning marriage, and let us remember what was said before—that a man should cling to immortality, and leave behind him children's children to be the servants of God in his place for ever. All this and much more may be truly said by way of prelude about the duty of marriage. But if a man will not listen, and remains unsocial and alien among his fellow-citizens, and is still unmarried at thirty-five years of age, let him pay a yearly fine;—he who of the highest class shall pay a fine of a hundred drachmae, and he who is of the second class a fine of seventy drachmae; the third class shall pay sixty drachmae, and the fourth thirty drachmae, and let the money be sacred to Here; he who does not pay the fine annually shall owe ten times the sum, which the treasurer of the goddess shall exact; and if he fails in doing so, let him be answerable and give an account of the money at his audit. He who refuses to marry shall be thus punished in money, and also be deprived of all honour which the younger show to the elder; let no young man voluntarily obey him, and, if he attempt to punish any one, let every one come to the rescue and defend the injured person, and he who is present and does not come to the rescue, shall be pronounced by the law to be a coward and a bad citizen. Of the marriage portion I have already spoken; and again I say for the instruction of poor men that he who neither gives nor receives a dowry on account of poverty, has a compensation; for the citizens of our state are provided with the necessaries of life, and wives will be less likely to be insolent, and husbands to be mean and subservient to them on account of property. And he who obeys this law will do a noble action; but he who will not obey, and gives or receives more than fifty drachmae as the price of the marriage garments if he be of the lowest, or more than a mina, or a mina-and-a-half, if he be of the third or second classes, or two minae if he be of the highest class, shall owe to the public treasury a similar sum, and that which is given or received shall be sacred to Here and Zeus; and let the treasurers of these Gods exact the money, as was said before about the unmarried—that the treasurers of Here were to exact the money, or pay the fine themselves.

The betrothal by a father shall be valid in the first degree, that by a grandfather in the second degree, and in the third degree, betrothal by brothers who have the same father; but if there are none of these alive, the betrothal by a mother shall be valid in like manner; in cases of unexampled fatality, the next of kin and the guardians shall have authority. What are to be the rites before marriages, or any other sacred acts, relating either to future, present, or past marriages, shall be referred to the interpreters; and he who follows their advice may be satisfied. Touching the marriage festival, they shall assemble not more than five male and five female friends of both families; and a like number of members of the family of either sex, and no man shall spend more than his means will allow; he who is of the richest class may spend a mina,—he who is of the second, half a mina, and in the same proportion as the census of each decreases: all men shall praise him who is obedient to the law; but he who is disobedient shall be punished by the guardians of the law as a man wanting in true taste, and uninstructed in the laws of bridal song. Drunkenness is always improper, except at the festivals of the God who gave wine; and peculiarly dangerous, when a man is engaged in the business of marriage; at such a crisis of their lives a bride and bridegroom ought to have all their wits about them—they ought to take care that their offspring may be born of reasonable beings; for on what day or night Heaven will give them increase, who can say? Moreover, they ought not to begetting children when their bodies are dissipated by intoxication, but their offspring should be compact and solid, quiet and compounded properly; whereas the drunkard is all abroad in all his actions, and beside himself both in body and soul. Wherefore, also, the drunken man is bad and unsteady in sowing the seed of increase, and is likely to beget offspring who will be unstable and untrustworthy, and cannot be expected to walk straight either in body or mind. Hence during the whole year and all his life long, and

especially while he is begetting children, he ought to take care and not intentionally do what is injurious to health, or what involves insolence and wrong; for he cannot help leaving the impression of himself on the souls and bodies of his offspring, and he begets children in every way inferior. And especially on the day and night of marriage should a man abstain from such things. For the beginning, which is also a God dwelling in man, preserves all things, if it meet with proper respect from each individual. He who marries is further to consider, that one of the two houses in the lot is the nest and nursery of his young, and there he is to marry and make a home for himself and bring up his children, going away from his father and mother. For in friendships there must be some degree of desire, in order to cement and bind together diversities of character; but excessive intercourse not having the desire which is created by time, insensibly dissolves friendships from a feeling of satiety; wherefore a man and his wife shall leave to his and her father and mother their own dwelling-places, and themselves go as to a colony and dwell there, and visit and be visited by their parents; and they shall beget and bring up children, handing on the torch of life from one generation to another, and worshipping the Gods according to law for ever.

In the next place, we have to consider what sort of property will be most convenient. There is no difficulty either in understanding or acquiring most kinds of property, but there is great difficulty in what relates to slaves. And the reason is, that we speak about them in a way which is right and which is not right; for what we say about our slaves is consistent and also inconsistent with our practice about them.

MEGILLUS: I do not understand, Stranger, what you mean.

ATHENIAN: I am not surprised, Megillus, for the state of the Helots among the Lacedaemonians is of all Hellenic forms of slavery the most controverted and disputed about, some approving and some condemning it; there is less dispute about the slavery which exists among the Heracleots, who have subjugated the Mariandynians, and about the Thessalian Penestae. Looking at these and the like examples, what ought we to do concerning property in slaves? I made a remark, in passing, which naturally elicited a question about my meaning from you. It was this:—We know that all would agree that we should have the best and most attached slaves whom we can get. For many a man has found his slaves better in every way than brethren or sons, and many times they have saved the lives and property of their masters and their whole house—such tales are well known.

MEGILLUS: To be sure.

ATHENIAN: But may we not also say that the soul of the slave is utterly corrupt, and that no man of sense ought to trust them? And the wisest of our poets, speaking of Zeus, says:

'Far-seeing Zeus takes away half the understanding of men whom the day of slavery subdues.'

Different persons have got these two different notions of slaves in their minds—some of them utterly distrust their servants, and, as if they were wild beasts, chastise them with goads and whips, and make their souls three times, or rather many times, as slavish as they were before;—and others do just the opposite.

MEGILLUS: True.

CLEINIAS: Then what are we to do in our own country, Stranger, seeing that there are such differences in the treatment of slaves by their owners?

ATHENIAN: Well, Cleinias, there can be no doubt that man is a troublesome animal, and therefore he is not very manageable, nor likely to become so, when you attempt to introduce the necessary division of slave, and freeman, and master.

CLEINIAS: That is obvious.

ATHENIAN: He is a troublesome piece of goods, as has been often shown by the frequent revolts of the Messenians, and the great mischiefs which happen in states having many slaves who speak the same language, and the numerous robberies and lawless life of the Italian banditti, as they are called. A man who considers all this is fairly at a loss. Two remedies alone remain to us,—not to have the slaves of the same country, nor if possible, speaking the same language (compare Aris. Pol.); in this way they will more easily be held in subjection: secondly, we should tend them carefully, not only out of regard to them, but yet more out of respect to ourselves. And the right treatment of slaves is to behave properly to them, and to do to them, if possible, even more justice than to those who are our equals; for he who naturally and genuinely reverences justice, and hates injustice, is discovered in his dealings with any class of men to whom he can easily be unjust. And he who in regard to the natures and actions of his slaves is undefiled by impiety and injustice, will best sow the seeds of virtue in them; and this may be truly said of every master, and tyrant, and of every other having authority in relation to his inferiors. Slaves ought to be punished as they deserve, and not admonished as if they were freemen, which will only make them conceited. The language used to a servant ought always to be that of a command (compare Arist. Pol.), and we ought not to jest with them, whether they are males or females—this is a foolish way which many people have of setting up their slaves, and making the life of servitude more disagreeable both for them and for their masters.

CLEINIAS: True.

ATHENIAN: Now that each of the citizens is provided, as far as possible, with a sufficient number of suitable slaves who can help him in what he has to do, we may next proceed to describe their dwellings.

CLEINIAS: Very good.

ATHENIAN: The city being new and hitherto uninhabited, care ought to be taken of all the buildings, and the manner of building each of them, and also of the temples and walls. These, Cleinias, were matters which properly came before the marriages;—but, as we are only talking, there is no objection to changing the order. If, however, our plan of legislation is ever to take effect, then the house shall precede the marriage if God so will, and afterwards we will come to the regulations about marriage; but at present we are only describing these matters in a general outline.

CLEINIAS: Quite true.

ATHENIAN: The temples are to be placed all round the agora, and the whole city built on the heights in a circle (compare Arist. Pol.), for the sake of defence and for the sake of purity. Near the temples

are to be placed buildings for the magistrates and the courts of law; in these plaintiff and defendant will receive their due, and the places will be regarded as most holy, partly because they have to do with holy things: and partly because they are the dwelling-places of holy Gods: and in them will be held the courts in which cases of homicide and other trials of capital offences may fitly take place. As to the walls, Megillus, I agree with Sparta in thinking that they should be allowed to sleep in the earth, and that we should not attempt to disinter them (compare Arist. Pol.); there is a poetical saying, which is finely expressed, that 'walls ought to be of steel and iron, and not of earth;' besides, how ridiculous of us to be sending out our young men annually into the country to dig and to trench, and to keep off the enemy by fortifications, under the idea that they are not to be allowed to set foot in our territory, and then, that we should surround ourselves with a wall, which, in the first place, is by no means conducive to the health of cities, and is also apt to produce a certain effeminacy in the minds of the inhabitants, inviting men to run thither instead of repelling their enemies, and leading them to imagine that their safety is due not to their keeping guard day and night, but that when they are protected by walls and gates, then they may sleep in safety; as if they were not meant to labour, and did not know that true repose comes from labour, and that disgraceful indolence and a careless temper of mind is only the renewal of trouble. But if men must have walls, the private houses ought to be so arranged from the first that the whole city may be one wall, having all the houses capable of defence by reason of their uniformity and equality towards the streets (compare Arist. Pol.). The form of the city being that of a single dwelling will have an agreeable aspect, and being easily guarded will be infinitely better for security. Until the original building is completed, these should be the principal objects of the inhabitants; and the wardens of the city should superintend the work, and should impose a fine on him who is negligent; and in all that relates to the city they should have a care of cleanliness, and not allow a private person to encroach upon any public property either by buildings or excavations. Further, they ought to take care that the rains from heaven flow off easily, and of any other matters which may have to be administered either within or without the city. The guardians of the law shall pass any further enactments which their experience may show to be necessary, and supply any other points in which the law may be deficient. And now that these matters, and the buildings about the agora, and the gymnasia, and places of instruction, and theatres, are all ready and waiting for scholars and spectators, let us proceed to the subjects which follow marriage in the order of legislation.

CLEINIAS: By all means.

ATHENIAN: Assuming that marriages exist already, Cleinias, the mode of life during the year after marriage, before children are born, will follow next in order. In what way bride and bridegroom ought to live in a city which is to be superior to other cities, is a matter not at all easy for us to determine. There have been many difficulties already, but this will be the greatest of them, and the most disagreeable to the many. Still I cannot but say what appears to me to be right and true, Cleinias.

CLEINIAS: Certainly.

ATHENIAN: He who imagines that he can give laws for the public conduct of states, while he leaves the private life of citizens wholly to take care of itself; who thinks that individuals may pass the day as they please, and that there is no necessity of order in all things; he, I say, who gives up the control of their private lives, and supposes that they will conform to law in their common and public life, is making a great mistake. Why have I made this remark? Why, because I am going to enact that the

bridegrooms should live at the common tables, just as they did before marriage. This was a singularity when first enacted by the legislator in your parts of the world, Megillus and Cleinias, as I should suppose, on the occasion of some war or other similar danger, which caused the passing of the law, and which would be likely to occur in thinly-peopled places, and in times of pressure. But when men had once tried and been accustomed to a common table, experience showed that the institution greatly conduced to security; and in some such manner the custom of having common tables arose among you.

CLEINIAS: Likely enough.

ATHENIAN: I said that there may have been singularity and danger in imposing such a custom at first, but that now there is not the same difficulty. There is, however, another institution which is the natural sequel to this, and would be excellent, if it existed anywhere, but at present it does not. The institution of which I am about to speak is not easily described or executed; and would be like the legislator 'combing wool into the fire,' as people say, or performing any other impossible and useless feat.

CLEINIAS: What is the cause, Stranger, of this extreme hesitation?

ATHENIAN: You shall hear without any fruitless loss of time. That which has law and order in a state is the cause of every good, but that which is disordered or ill-ordered is often the ruin of that which is well-ordered; and at this point the argument is now waiting. For with you, Cleinias and Megillus, the common tables of men are, as I said, a heaven-born and admirable institution, but you are mistaken in leaving the women unregulated by law. They have no similar institution of public tables in the light of day, and just that part of the human race which is by nature prone to secrecy and stealth on account of their weakness—I mean the female sex—has been left without regulation by the legislator, which is a great mistake. And, in consequence of this neglect, many things have grown lax among you, which might have been far better, if they had been only regulated by law; for the neglect of regulations about women may not only be regarded as a neglect of half the entire matter (Arist. Pol.), but in proportion as woman's nature is inferior to that of men in capacity for virtue, in that degree the consequence of such neglect is more than twice as important. The careful consideration of this matter, and the arranging and ordering on a common principle of all our institutions relating both to men and women, greatly conduces to the happiness of the state. But at present, such is the unfortunate condition of mankind, that no man of sense will even venture to speak of common tables in places and cities in which they have never been established at all; and how can any one avoid being utterly ridiculous, who attempts to compel women to show in public how much they eat and drink? There is nothing at which the sex is more likely to take offence. For women are accustomed to creep into dark places, and when dragged out into the light they will exert their utmost powers of resistance, and be far too much for the legislator. And therefore, as I said before, in most places they will not endure to have the truth spoken without raising a tremendous outcry, but in this state perhaps they may. And if we may assume that our whole discussion about the state has not been mere idle talk, I should like to prove to you, if you will consent to listen, that this institution is good and proper; but if you had rather not, I will refrain.

CLEINIAS: There is nothing which we should both of us like better, Stranger, than to hear what you have to say.

ATHENIAN: Very good; and you must not be surprised if I go back a little, for we have plenty of leisure, and there is nothing to prevent us from considering in every point of view the subject of law.

CLEINIAS: True.

ATHENIAN: Then let us return once more to what we were saying at first. Every man should understand that the human race either had no beginning at all, and will never have an end, but always will be and has been; or that it began an immense while ago.

CLEINIAS: Certainly.

ATHENIAN: Well, and have there not been constitutions and destructions of states, and all sorts of pursuits both orderly and disorderly, and diverse desires of meats and drinks always, and in all the world, and all sorts of changes of the seasons in which animals may be expected to have undergone innumerable transformations of themselves?

CLEINIAS: No doubt.

ATHENIAN: And may we not suppose that vines appeared, which had previously no existence, and also olives, and the gifts of Demeter and her daughter, of which one Triptolemus was the minister, and that, before these existed, animals took to devouring each other as they do still?

CLEINIAS: True.

ATHENIAN: Again, the practice of men sacrificing one another still exists among many nations; while, on the other hand, we hear of other human beings who did not even venture to taste the flesh of a cow and had no animal sacrifices, but only cakes and fruits dipped in honey, and similar pure offerings, but no flesh of animals; from these they abstained under the idea that they ought not to eat them, and might not stain the altars of the Gods with blood. For in those days men are said to have lived a sort of Orphic life, having the use of all lifeless things, but abstaining from all living things.

CLEINIAS: Such has been the constant tradition, and is very likely true.

ATHENIAN: Some one might say to us, What is the drift of all this?

CLEINIAS: A very pertinent question, Stranger.

ATHENIAN: And therefore I will endeavour, Cleinias, if I can, to draw the natural inference.

CLEINIAS: Proceed.

ATHENIAN: I see that among men all things depend upon three wants and desires, of which the end is virtue, if they are rightly led by them, or the opposite if wrongly. Now these are eating and drinking, which begin at birth—every animal has a natural desire for them, and is violently excited, and rebels against him who says that he must not satisfy all his pleasures and appetites, and get rid of all the corresponding pains—and the third and greatest and sharpest want and desire breaks out last, and is

the fire of sexual lust, which kindles in men every species of wantonness and madness. And these three disorders we must endeavour to master by the three great principles of fear and law and right reason; turning them away from that which is called pleasantest to the best, using the Muses and the Gods who preside over contests to extinguish their increase and influx.

But to return:—After marriage let us speak of the birth of children, and after their birth of their nurture and education. In the course of discussion the several laws will be perfected, and we shall at last arrive at the common tables. Whether such associations are to be confined to men, or extended to women also, we shall see better when we approach and take a nearer view of them; and we may then determine what previous institutions are required and will have to precede them. As I said before, we shall see them more in detail, and shall be better able to lay down the laws which are proper or suited to them.

CLEINIAS: Very true.

ATHENIAN: Let us keep in mind the words which have now been spoken; for hereafter there may be need of them.

CLEINIAS: What do you bid us keep in mind?

ATHENIAN: That which we comprehended under the three words—first, eating, secondly, drinking, thirdly, the excitement of love.

CLEINIAS: We shall be sure to remember, Stranger.

ATHENIAN: Very good. Then let us now proceed to marriage, and teach persons in what way they shall beget children, threatening them, if they disobey, with the terrors of the law.

CLEINIAS: What do you mean?

ATHENIAN: The bride and bridegroom should consider that they are to produce for the state the best and fairest specimens of children which they can. Now all men who are associated in any action always succeed when they attend and give their mind to what they are doing, but when they do not give their mind or have no mind, they fail; wherefore let the bridegroom give his mind to the bride and to the begetting of children, and the bride in like manner give her mind to the bridegroom, and particularly at the time when their children are not yet born. And let the women whom we have chosen be the overseers of such matters, and let them in whatever number, large or small, and at whatever time the magistrates may command, assemble every day in the temple of Eileithyia during a third part of the day, and being there assembled, let them inform one another of any one whom they see, whether man or woman, of those who are begetting children, disregarding the ordinances given at the time when the nuptial sacrifices and ceremonies were performed. Let the begetting of children and the supervision of those who are begetting them continue ten years and no longer, during the time when marriage is fruitful. But if any continue without children up to this time, let them take counsel with their kindred and with the women holding the office of overseer and be divorced for their mutual benefit. If, however, any dispute arises about what is proper and for the interest of either party, they shall choose ten of the guardians of the law and abide by their permission and appointment. The

women who preside over these matters shall enter into the houses of the young, and partly by admonitions and partly by threats make them give over their folly and error: if they persist, let the women go and tell the guardians of the law, and the guardians shall prevent them. But if they too cannot prevent them, they shall bring the matter before the people; and let them write up their names and make oath that they cannot reform such and such an one; and let him who is thus written up, if he cannot in a court of law convict those who have inscribed his name, be deprived of the privileges of a citizen in the following respects:—let him not go to weddings nor to the thanksgivings after the birth of children; and if he go, let any one who pleases strike him with impunity; and let the same regulations hold about women: let not a woman be allowed to appear abroad, or receive honour, or go to nuptial and birthday festivals, if she in like manner be written up as acting disorderly and cannot obtain a verdict. And if, when they themselves have done begetting children according to the law, a man or woman have connexion with another man or woman who are still begetting children, let the same penalties be inflicted upon them as upon those who are still having a family; and when the time for procreation has passed let the man or woman who refrains in such matters be held in esteem, and let those who do not refrain be held in the contrary of esteem—that is to say, disesteem. Now, if the greater part of mankind behave modestly, the enactments of law may be left to slumber; but, if they are disorderly, the enactments having been passed, let them be carried into execution. To every man the first year is the beginning of life, and the time of birth ought to be written down in the temples of their fathers as the beginning of existence to every child, whether boy or girl. Let every phratria have inscribed on a whited wall the names of the successive archons by whom the years are reckoned. And near to them let the living members of the phratria be inscribed, and when they depart life let them be erased. The limit of marriageable ages for a woman shall be from sixteen to twenty years at the longest,—for a man, from thirty to thirty-five years; and let a woman hold office at forty, and a man at thirty years. Let a man go out to war from twenty to sixty years, and for a woman, if there appear any need to make use of her in military service, let the time of service be after she shall have brought forth children up to fifty years of age; and let regard be had to what is possible and suitable to each.

BOOK VII.

And now, assuming children of both sexes to have been born, it will be proper for us to consider, in the next place, their nurture and education; this cannot be left altogether unnoticed, and yet may be thought a subject fitted rather for precept and admonition than for law. In private life there are many little things, not always apparent, arising out of the pleasures and pains and desires of individuals, which run counter to the intention of the legislator, and make the characters of the citizens various and dissimilar:—this is an evil in states; for by reason of their smallness and frequent occurrence, there would be an unseemliness and want of propriety in making them penal by law; and if made penal, they are the destruction of the written law because mankind get the habit of frequently transgressing the law in small matters. The result is that you cannot legislate about them, and still less can you be silent. I speak somewhat darkly, but I shall endeavour also to bring my wares into the light of day, for I acknowledge that at present there is a want of clearness in what I am saying.

CLEINIAS: Very true.

ATHENIAN. Am I not right in maintaining that a good education is that which tends most to the improvement of mind and body?

CLEINIAS: Undoubtedly.

ATHENIAN: And nothing can be plainer than that the fairest bodies are those which grow up from infancy in the best and straightest manner?

CLEINIAS: Certainly.

ATHENIAN: And do we not further observe that the first shoot of every living thing is by far the greatest and fullest? Many will even contend that a man at twenty-five does not reach twice the height which he attained at five.

CLEINIAS: True.

ATHENIAN: Well, and is not rapid growth without proper and abundant exercise the source endless evils in the body?

CLEINIAS: Yes.

ATHENIAN: And the body should have the most exercise when it receives most nourishment?

CLEINIAS: But, Stranger, are we to impose this great amount of exercise upon newly-born infants?

ATHENIAN: Nay, rather on the bodies of infants still unborn.

CLEINIAS: What do you mean, my good sir? In the process of gestation?

ATHENIAN: Exactly. I am not at all surprised that you have never heard of this very peculiar sort of gymnastic applied to such little creatures, which, although strange, I will endeavour to explain to you.

CLEINIAS: By all means.

ATHENIAN: The practice is more easy for us to understand than for you, by reason of certain amusements which are carried to excess by us at Athens. Not only boys, but often older persons, are in the habit of keeping quails and cocks (compare Republic), which they train to fight one another. And they are far from thinking that the contests in which they stir them up to fight with one another are sufficient exercise; for, in addition to this, they carry them about tucked beneath their armpits, holding the smaller birds in their hands, the larger under their arms, and go for a walk of a great many miles for the sake of health, that is to say, not their own health, but the health of the birds; whereby they prove to any intelligent person, that all bodies are benefited by shakings and movements, when they are moved without weariness, whether the motion proceeds from themselves, or is caused by a swing, or at sea, or on horseback, or by other bodies in whatever way moving, and that thus gaining the mastery over food and drink, they are able to impart beauty and health and strength. But admitting all this, what follows? Shall we make a ridiculous law that the pregnant woman shall walk

about and fashion the embryo within as we fashion wax before it hardens, and after birth swathe the infant for two years? Suppose that we compel nurses, under penalty of a legal fine, to be always carrying the children somewhere or other, either to the temples, or into the country, or to their relations' houses, until they are well able to stand, and to take care that their limbs are not distorted by leaning on them when they are too young (compare Arist. Pol.),—they should continue to carry them until the infant has completed its third year; the nurses should be strong, and there should be more than one of them. Shall these be our rules, and shall we impose a penalty for the neglect of them? No, no; the penalty of which we were speaking will fall upon our own heads more than enough.

CLEINIAS: What penalty?

ATHENIAN: Ridicule, and the difficulty of getting the feminine and servant-like dispositions of the nurses to comply.

CLEINIAS: Then why was there any need to speak of the matter at all?

ATHENIAN: The reason is, that masters and freemen in states, when they hear of it, are very likely to arrive at a true conviction that without due regulation of private life in cities, stability in the laying down of laws is hardly to be expected (compare Republic); and he who makes this reflection may himself adopt the laws just now mentioned, and, adopting them, may order his house and state well and be happy.

CLEINIAS: Likely enough.

ATHENIAN: And therefore let us proceed with our legislation until we have determined the exercises which are suited to the souls of young children, in the same manner in which we have begun to go through the rules relating to their bodies.

CLEINIAS: By all means.

ATHENIAN: Let us assume, then, as a first principle in relation both to the body and soul of very young creatures, that nursing and moving about by day and night is good for them all, and that the younger they are, the more they will need it (compare Arist. Pol.); infants should live, if that were possible, as if they were always rocking at sea. This is the lesson which we may gather from the experience of nurses, and likewise from the use of the remedy of motion in the rites of the Corybantes; for when mothers want their restless children to go to sleep they do not employ rest, but, on the contrary, motion—rocking them in their arms; nor do they give them silence, but they sing to them and lap them in sweet strains; and the Bacchic women are cured of their frenzy in the same manner by the use of the dance and of music.

CLEINIAS: Well, Stranger, and what is the reason of this?

ATHENIAN: The reason is obvious.

CLEINIAS: What?

ATHENIAN: The affection both of the Bacchantes and of the children is an emotion of fear, which springs out of an evil habit of the soul. And when some one applies external agitation to affections of this sort, the motion coming from without gets the better of the terrible and violent internal one, and produces a peace and calm in the soul, and quiets the restless palpitation of the heart, which is a thing much to be desired, sending the children to sleep, and making the Bacchantes, although they remain awake, to dance to the pipe with the help of the Gods to whom they offer acceptable sacrifices, and producing in them a sound mind, which takes the place of their frenzy. And, to express what I mean in a word, there is a good deal to be said in favour of this treatment.

CLEINIAS: Certainly.

ATHENIAN: But if fear has such a power we ought to infer from these facts, that every soul which from youth upward has been familiar with fears, will be made more liable to fear (compare Republic), and every one will allow that this is the way to form a habit of cowardice and not of courage.

CLEINIAS: No doubt.

ATHENIAN: And, on the other hand, the habit of overcoming, from our youth upwards, the fears and terrors which beset us, may be said to be an exercise of courage.

CLEINIAS: True.

ATHENIAN: And we may say that the use of exercise and motion in the earliest years of life greatly contributes to create a part of virtue in the soul.

CLEINIAS: Quite true.

ATHENIAN: Further, a cheerful temper, or the reverse, may be regarded as having much to do with high spirit on the one hand, or with cowardice on the other.

CLEINIAS: To be sure.

ATHENIAN: Then now we must endeavour to show how and to what extent we may, if we please, without difficulty implant either character in the young.

CLEINIAS: Certainly.

ATHENIAN: There is a common opinion, that luxury makes the disposition of youth discontented and irascible and vehemently excited by trifles; that on the other hand excessive and savage servitude makes men mean and abject, and haters of their kind, and therefore makes them undesirable associates.

CLEINIAS: But how must the state educate those who do not as yet understand the language of the country, and are therefore incapable of appreciating any sort of instruction?

ATHENIAN: I will tell you how:—Every animal that is born is wont to utter some cry, and this is especially the case with man, and he is also affected with the inclination to weep more than any other animal.

CLEINIAS: Quite true.

ATHENIAN: Do not nurses, when they want to know what an infant desires, judge by these signs?—when anything is brought to the infant and he is silent, then he is supposed to be pleased, but, when he weeps and cries out, then he is not pleased. For tears and cries are the inauspicious signs by which children show what they love and hate. Now the time which is thus spent is no less than three years, and is a very considerable portion of life to be passed ill or well.

CLEINIAS: True.

ATHENIAN: Does not the discontented and ungracious nature appear to you to be full of lamentations and sorrows more than a good man ought to be?

CLEINIAS: Certainly.

ATHENIAN: Well, but if during these three years every possible care were taken that our nursling should have as little of sorrow and fear, and in general of pain as was possible, might we not expect in early childhood to make his soul more gentle and cheerful? (Compare Arist. Pol.)

CLEINIAS: To be sure, Stranger—more especially if we could procure him a variety of pleasures.

ATHENIAN: There I can no longer agree, Cleinias: you amaze me. To bring him up in such a way would be his utter ruin; for the beginning is always the most critical part of education. Let us see whether I am right.

CLEINIAS: Proceed.

ATHENIAN: The point about which you and I differ is of great importance, and I hope that you, Megillus, will help to decide between us. For I maintain that the true life should neither seek for pleasures, nor, on the other hand, entirely avoid pains, but should embrace the middle state (compare Republic), which I just spoke of as gentle and benign, and is a state which we by some divine presage and inspiration rightly ascribe to God. Now, I say, he among men, too, who would be divine ought to pursue after this mean habit—he should not rush headlong into pleasures, for he will not be free from pains; nor should we allow any one, young or old, male or female, to be thus given any more than ourselves, and least of all the newly-born infant, for in infancy more than at any other time the character is engrained by habit. Nay, more, if I were not afraid of appearing to be ridiculous, I would say that a woman during her year of pregnancy should of all women be most carefully tended, and kept from violent or excessive pleasures and pains, and should at that time cultivate gentleness and benevolence and kindness.

CLEINIAS: You need not ask Megillus, Stranger, which of us has most truly spoken; for I myself agree that all men ought to avoid the life of unmingled pain or pleasure, and pursue always a middle course. And having spoken well, may I add that you have been well answered?

ATHENIAN: Very good, Cleinias; and now let us all three consider a further point.

CLEINIAS: What is it?

ATHENIAN: That all the matters which we are now describing are commonly called by the general name of unwritten customs, and what are termed the laws of our ancestors are all of similar nature. And the reflection which lately arose in our minds, that we can neither call these things laws, nor yet leave them unmentioned, is justified; for they are the bonds of the whole state, and come in between the written laws which are or are hereafter to be laid down; they are just ancestral customs of great antiquity, which, if they are rightly ordered and made habitual, shield and preserve the previously existing written law; but if they depart from right and fall into disorder, then they are like the props of builders which slip away out of their place and cause a universal ruin—one part drags another down, and the fair super-structure falls because the old foundations are undermined. Reflecting upon this, Cleinias, you ought to bind together the new state in every possible way, omitting nothing, whether great or small, of what are called laws or manners or pursuits, for by these means a city is bound together, and all these things are only lasting when they depend upon one another; and, therefore, we must not wonder if we find that many apparently trifling customs or usages come pouring in and lengthening out our laws.

CLEINIAS: Very true: we are disposed to agree with you.

ATHENIAN: Up to the age of three years, whether of boy or girl, if a person strictly carries out our previous regulations and makes them a principal aim, he will do much for the advantage of the young creatures. But at three, four, five, and even six years the childish nature will require sports; now is the time to get rid of self-will in him, punishing him, but not so as to disgrace him. We were saying about slaves, that we ought neither to add insult to punishment so as to anger them, nor yet to leave them unpunished lest they become self-willed; and a like rule is to be observed in the case of the free-born. Children at that age have certain natural modes of amusement which they find out for themselves when they meet. And all the children who are between the ages of three and six ought to meet at the temples of the villages, the several families of a village uniting on one spot. The nurses are to see that the children behave properly and orderly—they themselves and all their companies are to be under the control of twelve matrons, one for each company, who are annually selected to inspect them from the women previously mentioned [i.e. the women who have authority over marriage], whom the guardians of the law appoint. These matrons shall be chosen by the women who have authority over marriage, one out of each tribe; all are to be of the same age; and let each of them, as soon as she is appointed, hold office and go to the temples every day, punishing all offenders, male or female, who are slaves or strangers, by the help of some of the public slaves; but if any citizen disputes the punishment, let her bring him before the wardens of the city; or, if there be no dispute, let her punish him herself. After the age of six years the time has arrived for the separation of the sexes—let boys live with boys, and girls in like manner with girls. Now they must begin to learn—the boys going to teachers of horsemanship and the use of the bow, the javelin, and sling, and the girls too, if they do not object, at any rate until they know how to manage these weapons, and especially

how to handle heavy arms; for I may note, that the practice which now prevails is almost universally misunderstood.

CLEINIAS: In what respect?

ATHENIAN: In that the right and left hand are supposed to be by nature differently suited for our various uses of them; whereas no difference is found in the use of the feet and the lower limbs; but in the use of the hands we are, as it were, maimed by the folly of nurses and mothers; for although our several limbs are by nature balanced, we create a difference in them by bad habit. In some cases this is of no consequence, as, for example, when we hold the lyre in the left hand, and the plectrum in the right, but it is downright folly to make the same distinction in other cases. The custom of the Scythians proves our error; for they not only hold the bow from them with the left hand and draw the arrow to them with their right, but use either hand for both purposes. And there are many similar examples in charioteering and other things, from which we may learn that those who make the left side weaker than the right act contrary to nature. In the case of the plectrum, which is of horn only, and similar instruments, as I was saying, it is of no consequence, but makes a great difference, and may be of very great importance to the warrior who has to use iron weapons, bows and javelins, and the like; above all, when in heavy armour, he has to fight against heavy armour. And there is a very great difference between one who has learnt and one who has not, and between one who has been trained in gymnastic exercises and one who has not been. For as he who is perfectly skilled in the Pancratium or boxing or wrestling, is not unable to fight from his left side, and does not limp and draggle in confusion when his opponent makes him change his position, so in heavy-armed fighting, and in all other things, if I am not mistaken, the like holds—he who has these double powers of attack and defence ought not in any case to leave them either unused or untrained, if he can help; and if a person had the nature of Geryon or Briareus he ought to be able with his hundred hands to throw a hundred darts. Now, the magistrates, male and female, should see to all these things, the women superintending the nursing and amusements of the children, and the men superintending their education, that all of them, boys and girls alike, may be sound hand and foot, and may not, if they can help, spoil the gifts of nature by bad habits.

Education has two branches—one of gymnastic, which is concerned with the body, and the other of music, which is designed for the improvement of the soul. And gymnastic has also two branches—dancing and wrestling; and one sort of dancing imitates musical recitation, and aims at preserving dignity and freedom, the other aims at producing health, agility, and beauty in the limbs and parts of the body, giving the proper flexion and extension to each of them, a harmonious motion being diffused everywhere, and forming a suitable accompaniment to the dance. As regards wrestling, the tricks which Antaeus and Cercyon devised in their systems out of a vain spirit of competition, or the tricks of boxing which Epeius or Amycus invented, are useless and unsuitable for war, and do not deserve to have much said about them; but the art of wrestling erect and keeping free the neck and hands and sides, working with energy and constancy, with a composed strength, for the sake of health—these are always useful, and are not to be neglected, but to be enjoined alike on masters and scholars, when we reach that part of legislation; and we will desire the one to give their instructions freely, and the others to receive them thankfully. Nor, again, must we omit suitable imitations of war in our choruses; here in Crete you have the armed dances of the Curetes, and the Lacedaemonians have those of the Dioscuri. And our virgin lady, delighting in the amusement of the dance, thought it not fit to amuse herself with empty hands; she must be clothed in a complete suit of armour, and in

this attire go through the dance; and youths and maidens should in every respect imitate her, esteeming highly the favour of the Goddess, both with a view to the necessities of war, and to festive occasions: it will be right also for the boys, until such time as they go out to war, to make processions and supplications to all the Gods in goodly array, armed and on horseback, in dances and marches, fast or slow, offering up prayers to the Gods and to the sons of Gods; and also engaging in contests and preludes of contests, if at all, with these objects. For these sorts of exercises, and no others, are useful both in peace and war, and are beneficial alike to states and to private houses. But other labours and sports and exercises of the body are unworthy of freemen, O Megillus and Cleinias.

I have now completely described the kind of gymnastic which I said at first ought to be described; if you know of any better, will you communicate your thoughts?

CLEINIAS: It is not easy, Stranger, to put aside these principles of gymnastic and wrestling and to enunciate better ones.

ATHENIAN: Now we must say what has yet to be said about the gifts of the Muses and of Apollo: before, we fancied that we had said all, and that gymnastic alone remained; but now we see clearly what points have been omitted, and should be first proclaimed; of these, then, let us proceed to speak.

CLEINIAS: By all means.

ATHENIAN: Let me tell you once more—although you have heard me say the same before—that caution must be always exercised, both by the speaker and by the hearer, about anything that is very singular and unusual. For my tale is one which many a man would be afraid to tell, and yet I have a confidence which makes me go on.

CLEINIAS: What have you to say, Stranger?

ATHENIAN: I say that in states generally no one has observed that the plays of childhood have a great deal to do with the permanence or want of permanence in legislation. For when plays are ordered with a view to children having the same plays, and amusing themselves after the same manner, and finding delight in the same playthings, the more solemn institutions of the state are allowed to remain undisturbed. Whereas if sports are disturbed, and innovations are made in them, and they constantly change, and the young never speak of their having the same likings, or the same established notions of good and bad taste, either in the bearing of their bodies or in their dress, but he who devises something new and out of the way in figures and colours and the like is held in special honour, we may truly say that no greater evil can happen in a state; for he who changes the sports is secretly changing the manners of the young, and making the old to be dishonoured among them and the new to be honoured. And I affirm that there is nothing which is a greater injury to all states than saying or thinking thus. Will you hear me tell how great I deem the evil to be?

CLEINIAS: You mean the evil of blaming antiquity in states?

ATHENIAN: Exactly.

CLEINIAS: If you are speaking of that, you will find in us hearers who are disposed to receive what you say not unfavourably but most favourably.

ATHENIAN: I should expect so.

CLEINIAS: Proceed.

ATHENIAN: Well, then, let us give all the greater heed to one another's words. The argument affirms that any change whatever except from evil is the most dangerous of all things; this is true in the case of the seasons and of the winds, in the management of our bodies and the habits of our minds—true of all things except, as I said before, of the bad. He who looks at the constitution of individuals accustomed to eat any sort of meat, or drink any drink, or to do any work which they can get, may see that they are at first disordered by them, but afterwards, as time goes on, their bodies grow adapted to them, and they learn to know and like variety, and have good health and enjoyment of life; and if ever afterwards they are confined again to a superior diet, at first they are troubled with disorders, and with difficulty become habituated to their new food. A similar principle we may imagine to hold good about the minds of men and the natures of their souls. For when they have been brought up in certain laws, which by some Divine Providence have remained unchanged during long ages, so that no one has any memory or tradition of their ever having been otherwise than they are, then every one is afraid and ashamed to change that which is established. The legislator must somehow find a way of implanting this reverence for antiquity, and I would propose the following way: People are apt to fancy, as I was saying before, that when the plays of children are altered they are merely plays, not seeing that the most serious and detrimental consequences arise out of the change; and they readily comply with the child's wishes instead of deterring him, not considering that these children who make innovations in their games, when they grow up to be men, will be different from the last generation of children, and, being different, will desire a different sort of life, and under the influence of this desire will want other institutions and laws; and no one of them reflects that there will follow what I just now called the greatest of evils to states. Changes in bodily fashions are no such serious evils, but frequent changes in the praise and censure of manners are the greatest of evils, and require the utmost prevision.

CLEINIAS: To be sure.

ATHENIAN: And now do we still hold to our former assertion, that rhythms and music in general are imitations of good and evil characters in men? What say you?

CLEINIAS: That is the only doctrine which we can admit.

ATHENIAN: Must we not, then, try in every possible way to prevent our youth from even desiring to imitate new modes either in dance or song? nor must any one be allowed to offer them varieties of pleasures.

CLEINIAS: Most true.

ATHENIAN: Can any of us imagine a better mode of effecting this object than that of the Egyptians?

CLEINIAS: What is their method?

ATHENIAN: To consecrate every sort of dance or melody. First we should ordain festivals—calculating for the year what they ought to be, and at what time, and in honour of what Gods, sons of Gods, and heroes they ought to be celebrated; and, in the next place, what hymns ought to be sung at the several sacrifices, and with what dances the particular festival is to be honoured. This has to be arranged at first by certain persons, and, when arranged, the whole assembly of the citizens are to offer sacrifices and libations to the Fates and all the other Gods, and to consecrate the several odes to Gods and heroes: and if any one offers any other hymns or dances to any one of the Gods, the priests and priestesses, acting in concert with the guardians of the law, shall, with the sanction of religion and the law, exclude him, and he who is excluded, if he do not submit, shall be liable all his life long to have a suit of impiety brought against him by any one who likes.

CLEINIAS: Very good.

ATHENIAN: In the consideration of this subject, let us remember what is due to ourselves.

CLEINIAS: To what are you referring?

ATHENIAN: I mean that any young man, and much more any old one, when he sees or hears anything strange or unaccustomed, does not at once run to embrace the paradox, but he stands considering, like a person who is at a place where three paths meet, and does not very well know his way—he may be alone or he may be walking with others, and he will say to himself and them, 'Which is the way?' and will not move forward until he is satisfied that he is going right. And this is what we must do in the present instance: A strange discussion on the subject of law has arisen, which requires the utmost consideration, and we should not at our age be too ready to speak about such great matters, or be confident that we can say anything certain all in a moment.

CLEINIAS: Most true.

ATHENIAN: Then we will allow time for reflection, and decide when we have given the subject sufficient consideration. But that we may not be hindered from completing the natural arrangement of our laws, let us proceed to the conclusion of them in due order; for very possibly, if God will, the exposition of them, when completed, may throw light on our present perplexity.

CLEINIAS: Excellent, Stranger; let us do as you propose.

ATHENIAN: Let us then affirm the paradox that strains of music are our laws (nomoi), and this latter being the name which the ancients gave to lyric songs, they probably would not have very much objected to our proposed application of the word. Some one, either asleep or awake, must have had a dreamy suspicion of their nature. And let our decree be as follows: No one in singing or dancing shall offend against public and consecrated models, and the general fashion among the youth, any more than he would offend against any other law. And he who observes this law shall be blameless; but he who is disobedient, as I was saying, shall be punished by the guardians of the laws, and by the priests and priestesses. Suppose that we imagine this to be our law.

CLEINIAS: Very good.

ATHENIAN: Can any one who makes such laws escape ridicule? Let us see. I think that our only safety will be in first framing certain models for composers. One of these models shall be as follows: If when a sacrifice is going on, and the victims are being burnt according to law—if, I say, any one who may be a son or brother, standing by another at the altar and over the victims, horribly blasphemes, will not his words inspire despondency and evil omens and forebodings in the mind of his father and of his other kinsmen?

CLEINIAS: Of course.

ATHENIAN: And this is just what takes place in almost all our cities. A magistrate offers a public sacrifice, and there come in not one but many choruses, who take up a position a little way from the altar, and from time to time pour forth all sorts of horrible blasphemies on the sacred rites, exciting the souls of the audience with words and rhythms and melodies most sorrowful to hear; and he who at the moment when the city is offering sacrifice makes the citizens weep most, carries away the palm of victory. Now, ought we not to forbid such strains as these? And if ever our citizens must hear such lamentations, then on some unblest and inauspicious day let there be choruses of foreign and hired minstrels, like those hirelings who accompany the departed at funerals with barbarous Carian chants. That is the sort of thing which will be appropriate if we have such strains at all; and let the apparel of the singers be, not circlets and ornaments of gold, but the reverse. Enough of all this. I will simply ask once more whether we shall lay down as one of our principles of song—

CLEINIAS: What?

ATHENIAN: That we should avoid every word of evil omen; let that kind of song which is of good omen be heard everywhere and always in our state. I need hardly ask again, but shall assume that you agree with me.

CLEINIAS: By all means; that law is approved by the suffrages of us all.

ATHENIAN: But what shall be our next musical law or type? Ought not prayers to be offered up to the Gods when we sacrifice?

CLEINIAS: Certainly.

ATHENIAN: And our third law, if I am not mistaken, will be to the effect that our poets, understanding prayers to be requests which we make to the Gods, will take especial heed that they do not by mistake ask for evil instead of good. To make such a prayer would surely be too ridiculous.

CLEINIAS: Very true.

ATHENIAN: Were we not a little while ago quite convinced that no silver or golden Plutus should dwell in our state?

CLEINIAS: To be sure.

ATHENIAN: And what has it been the object of our argument to show? Did we not imply that the poets are not always quite capable of knowing what is good or evil? And if one of them utters a mistaken prayer in song or words, he will make our citizens pray for the opposite of what is good in matters of the highest import; than which, as I was saying, there can be few greater mistakes. Shall we then propose as one of our laws and models relating to the Muses—

CLEINIAS: What? will you explain the law more precisely?

ATHENIAN: Shall we make a law that the poet shall compose nothing contrary to the ideas of the lawful, or just, or beautiful, or good, which are allowed in the state? nor shall he be permitted to communicate his compositions to any private individuals, until he shall have shown them to the appointed judges and the guardians of the law, and they are satisfied with them. As to the persons whom we appoint to be our legislators about music and as to the director of education, these have been already indicated. Once more then, as I have asked more than once, shall this be our third law, and type, and model—What do you say?

CLEINIAS: Let it be so, by all means.

ATHENIAN: Then it will be proper to have hymns and praises of the Gods, intermingled with prayers; and after the Gods prayers and praises should be offered in like manner to demigods and heroes, suitable to their several characters.

CLEINIAS: Certainly.

ATHENIAN: In the next place there will be no objection to a law, that citizens who are departed and have done good and energetic deeds, either with their souls or with their bodies, and have been obedient to the laws, should receive eulogies; this will be very fitting.

CLEINIAS: Quite true.

ATHENIAN: But to honour with hymns and panegyrics those who are still alive is not safe; a man should run his course, and make a fair ending, and then we will praise him; and let praise be given equally to women as well as men who have been distinguished in virtue. The order of songs and dances shall be as follows: There are many ancient musical compositions and dances which are excellent, and from these the newly-founded city may freely select what is proper and suitable; and they shall choose judges of not less than fifty years of age, who shall make the selection, and any of the old poems which they deem sufficient they shall include; any that are deficient or altogether unsuitable, they shall either utterly throw aside, or examine and amend, taking into their counsel poets and musicians, and making use of their poetical genius; but explaining to them the wishes of the legislator in order that they may regulate dancing, music, and all choral strains, according to the mind of the judges; and not allowing them to indulge, except in some few matters, their individual pleasures and fancies. Now the irregular strain of music is always made ten thousand times better by attaining to law and order, and rejecting the honeyed Muse—not however that we mean wholly to exclude pleasure, which is the characteristic of all music. And if a man be brought up from childhood to the age of discretion and maturity in the use of the orderly and severe music, when he hears the opposite he detests it, and calls it illiberal; but if trained in the sweet and vulgar music, he deems the

severer kind cold and displeasing. So that, as I was saying before, while he who hears them gains no more pleasure from the one than from the other, the one has the advantage of making those who are trained in it better men, whereas the other makes them worse.

CLEINIAS: Very true.

ATHENIAN: Again, we must distinguish and determine on some general principle what songs are suitable to women, and what to men, and must assign to them their proper melodies and rhythms. It is shocking for a whole harmony to be inharmonical, or for a rhythm to be unrhythmical, and this will happen when the melody is inappropriate to them. And therefore the legislator must assign to these also their forms. Now both sexes have melodies and rhythms which of necessity belong to them; and those of women are clearly enough indicated by their natural difference. The grand, and that which tends to courage, may be fairly called manly; but that which inclines to moderation and temperance, may be declared both in law and in ordinary speech to be the more womanly quality. This, then, will be the general order of them.

Let us now speak of the manner of teaching and imparting them, and the persons to whom, and the time when, they are severally to be imparted. As the shipwright first lays down the lines of the keel, and thus, as it were, draws the ship in outline, so do I seek to distinguish the patterns of life, and lay down their keels according to the nature of different men's souls; seeking truly to consider by what means, and in what ways, we may go through the voyage of life best. Now human affairs are hardly worth considering in earnest, and yet we must be in earnest about them—a sad necessity constrains us. And having got thus far, there will be a fitness in our completing the matter, if we can only find some suitable method of doing so. But what do I mean? Some one may ask this very question, and quite rightly, too.

CLEINIAS: Certainly.

ATHENIAN: I say that about serious matters a man should be serious, and about a matter which is not serious he should not be serious; and that God is the natural and worthy object of our most serious and blessed endeavours, for man, as I said before, is made to be the plaything of God, and this, truly considered, is the best of him; wherefore also every man and woman should walk seriously, and pass life in the noblest of pastimes, and be of another mind from what they are at present.

CLEINIAS: In what respect?

ATHENIAN: At present they think that their serious pursuits should be for the sake of their sports, for they deem war a serious pursuit, which must be managed well for the sake of peace; but the truth is, that there neither is, nor has been, nor ever will be, either amusement or instruction in any degree worth speaking of in war, which is nevertheless deemed by us to be the most serious of our pursuits. And therefore, as we say, every one of us should live the life of peace as long and as well as he can. And what is the right way of living? Are we to live in sports always? If so, in what kind of sports? We ought to live sacrificing, and singing, and dancing, and then a man will be able to propitiate the Gods, and to defend himself against his enemies and conquer them in battle. The type of song or dance by which he will propitiate them has been described, and the paths along which he is to proceed have been cut for him. He will go forward in the spirit of the poet:

'Telemachus, some things thou wilt thyself find in thy heart, but other things God will suggest; for I deem that thou wast not born or brought up without the will of the Gods.'

And this ought to be the view of our alumni; they ought to think that what has been said is enough for them, and that any other things their Genius and God will suggest to them—he will tell them to whom, and when, and to what Gods severally they are to sacrifice and perform dances, and how they may propitiate the deities, and live according to the appointment of nature; being for the most part puppets, but having some little share of reality.

MEGILLUS: You have a low opinion of mankind, Stranger.

ATHENIAN: Nay, Megillus, be not amazed, but forgive me: I was comparing them with the Gods; and under that feeling I spoke. Let us grant, if you wish, that the human race is not to be despised, but is worthy of some consideration.

Next follow the buildings for gymnasia and schools open to all; these are to be in three places in the midst of the city; and outside the city and in the surrounding country, also in three places, there shall be schools for horse exercise, and large grounds arranged with a view to archery and the throwing of missiles, at which young men may learn and practise. Of these mention has already been made; and if the mention be not sufficiently explicit, let us speak further of them and embody them in laws. In these several schools let there be dwellings for teachers, who shall be brought from foreign parts by pay, and let them teach those who attend the schools the art of war and the art of music, and the children shall come not only if their parents please, but if they do not please; there shall be compulsory education, as the saying is, of all and sundry, as far as this is possible; and the pupils shall be regarded as belonging to the state rather than to their parents. My law would apply to females as well as males; they shall both go through the same exercises. I assert without fear of contradiction that gymnastic and horsemanship are as suitable to women as to men. Of the truth of this I am persuaded from ancient tradition, and at the present day there are said to be countless myriads of women in the neighbourhood of the Black Sea, called Sauromatides, who not only ride on horseback like men, but have enjoined upon them the use of bows and other weapons equally with the men. And I further affirm, that if these things are possible, nothing can be more absurd than the practice which prevails in our own country, of men and women not following the same pursuits with all their strength and with one mind, for thus the state, instead of being a whole, is reduced to a half, but has the same imposts to pay and the same toils to undergo; and what can be a greater mistake for any legislator to make than this?

CLEINIAS: Very true; yet much of what has been asserted by us, Stranger, is contrary to the custom of states; still, in saying that the discourse should be allowed to proceed, and that when the discussion is completed, we should choose what seems best, you spoke very properly, and I now feel compunction for what I have said. Tell me, then, what you would next wish to say.

ATHENIAN: I should wish to say, Cleinias, as I said before, that if the possibility of these things were not sufficiently proven in fact, then there might be an objection to the argument, but the fact being as I have said, he who rejects the law must find some other ground of objection; and, failing this, our exhortation will still hold good, nor will any one deny that women ought to share as far as possible in

education and in other ways with men. For consider; if women do not share in their whole life with men, then they must have some other order of life.

CLEINIAS: Certainly.

ATHENIAN: And what arrangement of life to be found anywhere is preferable to this community which we are now assigning to them? Shall we prefer that which is adopted by the Thracians and many other races who use their women to till the ground and to be shepherds of their herds and flocks, and to minister to them like slaves? Or shall we do as we and people in our part of the world do—getting together, as the phrase is, all our goods and chattels into one dwelling, we entrust them to our women, who are the stewards of them, and who also preside over the shuttles and the whole art of spinning? Or shall we take a middle course, as in Lacedaemon, Megillus—letting the girls share in gymnastic and music, while the grown-up women, no longer employed in spinning wool, are hard at work weaving the web of life, which will be no cheap or mean employment, and in the duty of serving and taking care of the household and bringing up the children, in which they will observe a sort of mean, not participating in the toils of war; and if there were any necessity that they should fight for their city and families, unlike the Amazons, they would be unable to take part in archery or any other skilled use of missiles, nor could they, after the example of the Goddess, carry shield or spear, or stand up nobly for their country when it was being destroyed, and strike terror into their enemies, if only because they were seen in regular order? Living as they do, they would never dare at all to imitate the Sauromatides, who, when compared with ordinary women, would appear to be like men. Let him who will, praise your legislators, but I must say what I think. The legislator ought to be whole and perfect, and not half a man only; he ought not to let the female sex live softly and waste money and have no order of life, while he takes the utmost care of the male sex, and leaves half of life only blest with happiness, when he might have made the whole state happy.

MEGILLUS: What shall we do, Cleinias? Shall we allow a stranger to run down Sparta in this fashion?

CLEINIAS: Yes; for as we have given him liberty of speech we must let him go on until we have perfected the work of legislation.

MEGILLUS: Very true.

ATHENIAN: Then now I may proceed?

CLEINIAS: By all means.

ATHENIAN: What will be the manner of life among men who may be supposed to have their food and clothing provided for them in moderation, and who have entrusted the practice of the arts to others, and whose husbandry committed to slaves paying a part of the produce, brings them a return sufficient for men living temperately; who, moreover, have common tables in which the men are placed apart, and near them are the common tables of their families, of their daughters and mothers, which day by day, the officers, male and female, are to inspect—they shall see to the behaviour of the company, and so dismiss them; after which the presiding magistrate and his attendants shall honour with libations those Gods to whom that day and night are dedicated, and then go home? To men whose lives are thus ordered, is there no work remaining to be done which is necessary and fitting,

but shall each one of them live fattening like a beast? Such a life is neither just nor honourable, nor can he who lives it fail of meeting his due; and the due reward of the idle fatted beast is that he should be torn in pieces by some other valiant beast whose fatness is worn down by brave deeds and toil. These regulations, if we duly consider them, will never be exactly carried into execution under present circumstances, nor as long as women and children and houses and all other things are the private property of individuals; but if we can attain the second-best form of polity, we shall be very well off. And to men living under this second polity there remains a work to be accomplished which is far from being small or insignificant, but is the greatest of all works, and ordained by the appointment of righteous law. For the life which may be truly said to be concerned with the virtue of body and soul is twice, or more than twice, as full of toil and trouble as the pursuit after Pythian and Olympic victories, which debars a man from every employment of life. For there ought to be no bye-work interfering with the greater work of providing the necessary exercise and nourishment for the body, and instruction and education for the soul. Night and day are not long enough for the accomplishment of their perfection and consummation; and therefore to this end all freemen ought to arrange the way in which they will spend their time during the whole course of the day, from morning till evening and from evening till the morning of the next sunrise. There may seem to be some impropriety in the legislator determining minutely the numberless details of the management of the house, including such particulars as the duty of wakefulness in those who are to be perpetual watchmen of the whole city; for that any citizen should continue during the whole of any night in sleep, instead of being seen by all his servants, always the first to awake and get up—this, whether the regulation is to be called a law or only a practice, should be deemed base and unworthy of a freeman; also that the mistress of the house should be awakened by her hand-maidens instead of herself first awakening them, is what the slaves, male and female, and the serving-boys, and, if that were possible, everybody and everything in the house should regard as base. If they rise early, they may all of them do much of their public and of their household business, as magistrates in the city, and masters and mistresses in their private houses, before the sun is up. Much sleep is not required by nature, either for our souls or bodies, or for the actions which they perform. For no one who is asleep is good for anything, any more than if he were dead; but he of us who has the most regard for life and reason keeps awake as long as he can, reserving only so much time for sleep as is expedient for health; and much sleep is not required, if the habit of moderation be once rightly formed. Magistrates in states who keep awake at night are terrible to the bad, whether enemies or citizens, and are honoured and reverenced by the just and temperate, and are useful to themselves and to the whole state.

A night which is passed in such a manner, in addition to all the above-mentioned advantages, infuses a sort of courage into the minds of the citizens. When the day breaks, the time has arrived for youth to go to their schoolmasters. Now neither sheep nor any other animals can live without a shepherd, nor can children be left without tutors, or slaves without masters. And of all animals the boy is the most unmanageable, inasmuch as he has the fountain of reason in him not yet regulated; he is the most insidious, sharp-witted, and insubordinate of animals. Wherefore he must be bound with many bridles; in the first place, when he gets away from mothers and nurses, he must be under the management of tutors on account of his childishness and foolishness; then, again, being a freeman, he must be controlled by teachers, no matter what they teach, and by studies; but he is also a slave, and in that regard any freeman who comes in his way may punish him and his tutor and his instructor, if any of them does anything wrong; and he who comes across him and does not inflict upon him the punishment which he deserves, shall incur the greatest disgrace; and let the guardian of the law, who is the director of education, see to him who coming in the way of the offences which we have

mentioned, does not chastise them when he ought, or chastises them in a way which he ought not; let him keep a sharp look-out, and take especial care of the training of our children, directing their natures, and always turning them to good according to the law.

But how can our law sufficiently train the director of education himself; for as yet all has been imperfect, and nothing has been said either clear or satisfactory? Now, as far as possible, the law ought to leave nothing to him, but to explain everything, that he may be an interpreter and tutor to others. About dances and music and choral strains, I have already spoken both as to the character of the selection of them, and the manner in which they are to be amended and consecrated. But we have not as yet spoken, O illustrious guardian of education, of the manner in which your pupils are to use those strains which are written in prose, although you have been informed what martial strains they are to learn and practise; what relates in the first place to the learning of letters, and secondly, to the lyre, and also to calculation, which, as we were saying, is needful for them all to learn, and any other things which are required with a view to war and the management of house and city, and, looking to the same object, what is useful in the revolutions of the heavenly bodies—the stars and sun and moon, and the various regulations about these matters which are necessary for the whole state—I am speaking of the arrangements of days in periods of months, and of months in years, which are to be observed, in order that seasons and sacrifices and festivals may have their regular and natural order, and keep the city alive and awake, the Gods receiving the honours due to them, and men having a better understanding about them: all these things, O my friend, have not yet been sufficiently declared to you by the legislator. Attend, then, to what I am now going to say: We were telling you, in the first place, that you were not sufficiently informed about letters, and the objection was to this effect—that you were never told whether he who was meant to be a respectable citizen should apply himself in detail to that sort of learning, or not apply himself at all; and the same remark holds good of the study of the lyre. But now we say that he ought to attend to them. A fair time for a boy of ten years old to spend in letters is three years; the age of thirteen is the proper time for him to begin to handle the lyre, and he may continue at this for another three years, neither more nor less, and whether his father or himself like or dislike the study, he is not to be allowed to spend more or less time in learning music than the law allows. And let him who disobeys the law be deprived of those youthful honours of which we shall hereafter speak. Hear, however, first of all, what the young ought to learn in the early years of life, and what their instructors ought to teach them. They ought to be occupied with their letters until they are able to read and write; but the acquisition of perfect beauty or quickness in writing, if nature has not stimulated them to acquire these accomplishments in the given number of years, they should let alone. And as to the learning of compositions committed to writing which are not set to the lyre, whether metrical or without rhythmical divisions, compositions in prose, as they are termed, having no rhythm or harmony—seeing how dangerous are the writings handed down to us by many writers of this class—what will you do with them, O most excellent guardians of the law? or how can the lawgiver rightly direct you about them? I believe that he will be in great difficulty.

CLEINIAS: What troubles you, Stranger? and why are you so perplexed in your mind?

ATHENIAN: You naturally ask, Cleinias, and to you and Megillus, who are my partners in the work of legislation, I must state the more difficult as well as the easier parts of the task.

CLEINIAS: To what do you refer in this instance?

ATHENIAN: I will tell you. There is a difficulty in opposing many myriads of mouths.

CLEINIAS: Well, and have we not already opposed the popular voice in many important enactments?

ATHENIAN: That is quite true; and you mean to imply that the road which we are taking may be disagreeable to some but is agreeable to as many others, or if not to as many, at any rate to persons not inferior to the others, and in company with them you bid me, at whatever risk, to proceed along the path of legislation which has opened out of our present discourse, and to be of good cheer, and not to faint.

CLEINIAS: Certainly.

ATHENIAN: And I do not faint; I say, indeed, that we have a great many poets writing in hexameter, trimeter, and all sorts of measures—some who are serious, others who aim only at raising a laugh—and all mankind declare that the youth who are rightly educated should be brought up in them and saturated with them; some insist that they should be constantly hearing them read aloud, and always learning them, so as to get by heart entire poets; while others select choice passages and long speeches, and make compendiums of them, saying that these ought to be committed to memory, if a man is to be made good and wise by experience and learning of many things. And you want me now to tell them plainly in what they are right and in what they are wrong.

CLEINIAS: Yes, I do.

ATHENIAN: But how can I in one word rightly comprehend all of them? I am of opinion, and, if I am not mistaken, there is a general agreement, that every one of these poets has said many things well and many things the reverse of well; and if this be true, then I do affirm that much learning is dangerous to youth.

CLEINIAS: How would you advise the guardian of the law to act?

ATHENIAN: In what respect?

CLEINIAS: I mean to what pattern should he look as his guide in permitting the young to learn some things and forbidding them to learn others. Do not shrink from answering.

ATHENIAN: My good Cleinias, I rather think that I am fortunate.

CLEINIAS: How so?

ATHENIAN: I think that I am not wholly in want of a pattern, for when I consider the words which we have spoken from early dawn until now, and which, as I believe, have been inspired by Heaven, they appear to me to be quite like a poem. When I reflected upon all these words of ours, I naturally felt pleasure, for of all the discourses which I have ever learnt or heard, either in poetry or prose, this seemed to me to be the justest, and most suitable for young men to hear; I cannot imagine any better pattern than this which the guardian of the law who is also the director of education can have. He cannot do better than advise the teachers to teach the young these words and any which are of a like

nature, if he should happen to find them, either in poetry or prose, or if he come across unwritten discourses akin to ours, he should certainly preserve them, and commit them to writing. And, first of all, he shall constrain the teachers themselves to learn and approve them, and any of them who will not, shall not be employed by him, but those whom he finds agreeing in his judgment, he shall make use of and shall commit to them the instruction and education of youth. And here and on this wise let my fanciful tale about letters and teachers of letters come to an end.

CLEINIAS: I do not think, Stranger, that we have wandered out of the proposed limits of the argument; but whether we are right or not in our whole conception, I cannot be very certain.

ATHENIAN: The truth, Cleinias, may be expected to become clearer when, as we have often said, we arrive at the end of the whole discussion about laws.

CLEINIAS: Yes.

ATHENIAN: And now that we have done with the teacher of letters, the teacher of the lyre has to receive orders from us.

CLEINIAS: Certainly.

ATHENIAN: I think that we have only to recollect our previous discussions, and we shall be able to give suitable regulations touching all this part of instruction and education to the teachers of the lyre.

CLEINIAS: To what do you refer?

ATHENIAN: We were saying, if I remember rightly, that the sixty years old choristers of Dionysus were to be specially quick in their perceptions of rhythm and musical composition, that they might be able to distinguish good and bad imitation, that is to say, the imitation of the good or bad soul when under the influence of passion, rejecting the one and displaying the other in hymns and songs, charming the souls of youth, and inviting them to follow and attain virtue by the way of imitation.

CLEINIAS: Very true.

ATHENIAN: And with this view the teacher and the learner ought to use the sounds of the lyre, because its notes are pure, the player who teaches and his pupil rendering note for note in unison; but complexity, and variation of notes, when the strings give one sound and the poet or composer of the melody gives another—also when they make concords and harmonies in which lesser and greater intervals, slow and quick, or high and low notes, are combined—or, again, when they make complex variations of rhythms, which they adapt to the notes of the lyre—all that sort of thing is not suited to those who have to acquire speedy and useful knowledge of music in three years; for opposite principles are confusing, and create a difficulty in learning, and our young men should learn quickly, and their mere necessary acquirements are not few or trifling, as will be shown in due course. Let the director of education attend to the principles concerning music which we are laying down. As to the songs and words themselves which the masters of choruses are to teach and the character of them, they have been already described by us, and are the same which, when consecrated and

adapted to the different festivals, we said were to benefit cities by affording them an innocent amusement.

CLEINIAS: That, again, is true.

ATHENIAN: Then let him who has been elected a director of music receive these rules from us as containing the very truth; and may he prosper in his office! Let us now proceed to lay down other rules in addition to the preceding about dancing and gymnastic exercise in general. Having said what remained to be said about the teaching of music, let us speak in like manner about gymnastic. For boys and girls ought to learn to dance and practise gymnastic exercises—ought they not?

CLEINIAS: Yes.

ATHENIAN: Then the boys ought to have dancing masters, and the girls dancing mistresses to exercise them.

CLEINIAS: Very good.

ATHENIAN: Then once more let us summon him who has the chief concern in the business, the superintendent of youth [i.e. the director of education]; he will have plenty to do, if he is to have the charge of music and gymnastic.

CLEINIAS: But how will an old man be able to attend to such great charges?

ATHENIAN: O my friend, there will be no difficulty, for the law has already given and will give him permission to select as his assistants in this charge any citizens, male or female, whom he desires; and he will know whom he ought to choose, and will be anxious not to make a mistake, from a due sense of responsibility, and from a consciousness of the importance of his office, and also because he will consider that if young men have been and are well brought up, then all things go swimmingly, but if not, it is not meet to say, nor do we say, what will follow, lest the regarders of omens should take alarm about our infant state. Many things have been said by us about dancing and about gymnastic movements in general; for we include under gymnastics all military exercises, such as archery, and all hurling of weapons, and the use of the light shield, and all fighting with heavy arms, and military evolutions, and movements of armies, and encampings, and all that relates to horsemanship. Of all these things there ought to be public teachers, receiving pay from the state, and their pupils should be the men and boys in the state, and also the girls and women, who are to know all these things. While they are yet girls they should have practised dancing in arms and the whole art of fighting—when grown-up women, they should apply themselves to evolutions and tactics, and the mode of grounding and taking up arms; if for no other reason, yet in case the whole military force should have to leave the city and carry on operations of war outside, that those who will have to guard the young and the rest of the city may be equal to the task; and, on the other hand, when enemies, whether barbarian or Hellenic, come from without with mighty force and make a violent assault upon them, and thus compel them to fight for the possession of the city, which is far from being an impossibility, great would be the disgrace to the state, if the women had been so miserably trained that they could not fight for their young, as birds will, against any creature however strong,

and die or undergo any danger, but must instantly rush to the temples and crowd at the altars and shrines, and bring upon human nature the reproach, that of all animals man is the most cowardly!

CLEINIAS: Such a want of education, Stranger, is certainly an unseemly thing to happen in a state, as well as a great misfortune.

ATHENIAN: Suppose that we carry our law to the extent of saying that women ought not to neglect military matters, but that all citizens, male and female alike, shall attend to them?

CLEINIAS: I quite agree.

ATHENIAN: Of wrestling we have spoken in part, but of what I should call the most important part we have not spoken, and cannot easily speak without showing at the same time by gesture as well as in word what we mean; when word and action combine, and not till then, we shall explain clearly what has been said, pointing out that of all movements wrestling is most akin to the military art, and is to be pursued for the sake of this, and not this for the sake of wrestling.

CLEINIAS: Excellent. ATHENIAN: Enough of wrestling; we will now proceed to speak of other movements of the body. Such motion may be in general called dancing, and is of two kinds: one of nobler figures, imitating the honourable, the other of the more ignoble figures, imitating the mean; and of both these there are two further subdivisions. Of the serious, one kind is of those engaged in war and vehement action, and is the exercise of a noble person and a manly heart; the other exhibits a temperate soul in the enjoyment of prosperity and modest pleasures, and may be truly called and is the dance of peace. The warrior dance is different from the peaceful one, and may be rightly termed Pyrrhic; this imitates the modes of avoiding blows and missiles by dropping or giving way, or springing aside, or rising up or falling down; also the opposite postures which are those of action, as, for example, the imitation of archery and the hurling of javelins, and of all sorts of blows. And when the imitation is of brave bodies and souls, and the action is direct and muscular, giving for the most part a straight movement to the limbs of the body—that, I say, is the true sort; but the opposite is not right. In the dance of peace what we have to consider is whether a man bears himself naturally and gracefully, and after the manner of men who duly conform to the law. But before proceeding I must distinguish the dancing about which there is any doubt, from that about which there is no doubt. Which is the doubtful kind, and how are the two to be distinguished? There are dances of the Bacchic sort, both those in which, as they say, they imitate drunken men, and which are named after the Nymphs, and Pan, and Silenuses, and Satyrs; and also those in which purifications are made or mysteries celebrated—all this sort of dancing cannot be rightly defined as having either a peaceful or a warlike character, or indeed as having any meaning whatever, and may, I think, be most truly described as distinct from the warlike dance, and distinct from the peaceful, and not suited for a city at all. There let it lie; and so leaving it to lie, we will proceed to the dances of war and peace, for with these we are undoubtedly concerned. Now the unwarlike muse, which honours in dance the Gods and the sons of the Gods, is entirely associated with the consciousness of prosperity; this class may be subdivided into two lesser classes, of which one is expressive of an escape from some labour or danger into good, and has greater pleasures, the other expressive of preservation and increase of former good, in which the pleasure is less exciting—in all these cases, every man when the pleasure is greater, moves his body more, and less when the pleasure is less; and, again, if he be more orderly and has learned courage from discipline he moves less, but if he be a coward, and has no training or

self-control, he makes greater and more violent movements, and in general when he is speaking or singing he is not altogether able to keep his body still; and so out of the imitation of words in gestures the whole art of dancing has arisen. And in these various kinds of imitation one man moves in an orderly, another in a disorderly manner; and as the ancients may be observed to have given many names which are according to nature and deserving of praise, so there is an excellent one which they have given to the dances of men who in their times of prosperity are moderate in their pleasures—the giver of names, whoever he was, assigned to them a very true, and poetical, and rational name, when he called them Emmeleiai, or dances of order, thus establishing two kinds of dances of the nobler sort, the dance of war which he called the Pyrrhic, and the dance of peace which he called Emmeleia, or the dance of order; giving to each their appropriate and becoming name. These things the legislator should indicate in general outline, and the guardian of the law should enquire into them and search them out, combining dancing with music, and assigning to the several sacrificial feasts that which is suitable to them; and when he has consecrated all of them in due order, he shall for the future change nothing, whether of dance or song. Thenceforward the city and the citizens shall continue to have the same pleasures, themselves being as far as possible alike, and shall live well and happily.

I have described the dances which are appropriate to noble bodies and generous souls. But it is necessary also to consider and know uncomely persons and thoughts, and those which are intended to produce laughter in comedy, and have a comic character in respect of style, song, and dance, and of the imitations which these afford. For serious things cannot be understood without laughable things, nor opposites at all without opposites, if a man is really to have intelligence of either; but he cannot carry out both in action, if he is to have any degree of virtue. And for this very reason he should learn them both, in order that he may not in ignorance do or say anything which is ridiculous and out of place—he should command slaves and hired strangers to imitate such things, but he should never take any serious interest in them himself, nor should any freeman or freewoman be discovered taking pains to learn them; and there should always be some element of novelty in the imitation. Let these then be laid down, both in law and in our discourse, as the regulations of laughable amusements which are generally called comedy. And, if any of the serious poets, as they are termed, who write tragedy, come to us and say—'O strangers, may we go to your city and country or may we not, and shall we bring with us our poetry—what is your will about these matters?'—how shall we answer the divine men? I think that our answer should be as follows: Best of strangers, we will say to them, we also according to our ability are tragic poets, and our tragedy is the best and noblest; for our whole state is an imitation of the best and noblest life, which we affirm to be indeed the very truth of tragedy. You are poets and we are poets, both makers of the same strains, rivals and antagonists in the noblest of dramas, which true law can alone perfect, as our hope is. Do not then suppose that we shall all in a moment allow you to erect your stage in the agora, or introduce the fair voices of your actors, speaking above our own, and permit you to harangue our women and children, and the common people, about our institutions, in language other than our own, and very often the opposite of our own. For a state would be mad which gave you this licence, until the magistrates had determined whether your poetry might be recited, and was fit for publication or not. Wherefore, O ye sons and scions of the softer Muses, first of all show your songs to the magistrates, and let them compare them with our own, and if they are the same or better we will give you a chorus; but if not, then, my friends, we cannot. Let these, then, be the customs ordained by law about all dances and the teaching of them, and let matters relating to slaves be separated from those relating to masters, if you do not object.

CLEINIAS: We can have no hesitation in assenting when you put the matter thus.

ATHENIAN: There still remain three studies suitable for freemen. Arithmetic is one of them; the measurement of length, surface, and depth is the second; and the third has to do with the revolutions of the stars in relation to one another. Not every one has need to toil through all these things in a strictly scientific manner, but only a few, and who they are to be we will hereafter indicate at the end, which will be the proper place; not to know what is necessary for mankind in general, and what is the truth, is disgraceful to every one: and yet to enter into these matters minutely is neither easy, nor at all possible for every one; but there is something in them which is necessary and cannot be set aside, and probably he who made the proverb about God originally had this in view when he said, that 'not even God himself can fight against necessity;' he meant, if I am not mistaken, divine necessity; for as to the human necessities of which the many speak, when they talk in this manner, nothing can be more ridiculous than such an application of the words.

CLEINIAS: And what necessities of knowledge are there, Stranger, which are divine and not human?

ATHENIAN: I conceive them to be those of which he who has no use nor any knowledge at all cannot be a God, or demi-god, or hero to mankind, or able to take any serious thought or charge of them. And very unlike a divine man would he be, who is unable to count one, two, three, or to distinguish odd and even numbers, or is unable to count at all, or reckon night and day, and who is totally unacquainted with the revolution of the sun and moon, and the other stars. There would be great folly in supposing that all these are not necessary parts of knowledge to him who intends to know anything about the highest kinds of knowledge; but which these are, and how many there are of them, and when they are to be learned, and what is to be learned together and what apart, and the whole correlation of them, must be rightly apprehended first; and these leading the way we may proceed to the other parts of knowledge. For so necessity grounded in nature constrains us, against which we say that no God contends, or ever will contend.

CLEINIAS: I think, Stranger, that what you have now said is very true and agreeable to nature.

ATHENIAN: Yes, Cleinias, that is so. But it is difficult for the legislator to begin with these studies; at a more convenient time we will make regulations for them.

CLEINIAS: You seem, Stranger, to be afraid of our habitual ignorance of the subject: there is no reason why that should prevent you from speaking out.

ATHENIAN: I certainly am afraid of the difficulties to which you allude, but I am still more afraid of those who apply themselves to this sort of knowledge, and apply themselves badly. For entire ignorance is not so terrible or extreme an evil, and is far from being the greatest of all; too much cleverness and too much learning, accompanied with an ill bringing up, are far more fatal.

CLEINIAS: True.

ATHENIAN: All freemen I conceive, should learn as much of these branches of knowledge as every child in Egypt is taught when he learns the alphabet. In that country arithmetical games have been invented for the use of mere children, which they learn as a pleasure and amusement. They have to

distribute apples and garlands, using the same number sometimes for a larger and sometimes for a lesser number of persons; and they arrange pugilists and wrestlers as they pair together by lot or remain over, and show how their turns come in natural order. Another mode of amusing them is to distribute vessels, sometimes of gold, brass, silver, and the like, intermixed with one another, sometimes of one metal only; as I was saying they adapt to their amusement the numbers in common use, and in this way make more intelligible to their pupils the arrangements and movements of armies and expeditions, and in the management of a household they make people more useful to themselves, and more wide awake; and again in measurements of things which have length, and breadth, and depth, they free us from that natural ignorance of all these things which is so ludicrous and disgraceful.

CLEINIAS: What kind of ignorance do you mean?

ATHENIAN: O my dear Cleinias, I, like yourself, have late in life heard with amazement of our ignorance in these matters; to me we appear to be more like pigs than men, and I am quite ashamed, not only of myself, but of all Hellenes.

CLEINIAS: About what? Say, Stranger, what you mean.

ATHENIAN: I will; or rather I will show you my meaning by a question, and do you please to answer me: You know, I suppose, what length is?

CLEINIAS: Certainly.

ATHENIAN: And what breadth is?

CLEINIAS: To be sure.

ATHENIAN: And you know that these are two distinct things, and that there is a third thing called depth?

CLEINIAS: Of course.

ATHENIAN: And do not all these seem to you to be commensurable with themselves?

CLEINIAS: Yes.

ATHENIAN: That is to say, length is naturally commensurable with length, and breadth with breadth, and depth in like manner with depth?

CLEINIAS: Undoubtedly.

ATHENIAN: But if some things are commensurable and others wholly incommensurable, and you think that all things are commensurable, what is your position in regard to them?

CLEINIAS: Clearly, far from good.

ATHENIAN: Concerning length and breadth when compared with depth, or breadth and length when compared with one another, are not all the Hellenes agreed that these are commensurable with one another in some way?

CLEINIAS: Quite true.

ATHENIAN: But if they are absolutely incommensurable, and yet all of us regard them as commensurable, have we not reason to be ashamed of our compatriots; and might we not say to them: O ye best of Hellenes, is not this one of the things of which we were saying that not to know them is disgraceful, and of which to have a bare knowledge only is no great distinction?

CLEINIAS: Certainly.

ATHENIAN: And there are other things akin to these, in which there spring up other errors of the same family.

CLEINIAS: What are they?

ATHENIAN: The natures of commensurable and incommensurable quantities in their relation to one another. A man who is good for anything ought to be able, when he thinks, to distinguish them; and different persons should compete with one another in asking questions, which will be a far better and more graceful way of passing their time than the old man's game of draughts.

CLEINIAS: I dare say; and these pastimes are not so very unlike a game of draughts.

ATHENIAN: And these, as I maintain, Cleinias, are the studies which our youth ought to learn, for they are innocent and not difficult; the learning of them will be an amusement, and they will benefit the state. If any one is of another mind, let him say what he has to say.

CLEINIAS: Certainly.

ATHENIAN: Then if these studies are such as we maintain, we will include them; if not, they shall be excluded.

CLEINIAS: Assuredly: but may we not now, Stranger, prescribe these studies as necessary, and so fill up the lacunae of our laws?

ATHENIAN: They shall be regarded as pledges which may be hereafter redeemed and removed from our state, if they do not please either us who give them, or you who accept them.

CLEINIAS: A fair condition.

ATHENIAN: Next let us see whether we are or are not willing that the study of astronomy shall be proposed for our youth.

CLEINIAS: Proceed.

ATHENIAN: Here occurs a strange phenomenon, which certainly cannot in any point of view be tolerated.

CLEINIAS: To what are you referring?

ATHENIAN: Men say that we ought not to enquire into the supreme God and the nature of the universe, nor busy ourselves in searching out the causes of things, and that such enquiries are impious; whereas the very opposite is the truth.

CLEINIAS: What do you mean?

ATHENIAN: Perhaps what I am saying may seem paradoxical, and at variance with the usual language of age. But when any one has any good and true notion which is for the advantage of the state and in every way acceptable to God, he cannot abstain from expressing it.

CLEINIAS: Your words are reasonable enough; but shall we find any good or true notion about the stars?

ATHENIAN: My good friends, at this hour all of us Hellenes tell lies, if I may use such an expression, about those great Gods, the Sun and the Moon.

CLEINIAS: Lies of what nature?

ATHENIAN: We say that they and divers other stars do not keep the same path, and we call them planets or wanderers.

CLEINIAS: Very true, Stranger; and in the course of my life I have often myself seen the morning star and the evening star and divers others not moving in their accustomed course, but wandering out of their path in all manner of ways, and I have seen the sun and moon doing what we all know that they do.

ATHENIAN: Just so, Megillus and Cleinias; and I maintain that our citizens and our youth ought to learn about the nature of the Gods in heaven, so far as to be able to offer sacrifices and pray to them in pious language, and not to blaspheme about them.

CLEINIAS: There you are right, if such a knowledge be only attainable; and if we are wrong in our mode of speaking now, and can be better instructed and learn to use better language, then I quite agree with you that such a degree of knowledge as will enable us to speak rightly should be acquired by us. And now do you try to explain to us your whole meaning, and we, on our part, will endeavour to understand you.

ATHENIAN: There is some difficulty in understanding my meaning, but not a very great one, nor will any great length of time be required. And of this I am myself a proof; for I did not know these things long ago, nor in the days of my youth, and yet I can explain them to you in a brief space of time; whereas if they had been difficult I could certainly never have explained them all, old as I am, to old men like yourselves.

CLEINIAS: True; but what is this study which you describe as wonderful and fitting for youth to learn, but of which we are ignorant? Try and explain the nature of it to us as clearly as you can.

ATHENIAN: I will. For, O my good friends, that other doctrine about the wandering of the sun and the moon and the other stars is not the truth, but the very reverse of the truth. Each of them moves in the same path—not in many paths, but in one only, which is circular, and the varieties are only apparent. Nor are we right in supposing that the swiftest of them is the slowest, nor conversely, that the slowest is the quickest. And if what I say is true, only just imagine that we had a similar notion about horses running at Olympia, or about men who ran in the long course, and that we addressed the swiftest as the slowest and the slowest as the swiftest, and sang the praises of the vanquished as though he were the victor—in that case our praises would not be true, nor very agreeable to the runners, though they be but men; and now, to commit the same error about the Gods which would have been ludicrous and erroneous in the case of men—is not that ludicrous and erroneous?

CLEINIAS: Worse than ludicrous, I should say.

ATHENIAN: At all events, the Gods cannot like us to be spreading a false report of them.

CLEINIAS: Most true, if such is the fact.

ATHENIAN: And if we can show that such is really the fact, then all these matters ought to be learned so far as is necessary for the avoidance of impiety; but if we cannot, they may be let alone, and let this be our decision.

CLEINIAS: Very good.

ATHENIAN: Enough of laws relating to education and learning. But hunting and similar pursuits in like manner claim our attention. For the legislator appears to have a duty imposed upon him which goes beyond mere legislation. There is something over and above law which lies in a region between admonition and law, and has several times occurred to us in the course of discussion; for example, in the education of very young children there were things, as we maintain, which are not to be defined, and to regard them as matters of positive law is a great absurdity. Now, our laws and the whole constitution of our state having been thus delineated, the praise of the virtuous citizen is not complete when he is described as the person who serves the laws best and obeys them most, but the higher form of praise is that which describes him as the good citizen who passes through life undefiled and is obedient to the words of the legislator, both when he is giving laws and when he assigns praise and blame. This is the truest word that can be spoken in praise of a citizen; and the true legislator ought not only to write his laws, but also to interweave with them all such things as seem to him honourable and dishonourable. And the perfect citizen ought to seek to strengthen these no less than the principles of law which are sanctioned by punishments. I will adduce an example which will clear up my meaning, and will be a sort of witness to my words. Hunting is of wide extent, and has a name under which many things are included, for there is a hunting of creatures in the water, and of creatures in the air, and there is a great deal of hunting of land animals of all kinds, and not of wild beasts only. The hunting after man is also worthy of consideration; there is the hunting after him in war, and there is often a hunting after him in the way of friendship, which is praised and also blamed; and there is thieving, and the hunting which is practised by robbers, and that of armies against

armies. Now the legislator, in laying down laws about hunting, can neither abstain from noting these things, nor can he make threatening ordinances which will assign rules and penalties about all of them. What is he to do? He will have to praise and blame hunting with a view to the exercise and pursuits of youth. And, on the other hand, the young man must listen obediently; neither pleasure nor pain should hinder him, and he should regard as his standard of action the praises and injunctions of the legislator rather than the punishments which he imposes by law. This being premised, there will follow next in order moderate praise and censure of hunting; the praise being assigned to that kind which will make the souls of young men better, and the censure to that which has the opposite effect. And now let us address young men in the form of a prayer for their welfare: O friends, we will say to them, may no desire or love of hunting in the sea, or of angling or of catching the creatures in the waters, ever take possession of you, either when you are awake or when you are asleep, by hook or with weels, which latter is a very lazy contrivance; and let not any desire of catching men and of piracy by sea enter into your souls and make you cruel and lawless hunters. And as to the desire of thieving in town or country, may it never enter into your most passing thoughts; nor let the insidious fancy of catching birds, which is hardly worthy of freemen, come into the head of any youth. There remains therefore for our athletes only the hunting and catching of land animals, of which the one sort is called hunting by night, in which the hunters sleep in turn and are lazy; this is not to be commended any more than that which has intervals of rest, in which the wild strength of beasts is subdued by nets and snares, and not by the victory of a laborious spirit. Thus, only the best kind of hunting is allowed at all—that of quadrupeds, which is carried on with horses and dogs and men's own persons, and they get the victory over the animals by running them down and striking them and hurling at them, those who have a care of godlike manhood taking them with their own hands. The praise and blame which is assigned to all these things has now been declared; and let the law be as follows: Let no one hinder these who verily are sacred hunters from following the chase wherever and whithersoever they will; but the hunter by night, who trusts to his nets and gins, shall not be allowed to hunt anywhere. The fowler in the mountains and waste places shall be permitted, but on cultivated ground and on consecrated wilds he shall not be permitted; and any one who meets him may stop him. As to the hunter in waters, he may hunt anywhere except in harbours or sacred streams or marshes or pools, provided only that he do not pollute the water with poisonous juices. And now we may say that all our enactments about education are complete.

CLEINIAS: Very good.

BOOK VIII.

ATHENIAN: Next, with the help of the Delphian oracle, we have to institute festivals and make laws about them, and to determine what sacrifices will be for the good of the city, and to what Gods they shall be offered; but when they shall be offered, and how often, may be partly regulated by us.

CLEINIAS: The number—yes.

ATHENIAN: Then we will first determine the number; and let the whole number be 365—one for every day—so that one magistrate at least will sacrifice daily to some God or demi-god on behalf of the city, and the citizens, and their possessions. And the interpreters, and priests, and priestesses, and prophets shall meet, and, in company with the guardians of the law, ordain those things which the legislator of necessity omits; and I may remark that they are the very persons who ought to take note of what is omitted. The law will say that there are twelve feasts dedicated to the twelve Gods, after whom the several tribes are named; and that to each of them they shall sacrifice every month, and appoint choruses, and musical and gymnastic contests, assigning them so as to suit the Gods and seasons of the year. And they shall have festivals for women, distinguishing those which ought to be separated from the men's festivals, and those which ought not. Further, they shall not confuse the infernal deities and their rites with the Gods who are termed heavenly and their rites, but shall separate them, giving to Pluto his own in the twelfth month, which is sacred to him, according to the law. To such a deity warlike men should entertain no aversion, but they should honour him as being always the best friend of man. For the connexion of soul and body is no way better than the dissolution of them, as I am ready to maintain quite seriously. Moreover, those who would regulate these matters rightly should consider, that our city among existing cities has no fellow, either in respect of leisure or command of the necessaries of life, and that like an individual she ought to live happily. And those who would live happily should in the first place do no wrong to one another, and ought not themselves to be wronged by others; to attain the first is not difficult, but there is great difficulty in acquiring the power of not being wronged. No man can be perfectly secure against wrong, unless he has become perfectly good; and cities are like individuals in this, for a city if good has a life of peace, but if evil, a life of war within and without. Wherefore the citizens ought to practise war—not in time of war, but rather while they are at peace. And every city which has any sense, should take the field at least for one day in every month, and for more if the magistrates think fit, having no regard to winter cold or summer heat; and they should go out en masse, including their wives and their children, when the magistrates determine to lead forth the whole people, or in separate portions when summoned by them; and they should always provide that there should be games and sacrificial feasts, and they should have tournaments, imitating in as lively a manner as they can real battles. And they should distribute prizes of victory and valour to the competitors, passing censures and encomiums on one another according to the characters which they bear in the contests and in their whole life, honouring him who seems to be the best, and blaming him who is the opposite. And let poets celebrate the victors—not however every poet, but only one who in the first place is not less than fifty years of age; nor should he be one who, although he may have musical and poetical gifts, has never in his life done any noble or illustrious action; but those who are themselves good and also honourable in the state, creators of noble actions—let their poems be sung, even though they be not very musical. And let the judgment of them rest with the instructor of youth and the other guardians of the laws, who shall give them this privilege, and they alone shall be free to sing; but the rest of the world shall not have this liberty. Nor shall any one dare to sing a song which has not been approved by the judgment of the guardians of the laws, not even if his strain be sweeter than the songs of Thamyras and Orpheus; but only such poems as have been judged sacred and dedicated to the Gods, and such as are the works of good men, in which praise or blame has been awarded and which have been deemed to fulfil their design fairly.

The regulations about war, and about liberty of speech in poetry, ought to apply equally to men and women. The legislator may be supposed to argue the question in his own mind: Who are my citizens for whom I have set in order the city? Are they not competitors in the greatest of all contests, and

have they not innumerable rivals? To be sure, will be the natural reply. Well, but if we were training boxers, or pancratiasts, or any other sort of athletes, would they never meet until the hour of contest arrived; and should we do nothing to prepare ourselves previously by daily practice? Surely, if we were boxers, we should have been learning to fight for many days before, and exercising ourselves in imitating all those blows and wards which we were intending to use in the hour of conflict; and in order that we might come as near to reality as possible, instead of cestuses we should put on boxing-gloves, that the blows and the wards might be practised by us to the utmost of our power. And if there were a lack of competitors, the ridicule of fools would not deter us from hanging up a lifeless image and practising at that. Or if we had no adversary at all, animate or inanimate, should we not venture in the dearth of antagonists to spar by ourselves? In what other manner could we ever study the art of self-defence?

CLEINIAS: The way which you mention, Stranger, would be the only way.

ATHENIAN: And shall the warriors of our city, who are destined when occasion calls to enter the greatest of all contests, and to fight for their lives, and their children, and their property, and the whole city, be worse prepared than boxers? And will the legislator, because he is afraid that their practising with one another may appear to some ridiculous, abstain from commanding them to go out and fight; will he not ordain that soldiers shall perform lesser exercises without arms every day, making dancing and all gymnastic tend to this end; and also will he not require that they shall practise some gymnastic exercises, greater as well as lesser, as often as every month; and that they shall have contests one with another in every part of the country, seizing upon posts and lying in ambush, and imitating in every respect the reality of war; fighting with boxing-gloves and hurling javelins, and using weapons somewhat dangerous, and as nearly as possible like the true ones, in order that the sport may not be altogether without fear, but may have terrors and to a certain degree show the man who has and who has not courage; and that the honour and dishonour which are assigned to them respectively, may prepare the whole city for the true conflict of life? If any one dies in these mimic contests, the homicide is involuntary, and we will make the slayer, when he has been purified according to law, to be pure of blood, considering that if a few men should die, others as good as they will be born; but that if fear is dead, then the citizens will never find a test of superior and inferior natures, which is a far greater evil to the state than the loss of a few.

CLEINIAS: We are quite agreed, Stranger, that we should legislate about such things, and that the whole state should practise them.

ATHENIAN: And what is the reason that dances and contests of this sort hardly ever exist in states, at least not to any extent worth speaking of? Is this due to the ignorance of mankind and their legislators?

CLEINIAS: Perhaps.

ATHENIAN: Certainly not, sweet Cleinias; there are two causes, which are quite enough to account for the deficiency.

CLEINIAS: What are they?

ATHENIAN: One cause is the love of wealth, which wholly absorbs men, and never for a moment allows them to think of anything but their own private possessions; on this the soul of every citizen hangs suspended, and can attend to nothing but his daily gain; mankind are ready to learn any branch of knowledge, and to follow any pursuit which tends to this end, and they laugh at every other: that is one reason why a city will not be in earnest about such contests or any other good and honourable pursuit. But from an insatiable love of gold and silver, every man will stoop to any art or contrivance, seemly or unseemly, in the hope of becoming rich; and will make no objection to performing any action, holy, or unholy and utterly base; if only like a beast he have the power of eating and drinking all kinds of things, and procuring for himself in every sort of way the gratification of his lusts.

CLEINIAS: True.

ATHENIAN: Let this, then, be deemed one of the causes which prevent states from pursuing in an efficient manner the art of war, or any other noble aim, but makes the orderly and temperate part of mankind into merchants, and captains of ships, and servants, and converts the valiant sort into thieves and burglars, and robbers of temples, and violent, tyrannical persons; many of whom are not without ability, but they are unfortunate.

CLEINIAS: What do you mean?

ATHENIAN: Must not they be truly unfortunate whose souls are compelled to pass through life always hungering?

CLEINIAS: Then that is one cause, Stranger; but you spoke of another.

ATHENIAN: Thank you for reminding me.

CLEINIAS: The insatiable lifelong love of wealth, as you were saying, is one cause which absorbs mankind, and prevents them from rightly practising the arts of war: Granted; and now tell me, what is the other?

ATHENIAN: Do you imagine that I delay because I am in a perplexity?

CLEINIAS: No; but we think that you are too severe upon the money-loving temper, of which you seem in the present discussion to have a peculiar dislike.

ATHENIAN: That is a very fair rebuke, Cleinias; and I will now proceed to the second cause.

CLEINIAS: Proceed.

ATHENIAN: I say that governments are a cause—democracy, oligarchy, tyranny, concerning which I have often spoken in the previous discourse; or rather governments they are not, for none of them exercises a voluntary rule over voluntary subjects; but they may be truly called states of discord, in which while the government is voluntary, the subjects always obey against their will, and have to be coerced; and the ruler fears the subject, and will not, if he can help, allow him to become either noble,

or rich, or strong, or valiant, or warlike at all. These two are the chief causes of almost all evils, and of the evils of which I have been speaking they are notably the causes. But our state has escaped both of them; for her citizens have the greatest leisure, and they are not subject to one another, and will, I think, be made by these laws the reverse of lovers of money. Such a constitution may be reasonably supposed to be the only one existing which will accept the education which we have described, and the martial pastimes which have been perfected according to our idea.

CLEINIAS: True.

ATHENIAN: Then next we must remember, about all gymnastic contests, that only the warlike sort of them are to be practised and to have prizes of victory; and those which are not military are to be given up. The military sort had better be completely described and established by law; and first, let us speak of running and swiftness.

CLEINIAS: Very good.

ATHENIAN: Certainly the most military of all qualities is general activity of body, whether of foot or hand. For escaping or for capturing an enemy, quickness of foot is required; but hand-to-hand conflict and combat need vigour and strength.

CLEINIAS: Very true.

ATHENIAN: Neither of them can attain their greatest efficiency without arms.

CLEINIAS: How can they?

ATHENIAN: Then our herald, in accordance with the prevailing practice, will first summon the runner—he will appear armed, for to an unarmed competitor we will not give a prize. And he shall enter first who is to run the single course bearing arms; next, he who is to run the double course; third, he who is to run the horse-course; and fourthly, he who is to run the long course; the fifth whom we start, shall be the first sent forth in heavy armour, and shall run a course of sixty stadia to some temple of Ares—and we will send forth another, whom we will style the more heavily armed, to run over smoother ground. There remains the archer; and he shall run in the full equipments of an archer a distance of 100 stadia over mountains, and across every sort of country, to a temple of Apollo and Artemis; this shall be the order of the contest, and we will wait for them until they return, and will give a prize to the conqueror in each.

CLEINIAS: Very good.

ATHENIAN: Let us suppose that there are three kinds of contests—one of boys, another of beardless youths, and a third of men. For the youths we will fix the length of the contest at two-thirds, and for the boys at half of the entire course, whether they contend as archers or as heavy-armed. Touching the women, let the girls who are not grown up compete naked in the stadium and the double course, and the horse-course and the long course, and let them run on the race-ground itself; those who are thirteen years of age and upwards until their marriage shall continue to share in contests if they are not more than twenty, and shall be compelled to run up to eighteen; and they shall descend into the

arena in suitable dresses. Let these be the regulations about contests in running both for men and women.

Respecting contests of strength, instead of wrestling and similar contests of the heavier sort, we will institute conflicts in armour of one against one, and two against two, and so on up to ten against ten. As to what a man ought not to suffer or do, and to what extent, in order to gain the victory—as in wrestling, the masters of the art have laid down what is fair and what is not fair, so in fighting in armour—we ought to call in skilful persons, who shall judge for us and be our assessors in the work of legislation; they shall say who deserves to be victor in combats of this sort, and what he is not to do or have done to him, and in like manner what rule determines who is defeated; and let these ordinances apply to women until they are married as well as to men. The pancration shall have a counterpart in a combat of the light-armed; they shall contend with bows and with light shields and with javelins and in the throwing of stones by slings and by hand: and laws shall be made about it, and rewards and prizes given to him who best fulfils the ordinances of the law.

Next in order we shall have to legislate about the horse contests. Now we do not need many horses, for they cannot be of much use in a country like Crete, and hence we naturally do not take great pains about the rearing of them or about horse races. There is no one who keeps a chariot among us, and any rivalry in such matters would be altogether out of place; there would be no sense nor any shadow of sense in instituting contests which are not after the manner of our country. And therefore we give our prizes for single horses—for colts who have not yet cast their teeth, and for those who are intermediate, and for the full-grown horses themselves; and thus our equestrian games will accord with the nature of the country. Let them have conflict and rivalry in these matters in accordance with the law, and let the colonels and generals of horse decide together about all courses and about the armed competitors in them. But we have nothing to say to the unarmed either in gymnastic exercises or in these contests. On the other hand, the Cretan bowman or javelin-man who fights in armour on horseback is useful, and therefore we may as well place a competition of this sort among our amusements. Women are not to be forced to compete by laws and ordinances; but if from previous training they have acquired the habit and are strong enough and like to take part, let them do so, girls as well as boys, and no blame to them.

Thus the competition in gymnastic and the mode of learning it have been described; and we have spoken also of the toils of the contest, and of daily exercises under the superintendence of masters. Likewise, what relates to music has been, for the most part, completed. But as to rhapsodes and the like, and the contests of choruses which are to perform at feasts, all this shall be arranged when the months and days and years have been appointed for Gods and demi-gods, whether every third year, or again every fifth year, or in whatever way or manner the Gods may put into men's minds the distribution and order of them. At the same time, we may expect that the musical contests will be celebrated in their turn by the command of the judges and the director of education and the guardians of the law meeting together for this purpose, and themselves becoming legislators of the times and nature and conditions of the choral contests and of dancing in general. What they ought severally to be in language and song, and in the admixture of harmony with rhythm and the dance, has been often declared by the original legislator; and his successors ought to follow him, making the games and sacrifices duly to correspond at fitting times, and appointing public festivals. It is not difficult to determine how these and the like matters may have a regular order; nor, again, will the alteration of them do any great good or harm to the state. There is, however, another matter of great importance

and difficulty, concerning which God should legislate, if there were any possibility of obtaining from Him an ordinance about it. But seeing that divine aid is not to be had, there appears to be a need of some bold man who specially honours plainness of speech, and will say outright what he thinks best for the city and citizens—ordaining what is good and convenient for the whole state amid the corruptions of human souls, opposing the mightiest lusts, and having no man his helper but himself standing alone and following reason only.

CLEINIAS: What is this, Stranger, that you are saying? For we do not as yet understand your meaning.

ATHENIAN: Very likely; I will endeavour to explain myself more clearly. When I came to the subject of education, I beheld young men and maidens holding friendly intercourse with one another. And there naturally arose in my mind a sort of apprehension—I could not help thinking how one is to deal with a city in which youths and maidens are well nurtured, and have nothing to do, and are not undergoing the excessive and servile toils which extinguish wantonness, and whose only cares during their whole life are sacrifices and festivals and dances. How, in such a state as this, will they abstain from desires which thrust many a man and woman into perdition; and from which reason, assuming the functions of law, commands them to abstain? The ordinances already made may possibly get the better of most of these desires; the prohibition of excessive wealth is a very considerable gain in the direction of temperance, and the whole education of our youth imposes a law of moderation on them; moreover, the eye of the rulers is required always to watch over the young, and never to lose sight of them; and these provisions do, as far as human means can effect anything, exercise a regulating influence upon the desires in general. But how can we take precautions against the unnatural loves of either sex, from which innumerable evils have come upon individuals and cities? How shall we devise a remedy and way of escape out of so great a danger? Truly, Cleinias, here is a difficulty. In many ways Crete and Lacedaemon furnish a great help to those who make peculiar laws; but in the matter of love, as we are alone, I must confess that they are quite against us. For if any one following nature should lay down the law which existed before the days of Laius, and denounce these lusts as contrary to nature, adducing the animals as a proof that such unions were monstrous, he might prove his point, but he would be wholly at variance with the custom of your states. Further, they are repugnant to a principle which we say that a legislator should always observe; for we are always enquiring which of our enactments tends to virtue and which not. And suppose we grant that these loves are accounted by law to the honourable, or at least not disgraceful, in what degree will they contribute to virtue? Will such passions implant in the soul of him who is seduced the habit of courage, or in the soul of the seducer the principle of temperance? Who will ever believe this? or rather, who will not blame the effeminacy of him who yields to pleasures and is unable to hold out against them? Will not all men censure as womanly him who imitates the woman? And who would ever think of establishing such a practice by law? certainly no one who had in his mind the image of true law. How can we prove that what I am saying is true? He who would rightly consider these matters must see the nature of friendship and desire, and of these so-called loves, for they are of two kinds, and out of the two arises a third kind, having the same name; and this similarity of name causes all the difficulty and obscurity.

CLEINIAS: How is that?

ATHENIAN: Dear is the like in virtue to the like, and the equal to the equal; dear also, though unlike, is he who has abundance to him who is in want. And when either of these friendships becomes excessive, we term the excess love.

CLEINIAS: Very true.

ATHENIAN: The friendship which arises from contraries is horrible and coarse, and has often no tie of communion; but that which arises from likeness is gentle, and has a tie of communion which lasts through life. As to the mixed sort which is made up of them both, there is, first of all, a difficulty in determining what he who is possessed by this third love desires; moreover, he is drawn different ways, and is in doubt between the two principles; the one exhorting him to enjoy the beauty of youth, and the other forbidding him. For the one is a lover of the body, and hungers after beauty, like ripe fruit, and would fain satisfy himself without any regard to the character of the beloved; the other holds the desire of the body to be a secondary matter, and looking rather than loving and with his soul desiring the soul of the other in a becoming manner, regards the satisfaction of the bodily love as wantonness; he reverences and respects temperance and courage and magnanimity and wisdom, and wishes to live chastely with the chaste object of his affection. Now the sort of love which is made up of the other two is that which we have described as the third. Seeing then that there are these three sorts of love, ought the law to prohibit and forbid them all to exist among us? Is it not rather clear that we should wish to have in the state the love which is of virtue and which desires the beloved youth to be the best possible; and the other two, if possible, we should hinder? What do you say, friend Megillus?

MEGILLUS: I think, Stranger, that you are perfectly right in what you have been now saying.

Athenian: I knew well, my friend, that I should obtain your assent, which I accept, and therefore have no need to analyze your custom any further. Cleinias shall be prevailed upon to give me his assent at some other time. Enough of this; and now let us proceed to the laws.

MEGILLUS: Very good.

ATHENIAN: Upon reflection I see a way of imposing the law, which, in one respect, is easy, but, in another, is of the utmost difficulty.

MEGILLUS: What do you mean?

ATHENIAN: We are all aware that most men, in spite of their lawless natures, are very strictly and precisely restrained from intercourse with the fair, and this is not at all against their will, but entirely with their will.

MEGILLUS: When do you mean?

ATHENIAN: When any one has a brother or sister who is fair; and about a son or daughter the same unwritten law holds, and is a most perfect safeguard, so that no open or secret connexion ever takes place between them. Nor does the thought of such a thing ever enter at all into the minds of most of them.

MEGILLUS: Very true.

ATHENIAN: Does not a little word extinguish all pleasures of that sort?

MEGILLUS: What word?

ATHENIAN: The declaration that they are unholy, hated of God, and most infamous; and is not the reason of this that no one has ever said the opposite, but every one from his earliest childhood has heard men speaking in the same manner about them always and everywhere, whether in comedy or in the graver language of tragedy? When the poet introduces on the stage a Thyestes or an Oedipus, or a Macareus having secret intercourse with his sister, he represents him, when found out, ready to kill himself as the penalty of his sin.

MEGILLUS: You are very right in saying that tradition, if no breath of opposition ever assails it, has a marvellous power.

ATHENIAN: Am I not also right in saying that the legislator who wants to master any of the passions which master man may easily know how to subdue them? He will consecrate the tradition of their evil character among all, slaves and freemen, women and children, throughout the city: that will be the surest foundation of the law which he can make.

MEGILLUS: Yes; but will he ever succeed in making all mankind use the same language about them?

ATHENIAN: A good objection; but was I not just now saying that I had a way to make men use natural love and abstain from unnatural, not intentionally destroying the seeds of human increase, or sowing them in stony places, in which they will take no root; and that I would command them to abstain too from any female field of increase in which that which is sown is not likely to grow? Now if a law to this effect could only be made perpetual, and gain an authority such as already prevents intercourse of parents and children—such a law, extending to other sensual desires, and conquering them, would be the source of ten thousand blessings. For, in the first place, moderation is the appointment of nature, and deters men from all frenzy and madness of love, and from all adulteries and immoderate use of meats and drinks, and makes them good friends to their own wives. And innumerable other benefits would result if such a law could only be enforced. I can imagine some lusty youth who is standing by, and who, on hearing this enactment, declares in scurrilous terms that we are making foolish and impossible laws, and fills the world with his outcry. And therefore I said that I knew a way of enacting and perpetuating such a law, which was very easy in one respect, but in another most difficult. There is no difficulty in seeing that such a law is possible, and in what way; for, as I was saying, the ordinance once consecrated would master the soul of every man, and terrify him into obedience. But matters have now come to such a pass that even then the desired result seems as if it could not be attained, just as the continuance of an entire state in the practice of common meals is also deemed impossible. And although this latter is partly disproven by the fact of their existence among you, still even in your cities the common meals of women would be regarded as unnatural and impossible. I was thinking of the rebelliousness of the human heart when I said that the permanent establishment of these things is very difficult.

MEGILLUS: Very true.

ATHENIAN: Shall I try and find some sort of persuasive argument which will prove to you that such enactments are possible, and not beyond human nature?

CLEINIAS: By all means.

ATHENIAN: Is a man more likely to abstain from the pleasures of love and to do what he is bidden about them, when his body is in a good condition, or when he is in an ill condition, and out of training?

CLEINIAS: He will be far more temperate when he is in training.

ATHENIAN: And have we not heard of Iccus of Tarentum, who, with a view to the Olympic and other contests, in his zeal for his art, and also because he was of a manly and temperate disposition, never had any connexion with a woman or a youth during the whole time of his training? And the same is said of Crison and Astylus and Diopompus and many others; and yet, Cleinias, they were far worse educated in their minds than your and my citizens, and in their bodies far more lusty.

CLEINIAS: No doubt this fact has been often affirmed positively by the ancients of these athletes.

ATHENIAN: And had they the courage to abstain from what is ordinarily deemed a pleasure for the sake of a victory in wrestling, running, and the like; and shall our young men be incapable of a similar endurance for the sake of a much nobler victory, which is the noblest of all, as from their youth upwards we will tell them, charming them, as we hope, into the belief of this by tales and sayings and songs?

CLEINIAS: Of what victory are you speaking?

ATHENIAN: Of the victory over pleasure, which if they win, they will live happily; or if they are conquered, the reverse of happily. And, further, may we not suppose that the fear of impiety will enable them to master that which other inferior people have mastered?

CLEINIAS: I dare say.

ATHENIAN: And since we have reached this point in our legislation, and have fallen into a difficulty by reason of the vices of mankind, I affirm that our ordinance should simply run in the following terms: Our citizens ought not to fall below the nature of birds and beasts in general, who are born in great multitudes, and yet remain until the age for procreation virgin and unmarried, but when they have reached the proper time of life are coupled, male and female, and lovingly pair together, and live the rest of their lives in holiness and innocence, abiding firmly in their original compact: surely, we will say to them, you should be better than the animals. But if they are corrupted by the other Hellenes and the common practice of barbarians, and they see with their eyes and hear with their ears of the so-called free love everywhere prevailing among them, and they themselves are not able to get the better of the temptation, the guardians of the law, exercising the functions of lawgivers, shall devise a second law against them.

CLEINIAS: And what law would you advise them to pass if this one failed?

ATHENIAN: Clearly, Cleinias, the one which would naturally follow.

CLEINIAS: What is that?

ATHENIAN: Our citizens should not allow pleasures to strengthen with indulgence, but should by toil divert the aliment and exuberance of them into other parts of the body; and this will happen if no immodesty be allowed in the practice of love. Then they will be ashamed of frequent intercourse, and they will find pleasure, if seldom enjoyed, to be a less imperious mistress. They should not be found out doing anything of the sort. Concealment shall be honourable, and sanctioned by custom and made law by unwritten prescription; on the other hand, to be detected shall be esteemed dishonourable, but not, to abstain wholly. In this way there will be a second legal standard of honourable and dishonourable, involving a second notion of right. Three principles will comprehend all those corrupt natures whom we call inferior to themselves, and who form but one class, and will compel them not to transgress.

CLEINIAS: What are they?

ATHENIAN: The principle of piety, the love of honour, and the desire of beauty, not in the body but in the soul. These are, perhaps, romantic aspirations; but they are the noblest of aspirations, if they could only be realised in all states, and, God willing, in the matter of love we may be able to enforce one of two things—either that no one shall venture to touch any person of the freeborn or noble class except his wedded wife, or sow the unconsecrated and bastard seed among harlots, or in barren and unnatural lusts; or at least we may abolish altogether the connection of men with men; and as to women, if any man has to do with any but those who come into his house duly married by sacred rites, whether they be bought or acquired in any other way, and he offends publicly in the face of all mankind, we shall be right in enacting that he be deprived of civic honours and privileges, and be deemed to be, as he truly is, a stranger. Let this law, then, whether it is one, or ought rather to be called two, be laid down respecting love in general, and the intercourse of the sexes which arises out of the desires, whether rightly or wrongly indulged.

MEGILLUS: I, for my part, Stranger, would gladly receive this law. Cleinias shall speak for himself, and tell you what is his opinion.

CLEINIAS: I will, Megillus, when an opportunity offers; at present, I think that we had better allow the Stranger to proceed with his laws.

MEGILLUS: Very good.

ATHENIAN: We had got about as far as the establishment of the common tables, which in most places would be difficult, but in Crete no one would think of introducing any other custom. There might arise a question about the manner of them—whether they shall be such as they are here in Crete, or such as they are in Lacedaemon—or is there a third kind which may be better than either of them? The answer to this question might be easily discovered, but the discovery would do no great good, for at present they are very well ordered.

Leaving the common tables, we may therefore proceed to the means of providing food. Now, in cities the means of life are gained in many ways and from divers sources, and in general from two sources, whereas our city has only one. For most of the Hellenes obtain their food from sea and land, but our citizens from land only. And this makes the task of the legislator less difficult—half as many laws will be enough, and much less than half; and they will be of a kind better suited to free men. For he has nothing to do with laws about shipowners and merchants and retailers and inn-keepers and tax collectors and mines and moneylending and compound interest and innumerable other things—bidding good-bye to these, he gives laws to husbandmen and shepherds and bee-keepers, and to the guardians and superintendents of their implements; and he has already legislated for greater matters, as for example, respecting marriage and the procreation and nurture of children, and for education, and the establishment of offices—and now he must direct his laws to those who provide food and labour in preparing it.

Let us first of all, then, have a class of laws which shall be called the laws of husbandmen. And let the first of them be the law of Zeus, the God of boundaries. Let no one shift the boundary line either of a fellow-citizen who is a neighbour, or, if he dwells at the extremity of the land, of any stranger who is conterminous with him, considering that this is truly 'to move the immovable,' and every one should be more willing to move the largest rock which is not a landmark, than the least stone which is the sworn mark of friendship and hatred between neighbours; for Zeus, the god of kindred, is the witness of the citizen, and Zeus, the god of strangers, of the stranger, and when aroused, terrible are the wars which they stir up. He who obeys the law will never know the fatal consequences of disobedience, but he who despises the law shall be liable to a double penalty, the first coming from the Gods, and the second from the law. For let no one wilfully remove the boundaries of his neighbour's land, and if any one does, let him who will inform the landowners, and let them bring him into court, and if he be convicted of re-dividing the land by stealth or by force, let the court determine what he ought to suffer or pay. In the next place, many small injuries done by neighbours to one another, through their multiplication, may cause a weight of enmity, and make neighbourhood a very disagreeable and bitter thing. Wherefore a man ought to be very careful of committing any offence against his neighbour, and especially of encroaching on his neighbour's land; for any man may easily do harm, but not every man can do good to another. He who encroaches on his neighbour's land, and transgresses his boundaries, shall make good the damage, and, to cure him of his impudence and also of his meanness, he shall pay a double penalty to the injured party. Of these and the like matters the wardens of the country shall take cognizance, and be the judges of them and assessors of the damage; in the more important cases, as has been already said, the whole number of them belonging to any one of the twelve divisions shall decide, and in the lesser cases the commanders: or, again, if any one pastures his cattle on his neighbour's land, they shall see the injury, and adjudge the penalty. And if any one, by decoying the bees, gets possession of another's swarms, and draws them to himself by making noises, he shall pay the damage; or if any one sets fire to his own wood and takes no care of his neighbour's property, he shall be fined at the discretion of the magistrates. And if in planting he does not leave a fair distance between his own and his neighbour's land, he shall be punished, in accordance with the enactments of many lawgivers, which we may use, not deeming it necessary that the great legislator of our state should determine all the trifles which might be decided by any body; for example, husbandmen have had of old excellent laws about waters, and there is no reason why we should propose to divert their course: He who likes may draw water from the fountain-head of the common stream on to his own land, if he do not cut off the spring which clearly belongs to some other owner; and he may take the water in any direction which he pleases, except through a

house or temple or sepulchre, but he must be careful to do no harm beyond the channel. And if there be in any place a natural dryness of the earth, which keeps in the rain from heaven, and causes a deficiency in the supply of water, let him dig down on his own land as far as the clay, and if at this depth he finds no water, let him obtain water from his neighbours, as much as is required for his servants' drinking, and if his neighbours, too, are limited in their supply, let him have a fixed measure, which shall be determined by the wardens of the country. This he shall receive each day, and on these terms have a share of his neighbours' water. If there be heavy rain, and one of those on the lower ground injures some tiller of the upper ground, or some one who has a common wall, by refusing to give them an outlet for water; or, again, if some one living on the higher ground recklessly lets off the water on his lower neighbour, and they cannot come to terms with one another, let him who will call in a warden of the city, if he be in the city, or if he be in the country, a warden of the country, and let him obtain a decision determining what each of them is to do. And he who will not abide by the decision shall suffer for his malignant and morose temper, and pay a fine to the injured party, equivalent to double the value of the injury, because he was unwilling to submit to the magistrates.

Now the participation of fruits shall be ordered on this wise. The goddess of Autumn has two gracious gifts: one the joy of Dionysus which is not treasured up; the other, which nature intends to be stored. Let this be the law, then, concerning the fruits of autumn: He who tastes the common or storing fruits of autumn, whether grapes or figs, before the season of vintage which coincides with Arcturus, either on his own land or on that of others—let him pay fifty drachmae, which shall be sacred to Dionysus, if he pluck them from his own land; and if from his neighbour's land, a mina, and if from any others', two-thirds of a mina. And he who would gather the 'choice' grapes or the 'choice' figs, as they are now termed, if he take them off his own land, let him pluck them how and when he likes; but if he take them from the ground of others without their leave, let him in that case be always punished in accordance with the law which ordains that he should not move what he has not laid down. And if a slave touches any fruit of this sort, without the consent of the owner of the land, he shall be beaten with as many blows as there are grapes on the bunch, or figs on the fig-tree. Let a metic purchase the 'choice' autumnal fruit, and then, if he pleases, he may gather it; but if a stranger is passing along the road, and desires to eat, let him take of the 'choice' grape for himself and a single follower without payment, as a tribute of hospitality. The law however forbids strangers from sharing in the sort which is not used for eating; and if any one, whether he be master or slave, takes of them in ignorance, let the slave be beaten, and the freeman dismissed with admonitions, and instructed to take of the other autumnal fruits which are unfit for making raisins and wine, or for laying by as dried figs. As to pears, and apples, and pomegranates, and similar fruits, there shall be no disgrace in taking them secretly; but he who is caught, if he be of less than thirty years of age, shall be struck and beaten off, but not wounded; and no freeman shall have any right of satisfaction for such blows. Of these fruits the stranger may partake, just as he may of the fruits of autumn. And if an elder, who is more than thirty years of age, eat of them on the spot, let him, like the stranger, be allowed to partake of all such fruits, but he must carry away nothing. If, however, he will not obey the law, let him run the risk of failing in the competition of virtue, in case any one takes notice of his actions before the judges at the time.

Water is the greatest element of nutrition in gardens, but is easily polluted. You cannot poison the soil, or the sun, or the air, which are the other elements of nutrition in plants, or divert them, or steal them; but all these things may very likely happen in regard to water, which must therefore be

protected by law. And let this be the law: If any one intentionally pollutes the water of another, whether the water of a spring, or collected in reservoirs, either by poisonous substances, or by digging, or by theft, let the injured party bring the cause before the wardens of the city, and claim in writing the value of the loss; if the accused be found guilty of injuring the water by deleterious substances, let him not only pay damages, but purify the stream or the cistern which contains the water, in such manner as the laws of the interpreters order the purification to be made by the offender in each case.

With respect to the gathering in of the fruits of the soil, let a man, if he pleases, carry his own fruits through any place in which he either does no harm to any one, or himself gains three times as much as his neighbour loses. Now of these things the magistrates should be cognizant, as of all other things in which a man intentionally does injury to another or to the property of another, by fraud or force, in the use which he makes of his own property. All these matters a man should lay before the magistrates, and receive damages, supposing the injury to be not more than three minae; or if he have a charge against another which involves a larger amount, let him bring his suit into the public courts and have the evil-doer punished. But if any of the magistrates appear to adjudge the penalties which he imposes in an unjust spirit, let him be liable to pay double to the injured party. Any one may bring the offences of magistrates, in any particular case, before the public courts. There are innumerable little matters relating to the modes of punishment, and applications for suits, and summonses and the witnesses to summonses—for example, whether two witnesses should be required for a summons, or how many—and all such details, which cannot be omitted in legislation, but are beneath the wisdom of an aged legislator. These lesser matters, as they indeed are in comparison with the greater ones, let a younger generation regulate by law, after the patterns which have preceded, and according to their own experience of the usefulness and necessity of such laws; and when they are duly regulated let there be no alteration, but let the citizens live in the observance of them.

Now of artisans, let the regulations be as follows: In the first place, let no citizen or servant of a citizen be occupied in handicraft arts; for he who is to secure and preserve the public order of the state, has an art which requires much study and many kinds of knowledge, and does not admit of being made a secondary occupation; and hardly any human being is capable of pursuing two professions or two arts rightly, or of practising one art himself, and superintending some one else who is practising another. Let this, then, be our first principle in the state: No one who is a smith shall also be a carpenter, and if he be a carpenter, he shall not superintend the smith's art rather than his own, under the pretext that in superintending many servants who are working for him, he is likely to superintend them better, because more revenue will accrue to him from them than from his own art; but let every man in the state have one art, and get his living by that. Let the wardens of the city labour to maintain this law, and if any citizen incline to any other art rather than the study of virtue, let them punish him with disgrace and infamy, until they bring him back into his own right course; and if any stranger profess two arts, let them chastise him with bonds and money penalties, and expulsion from the state, until they compel him to be one only and not many.

But as touching payments for hire, and contracts of work, or in case any one does wrong to any of the citizens, or they do wrong to any other, up to fifty drachmae, let the wardens of the city decide the case; but if a greater amount be involved, then let the public courts decide according to law. Let no one pay any duty either on the importation or exportation of goods; and as to frankincense and similar

perfumes, used in the service of the Gods, which come from abroad, and purple and other dyes which are not produced in the country, or the materials of any art which have to be imported, and which are not necessary—no one should import them; nor, again, should any one export anything which is wanted in the country. Of all these things let there be inspectors and superintendents, taken from the guardians of the law; and they shall be the twelve next in order to the five seniors. Concerning arms, and all implements which are required for military purposes, if there be need of introducing any art, or plant, or metal, or chains of any kind, or animals for use in war, let the commanders of the horse and the generals have authority over their importation and exportation; the city shall send them out and also receive them, and the guardians of the law shall make fit and proper laws about them. But let there be no retail trade for the sake of moneymaking, either in these or any other articles, in the city or country at all.

With respect to food and the distribution of the produce of the country, the right and proper way seems to be nearly that which is the custom of Crete; for all should be required to distribute the fruits of the soil into twelve parts, and in this way consume them. Let the twelfth portion of each as for instance of wheat and barley, to which the rest of the fruits of the earth shall be added, as well as the animals which are for sale in each of the twelve divisions, be divided in due proportion into three parts; one part for freemen, another for their servants, and a third for craftsmen and in general for strangers, whether sojourners who may be dwelling in the city, and like other men must live, or those who come on some business which they have with the state, or with some individual. Let only this third part of all necessaries be required to be sold; out of the other two-thirds no one shall be compelled to sell. And how will they be best distributed? In the first place, we see clearly that the distribution will be of equals in one point of view, and in another point of view of unequals.

CLEINIAS: What do you mean?

ATHENIAN: I mean that the earth of necessity produces and nourishes the various articles of food, sometimes better and sometimes worse.

CLEINIAS: Of course.

ATHENIAN: Such being the case, let no one of the three portions be greater than either of the other two—neither that which is assigned to masters or to slaves, nor again that of the stranger; but let the distribution to all be equal and alike, and let every citizen take his two portions and distribute them among slaves and freemen, he having power to determine the quantity and quality. And what remains he shall distribute by measure and number among the animals who have to be sustained from the earth, taking the whole number of them.

In the second place, our citizens should have separate houses duly ordered; and this will be the order proper for men like them. There shall be twelve hamlets, one in the middle of each twelfth portion, and in each hamlet they shall first set apart a market-place, and the temples of the Gods, and of their attendant demi-gods; and if there be any local deities of the Magnetes, or holy seats of other ancient deities, whose memory has been preserved, to these let them pay their ancient honours. But Hestia, and Zeus, and Athene will have temples everywhere together with the God who presides in each of the twelve districts. And the first erection of houses shall be around these temples, where the ground is highest, in order to provide the safest and most defensible place of retreat for the guards. All the

rest of the country they shall settle in the following manner: They shall make thirteen divisions of the craftsmen; one of them they shall establish in the city, and this, again, they shall subdivide into twelve lesser divisions, among the twelve districts of the city, and the remainder shall be distributed in the country round about; and in each village they shall settle various classes of craftsmen, with a view to the convenience of the husbandmen. And the chief officers of the wardens of the country shall superintend all these matters, and see how many of them, and which class of them, each place requires; and fix them where they are likely to be least troublesome, and most useful to the husbandman. And the wardens of the city shall see to similar matters in the city.

Now the wardens of the agora ought to see to the details of the agora. Their first care, after the temples which are in the agora have been seen to, should be to prevent any one from doing any wrong in dealings between man and man; in the second place, as being inspectors of temperance and violence, they should chastise him who requires chastisement. Touching articles of sale, they should first see whether the articles which the citizens are under regulations to sell to strangers are sold to them, as the law ordains. And let the law be as follows: On the first day of the month, the persons in charge, whoever they are, whether strangers or slaves, who have the charge on behalf of the citizens, shall produce to the strangers the portion which falls to them, in the first place, a twelfth portion of the corn—the stranger shall purchase corn for the whole month, and other cereals, on the first market day; and on the tenth day of the month the one party shall sell, and the other buy, liquids sufficient to last during the whole month; and on the twenty-third day there shall be a sale of animals by those who are willing to sell to the people who want to buy, and of implements and other things which husbandmen sell, (such as skins and all kinds of clothing, either woven or made of felt and other goods of the same sort) and which strangers are compelled to buy and purchase of others. As to the retail trade in these things, whether of barley or wheat set apart for meal and flour, or any other kind of food, no one shall sell them to citizens or their slaves, nor shall any one buy of a citizen; but let the stranger sell them in the market of strangers, to artisans and their slaves, making an exchange of wine and food, which is commonly called retail trade. And butchers shall offer for sale parts of dismembered animals to the strangers, and artisans, and their servants. Let any stranger who likes buy fuel from day to day wholesale, from those who have the care of it in the country, and let him sell to the strangers as much as he pleases and when he pleases. As to other goods and implements which are likely to be wanted, they shall sell them in the common market, at any place which the guardians of the law and the wardens of the market and city, choosing according to their judgment, shall determine; at such places they shall exchange money for goods, and goods for money, neither party giving credit to the other; and he who gives credit must be satisfied, whether he obtain his money or not, for in such exchanges he will not be protected by law. But whenever property has been bought or sold, greater in quantity or value than is allowed by the law, which has determined within what limits a man may increase and diminish his possessions, let the excess be registered in the books of the guardians of the law; or in case of diminution, let there be an erasure made. And let the same rule be observed about the registration of the property of the metics. Any one who likes may come and be a metic on certain conditions; a foreigner, if he likes, and is able to settle, may dwell in the land, but he must practise an art, and not abide more than twenty years from the time at which he has registered himself; and he shall pay no sojourner's tax, however small, except good conduct, nor any other tax for buying and selling. But when the twenty years have expired, he shall take his property with him and depart. And if in the course of these years he should chance to distinguish himself by any considerable benefit which he confers on the state, and he thinks that he can persuade the council and assembly, either to grant him delay in leaving the country, or to allow him to

remain for the whole of his life, let him go and persuade the city, and whatever they assent to at his instance shall take effect. For the children of the metics, being artisans, and of fifteen years of age, let the time of their sojourn commence after their fifteenth year; and let them remain for twenty years, and then go where they like; but any of them who wishes to remain, may do so, if he can persuade the council and assembly. And if he depart, let him erase all the entries which have been made by him in the register kept by the magistrates.

BOOK IX.

Next to all the matters which have preceded in the natural order of legislation will come suits of law. Of suits those which relate to agriculture have been already described, but the more important have not been described. Having mentioned them severally under their usual names, we will proceed to say what punishments are to be inflicted for each offence, and who are to be the judges of them.

CLEINIAS: Very good.

ATHENIAN: There is a sense of disgrace in legislating, as we are about to do, for all the details of crime in a state which, as we say, is to be well regulated and will be perfectly adapted to the practice of virtue. To assume that in such a state there will arise some one who will be guilty of crimes as heinous as any which are ever perpetrated in other states, and that we must legislate for him by anticipation, and threaten and make laws against him if he should arise, in order to deter him, and punish his acts, under the idea that he will arise—this, as I was saying, is in a manner disgraceful. Yet seeing that we are not like the ancient legislators, who gave laws to heroes and sons of gods, being, according to the popular belief, themselves the offspring of the gods, and legislating for others, who were also the children of divine parents, but that we are only men who are legislating for the sons of men, there is no uncharitableness in apprehending that some one of our citizens may be like a seed which has touched the ox's horn, having a heart so hard that it cannot be softened any more than those seeds can be softened by fire. Among our citizens there may be those who cannot be subdued by all the strength of the laws; and for their sake, though an ungracious task, I will proclaim my first law about the robbing of temples, in case any one should dare to commit such a crime. I do not expect or imagine that any well-brought-up citizen will ever take the infection, but their servants, and strangers, and strangers' servants may be guilty of many impieties. And with a view to them especially, and yet not without a provident eye to the weakness of human nature generally, I will proclaim the law about robbers of temples and similar incurable, or almost incurable, criminals. Having already agreed that such enactments ought always to have a short prelude, we may speak to the criminal, whom some tormenting desire by night and by day tempts to go and rob a temple, the fewest possible words of admonition and exhortation: O sir, we will say to him, the impulse which moves you to rob temples is not an ordinary human malady, nor yet a visitation of heaven, but a madness which is begotten in a man from ancient and unexpiated crimes of his race, an ever-recurring curse—against this you must guard with all your might, and how you are to guard we will explain to you. When any such thought comes into your mind, go and perform expiations, go as a suppliant to the temples of the Gods who avert evils, go to the society of those who are called good

men among you; hear them tell and yourself try to repeat after them, that every man should honour the noble and the just. Fly from the company of the wicked—fly and turn not back; and if your disorder is lightened by these remedies, well and good, but if not, then acknowledge death to be nobler than life, and depart hence.

Such are the preludes which we sing to all who have thoughts of unholy and treasonable actions, and to him who hearkens to them the law has nothing to say. But to him who is disobedient when the prelude is over, cry with a loud voice—He who is taken in the act of robbing temples, if he be a slave or stranger, shall have his evil deed engraven on his face and hands, and shall be beaten with as many stripes as may seem good to the judges, and be cast naked beyond the borders of the land. And if he suffers this punishment he will probably return to his right mind and be improved; for no penalty which the law inflicts is designed for evil, but always makes him who suffers either better or not so much worse as he would have been. But if any citizen be found guilty of any great or unmentionable wrong, either in relation to the Gods, or his parents, or the state, let the judge deem him to be incurable, remembering that after receiving such an excellent education and training from youth upward, he has not abstained from the greatest of crimes. His punishment shall be death, which to him will be the least of evils; and his example will benefit others, if he perish ingloriously, and be cast beyond the borders of the land. But let his children and family, if they avoid the ways of their father, have glory, and let honourable mention be made of them, as having nobly and manfully escaped out of evil into good. None of them should have their goods confiscated to the state, for the lots of the citizens ought always to continue the same and equal.

Touching the exaction of penalties, when a man appears to have done anything which deserves a fine, he shall pay the fine, if he have anything in excess of the lot which is assigned to him; but more than that he shall not pay. And to secure exactness, let the guardians of the law refer to the registers, and inform the judges of the precise truth, in order that none of the lots may go uncultivated for want of money. But if any one seems to deserve a greater penalty, let him undergo a long and public imprisonment and be dishonoured, unless some of his friends are willing to be surety for him, and liberate him by assisting him to pay the fine. No criminal shall go unpunished, not even for a single offence, nor if he have fled the country; but let the penalty be according to his deserts—death, or bonds, or blows, or degrading places of sitting or standing, or removal to some temple on the borders of the land; or let him pay fines, as we said before. In cases of death, let the judges be the guardians of the law, and a court selected by merit from the last year's magistrates. But how the causes are to be brought into court, how the summonses are to be served, and the like, these things may be left to the younger generation of legislators to determine; the manner of voting we must determine ourselves.

Let the vote be given openly; but before they come to the vote let the judges sit in order of seniority over against plaintiff and defendant, and let all the citizens who can spare time hear and take a serious interest in listening to such causes. First of all the plaintiff shall make one speech, and then the defendant shall make another; and after the speeches have been made the eldest judge shall begin to examine the parties, and proceed to make an adequate enquiry into what has been said; and after the oldest has spoken, the rest shall proceed in order to examine either party as to what he finds defective in the evidence, whether of statement or omission; and he who has nothing to ask shall hand over the examination to another. And on so much of what has been said as is to the purpose all the judges shall set their seals, and place the writings on the altar of Hestia. On the next day they

shall meet again, and in like manner put their questions and go through the cause, and again set their seals upon the evidence; and when they have three times done this, and have had witnesses and evidence enough, they shall each of them give a holy vote, after promising by Hestia that they will decide justly and truly to the utmost of their power; and so they shall put an end to the suit.

Next, after what relates to the Gods, follows what relates to the dissolution of the state: Whoever by permitting a man to power enslaves the laws, and subjects the city to factions, using violence and stirring up sedition contrary to law, him we will deem the greatest enemy of the whole state. But he who takes no part in such proceedings, and, being one of the chief magistrates of the state, has no knowledge of treason, or, having knowledge of it, by reason of cowardice does not interfere on behalf of his country, such an one we must consider nearly as bad. Every man who is worth anything will inform the magistrates, and bring the conspirator to trial for making a violent and illegal attempt to change the government. The judges of such cases shall be the same as of the robbers of temples; and let the whole proceeding be carried on in the same way, and the vote of the majority condemn to death. But let there be a general rule, that the disgrace and punishment of the father is not to be visited on the children, except in the case of some one whose father, grandfather, and great-grandfather have successively undergone the penalty of death. Such persons the city shall send away with all their possessions to the city and country of their ancestors, retaining only and wholly their appointed lot. And out of the citizens who have more than one son of not less than ten years of age, they shall select ten whom their father or grandfather by the mother's or father's side shall appoint, and let them send to Delphi the names of those who are selected, and him whom the God chooses they shall establish as heir of the house which has failed; and may he have better fortune than his predecessors!

CLEINIAS: Very good.

ATHENIAN: Once more let there be a third general law respecting the judges who are to give judgment, and the manner of conducting suits against those who are tried on an accusation of treason; and as concerning the remaining or departure of their descendants—there shall be one law for all three, for the traitor, and the robber of temples, and the subverter by violence of the laws of the state. For a thief, whether he steal much or little, let there be one law, and one punishment for all alike: in the first place, let him pay double the amount of the theft if he be convicted, and if he have so much over and above the allotment—if he have not, he shall be bound until he pay the penalty, or persuade him who has obtained the sentence against him to forgive him. But if a person be convicted of a theft against the state, then if he can persuade the city, or if he will pay back twice the amount of the theft, he shall be set free from his bonds.

CLEINIAS: What makes you say, Stranger, that a theft is all one, whether the thief may have taken much or little, and either from sacred or secular places—and these are not the only differences in thefts—seeing, then, that they are of many kinds, ought not the legislator to adapt himself to them, and impose upon them entirely different penalties?

ATHENIAN: Excellent. I was running on too fast, Cleinias, and you impinged upon me, and brought me to my senses, reminding me of what, indeed, had occurred to my mind already, that legislation was never yet rightly worked out, as I may say in passing. Do you remember the image in which I likened the men for whom laws are now made to slaves who are doctored by slaves? For of this you

may be very sure, that if one of those empirical physicians, who practise medicine without science, were to come upon the gentleman physician talking to his gentleman patient, and using the language almost of philosophy, beginning at the beginning of the disease and discoursing about the whole nature of the body, he would burst into a hearty laugh—he would say what most of those who are called doctors always have at their tongue's end: Foolish fellow, he would say, you are not healing the sick man, but you are educating him; and he does not want to be made a doctor, but to get well.

CLEINIAS: And would he not be right?

ATHENIAN: Perhaps he would; and he might remark upon us, that he who discourses about laws, as we are now doing, is giving the citizens education and not laws; that would be rather a telling observation.

CLEINIAS: Very true.

ATHENIAN: But we are fortunate.

CLEINIAS: In what way?

ATHENIAN: Inasmuch as we are not compelled to give laws, but we may take into consideration every form of government, and ascertain what is best and what is most needful, and how they may both be carried into execution; and we may also, if we please, at this very moment choose what is best, or, if we prefer, what is most necessary—which shall we do?

CLEINIAS: There is something ridiculous, Stranger, in our proposing such an alternative, as if we were legislators, simply bound under some great necessity which cannot be deferred to the morrow. But we, as I may by the grace of Heaven affirm, like gatherers of stones or beginners of some composite work, may gather a heap of materials, and out of this, at our leisure, select what is suitable for our projected construction. Let us then suppose ourselves to be at leisure, not of necessity building, but rather like men who are partly providing materials, and partly putting them together. And we may truly say that some of our laws, like stones, are already fixed in their places, and others lie at hand.

ATHENIAN: Certainly, in that case, Cleinias, our view of law will be more in accordance with nature. For there is another matter affecting legislators, which I must earnestly entreat you to consider.

CLEINIAS: What is it?

ATHENIAN: There are many writings to be found in cities, and among them there are discourses composed by legislators as well as by other persons.

CLEINIAS: To be sure.

ATHENIAN: Shall we give heed rather to the writings of those others—poets and the like, who either in metre or out of metre have recorded their advice about the conduct of life, and not to the writings of legislators? or shall we give heed to them above all?

CLEINIAS: Yes; to them far above all others.

ATHENIAN: And ought the legislator alone among writers to withhold his opinion about the beautiful, the good, and the just, and not to teach what they are, and how they are to be pursued by those who intend to be happy?

CLEINIAS: Certainly not.

ATHENIAN: And is it disgraceful for Homer and Tyrtaeus and other poets to lay down evil precepts in their writings respecting life and the pursuits of men, but not so disgraceful for Lycurgus and Solon and others who were legislators as well as writers? Is it not true that of all the writings to be found in cities, those which relate to laws, when you unfold and read them, ought to be by far the noblest and the best? and should not other writings either agree with them, or if they disagree, be deemed ridiculous? We should consider whether the laws of states ought not to have the character of loving and wise parents, rather than of tyrants and masters, who command and threaten, and, after writing their decrees on walls, go their ways; and whether, in discoursing of laws, we should not take the gentler view of them which may or may not be attainable—at any rate, we will show our readiness to entertain such a view, and be prepared to undergo whatever may be the result. And may the result be good, and if God be gracious, it will be good!

CLEINIAS: Excellent; let us do as you say.

ATHENIAN: Then we will now consider accurately, as we proposed, what relates to robbers of temples, and all kinds of thefts, and offences in general; and we must not be annoyed if, in the course of legislation, we have enacted some things, and have not made up our minds about some others; for as yet we are not legislators, but we may soon be. Let us, if you please, consider these matters.

CLEINIAS: By all means.

ATHENIAN: Concerning all things honourable and just, let us then endeavour to ascertain how far we are consistent with ourselves, and how far we are inconsistent, and how far the many, from whom at any rate we should profess a desire to differ, agree and disagree among themselves.

CLEINIAS: What are the inconsistencies which you observe in us?

ATHENIAN: I will endeavour to explain. If I am not mistaken, we are all agreed that justice, and just men and things and actions, are all fair, and, if a person were to maintain that just men, even when they are deformed in body, are still perfectly beautiful in respect of the excellent justice of their minds, no one would say that there was any inconsistency in this.

CLEINIAS: They would be quite right.

ATHENIAN: Perhaps; but let us consider further, that if all things which are just are fair and honourable, in the term 'all' we must include just sufferings which are the correlatives of just actions.

CLEINIAS: And what is the inference?

ATHENIAN: The inference is, that a just action in partaking of the just partakes also in the same degree of the fair and honourable.

CLEINIAS: Certainly.

ATHENIAN: And must not a suffering which partakes of the just principle be admitted to be in the same degree fair and honourable, if the argument is consistently carried out?

CLEINIAS: True.

ATHENIAN: But then if we admit suffering to be just and yet dishonourable, and the term 'dishonourable' is applied to justice, will not the just and the honourable disagree?

CLEINIAS: What do you mean?

ATHENIAN: A thing not difficult to understand; the laws which have been already enacted would seem to announce principles directly opposed to what we are saying.

CLEINIAS: To what?

ATHENIAN: We had enacted, if I am not mistaken, that the robber of temples, and he who was the enemy of law and order, might justly be put to death, and we were proceeding to make divers other enactments of a similar nature. But we stopped short, because we saw that these sufferings are infinite in number and degree, and that they are, at once, the most just and also the most dishonourable of all sufferings. And if this be true, are not the just and the honourable at one time all the same, and at another time in the most diametrical opposition?

CLEINIAS: Such appears to be the case.

ATHENIAN: In this discordant and inconsistent fashion does the language of the many rend asunder the honourable and just.

CLEINIAS: Very true, Stranger.

ATHENIAN: Then now, Cleinias, let us see how far we ourselves are consistent about these matters.

CLEINIAS: Consistent in what?

ATHENIAN: I think that I have clearly stated in the former part of the discussion, but if I did not, let me now state—

CLEINIAS: What?

ATHENIAN: That all bad men are always involuntarily bad; and from this I must proceed to draw a further inference.

CLEINIAS: What is it?

ATHENIAN: That the unjust man may be bad, but that he is bad against his will. Now that an action which is voluntary should be done involuntarily is a contradiction; wherefore he who maintains that injustice is involuntary will deem that the unjust does injustice involuntarily. I too admit that all men do injustice involuntarily, and if any contentious or disputatious person says that men are unjust against their will, and yet that many do injustice willingly, I do not agree with him. But, then, how can I avoid being inconsistent with myself, if you, Cleinias, and you, Megillus, say to me—Well, Stranger, if all this be as you say, how about legislating for the city of the Magnetes—shall we legislate or not—what do you advise? Certainly we will, I should reply. Then will you determine for them what are voluntary and what are involuntary crimes, and shall we make the punishments greater of voluntary errors and crimes and less for the involuntary? or shall we make the punishment of all to be alike, under the idea that there is no such thing as voluntary crime?

CLEINIAS: Very good, Stranger; and what shall we say in answer to these objections?

ATHENIAN: That is a very fair question. In the first place, let us—

CLEINIAS: Do what?

ATHENIAN: Let us remember what has been well said by us already, that our ideas of justice are in the highest degree confused and contradictory. Bearing this in mind, let us proceed to ask ourselves once more whether we have discovered a way out of the difficulty. Have we ever determined in what respect these two classes of actions differ from one another? For in all states and by all legislators whatsoever, two kinds of actions have been distinguished—the one, voluntary, the other, involuntary; and they have legislated about them accordingly. But shall this new word of ours, like an oracle of God, be only spoken, and get away without giving any explanation or verification of itself? How can a word not understood be the basis of legislation? Impossible. Before proceeding to legislate, then, we must prove that they are two, and what is the difference between them, that when we impose the penalty upon either, every one may understand our proposal, and be able in some way to judge whether the penalty is fitly or unfitly inflicted.

CLEINIAS: I agree with you, Stranger; for one of two things is certain: either we must not say that all unjust acts are involuntary, or we must show the meaning and truth of this statement.

ATHENIAN: Of these two alternatives, the one is quite intolerable—not to speak what I believe to be the truth would be to me unlawful and unholy. But if acts of injustice cannot be divided into voluntary and involuntary, I must endeavour to find some other distinction between them.

CLEINIAS: Very true, Stranger; there cannot be two opinions among us upon that point.

ATHENIAN: Reflect, then; there are hurts of various kinds done by the citizens to one another in the intercourse of life, affording plentiful examples both of the voluntary and involuntary.

CLEINIAS: Certainly.

ATHENIAN: I would not have any one suppose that all these hurts are injuries, and that these injuries are of two kinds—one, voluntary, and the other, involuntary; for the involuntary hurts of all men are quite as many and as great as the voluntary. And please to consider whether I am right or quite wrong in what I am going to say; for I deny, Cleinias and Megillus, that he who harms another involuntarily does him an injury involuntarily, nor should I legislate about such an act under the idea that I am legislating for an involuntary injury. But I should rather say that such a hurt, whether great or small, is not an injury at all; and, on the other hand, if I am right, when a benefit is wrongly conferred, the author of the benefit may often be said to injure. For I maintain, O my friends, that the mere giving or taking away of anything is not to be described either as just or unjust; but the legislator has to consider whether mankind do good or harm to one another out of a just principle and intention. On the distinction between injustice and hurt he must fix his eye; and when there is hurt, he must, as far as he can, make the hurt good by law, and save that which is ruined, and raise up that which is fallen, and make that which is dead or wounded whole. And when compensation has been given for injustice, the law must always seek to win over the doers and sufferers of the several hurts from feelings of enmity to those of friendship.

CLEINIAS: Very good.

ATHENIAN: Then as to unjust hurts (and gains also, supposing the injustice to bring gain), of these we may heal as many as are capable of being healed, regarding them as diseases of the soul; and the cure of injustice will take the following direction.

CLEINIAS: What direction?

ATHENIAN: When any one commits any injustice, small or great, the law will admonish and compel him either never at all to do the like again, or never voluntarily, or at any rate in a far less degree; and he must in addition pay for the hurt. Whether the end is to be attained by word or action, with pleasure or pain, by giving or taking away privileges, by means of fines or gifts, or in whatsoever way the law shall proceed to make a man hate injustice, and love or not hate the nature of the just—this is quite the noblest work of law. But if the legislator sees any one who is incurable, for him he will appoint a law and a penalty. He knows quite well that to such men themselves there is no profit in the continuance of their lives, and that they would do a double good to the rest of mankind if they would take their departure, inasmuch as they would be an example to other men not to offend, and they would relieve the city of bad citizens. In such cases, and in such cases only, the legislator ought to inflict death as the punishment of offences.

CLEINIAS: What you have said appears to me to be very reasonable, but will you favour me by stating a little more clearly the difference between hurt and injustice, and the various complications of the voluntary and involuntary which enter into them?

ATHENIAN: I will endeavour to do as you wish: Concerning the soul, thus much would be generally said and allowed, that one element in her nature is passion, which may be described either as a state or a part of her, and is hard to be striven against and contended with, and by irrational force overturns many things.

CLEINIAS: Very true.

ATHENIAN: And pleasure is not the same with passion, but has an opposite power, working her will by persuasion and by the force of deceit in all things.

CLEINIAS: Quite true.

ATHENIAN: A man may truly say that ignorance is a third cause of crimes. Ignorance, however, may be conveniently divided by the legislator into two sorts: there is simple ignorance, which is the source of lighter offences, and double ignorance, which is accompanied by a conceit of wisdom; and he who is under the influence of the latter fancies that he knows all about matters of which he knows nothing. This second kind of ignorance, when possessed of power and strength, will be held by the legislator to be the source of great and monstrous crimes, but when attended with weakness, will only result in the errors of children and old men; and these he will treat as errors, and will make laws accordingly for those who commit them, which will be the mildest and most merciful of all laws.

CLEINIAS: You are perfectly right.

ATHENIAN: We all of us remark of one man that he is superior to pleasure and passion, and of another that he is inferior to them; and this is true.

CLEINIAS: Certainly.

ATHENIAN: But no one was ever yet heard to say that one of us is superior and another inferior to ignorance.

CLEINIAS: Very true.

ATHENIAN: We are speaking of motives which incite men to the fulfilment of their will; although an individual may be often drawn by them in opposite directions at the same time.

CLEINIAS: Yes, often.

ATHENIAN: And now I can define to you clearly, and without ambiguity, what I mean by the just and unjust, according to my notion of them: When anger and fear, and pleasure and pain, and jealousies and desires, tyrannize over the soul, whether they do any harm or not—I call all this injustice. But when the opinion of the best, in whatever part of human nature states or individuals may suppose that to dwell, has dominion in the soul and orders the life of every man, even if it be sometimes mistaken, yet what is done in accordance therewith, and the principle in individuals which obeys this rule, and is best for the whole life of man, is to be called just; although the hurt done by mistake is thought by many to be involuntary injustice. Leaving the question of names, about which we are not going to quarrel, and having already delineated three sources of error, we may begin by recalling them somewhat more vividly to our memory: One of them was of the painful sort, which we denominate anger and fear.

CLEINIAS: Quite right.

ATHENIAN: There was a second consisting of pleasures and desires, and a third of hopes, which aimed at true opinion about the best. The latter being subdivided into three, we now get five sources of actions, and for these five we will make laws of two kinds.

CLEINIAS: What are the two kinds?

ATHENIAN: There is one kind of actions done by violence and in the light of day, and another kind of actions which are done in darkness and with secret deceit, or sometimes both with violence and deceit; the laws concerning these last ought to have a character of severity.

CLEINIAS: Naturally.

ATHENIAN: And now let us return from this digression and complete the work of legislation. Laws have been already enacted by us concerning the robbers of the Gods, and concerning traitors, and also concerning those who corrupt the laws for the purpose of subverting the government. A man may very likely commit some of these crimes, either in a state of madness or when affected by disease, or under the influence of extreme old age, or in a fit of childish wantonness, himself no better than a child. And if this be made evident to the judges elected to try the cause, on the appeal of the criminal or his advocate, and he be judged to have been in this state when he committed the offence, he shall simply pay for the hurt which he may have done to another; but he shall be exempt from other penalties, unless he have slain some one, and have on his hands the stain of blood. And in that case he shall go to another land and country, and there dwell for a year; and if he return before the expiration of the time which the law appoints, or even set his foot at all on his native land, he shall be bound by the guardians of the law in the public prison for two years, and then go free.

Having begun to speak of homicide, let us endeavour to lay down laws concerning every different kind of homicide; and, first of all, concerning violent and involuntary homicides. If any one in an athletic contest, and at the public games, involuntarily kills a friend, and he dies either at the time or afterwards of the blows which he has received; or if the like misfortune happens to any one in war, or military exercises, or mimic contests of which the magistrates enjoin the practice, whether with or without arms, when he has been purified according to the law brought from Delphi relating to these matters, he shall be innocent. And so in the case of physicians: if their patient dies against their will, they shall be held guiltless by the law. And if one slay another with his own hand, but unintentionally, whether he be unarmed or have some instrument or dart in his hand; or if he kill him by administering food or drink, or by the application of fire or cold, or by suffocating him, whether he do the deed by his own hand, or by the agency of others, he shall be deemed the agent, and shall suffer one of the following penalties: If he kill the slave of another in the belief that he is his own, he shall bear the master of the dead man harmless from loss, or shall pay a penalty of twice the value of the dead man, which the judges shall assess; but purifications must be used greater and more numerous than for those who committed homicide at the games—what they are to be, the interpreters whom the God appoints shall be authorised to declare. And if a man kills his own slave, when he has been purified according to law, he shall be quit of the homicide. And if a man kills a freeman unintentionally, he shall undergo the same purification as he did who killed the slave. But let him not forget also a tale of olden time, which is to this effect: He who has suffered a violent end, when newly dead, if he has had the soul of a freeman in life, is angry with the author of his death; and being himself full of fear and panic by reason of his violent end, when he sees his murderer walking about in his own accustomed

haunts, he is stricken with terror and becomes disordered, and this disorder of his, aided by the guilty recollection of the other, is communicated by him with overwhelming force to the murderer and his deeds. Wherefore also the murderer must go out of the way of his victim for the entire period of a year, and not himself be found in any spot which was familiar to him throughout the country. And if the dead man be a stranger, the homicide shall be kept from the country of the stranger during a like period. If any one voluntarily obeys this law, the next of kin to the deceased, seeing all that has happened, shall take pity on him, and make peace with him, and show him all gentleness. But if any one is disobedient, and either ventures to go to any of the temples and sacrifice unpurified, or will not continue in exile during the appointed time, the next of kin to the deceased shall proceed against him for murder; and if he be convicted, every part of his punishment shall be doubled. And if the next of kin do not proceed against the perpetrator of the crime, then the pollution shall be deemed to fall upon his own head—the murdered man will fix the guilt upon his kinsman, and he who has a mind to proceed against him may compel him to be absent from his country during five years, according to law. If a stranger unintentionally kill a stranger who is dwelling in the city, he who likes shall prosecute the cause according to the same rules. If he be a metic, let him be absent for a year, or if he be an entire stranger, in addition to the purification, whether he have slain a stranger, or a metic, or a citizen, he shall be banished for life from the country which is in possession of our laws. And if he return contrary to law, let the guardians of the law punish him with death; and let them hand over his property, if he have any, to him who is next of kin to the sufferer. And if he be wrecked, and driven on the coast against his will, he shall take up his abode on the seashore, wetting his feet in the sea, and watching for an opportunity of sailing; but if he be brought by land, and is not his own master, let the magistrate whom he first comes across in the city, release him and send him unharmed over the border.

If any one slays a freeman with his own hand, and the deed be done in passion, in the case of such actions we must begin by making a distinction. For a deed is done from passion either when men suddenly, and without intention to kill, cause the death of another by blows and the like on a momentary impulse, and are sorry for the deed immediately afterwards; or again, when after having been insulted in deed or word, men pursue revenge, and kill a person intentionally, and are not sorry for the act. And, therefore, we must assume that these homicides are of two kinds, both of them arising from passion, which may be justly said to be in a mean between the voluntary and involuntary; at the same time, they are neither of them anything more than a likeness or shadow of either. He who treasures up his anger, and avenges himself, not immediately and at the moment, but with insidious design, and after an interval, is like the voluntary; but he who does not treasure up his anger, and takes vengeance on the instant, and without malice prepense, approaches to the involuntary; and yet even he is not altogether involuntary, but is only the image or shadow of the involuntary; wherefore about homicides committed in hot blood, there is a difficulty in determining whether in legislating we shall reckon them as voluntary or as partly involuntary. The best and truest view is to regard them respectively as likenesses only of the voluntary and involuntary, and to distinguish them accordingly as they are done with or without premeditation. And we should make the penalties heavier for those who commit homicide with angry premeditation, and lighter for those who do not premeditate, but smite upon the instant; for that which is like a greater evil should be punished more severely, and that which is like a less evil should be punished less severely: this shall be the rule of our laws.

CLEINIAS: Certainly.

ATHENIAN: Let us proceed: If any one slays a freeman with his own hand, and the deed be done in a moment of anger, and without premeditation, let the offender suffer in other respects as the involuntary homicide would have suffered, and also undergo an exile of two years, that he may learn to school his passions. But he who slays another from passion, yet with premeditation, shall in other respects suffer as the former; and to this shall be added an exile of three instead of two years—his punishment is to be longer because his passion is greater. The manner of their return shall be on this wise: (and here the law has difficulty in determining exactly; for in some cases the murderer who is judged by the law to be the worse may really be the less cruel, and he who is judged the less cruel may be really the worse, and may have executed the murder in a more savage manner, whereas the other may have been gentler. But in general the degrees of guilt will be such as we have described them. Of all these things the guardians of the law must take cognizance): When a homicide of either kind has completed his term of exile, the guardians shall send twelve judges to the borders of the land; these during the interval shall have informed themselves of the actions of the criminals, and they shall judge respecting their pardon and reception; and the homicides shall abide by their judgment. But if after they have returned home, any one of them in a moment of anger repeats the deed, let him be an exile, and return no more; or if he returns, let him suffer as the stranger was to suffer in a similar case. He who kills his own slave shall undergo a purification, but if he kills the slave of another in anger, he shall pay twice the amount of the loss to his owner. And if any homicide is disobedient to the law, and without purification pollutes the agora, or the games, or the temples, he who pleases may bring to trial the next of kin to the dead man for permitting him, and the murderer with him, and may compel the one to exact and the other to suffer a double amount of fines and purifications; and the accuser shall himself receive the fine in accordance with the law. If a slave in a fit of passion kills his master, the kindred of the deceased man may do with the murderer (provided only they do not spare his life) whatever they please, and they will be pure; or if he kills a freeman, who is not his master, the owner shall give up the slave to the relatives of the deceased, and they shall be under an obligation to put him to death, but this may be done in any manner which they please. And if (which is a rare occurrence, but does sometimes happen) a father or a mother in a moment of passion slays a son or daughter by blows, or some other violence, the slayer shall undergo the same purification as in other cases, and be exiled during three years; but when the exile returns the wife shall separate from the husband, and the husband from the wife, and they shall never afterwards beget children together, or live under the same roof, or partake of the same sacred rites with those whom they have deprived of a child or of a brother. And he who is impious and disobedient in such a case shall be brought to trial for impiety by any one who pleases. If in a fit of anger a husband kills his wedded wife, or the wife her husband, the slayer shall undergo the same purification, and the term of exile shall be three years. And when he who has committed any such crime returns, let him have no communication in sacred rites with his children, neither let him sit at the same table with them, and the father or son who disobeys shall be liable to be brought to trial for impiety by any one who pleases. If a brother or a sister in a fit of passion kills a brother or a sister, they shall undergo purification and exile, as was the case with parents who killed their offspring: they shall not come under the same roof, or share in the sacred rites of those whom they have deprived of their brethren, or of their children. And he who is disobedient shall be justly liable to the law concerning impiety, which relates to these matters. If any one is so violent in his passion against his parents, that in the madness of his anger he dares to kill one of them, if the murdered person before dying freely forgives the murderer, let him undergo the purification which is assigned to those who have been guilty of involuntary homicide, and do as they do, and he shall be pure. But if he be not acquitted, the perpetrator of such a deed shall be amenable to many laws—he shall be amenable to

the extreme punishments for assault, and impiety, and robbing of temples, for he has robbed his parent of life; and if a man could be slain more than once, most justly would he who in a fit of passion has slain father or mother, undergo many deaths. How can he, whom, alone of all men, even in defence of his life, and when about to suffer death at the hands of his parents, no law will allow to kill his father or his mother who are the authors of his being, and whom the legislator will command to endure any extremity rather than do this—how can he, I say, lawfully receive any other punishment? Let death then be the appointed punishment of him who in a fit of passion slays his father or his mother. But if brother kills brother in a civil broil, or under other like circumstances, if the other has begun, and he only defends himself, let him be free from guilt, as he would be if he had slain an enemy; and the same rule will apply if a citizen kill a citizen, or a stranger a stranger. Or if a stranger kill a citizen or a citizen a stranger in self-defence, let him be free from guilt in like manner; and so in the case of a slave who has killed a slave; but if a slave have killed a freeman in self-defence, let him be subject to the same law as he who has killed a father; and let the law about the remission of penalties in the case of parricide apply equally to every other remission. Whenever any sufferer of his own accord remits the guilt of homicide to another, under the idea that his act was involuntary, let the perpetrator of the deed undergo a purification and remain in exile for a year, according to law.

Enough has been said of murders violent and involuntary and committed in passion: we have now to speak of voluntary crimes done with injustice of every kind and with premeditation, through the influence of pleasures, and desires, and jealousies.

CLEINIAS: Very good.

ATHENIAN: Let us first speak, as far as we are able, of their various kinds. The greatest cause of them is lust, which gets the mastery of the soul maddened by desire; and this is most commonly found to exist where the passion reigns which is strongest and most prevalent among the mass of mankind: I mean where the power of wealth breeds endless desires of never-to-be-satisfied acquisition, originating in natural disposition, and a miserable want of education. Of this want of education, the false praise of wealth which is bruited about both among Hellenes and barbarians is the cause; they deem that to be the first of goods which in reality is only the third. And in this way they wrong both posterity and themselves, for nothing can be nobler and better than that the truth about wealth should be spoken in all states—namely, that riches are for the sake of the body, as the body is for the sake of the soul. They are good, and wealth is intended by nature to be for the sake of them, and is therefore inferior to them both, and third in order of excellence. This argument teaches us that he who would be happy ought not to seek to be rich, or rather he should seek to be rich justly and temperately, and then there would be no murders in states requiring to be purged away by other murders. But now, as I said at first, avarice is the chiefest cause and source of the worst trials for voluntary homicide. A second cause is ambition: this creates jealousies, which are troublesome companions, above all to the jealous man himself, and in a less degree to the chiefs of the state. And a third cause is cowardly and unjust fear, which has been the occasion of many murders. When a man is doing or has done something which he desires that no one should know him to be doing or to have done, he will take the life of those who are likely to inform of such things, if he have no other means of getting rid of them. Let this be said as a prelude concerning crimes of violence in general; and I must not omit to mention a tradition which is firmly believed by many, and has been received by them from those who are learned in the mysteries: they say that such deeds will be punished in the world below, and also that when the perpetrators return to this world they will pay the natural penalty

which is due to the sufferer, and end their lives in like manner by the hand of another. If he who is about to commit murder believes this, and is made by the mere prelude to dread such a penalty, there is no need to proceed with the proclamation of the law. But if he will not listen, let the following law be declared and registered against him: Whoever shall wrongfully and of design slay with his own hand any of his kinsmen, shall in the first place be deprived of legal privileges; and he shall not pollute the temples, or the agora, or the harbours, or any other place of meeting, whether he is forbidden of men or not; for the law, which represents the whole state, forbids him, and always is and will be in the attitude of forbidding him. And if a cousin or nearer relative of the deceased, whether on the male or female side, does not prosecute the homicide when he ought, and have him proclaimed an outlaw, he shall in the first place be involved in the pollution, and incur the hatred of the Gods, even as the curse of the law stirs up the voices of men against him; and in the second place he shall be liable to be prosecuted by any one who is willing to inflict retribution on behalf of the dead. And he who would avenge a murder shall observe all the precautionary ceremonies of lavation, and any others which the God commands in cases of this kind. Let him have proclamation made, and then go forth and compel the perpetrator to suffer the execution of justice according to the law. Now the legislator may easily show that these things must be accomplished by prayers and sacrifices to certain Gods, who are concerned with the prevention of murders in states. But who these Gods are, and what should be the true manner of instituting such trials with due regard to religion, the guardians of the law, aided by the interpreters, and the prophets, and the God, shall determine, and when they have determined let them carry on the prosecution at law. The cause shall have the same judges who are appointed to decide in the case of those who plunder temples. Let him who is convicted be punished with death, and let him not be buried in the country of the murdered man, for this would be shameless as well as impious. But if he fly and will not stand his trial, let him fly for ever; or, if he set foot anywhere on any part of the murdered man's country, let any relation of the deceased, or any other citizen who may first happen to meet with him, kill him with impunity, or bind and deliver him to those among the judges of the case who are magistrates, that they may put him to death. And let the prosecutor demand surety of him whom he prosecutes; three sureties sufficient in the opinion of the magistrates who try the cause shall be provided by him, and they shall undertake to produce him at the trial. But if he be unwilling or unable to provide sureties, then the magistrates shall take him and keep him in bonds, and produce him at the day of trial.

If a man do not commit a murder with his own hand, but contrives the death of another, and is the author of the deed in intention and design, and he continues to dwell in the city, having his soul not pure of the guilt of murder, let him be tried in the same way, except in what relates to the sureties; and also, if he be found guilty, his body after execution may have burial in his native land, but in all other respects his case shall be as the former; and whether a stranger shall kill a citizen, or a citizen a stranger, or a slave a slave, there shall be no difference as touching murder by one's own hand or by contrivance, except in the matter of sureties; and these, as has been said, shall be required of the actual murderer only, and he who brings the accusation shall bind them over at the time. If a slave be convicted of slaying a freeman voluntarily, either by his own hand or by contrivance, let the public executioner take him in the direction of the sepulchre, to a place whence he can see the tomb of the dead man, and inflict upon him as many stripes as the person who caught him orders, and if he survive, let him put him to death. And if any one kills a slave who has done no wrong, because he is afraid that he may inform of some base and evil deeds of his own, or for any similar reason, in such a case let him pay the penalty of murder, as he would have done if he had slain a citizen. There are things about which it is terrible and unpleasant to legislate, but impossible not to legislate. If, for

example, there should be murders of kinsmen, either perpetrated by the hands of kinsmen, or by their contrivance, voluntary and purely malicious, which most often happen in ill-regulated and ill-educated states, and may perhaps occur even in a country where a man would not expect to find them, we must repeat once more the tale which we narrated a little while ago, in the hope that he who hears us will be the more disposed to abstain voluntarily on these grounds from murders which are utterly abominable. For the myth, or saying, or whatever we ought to call it, has been plainly set forth by priests of old; they have pronounced that the justice which guards and avenges the blood of kindred, follows the law of retaliation, and ordains that he who has done any murderous act should of necessity suffer that which he has done. He who has slain a father shall himself be slain at some time or other by his children—if a mother, he shall of necessity take a woman's nature, and lose his life at the hands of his offspring in after ages; for where the blood of a family has been polluted there is no other purification, nor can the pollution be washed out until the homicidal soul which did the deed has given life for life, and has propitiated and laid to sleep the wrath of the whole family. These are the retributions of Heaven, and by such punishments men should be deterred. But if they are not deterred, and any one should be incited by some fatality to deprive his father, or mother, or brethren, or children, of life voluntarily and of purpose, for him the earthly lawgiver legislates as follows: There shall be the same proclamations about outlawry, and there shall be the same sureties which have been enacted in the former cases. But in his case, if he be convicted, the servants of the judges and the magistrates shall slay him at an appointed place without the city where three ways meet, and there expose his body naked, and each of the magistrates on behalf of the whole city shall take a stone and cast it upon the head of the dead man, and so deliver the city from pollution; after that, they shall bear him to the borders of the land, and cast him forth unburied, according to law. And what shall he suffer who slays him who of all men, as they say, is his own best friend? I mean the suicide, who deprives himself by violence of his appointed share of life, not because the law of the state requires him, nor yet under the compulsion of some painful and inevitable misfortune which has come upon him, nor because he has had to suffer from irremediable and intolerable shame, but who from sloth or want of manliness imposes upon himself an unjust penalty. For him, what ceremonies there are to be of purification and burial God knows, and about these the next of kin should enquire of the interpreters and of the laws thereto relating, and do according to their injunctions. They who meet their death in this way shall be buried alone, and none shall be laid by their side; they shall be buried ingloriously in the borders of the twelve portions of the land, in such places as are uncultivated and nameless, and no column or inscription shall mark the place of their interment. And if a beast of burden or other animal cause the death of any one, except in the case of anything of that kind happening to a competitor in the public contests, the kinsmen of the deceased shall prosecute the slayer for murder, and the wardens of the country, such, and so many as the kinsmen appoint, shall try the cause, and let the beast when condemned be slain by them, and let them cast it beyond the borders. And if any lifeless thing deprive a man of life, except in the case of a thunderbolt or other fatal dart sent from the Gods—whether a man is killed by lifeless objects falling upon him, or by his falling upon them, the nearest of kin shall appoint the nearest neighbour to be a judge, and thereby acquit himself and the whole family of guilt. And he shall cast forth the guilty thing beyond the border, as has been said about the animals.

If a man is found dead, and his murderer be unknown, and after a diligent search cannot be detected, there shall be the same proclamation as in the previous cases, and the same interdict on the murderer; and having proceeded against him, they shall proclaim in the agora by a herald, that he who has slain such and such a person, and has been convicted of murder, shall not set his foot in the

temples, nor at all in the country of the murdered man, and if he appears and is discovered, he shall die, and be cast forth unburied beyond the border. Let this one law then be laid down by us about murder; and let cases of this sort be so regarded.

And now let us say in what cases and under what circumstances the murderer is rightly free from guilt: If a man catch a thief coming into his house by night to steal, and he take and kill him, or if he slay a footpad in self-defence, he shall be guiltless. And any one who does violence to a free woman or a youth, shall be slain with impunity by the injured person, or by his or her father or brothers or sons. If a man find his wife suffering violence, he may kill the violator, and be guiltless in the eye of the law; or if a person kill another in warding off death from his father or mother or children or brethren or wife who are doing no wrong, he shall assuredly be guiltless.

Thus much as to the nurture and education of the living soul of man, having which, he can, and without which, if he unfortunately be without them, he cannot live; and also concerning the punishments which are to be inflicted for violent deaths, let thus much be enacted. Of the nurture and education of the body we have spoken before, and next in order we have to speak of deeds of violence, voluntary and involuntary, which men do to one another; these we will now distinguish, as far as we are able, according to their nature and number, and determine what will be the suitable penalties of each, and so assign to them their proper place in the series of our enactments. The poorest legislator will have no difficulty in determining that wounds and mutilations arising out of wounds should follow next in order after deaths. Let wounds be divided as homicides were divided—into those which are involuntary, and which are given in passion or from fear, and those inflicted voluntarily and with premeditation. Concerning all this, we must make some such proclamation as the following: Mankind must have laws, and conform to them, or their life would be as bad as that of the most savage beast. And the reason of this is that no man's nature is able to know what is best for human society; or knowing, always able and willing to do what is best. In the first place, there is a difficulty in apprehending that the true art of politics is concerned, not with private but with public good (for public good binds together states, but private only distracts them); and that both the public and private good as well of individuals as of states is greater when the state and not the individual is first considered. In the second place, although a person knows in the abstract that this is true, yet if he be possessed of absolute and irresponsible power, he will never remain firm in his principles or persist in regarding the public good as primary in the state, and the private good as secondary. Human nature will be always drawing him into avarice and selfishness, avoiding pain and pursuing pleasure without any reason, and will bring these to the front, obscuring the juster and better; and so working darkness in his soul will at last fill with evils both him and the whole city. For if a man were born so divinely gifted that he could naturally apprehend the truth, he would have no need of laws to rule over him; for there is no law or order which is above knowledge, nor can mind, without impiety, be deemed the subject or slave of any man, but rather the lord of all. I speak of mind, true and free, and in harmony with nature. But then there is no such mind anywhere, or at least not much; and therefore we must choose law and order, which are second best. These look at things as they exist for the most part only, and are unable to survey the whole of them. And therefore I have spoken as I have.

And now we will determine what penalty he ought to pay or suffer who has hurt or wounded another. Any one may easily imagine the questions which have to be asked in all such cases: What did he wound, or whom, or how, or when? for there are innumerable particulars of this sort which greatly vary from one another. And to allow courts of law to determine all these things, or not to determine

any of them, is alike impossible. There is one particular which they must determine in all cases—the question of fact. And then, again, that the legislator should not permit them to determine what punishment is to be inflicted in any of these cases, but should himself decide about all of them, small or great, is next to impossible.

CLEINIAS: Then what is to be the inference?

ATHENIAN: The inference is, that some things should be left to courts of law; others the legislator must decide for himself.

CLEINIAS: And what ought the legislator to decide, and what ought he to leave to the courts of law?

ATHENIAN: I may reply, that in a state in which the courts are bad and mute, because the judges conceal their opinions and decide causes clandestinely; or what is worse, when they are disorderly and noisy, as in a theatre, clapping or hooting in turn this or that orator—I say that then there is a very serious evil, which affects the whole state. Unfortunate is the necessity of having to legislate for such courts, but where the necessity exists, the legislator should only allow them to ordain the penalties for the smallest offences; if the state for which he is legislating be of this character, he must take most matters into his own hands and speak distinctly. But when a state has good courts, and the judges are well trained and scrupulously tested, the determination of the penalties or punishments which shall be inflicted on the guilty may fairly and with advantage be left to them. And we are not to be blamed for not legislating concerning all that large class of matters which judges far worse educated than ours would be able to determine, assigning to each offence what is due both to the perpetrator and to the sufferer. We believe those for whom we are legislating to be best able to judge, and therefore to them the greater part may be left. At the same time, as I have often said, we should exhibit to the judges, as we have done, the outline and form of the punishments to be inflicted, and then they will not transgress the just rule. That was an excellent practice, which we observed before, and which now that we are resuming the work of legislation, may with advantage be repeated by us.

Let the enactment about wounding be in the following terms: If any one has a purpose and intention to slay another who is not his enemy, and whom the law does not permit him to slay, and he wounds him, but is unable to kill him, he who had the intent and has wounded him is not to be pitied—he deserves no consideration, but should be regarded as a murderer and be tried for murder. Still having respect to the fortune which has in a manner favoured him, and to the providence which in pity to him and to the wounded man saved the one from a fatal blow, and the other from an accursed fate and calamity—as a thank-offering to this deity, and in order not to oppose his will—in such a case the law will remit the punishment of death, and only compel the offender to emigrate to a neighbouring city for the rest of his life, where he shall remain in the enjoyment of all his possessions. But if he have injured the wounded man, he shall make such compensation for the injury as the court deciding the cause shall assess, and the same judges shall decide who would have decided if the man had died of his wounds. And if a child intentionally wound his parents, or a servant his master, death shall be the penalty. And if a brother or a sister intentionally wound a brother or a sister, and is found guilty, death shall be the penalty. And if a husband wound a wife, or a wife a husband, with intent to kill, let him or her undergo perpetual exile; if they have sons or daughters who are still young, the guardians shall take care of their property, and have charge of the children as orphans. If their sons are grown up, they shall be under no obligation to support the exiled parent, but they shall possess the property

themselves. And if he who meets with such a misfortune has no children, the kindred of the exiled man to the degree of sons of cousins, both on the male and female side, shall meet together, and after taking counsel with the guardians of the law and the priests, shall appoint a 5040th citizen to be the heir of the house, considering and reasoning that no house of all the 5040 belongs to the inhabitant or to the whole family, but is the public and private property of the state. Now the state should seek to have its houses as holy and happy as possible. And if any one of the houses be unfortunate, and stained with impiety, and the owner leave no posterity, but dies unmarried, or married and childless, having suffered death as the penalty of murder or some other crime committed against the Gods or against his fellow-citizens, of which death is the penalty distinctly laid down in the law; or if any of the citizens be in perpetual exile, and also childless, that house shall first of all be purified and undergo expiation according to law; and then let the kinsmen of the house, as we were just now saying, and the guardians of the law, meet and consider what family there is in the state which is of the highest repute for virtue and also for good fortune, in which there are a number of sons; from that family let them take one and introduce him to the father and forefathers of the dead man as their son, and, for the sake of the omen, let him be called so, that he may be the continuer of their family, the keeper of their hearth, and the minister of their sacred rites with better fortune than his father had; and when they have made this supplication, they shall make him heir according to law, and the offending person they shall leave nameless and childless and portionless when calamities such as these overtake him.

Now the boundaries of some things do not touch one another, but there is a borderland which comes in between, preventing them from touching. And we were saying that actions done from passion are of this nature, and come in between the voluntary and involuntary. If a person be convicted of having inflicted wounds in a passion, in the first place he shall pay twice the amount of the injury, if the wound be curable, or, if incurable, four times the amount of the injury; or if the wound be curable, and at the same time cause great and notable disgrace to the wounded person, he shall pay fourfold. And whenever any one in wounding another injures not only the sufferer, but also the city, and makes him incapable of defending his country against the enemy, he, besides the other penalties, shall pay a penalty for the loss which the state has incurred. And the penalty shall be, that in addition to his own times of service, he shall serve on behalf of the disabled person, and shall take his place in war; or, if he refuse, he shall be liable to be convicted by law of refusal to serve. The compensation for the injury, whether to be twofold or threefold or fourfold, shall be fixed by the judges who convict him. And if, in like manner, a brother wounds a brother, the parents and kindred of either sex, including the children of cousins, whether on the male or female side, shall meet, and when they have judged the cause, they shall entrust the assessment of damages to the parents, as is natural; and if the estimate be disputed, then the kinsmen on the male side shall make the estimate, or if they cannot, they shall commit the matter to the guardians of the law. And when similar charges of wounding are brought by children against their parents, those who are more than sixty years of age, having children of their own, not adopted, shall be required to decide; and if any one is convicted, they shall determine whether he or she ought to die, or suffer some other punishment either greater than death, or, at any rate, not much less. A kinsman of the offender shall not be allowed to judge the cause, not even if he be of the age which is prescribed by the law. If a slave in a fit of anger wound a freeman, the owner of the slave shall give him up to the wounded man, who may do as he pleases with him, and if he do not give him up he shall himself make good the injury. And if any one says that the slave and the wounded man are conspiring together, let him argue the point, and if he is cast, he shall pay for the wrong three times over, but if he gains his case, the freeman who conspired with the slave shall be

liable to an action for kidnapping. And if any one unintentionally wounds another he shall simply pay for the harm, for no legislator is able to control chance. In such a case the judges shall be the same as those who are appointed in the case of children suing their parents; and they shall estimate the amount of the injury.

All the preceding injuries and every kind of assault are deeds of violence; and every man, woman, or child ought to consider that the elder has the precedence of the younger in honour, both among the Gods and also among men who would live in security and happiness. Wherefore it is a foul thing and hateful to the Gods to see an elder man assaulted by a younger in the city, and it is reasonable that a young man when struck by an elder should lightly endure his anger, laying up in store for himself a like honour when he is old. Let this be the law: Every one shall reverence his elder in word and deed; he shall respect any one who is twenty years older than himself, whether male or female, regarding him or her as his father or mother; and he shall abstain from laying hands on any one who is of an age to have been his father or mother, out of reverence to the Gods who preside over birth; similarly he shall keep his hands from a stranger, whether he be an old inhabitant or newly arrived; he shall not venture to correct such an one by blows, either as the aggressor or in self-defence. If he thinks that some stranger has struck him out of wantonness or insolence, and ought to be punished, he shall take him to the wardens of the city, but let him not strike him, that the stranger may be kept far away from the possibility of lifting up his hand against a citizen, and let the wardens of the city take the offender and examine him, not forgetting their duty to the God of Strangers, and in case the stranger appears to have struck the citizen unjustly, let them inflict upon him as many blows with the scourge as he was himself inflicted, and quell his presumption. But if he be innocent, they shall threaten and rebuke the man who arrested him, and let them both go. If a person strikes another of the same age or somewhat older than himself, who has no children, whether he be an old man who strikes an old man or a young man who strikes a young man, let the person struck defend himself in the natural way without a weapon and with his hands only. He who, being more than forty years of age, dares to fight with another, whether he be the aggressor or in self-defence, shall be regarded as rude and ill-mannered and slavish—this will be a disgraceful punishment, and therefore suitable to him. The obedient nature will readily yield to such exhortations, but the disobedient, who heeds not the prelude, shall have the law ready for him: If any man smite another who is older than himself, either by twenty or by more years, in the first place, he who is at hand, not being younger than the combatants, nor their equal in age, shall separate them, or be disgraced according to law; but if he be the equal in age of the person who is struck or younger, he shall defend the person injured as he would a brother or father or still older relative. Further, let him who dares to smite an elder be tried for assault, as I have said, and if he be found guilty, let him be imprisoned for a period of not less than a year, or if the judges approve of a longer period, their decision shall be final. But if a stranger or metic smite one who is older by twenty years or more, the same law shall hold about the bystanders assisting, and he who is found guilty in such a suit, if he be a stranger but not resident, shall be imprisoned during a period of two years; and a metic who disobeys the laws shall be imprisoned for three years, unless the court assign him a longer term. And let him who was present in any of these cases and did not assist according to law be punished, if he be of the highest class, by paying a fine of a mina; or if he be of the second class, of fifty drachmas; or if of the third class, by a fine of thirty drachmas; or if he be of the fourth class, by a fine of twenty drachmas; and the generals and taxiarchs and phylarchs and hipparchs shall form the court in such cases.

Laws are partly framed for the sake of good men, in order to instruct them how they may live on friendly terms with one another, and partly for the sake of those who refuse to be instructed, whose spirit cannot be subdued, or softened, or hindered from plunging into evil. These are the persons who cause the word to be spoken which I am about to utter; for them the legislator legislates of necessity, and in the hope that there may be no need of his laws. He who shall dare to lay violent hands upon his father or mother, or any still older relative, having no fear either of the wrath of the Gods above, or of the punishments that are spoken of in the world below, but transgresses in contempt of ancient and universal traditions as though he were too wise to believe in them, requires some extreme measure of prevention. Now death is not the worst that can happen to men; far worse are the punishments which are said to pursue them in the world below. But although they are most true tales, they work on such souls no prevention; for if they had any effect there would be no slayers of mothers, or impious hands lifted up against parents; and therefore the punishments of this world which are inflicted during life ought not in such cases to fall short, if possible, of the terrors of the world below. Let our enactment then be as follows: If a man dare to strike his father or his mother, or their fathers or mothers, he being at the time of sound mind, then let any one who is at hand come to the rescue as has been already said, and the metic or stranger who comes to the rescue shall be called to the first place in the games; but if he do not come he shall suffer the punishment of perpetual exile. He who is not a metic, if he comes to the rescue, shall have praise, and if he do not come, blame. And if a slave come to the rescue, let him be made free, but if he do not come to the rescue, let him receive 100 strokes of the whip, by order of the wardens of the agora, if the occurrence take place in the agora; or if somewhere in the city beyond the limits of the agora, any warden of the city who is in residence shall punish him; or if in the country, then the commanders of the wardens of the country. If those who are near at the time be inhabitants of the same place, whether they be youths, or men, or women, let them come to the rescue and denounce him as the impious one; and he who does not come to the rescue shall fall under the curse of Zeus, the God of kindred and of ancestors, according to law. And if any one is found guilty of assaulting a parent, let him in the first place be forever banished from the city into the country, and let him abstain from the temples; and if he do not abstain, the wardens of the country shall punish him with blows, or in any way which they please, and if he return he shall be put to death. And if any freeman eat or drink, or have any other sort of intercourse with him, or only meeting him have voluntarily touched him, he shall not enter into any temple, nor into the agora, nor into the city, until he is purified; for he should consider that he has become tainted by a curse. And if he disobeys the law, and pollutes the city and the temples contrary to law, and one of the magistrates sees him and does not indict him, when he gives in his account this omission shall be a most serious charge.

If a slave strike a freeman, whether a stranger or a citizen, let any one who is present come to the rescue, or pay the penalty already mentioned; and let the bystanders bind him, and deliver him up to the injured person, and he receiving him shall put him in chains, and inflict on him as many stripes as he pleases; but having punished him he must surrender him to his master according to law, and not deprive him of his property. Let the law be as follows: The slave who strikes a freeman, not at the command of the magistrates, his owner shall receive bound from the man whom he has stricken, and not release him until the slave has persuaded the man whom he has stricken that he ought to be released. And let there be the same laws about women in relation to women, and about men and women in relation to one another.

BOOK X.

And now having spoken of assaults, let us sum up all acts of violence under a single law, which shall be as follows: No one shall take or carry away any of his neighbour's goods, neither shall he use anything which is his neighbour's without the consent of the owner; for these are the offences which are and have been, and will ever be, the source of all the aforesaid evils. The greatest of them are excesses and insolences of youth, and are offences against the greatest when they are done against religion; and especially great when in violation of public and holy rites, or of the partly-common rites in which tribes and phratries share; and in the second degree great when they are committed against private rites and sepulchres, and in the third degree (not to repeat the acts formerly mentioned), when insults are offered to parents; the fourth kind of violence is when any one, regardless of the authority of the rulers, takes or carries away or makes use of anything which belongs to them, not having their consent; and the fifth kind is when the violation of the civil rights of an individual demands reparation. There should be a common law embracing all these cases. For we have already said in general terms what shall be the punishment of sacrilege, whether fraudulent or violent, and now we have to determine what is to be the punishment of those who speak or act insolently toward the Gods. But first we must give them an admonition which may be in the following terms: No one who in obedience to the laws believed that there were Gods, ever intentionally did any unholy act, or uttered any unlawful word; but he who did must have supposed one of three things—either that they did not exist—which is the first possibility, or secondly, that, if they did, they took no care of man, or thirdly, that they were easily appeased and turned aside from their purpose by sacrifices and prayers.

CLEINIAS: What shall we say or do to these persons?

ATHENIAN: My good friend, let us first hear the jests which I suspect that they in their superiority will utter against us.

CLEINIAS: What jests?

ATHENIAN: They will make some irreverent speech of this sort: 'O inhabitants of Athens, and Sparta, and Cnosus,' they will reply, 'in that you speak truly; for some of us deny the very existence of the Gods, while others, as you say, are of opinion that they do not care about us; and others that they are turned from their course by gifts. Now we have a right to claim, as you yourself allowed, in the matter of laws, that before you are hard upon us and threaten us, you should argue with us and convince us—you should first attempt to teach and persuade us that there are Gods by reasonable evidences, and also that they are too good to be unrighteous, or to be propitiated, or turned from their course by gifts. For when we hear such things said of them by those who are esteemed to be the best of poets, and orators, and prophets, and priests, and by innumerable others, the thoughts of most of us are not set upon abstaining from unrighteous acts, but upon doing them and atoning for them. When lawgivers profess that they are gentle and not stern, we think that they should first of all use persuasion to us, and show us the existence of Gods, if not in a better manner than other men, at any

rate in a truer; and who knows but that we shall hearken to you? If then our request is a fair one, please to accept our challenge.

CLEINIAS: But is there any difficulty in proving the existence of the Gods?

ATHENIAN: How would you prove it?

CLEINIAS: How? In the first place, the earth and the sun, and the stars and the universe, and the fair order of the seasons, and the division of them into years and months, furnish proofs of their existence, and also there is the fact that all Hellenes and barbarians believe in them.

ATHENIAN: I fear, my sweet friend, though I will not say that I much regard, the contempt with which the profane will be likely to assail us. For you do not understand the nature of their complaint, and you fancy that they rush into impiety only from a love of sensual pleasure.

CLEINIAS: Why, Stranger, what other reason is there?

ATHENIAN: One which you who live in a different atmosphere would never guess.

CLEINIAS: What is it?

ATHENIAN: A very grievous sort of ignorance which is imagined to be the greatest wisdom.

CLEINIAS: What do you mean?

ATHENIAN: At Athens there are tales preserved in writing which the virtue of your state, as I am informed, refuses to admit. They speak of the Gods in prose as well as verse, and the oldest of them tell of the origin of the heavens and of the world, and not far from the beginning of their story they proceed to narrate the birth of the Gods, and how after they were born they behaved to one another. Whether these stories have in other ways a good or a bad influence, I should not like to be severe upon them, because they are ancient; but, looking at them with reference to the duties of children to their parents, I cannot praise them, or think that they are useful, or at all true. Of the words of the ancients I have nothing more to say; and I should wish to say of them only what is pleasing to the Gods. But as to our younger generation and their wisdom, I cannot let them off when they do mischief. For do but mark the effect of their words: when you and I argue for the existence of the Gods, and produce the sun, moon, stars, and earth, claiming for them a divine being, if we would listen to the aforesaid philosophers we should say that they are earth and stones only, which can have no care at all of human affairs, and that all religion is a cooking up of words and a make-believe.

CLEINIAS: One such teacher, O stranger, would be bad enough, and you imply that there are many of them, which is worse.

ATHENIAN: Well, then; what shall we say or do? Shall we assume that some one is accusing us among unholy men, who are trying to escape from the effect of our legislation; and that they say of us—How dreadful that you should legislate on the supposition that there are Gods! Shall we make a defence of ourselves? or shall we leave them and return to our laws, lest the prelude should become

longer than the law? For the discourse will certainly extend to great length, if we are to treat the impiously disposed as they desire, partly demonstrating to them at some length the things of which they demand an explanation, partly making them afraid or dissatisfied, and then proceed to the requisite enactments.

CLEINIAS: Yes, Stranger; but then how often have we repeated already that on the present occasion there is no reason why brevity should be preferred to length; for who is 'at our heels?' as the saying goes, and it would be paltry and ridiculous to prefer the shorter to the better. It is a matter of no small consequence, in some way or other to prove that there are Gods, and that they are good, and regard justice more than men do. The demonstration of this would be the best and noblest prelude of all our laws. And therefore, without impatience, and without hurry, let us unreservedly consider the whole matter, summoning up all the power of persuasion which we possess.

ATHENIAN: Seeing you thus in earnest, I would fain offer up a prayer that I may succeed: but I must proceed at once. Who can be calm when he is called upon to prove the existence of the Gods? Who can avoid hating and abhorring the men who are and have been the cause of this argument; I speak of those who will not believe the tales which they have heard as babes and sucklings from their mothers and nurses, repeated by them both in jest and earnest, like charms, who have also heard them in the sacrificial prayers, and seen sights accompanying them—sights and sounds delightful to children—and their parents during the sacrifices showing an intense earnestness on behalf of their children and of themselves, and with eager interest talking to the Gods, and beseeching them, as though they were firmly convinced of their existence; who likewise see and hear the prostrations and invocations which are made by Hellenes and barbarians at the rising and setting of the sun and moon, in all the vicissitudes of life, not as if they thought that there were no Gods, but as if there could be no doubt of their existence, and no suspicion of their non-existence; when men, knowing all these things, despise them on no real grounds, as would be admitted by all who have any particle of intelligence, and when they force us to say what we are now saying, how can any one in gentle terms remonstrate with the like of them, when he has to begin by proving to them the very existence of the Gods? Yet the attempt must be made; for it would be unseemly that one half of mankind should go mad in their lust of pleasure, and the other half in their indignation at such persons. Our address to these lost and perverted natures should not be spoken in passion; let us suppose ourselves to select some one of them, and gently reason with him, smothering our anger: O my son, we will say to him, you are young, and the advance of time will make you reverse many of the opinions which you now hold. Wait awhile, and do not attempt to judge at present of the highest things; and that is the highest of which you now think nothing—to know the Gods rightly and to live accordingly. And in the first place let me indicate to you one point which is of great importance, and about which I cannot be deceived: You and your friends are not the first who have held this opinion about the Gods. There have always been persons more or less numerous who have had the same disorder. I have known many of them, and can tell you, that no one who had taken up in youth this opinion, that the Gods do not exist, ever continued in the same until he was old; the two other notions certainly do continue in some cases, but not in many; the notion, I mean, that the Gods exist, but take no heed of human things, and the other notion that they do take heed of them, but are easily propitiated with sacrifices and prayers. As to the opinion about the Gods which may some day become clear to you, I advise you to wait and consider if it be true or not; ask of others, and above all of the legislator. In the meantime take care that you do not offend against the Gods. For the duty of the legislator is and always will be to teach you the truth of these matters.

CLEINIAS: Our address, Stranger, thus far, is excellent.

ATHENIAN: Quite true, Megillus and Cleinias, but I am afraid that we have unconsciously lighted on a strange doctrine.

CLEINIAS: What doctrine do you mean?

ATHENIAN: The wisest of all doctrines, in the opinion of many.

CLEINIAS: I wish that you would speak plainer.

ATHENIAN: The doctrine that all things do become, have become, and will become, some by nature, some by art, and some by chance.

CLEINIAS: Is not that true?

ATHENIAN: Well, philosophers are probably right; at any rate we may as well follow in their track, and examine what is the meaning of them and their disciples.

CLEINIAS: By all means.

ATHENIAN: They say that the greatest and fairest things are the work of nature and of chance, the lesser of art, which, receiving from nature the greater and primeval creations, moulds and fashions all those lesser works which are generally termed artificial.

CLEINIAS: How is that?

ATHENIAN: I will explain my meaning still more clearly. They say that fire and water, and earth and air, all exist by nature and chance, and none of them by art, and that as to the bodies which come next in order—earth, and sun, and moon, and stars—they have been created by means of these absolutely inanimate existences. The elements are severally moved by chance and some inherent force according to certain affinities among them—of hot with cold, or of dry with moist, or of soft with hard, and according to all the other accidental admixtures of opposites which have been formed by necessity. After this fashion and in this manner the whole heaven has been created, and all that is in the heaven, as well as animals and all plants, and all the seasons come from these elements, not by the action of mind, as they say, or of any God, or from art, but as I was saying, by nature and chance only. Art sprang up afterwards and out of these, mortal and of mortal birth, and produced in play certain images and very partial imitations of the truth, having an affinity to one another, such as music and painting create and their companion arts. And there are other arts which have a serious purpose, and these co-operate with nature, such, for example, as medicine, and husbandry, and gymnastic. And they say that politics co-operate with nature, but in a less degree, and have more of art; also that legislation is entirely a work of art, and is based on assumptions which are not true.

CLEINIAS: How do you mean?

ATHENIAN: In the first place, my dear friend, these people would say that the Gods exist not by nature, but by art, and by the laws of states, which are different in different places, according to the agreement of those who make them; and that the honourable is one thing by nature and another thing by law, and that the principles of justice have no existence at all in nature, but that mankind are always disputing about them and altering them; and that the alterations which are made by art and by law have no basis in nature, but are of authority for the moment and at the time at which they are made. These, my friends, are the sayings of wise men, poets and prose writers, which find a way into the minds of youth. They are told by them that the highest right is might, and in this way the young fall into impieties, under the idea that the Gods are not such as the law bids them imagine; and hence arise factions, these philosophers inviting them to lead a true life according to nature, that is, to live in real dominion over others, and not in legal subjection to them.

CLEINIAS: What a dreadful picture, Stranger, have you given, and how great is the injury which is thus inflicted on young men to the ruin both of states and families!

ATHENIAN: True, Cleinias; but then what should the lawgiver do when this evil is of long standing? should he only rise up in the state and threaten all mankind, proclaiming that if they will not say and think that the Gods are such as the law ordains (and this may be extended generally to the honourable, the just, and to all the highest things, and to all that relates to virtue and vice), and if they will not make their actions conform to the copy which the law gives them, then he who refuses to obey the law shall die, or suffer stripes and bonds, or privation of citizenship, or in some cases be punished by loss of property and exile? Should he not rather, when he is making laws for men, at the same time infuse the spirit of persuasion into his words, and mitigate the severity of them as far as he can?

CLEINIAS: Why, Stranger, if such persuasion be at all possible, then a legislator who has anything in him ought never to weary of persuading men; he ought to leave nothing unsaid in support of the ancient opinion that there are Gods, and of all those other truths which you were just now mentioning; he ought to support the law and also art, and acknowledge that both alike exist by nature, and no less than nature, if they are the creations of mind in accordance with right reason, as you appear to me to maintain, and I am disposed to agree with you in thinking.

ATHENIAN: Yes, my enthusiastic Cleinias; but are not these things when spoken to a multitude hard to be understood, not to mention that they take up a dismal length of time?

CLEINIAS: Why, Stranger, shall we, whose patience failed not when drinking or music were the themes of discourse, weary now of discoursing about the Gods, and about divine things? And the greatest help to rational legislation is that the laws when once written down are always at rest; they can be put to the test at any future time, and therefore, if on first hearing they seem difficult, there is no reason for apprehension about them, because any man however dull can go over them and consider them again and again; nor if they are tedious but useful, is there any reason or religion, as it seems to me, in any man refusing to maintain the principles of them to the utmost of his power.

MEGILLUS: Stranger, I like what Cleinias is saying.

ATHENIAN: Yes, Megillus, and we should do as he proposes; for if impious discourses were not scattered, as I may say, throughout the world, there would have been no need for any vindication of the existence of the Gods—but seeing that they are spread far and wide, such arguments are needed; and who should come to the rescue of the greatest laws, when they are being undermined by bad men, but the legislator himself?

MEGILLUS: There is no more proper champion of them.

ATHENIAN: Well, then, tell me, Cleinias—for I must ask you to be my partner—does not he who talks in this way conceive fire and water and earth and air to be the first elements of all things? these he calls nature, and out of these he supposes the soul to be formed afterwards; and this is not a mere conjecture of ours about his meaning, but is what he really means.

CLEINIAS: Very true.

ATHENIAN: Then, by Heaven, we have discovered the source of this vain opinion of all those physical investigators; and I would have you examine their arguments with the utmost care, for their impiety is a very serious matter; they not only make a bad and mistaken use of argument, but they lead away the minds of others: that is my opinion of them.

CLEINIAS: You are right; but I should like to know how this happens.

ATHENIAN: I fear that the argument may seem singular.

CLEINIAS: Do not hesitate, Stranger; I see that you are afraid of such a discussion carrying you beyond the limits of legislation. But if there be no other way of showing our agreement in the belief that there are Gods, of whom the law is said now to approve, let us take this way, my good sir.

ATHENIAN: Then I suppose that I must repeat the singular argument of those who manufacture the soul according to their own impious notions; they affirm that which is the first cause of the generation and destruction of all things, to be not first, but last, and that which is last to be first, and hence they have fallen into error about the true nature of the Gods.

CLEINIAS: Still I do not understand you.

ATHENIAN: Nearly all of them, my friends, seem to be ignorant of the nature and power of the soul, especially in what relates to her origin: they do not know that she is among the first of things, and before all bodies, and is the chief author of their changes and transpositions. And if this is true, and if the soul is older than the body, must not the things which are of the soul's kindred be of necessity prior to those which appertain to the body?

CLEINIAS: Certainly.

ATHENIAN: Then thought and attention and mind and art and law will be prior to that which is hard and soft and heavy and light; and the great and primitive works and actions will be works of art; they

will be the first, and after them will come nature and works of nature, which however is a wrong term for men to apply to them; these will follow, and will be under the government of art and mind.

CLEINIAS: But why is the word 'nature' wrong?

ATHENIAN: Because those who use the term mean to say that nature is the first creative power; but if the soul turn out to be the primeval element, and not fire or air, then in the truest sense and beyond other things the soul may be said to exist by nature; and this would be true if you proved that the soul is older than the body, but not otherwise.

CLEINIAS: You are quite right.

ATHENIAN: Shall we, then, take this as the next point to which our attention should be directed?

CLEINIAS: By all means.

ATHENIAN: Let us be on our guard lest this most deceptive argument with its youthful looks, beguiling us old men, give us the slip and make a laughing-stock of us. Who knows but we may be aiming at the greater, and fail of attaining the lesser? Suppose that we three have to pass a rapid river, and I, being the youngest of the three and experienced in rivers, take upon me the duty of making the attempt first by myself; leaving you in safety on the bank, I am to examine whether the river is passable by older men like yourselves, and if such appears to be the case then I shall invite you to follow, and my experience will help to convey you across; but if the river is impassable by you, then there will have been no danger to anybody but myself—would not that seem to be a very fair proposal? I mean to say that the argument in prospect is likely to be too much for you, out of your depth and beyond your strength, and I should be afraid that the stream of my questions might create in you who are not in the habit of answering, giddiness and confusion of mind, and hence a feeling of unpleasantness and unsuitableness might arise. I think therefore that I had better first ask the questions and then answer them myself while you listen in safety; in that way I can carry on the argument until I have completed the proof that the soul is prior to the body.

CLEINIAS: Excellent, Stranger, and I hope that you will do as you propose.

ATHENIAN: Come, then, and if ever we are to call upon the Gods, let us call upon them now in all seriousness to come to the demonstration of their own existence. And so holding fast to the rope we will venture upon the depths of the argument. When questions of this sort are asked of me, my safest answer would appear to be as follows: Some one says to me, 'O Stranger, are all things at rest and nothing in motion, or is the exact opposite of this true, or are some things in motion and others at rest?' To this I shall reply that some things are in motion and others at rest. 'And do not things which move move in a place, and are not the things which are at rest at rest in a place?' Certainly. 'And some move or rest in one place and some in more places than one?' You mean to say, we shall rejoin, that those things which rest at the centre move in one place, just as the circumference goes round of globes which are said to be at rest? 'Yes.' And we observe that, in the revolution, the motion which carries round the larger and the lesser circle at the same time is proportionally distributed to greater and smaller, and is greater and smaller in a certain proportion. Here is a wonder which might be thought an impossibility, that the same motion should impart swiftness and slowness in due

proportion to larger and lesser circles. 'Very true.' And when you speak of bodies moving in many places, you seem to me to mean those which move from one place to another, and sometimes have one centre of motion and sometimes more than one because they turn upon their axis; and whenever they meet anything, if it be stationary, they are divided by it; but if they get in the midst between bodies which are approaching and moving towards the same spot from opposite directions, they unite with them. 'I admit the truth of what you are saying.' Also when they unite they grow, and when they are divided they waste away—that is, supposing the constitution of each to remain, or if that fails, then there is a second reason of their dissolution. 'And when are all things created and how?' Clearly, they are created when the first principle receives increase and attains to the second dimension, and from this arrives at the one which is neighbour to this, and after reaching the third becomes perceptible to sense. Everything which is thus changing and moving is in process of generation; only when at rest has it real existence, but when passing into another state it is destroyed utterly. Have we not mentioned all motions that there are, and comprehended them under their kinds and numbered them with the exception, my friends, of two?

CLEINIAS: Which are they?

ATHENIAN: Just the two, with which our present enquiry is concerned.

CLEINIAS: Speak plainer.

ATHENIAN: I suppose that our enquiry has reference to the soul?

CLEINIAS: Very true.

ATHENIAN: Let us assume that there is a motion able to move other things, but not to move itself; that is one kind; and there is another kind which can move itself as well as other things, working in composition and decomposition, by increase and diminution and generation and destruction—that is also one of the many kinds of motion.

CLEINIAS: Granted.

ATHENIAN: And we will assume that which moves other, and is changed by other, to be the ninth, and that which changes itself and others, and is coincident with every action and every passion, and is the true principle of change and motion in all that is—that we shall be inclined to call the tenth.

CLEINIAS: Certainly.

ATHENIAN: And which of these ten motions ought we to prefer as being the mightiest and most efficient?

CLEINIAS: I must say that the motion which is able to move itself is ten thousand times superior to all the others.

ATHENIAN: Very good; but may I make one or two corrections in what I have been saying?

CLEINIAS: What are they?

ATHENIAN: When I spoke of the tenth sort of motion, that was not quite correct.

CLEINIAS: What was the error?

ATHENIAN: According to the true order, the tenth was really the first in generation and power; then follows the second, which was strangely enough termed the ninth by us.

CLEINIAS: What do you mean?

ATHENIAN: I mean this: when one thing changes another, and that another, of such will there be any primary changing element? How can a thing which is moved by another ever be the beginning of change? Impossible. But when the self-moved changes other, and that again other, and thus thousands upon tens of thousands of bodies are set in motion, must not the beginning of all this motion be the change of the self-moving principle?

CLEINIAS: Very true, and I quite agree.

ATHENIAN: Or, to put the question in another way, making answer to ourselves: If, as most of these philosophers have the audacity to affirm, all things were at rest in one mass, which of the above-mentioned principles of motion would first spring up among them?

CLEINIAS: Clearly the self-moving; for there could be no change in them arising out of any external cause; the change must first take place in themselves.

ATHENIAN: Then we must say that self-motion being the origin of all motions, and the first which arises among things at rest as well as among things in motion, is the eldest and mightiest principle of change, and that which is changed by another and yet moves other is second.

CLEINIAS: Quite true.

ATHENIAN: At this stage of the argument let us put a question.

CLEINIAS: What question?

ATHENIAN: If we were to see this power existing in any earthy, watery, or fiery substance, simple or compound—how should we describe it?

CLEINIAS: You mean to ask whether we should call such a self-moving power life?

ATHENIAN: I do.

CLEINIAS: Certainly we should.

ATHENIAN: And when we see soul in anything, must we not do the same—must we not admit that this is life?

CLEINIAS: We must.

ATHENIAN: And now, I beseech you, reflect—you would admit that we have a threefold knowledge of things?

CLEINIAS: What do you mean?

ATHENIAN: I mean that we know the essence, and that we know the definition of the essence, and the name—these are the three; and there are two questions which may be raised about anything.

CLEINIAS: How two?

ATHENIAN: Sometimes a person may give the name and ask the definition; or he may give the definition and ask the name. I may illustrate what I mean in this way.

CLEINIAS: How?

ATHENIAN: Number like some other things is capable of being divided into equal parts; when thus divided, number is named 'even,' and the definition of the name 'even' is 'number divisible into two equal parts'?

CLEINIAS: True.

ATHENIAN: I mean, that when we are asked about the definition and give the name, or when we are asked about the name and give the definition—in either case, whether we give name or definition, we speak of the same thing, calling 'even' the number which is divided into two equal parts.

CLEINIAS: Quite true.

ATHENIAN: And what is the definition of that which is named 'soul'? Can we conceive of any other than that which has been already given—the motion which can move itself?

CLEINIAS: You mean to say that the essence which is defined as the self-moved is the same with that which has the name soul?

ATHENIAN: Yes; and if this is true, do we still maintain that there is anything wanting in the proof that the soul is the first origin and moving power of all that is, or has become, or will be, and their contraries, when she has been clearly shown to be the source of change and motion in all things?

CLEINIAS: Certainly not; the soul as being the source of motion, has been most satisfactorily shown to be the oldest of all things.

ATHENIAN: And is not that motion which is produced in another, by reason of another, but never has any self-moving power at all, being in truth the change of an inanimate body, to be reckoned second, or by any lower number which you may prefer?

CLEINIAS: Exactly.

ATHENIAN: Then we are right, and speak the most perfect and absolute truth, when we say that the soul is prior to the body, and that the body is second and comes afterwards, and is born to obey the soul, which is the ruler?

CLEINIAS: Nothing can be more true.

ATHENIAN: Do you remember our old admission, that if the soul was prior to the body the things of the soul were also prior to those of the body?

CLEINIAS: Certainly.

ATHENIAN: Then characters and manners, and wishes and reasonings, and true opinions, and reflections, and recollections are prior to length and breadth and depth and strength of bodies, if the soul is prior to the body.

CLEINIAS: To be sure.

ATHENIAN: In the next place, we must not of necessity admit that the soul is the cause of good and evil, base and honourable, just and unjust, and of all other opposites, if we suppose her to be the cause of all things?

CLEINIAS: We must.

ATHENIAN: And as the soul orders and inhabits all things that move, however moving, must we not say that she orders also the heavens?

CLEINIAS: Of course.

ATHENIAN: One soul or more? More than one—I will answer for you; at any rate, we must not suppose that there are less than two—one the author of good, and the other of evil.

CLEINIAS: Very true.

ATHENIAN: Yes, very true; the soul then directs all things in heaven, and earth, and sea by her movements, and these are described by the terms—will, consideration, attention, deliberation, opinion true and false, joy and sorrow, confidence, fear, hatred, love, and other primary motions akin to these; which again receive the secondary motions of corporeal substances, and guide all things to growth and decay, to composition and decomposition, and to the qualities which accompany them, such as heat and cold, heaviness and lightness, hardness and softness, blackness and whiteness, bitterness and sweetness, and all those other qualities which the soul uses, herself a goddess, when

truly receiving the divine mind she disciplines all things rightly to their happiness; but when she is the companion of folly, she does the very contrary of all this. Shall we assume so much, or do we still entertain doubts?

CLEINIAS: There is no room at all for doubt.

ATHENIAN: Shall we say then that it is the soul which controls heaven and earth, and the whole world? that it is a principle of wisdom and virtue, or a principle which has neither wisdom nor virtue? Suppose that we make answer as follows:

CLEINIAS: How would you answer?

ATHENIAN: If, my friend, we say that the whole path and movement of heaven, and of all that is therein, is by nature akin to the movement and revolution and calculation of mind, and proceeds by kindred laws, then, as is plain, we must say that the best soul takes care of the world and guides it along the good path.

CLEINIAS: True.

ATHENIAN: But if the world moves wildly and irregularly, then the evil soul guides it.

CLEINIAS: True again.

ATHENIAN: Of what nature is the movement of mind? To this question it is not easy to give an intelligent answer; and therefore I ought to assist you in framing one.

CLEINIAS: Very good.

ATHENIAN: Then let us not answer as if we would look straight at the sun, making ourselves darkness at midday—I mean as if we were under the impression that we could see with mortal eyes, or know adequately the nature of mind—it will be safer to look at the image only.

CLEINIAS: What do you mean?

ATHENIAN: Let us select of the ten motions the one which mind chiefly resembles; this I will bring to your recollection, and will then make the answer on behalf of us all.

CLEINIAS: That will be excellent.

ATHENIAN: You will surely remember our saying that all things were either at rest or in motion?

CLEINIAS: I do.

ATHENIAN: And that of things in motion some were moving in one place, and others in more than one?

CLEINIAS: Yes.

ATHENIAN: Of these two kinds of motion, that which moves in one place must move about a centre like globes made in a lathe, and is most entirely akin and similar to the circular movement of mind.

CLEINIAS: What do you mean?

ATHENIAN: In saying that both mind and the motion which is in one place move in the same and like manner, in and about the same, and in relation to the same, and according to one proportion and order, and are like the motion of a globe, we invented a fair image, which does no discredit to our ingenuity.

CLEINIAS: It does us great credit.

ATHENIAN: And the motion of the other sort which is not after the same manner, nor in the same, nor about the same, nor in relation to the same, nor in one place, nor in order, nor according to any rule or proportion, may be said to be akin to senselessness and folly?

CLEINIAS: That is most true.

ATHENIAN: Then, after what has been said, there is no difficulty in distinctly stating, that since soul carries all things round, either the best soul or the contrary must of necessity carry round and order and arrange the revolution of the heaven.

CLEINIAS: And judging from what has been said, Stranger, there would be impiety in asserting that any but the most perfect soul or souls carries round the heavens.

ATHENIAN: You have understood my meaning right well, Cleinias, and now let me ask you another question.

CLEINIAS: What are you going to ask?

ATHENIAN: If the soul carries round the sun and moon, and the other stars, does she not carry round each individual of them?

CLEINIAS: Certainly.

ATHENIAN: Then of one of them let us speak, and the same argument will apply to all.

CLEINIAS: Which will you take?

ATHENIAN: Every one sees the body of the sun, but no one sees his soul, nor the soul of any other body living or dead; and yet there is great reason to believe that this nature, unperceived by any of our senses, is circumfused around them all, but is perceived by mind; and therefore by mind and reflection only let us apprehend the following point.

CLEINIAS: What is that?

ATHENIAN: If the soul carries round the sun, we shall not be far wrong in supposing one of three alternatives.

CLEINIAS: What are they?

ATHENIAN: Either the soul which moves the sun this way and that, resides within the circular and visible body, like the soul which carries us about every way; or the soul provides herself with an external body of fire or air, as some affirm, and violently propels body by body; or thirdly, she is without such a body, but guides the sun by some extraordinary and wonderful power.

CLEINIAS: Yes, certainly; the soul can only order all things in one of these three ways.

ATHENIAN: And this soul of the sun, which is therefore better than the sun, whether taking the sun about in a chariot to give light to men, or acting from without, or in whatever way, ought by every man to be deemed a God.

CLEINIAS: Yes, by every man who has the least particle of sense.

ATHENIAN: And of the stars too, and of the moon, and of the years and months and seasons, must we not say in like manner, that since a soul or souls having every sort of excellence are the causes of all of them, those souls are Gods, whether they are living beings and reside in bodies, and in this way order the whole heaven, or whatever be the place and mode of their existence—and will any one who admits all this venture to deny that all things are full of Gods?

CLEINIAS: No one, Stranger, would be such a madman.

ATHENIAN: And now, Megillus and Cleinias, let us offer terms to him who has hitherto denied the existence of the Gods, and leave him.

CLEINIAS: What terms?

ATHENIAN: Either he shall teach us that we were wrong in saying that the soul is the original of all things, and arguing accordingly; or, if he be not able to say anything better, then he must yield to us and live for the remainder of his life in the belief that there are Gods. Let us see, then, whether we have said enough or not enough to those who deny that there are Gods.

CLEINIAS: Certainly, quite enough, Stranger.

ATHENIAN: Then to them we will say no more. And now we are to address him who, believing that there are Gods, believes also that they take no heed of human affairs: To him we say—O thou best of men, in believing that there are Gods you are led by some affinity to them, which attracts you towards your kindred and makes you honour and believe in them. But the fortunes of evil and unrighteous men in private as well as public life, which, though not really happy, are wrongly counted happy in the judgment of men, and are celebrated both by poets and prose writers—these draw you aside from

your natural piety. Perhaps you have seen impious men growing old and leaving their children's children in high offices, and their prosperity shakes your faith—you have known or heard or been yourself an eyewitness of many monstrous impieties, and have beheld men by such criminal means from small beginnings attaining to sovereignty and the pinnacle of greatness; and considering all these things you do not like to accuse the Gods of them, because they are your relatives; and so from some want of reasoning power, and also from an unwillingness to find fault with them, you have come to believe that they exist indeed, but have no thought or care of human things. Now, that your present evil opinion may not grow to still greater impiety, and that we may if possible use arguments which may conjure away the evil before it arrives, we will add another argument to that originally addressed to him who utterly denied the existence of the Gods. And do you, Megillus and Cleinias, answer for the young man as you did before; and if any impediment comes in our way, I will take the word out of your mouths, and carry you over the river as I did just now.

CLEINIAS: Very good; do as you say, and we will help you as well as we can.

ATHENIAN: There will probably be no difficulty in proving to him that the Gods care about the small as well as about the great. For he was present and heard what was said, that they are perfectly good, and that the care of all things is most entirely natural to them.

CLEINIAS: No doubt he heard that.

ATHENIAN: Let us consider together in the next place what we mean by this virtue which we ascribe to them. Surely we should say that to be temperate and to possess mind belongs to virtue, and the contrary to vice?

CLEINIAS: Certainly.

ATHENIAN: Yes; and courage is a part of virtue, and cowardice of vice?

CLEINIAS: True.

ATHENIAN: And the one is honourable, and the other dishonourable?

CLEINIAS: To be sure.

ATHENIAN: And the one, like other meaner things, is a human quality, but the Gods have no part in anything of the sort?

CLEINIAS: That again is what everybody will admit.

ATHENIAN: But do we imagine carelessness and idleness and luxury to be virtues? What do you think?

CLEINIAS: Decidedly not.

ATHENIAN: They rank under the opposite class?

CLEINIAS: Yes.

ATHENIAN: And their opposites, therefore, would fall under the opposite class?

CLEINIAS: Yes.

ATHENIAN: But are we to suppose that one who possesses all these good qualities will be luxurious and heedless and idle, like those whom the poet compares to stingless drones?

CLEINIAS: And the comparison is a most just one.

ATHENIAN: Surely God must not be supposed to have a nature which He Himself hates? he who dares to say this sort of thing must not be tolerated for a moment.

CLEINIAS: Of course not. How could he have?

ATHENIAN: Should we not on any principle be entirely mistaken in praising any one who has some special business entrusted to him, if he have a mind which takes care of great matters and no care of small ones? Reflect; he who acts in this way, whether he be God or man, must act from one of two principles.

CLEINIAS: What are they?

ATHENIAN: Either he must think that the neglect of the small matters is of no consequence to the whole, or if he knows that they are of consequence, and he neglects them, his neglect must be attributed to carelessness and indolence. Is there any other way in which his neglect can be explained? For surely, when it is impossible for him to take care of all, he is not negligent if he fails to attend to these things great or small, which a God or some inferior being might be wanting in strength or capacity to manage?

CLEINIAS: Certainly not.

ATHENIAN: Now, then, let us examine the offenders, who both alike confess that there are Gods, but with a difference—the one saying that they may be appeased, and the other that they have no care of small matters: there are three of us and two of them, and we will say to them—In the first place, you both acknowledge that the Gods hear and see and know all things, and that nothing can escape them which is matter of sense and knowledge: do you admit this?

CLEINIAS: Yes.

ATHENIAN: And do you admit also that they have all power which mortals and immortals can have?

CLEINIAS: They will, of course, admit this also.

ATHENIAN: And surely we three and they two—five in all—have acknowledged that they are good and perfect?

CLEINIAS: Assuredly.

ATHENIAN: But, if they are such as we conceive them to be, can we possibly suppose that they ever act in the spirit of carelessness and indolence? For in us inactivity is the child of cowardice, and carelessness of inactivity and indolence.

CLEINIAS: Most true.

ATHENIAN: Then not from inactivity and carelessness is any God ever negligent; for there is no cowardice in them.

CLEINIAS: That is very true.

ATHENIAN: Then the alternative which remains is, that if the Gods neglect the lighter and lesser concerns of the universe, they neglect them because they know that they ought not to care about such matters—what other alternative is there but the opposite of their knowing?

CLEINIAS: There is none.

ATHENIAN: And, O most excellent and best of men, do I understand you to mean that they are careless because they are ignorant, and do not know that they ought to take care, or that they know, and yet like the meanest sort of men, knowing the better, choose the worse because they are overcome by pleasures and pains?

CLEINIAS: Impossible.

ATHENIAN: Do not all human things partake of the nature of soul? And is not man the most religious of all animals?

CLEINIAS: That is not to be denied.

ATHENIAN: And we acknowledge that all mortal creatures are the property of the Gods, to whom also the whole of heaven belongs?

CLEINIAS: Certainly.

ATHENIAN: And, therefore, whether a person says that these things are to the Gods great or small—in either case it would not be natural for the Gods who own us, and who are the most careful and the best of owners, to neglect us. There is also a further consideration.

CLEINIAS: What is it?

ATHENIAN: Sensation and power are in an inverse ratio to each other in respect to their ease and difficulty.

CLEINIAS: What do you mean?

ATHENIAN: I mean that there is greater difficulty in seeing and hearing the small than the great, but more facility in moving and controlling and taking care of small and unimportant things than of their opposites.

CLEINIAS: Far more.

ATHENIAN: Suppose the case of a physician who is willing and able to cure some living thing as a whole—how will the whole fare at his hands if he takes care only of the greater and neglects the parts which are lesser?

CLEINIAS: Decidedly not well.

ATHENIAN: No better would be the result with pilots or generals, or householders or statesmen, or any other such class, if they neglected the small and regarded only the great—as the builders say, the larger stones do not lie well without the lesser.

CLEINIAS: Of course not.

ATHENIAN: Let us not, then, deem God inferior to human workmen, who, in proportion to their skill, finish and perfect their works, small as well as great, by one and the same art; or that God, the wisest of beings, who is both willing and able to take care, is like a lazy good-for-nothing, or a coward, who turns his back upon labour and gives no thought to smaller and easier matters, but to the greater only.

CLEINIAS: Never, Stranger, let us admit a supposition about the Gods which is both impious and false.

ATHENIAN: I think that we have now argued enough with him who delights to accuse the Gods of neglect.

CLEINIAS: Yes.

ATHENIAN: He has been forced to acknowledge that he is in error, but he still seems to me to need some words of consolation.

CLEINIAS: What consolation will you offer him?

ATHENIAN: Let us say to the youth: The ruler of the universe has ordered all things with a view to the excellence and preservation of the whole, and each part, as far as may be, has an action and passion appropriate to it. Over these, down to the least fraction of them, ministers have been appointed to preside, who have wrought out their perfection with infinitesimal exactness. And one of these portions of the universe is thine own, unhappy man, which, however little, contributes to the whole; and you do not seem to be aware that this and every other creation is for the sake of the whole, and in order that the life of the whole may be blessed; and that you are created for the sake of the whole, and not the whole for the sake of you. For every physician and every skilled artist does all things for the sake of the whole, directing his effort towards the common good, executing the part for the sake of the whole,

and not the whole for the sake of the part. And you are annoyed because you are ignorant how what is best for you happens to you and to the universe, as far as the laws of the common creation admit. Now, as the soul combining first with one body and then with another undergoes all sorts of changes, either of herself, or through the influence of another soul, all that remains to the player of the game is that he should shift the pieces; sending the better nature to the better place, and the worse to the worse, and so assigning to them their proper portion.

CLEINIAS: In what way do you mean?

ATHENIAN: In a way which may be supposed to make the care of all things easy to the Gods. If any one were to form or fashion all things without any regard to the whole—if, for example, he formed a living element of water out of fire, instead of forming many things out of one or one out of many in regular order attaining to a first or second or third birth, the transmutation would have been infinite; but now the ruler of the world has a wonderfully easy task.

CLEINIAS: How so?

ATHENIAN: I will explain: When the king saw that our actions had life, and that there was much virtue in them and much vice, and that the soul and body, although not, like the Gods of popular opinion, eternal, yet having once come into existence, were indestructible (for if either of them had been destroyed, there would have been no generation of living beings); and when he observed that the good of the soul was ever by nature designed to profit men, and the evil to harm them—he, seeing all this, contrived so to place each of the parts that their position might in the easiest and best manner procure the victory of good and the defeat of evil in the whole. And he contrived a general plan by which a thing of a certain nature found a certain seat and room. But the formation of qualities he left to the wills of individuals. For every one of us is made pretty much what he is by the bent of his desires and the nature of his soul.

CLEINIAS: Yes, that is probably true.

ATHENIAN: Then all things which have a soul change, and possess in themselves a principle of change, and in changing move according to law and to the order of destiny: natures which have undergone a lesser change move less and on the earth's surface, but those which have suffered more change and have become more criminal sink into the abyss, that is to say, into Hades and other places in the world below, of which the very names terrify men, and which they picture to themselves as in a dream, both while alive and when released from the body. And whenever the soul receives more of good or evil from her own energy and the strong influence of others—when she has communion with divine virtue and becomes divine, she is carried into another and better place, which is perfect in holiness; but when she has communion with evil, then she also changes the place of her life.

'This is the justice of the Gods who inhabit Olympus.'

O youth or young man, who fancy that you are neglected by the Gods, know that if you become worse you shall go to the worse souls, or if better to the better, and in every succession of life and death you will do and suffer what like may fitly suffer at the hands of like. This is the justice of heaven,

which neither you nor any other unfortunate will ever glory in escaping, and which the ordaining powers have specially ordained; take good heed thereof, for it will be sure to take heed of you. If you say: I am small and will creep into the depths of the earth, or I am high and will fly up to heaven, you are not so small or so high but that you shall pay the fitting penalty, either here or in the world below or in some still more savage place whither you shall be conveyed. This is also the explanation of the fate of those whom you saw, who had done unholy and evil deeds, and from small beginnings had grown great, and you fancied that from being miserable they had become happy; and in their actions, as in a mirror, you seemed to see the universal neglect of the Gods, not knowing how they make all things work together and contribute to the great whole. And thinkest thou, bold man, that thou needest not to know this? he who knows it not can never form any true idea of the happiness or unhappiness of life or hold any rational discourse respecting either. If Cleinias and this our reverend company succeed in proving to you that you know not what you say of the Gods, then will God help you; but should you desire to hear more, listen to what we say to the third opponent, if you have any understanding whatsoever. For I think that we have sufficiently proved the existence of the Gods, and that they care for men: The other notion that they are appeased by the wicked, and take gifts, is what we must not concede to any one, and what every man should disprove to the utmost of his power.

CLEINIAS: Very good; let us do as you say.

ATHENIAN: Well, then, by the Gods themselves I conjure you to tell me—if they are to be propitiated, how are they to be propitiated? Who are they, and what is their nature? Must they not be at least rulers who have to order unceasingly the whole heaven?

CLEINIAS: True.

ATHENIAN: And to what earthly rulers can they be compared, or who to them? How in the less can we find an image of the greater? Are they charioteers of contending pairs of steeds, or pilots of vessels? Perhaps they might be compared to the generals of armies, or they might be likened to physicians providing against the diseases which make war upon the body, or to husbandmen observing anxiously the effects of the seasons on the growth of plants; or perhaps to shepherds of flocks. For as we acknowledge the world to be full of many goods and also of evils, and of more evils than goods, there is, as we affirm, an immortal conflict going on among us, which requires marvellous watchfulness; and in that conflict the Gods and demigods are our allies, and we are their property. Injustice and insolence and folly are the destruction of us, and justice and temperance and wisdom are our salvation; and the place of these latter is in the life of the Gods, although some vestige of them may occasionally be discerned among mankind. But upon this earth we know that there dwell souls possessing an unjust spirit, who may be compared to brute animals, which fawn upon their keepers, whether dogs or shepherds, or the best and most perfect masters; for they in like manner, as the voices of the wicked declare, prevail by flattery and prayers and incantations, and are allowed to make their gains with impunity. And this sin, which is termed dishonesty, is an evil of the same kind as what is termed disease in living bodies or pestilence in years or seasons of the year, and in cities and governments has another name, which is injustice.

CLEINIAS: Quite true.

ATHENIAN: What else can he say who declares that the Gods are always lenient to the doers of unjust acts, if they divide the spoil with them? As if wolves were to toss a portion of their prey to the dogs, and they, mollified by the gift, suffered them to tear the flocks. Must not he who maintains that the Gods can be propitiated argue thus?

CLEINIAS: Precisely so.

ATHENIAN: And to which of the above-mentioned classes of guardians would any man compare the Gods without absurdity? Will he say that they are like pilots, who are themselves turned away from their duty by 'libations of wine and the savour of fat,' and at last overturn both ship and sailors?

CLEINIAS: Assuredly not.

ATHENIAN: And surely they are not like charioteers who are bribed to give up the victory to other chariots?

CLEINIAS: That would be a fearful image of the Gods.

ATHENIAN: Nor are they like generals, or physicians, or husbandmen, or shepherds; and no one would compare them to dogs who have been silenced by wolves.

CLEINIAS: A thing not to be spoken of.

ATHENIAN: And are not all the Gods the chiefest of all guardians, and do they not guard our highest interests?

CLEINIAS: Yes; the chiefest.

ATHENIAN: And shall we say that those who guard our noblest interests, and are the best of guardians, are inferior in virtue to dogs, and to men even of moderate excellence, who would never betray justice for the sake of gifts which unjust men impiously offer them?

CLEINIAS: Certainly not; nor is such a notion to be endured, and he who holds this opinion may be fairly singled out and characterized as of all impious men the wickedest and most impious.

ATHENIAN: Then are the three assertions—that the Gods exist, and that they take care of men, and that they can never be persuaded to do injustice, now sufficiently demonstrated? May we say that they are?

CLEINIAS: You have our entire assent to your words.

ATHENIAN: I have spoken with vehemence because I am zealous against evil men; and I will tell you, dear Cleinias, why I am so. I would not have the wicked think that, having the superiority in argument, they may do as they please and act according to their various imaginations about the Gods; and this zeal has led me to speak too vehemently; but if we have at all succeeded in

persuading the men to hate themselves and love their opposites, the prelude of our laws about impiety will not have been spoken in vain.

CLEINIAS: So let us hope; and even if we have failed, the style of our argument will not discredit the lawgiver.

ATHENIAN: After the prelude shall follow a discourse, which will be the interpreter of the law; this shall proclaim to all impious persons that they must depart from their ways and go over to the pious. And to those who disobey, let the law about impiety be as follows: If a man is guilty of any impiety in word or deed, any one who happens to be present shall give information to the magistrates, in aid of the law; and let the magistrates who first receive the information bring him before the appointed court according to the law; and if a magistrate, after receiving information, refuses to act, he shall be tried for impiety at the instance of any one who is willing to vindicate the laws; and if any one be cast, the court shall estimate the punishment of each act of impiety; and let all such criminals be imprisoned. There shall be three prisons in the state: the first of them is to be the common prison in the neighbourhood of the agora for the safe-keeping of the generality of offenders; another is to be in the neighbourhood of the nocturnal council, and is to be called the 'House of Reformation'; another, to be situated in some wild and desolate region in the centre of the country, shall be called by some name expressive of retribution. Now, men fall into impiety from three causes, which have been already mentioned, and from each of these causes arise two sorts of impiety, in all six, which are worth distinguishing, and should not all have the same punishment. For he who does not believe in the Gods, and yet has a righteous nature, hates the wicked and dislikes and refuses to do injustice, and avoids unrighteous men, and loves the righteous. But they who besides believing that the world is devoid of Gods are intemperate, and have at the same time good memories and quick wits, are worse; although both of them are unbelievers, much less injury is done by the one than by the other. The one may talk loosely about the Gods and about sacrifices and oaths, and perhaps by laughing at other men he may make them like himself, if he be not punished. But the other who holds the same opinions and is called a clever man, is full of stratagem and deceit—men of this class deal in prophecy and jugglery of all kinds, and out of their ranks sometimes come tyrants and demagogues and generals and hierophants of private mysteries and the Sophists, as they are termed, with their ingenious devices. There are many kinds of unbelievers, but two only for whom legislation is required; one the hypocritical sort, whose crime is deserving of death many times over, while the other needs only bonds and admonition. In like manner also the notion that the Gods take no thought of men produces two other sorts of crimes, and the notion that they may be propitiated produces two more. Assuming these divisions, let those who have been made what they are only from want of understanding, and not from malice or an evil nature, be placed by the judge in the House of Reformation, and ordered to suffer imprisonment during a period of not less than five years. And in the meantime let them have no intercourse with the other citizens, except with members of the nocturnal council, and with them let them converse with a view to the improvement of their soul's health. And when the time of their imprisonment has expired, if any of them be of sound mind let him be restored to sane company, but if not, and if he be condemned a second time, let him be punished with death. As to that class of monstrous natures who not only believe that there are no Gods, or that they are negligent, or to be propitiated, but in contempt of mankind conjure the souls of the living and say that they can conjure the dead and promise to charm the Gods with sacrifices and prayers, and will utterly overthrow individuals and whole houses and states for the sake of money—let him who is guilty of any of these things be condemned by the court to be bound according to law in the prison

which is in the centre of the land, and let no freeman ever approach him, but let him receive the rations of food appointed by the guardians of the law from the hands of the public slaves; and when he is dead let him be cast beyond the borders unburied, and if any freeman assist in burying him, let him pay the penalty of impiety to any one who is willing to bring a suit against him. But if he leaves behind him children who are fit to be citizens, let the guardians of orphans take care of them, just as they would of any other orphans, from the day on which their father is convicted.

In all these cases there should be one law, which will make men in general less liable to transgress in word or deed, and less foolish, because they will not be allowed to practise religious rites contrary to law. And let this be the simple form of the law: No man shall have sacred rites in a private house. When he would sacrifice, let him go to the temples and hand over his offerings to the priests and priestesses, who see to the sanctity of such things, and let him pray himself, and let any one who pleases join with him in prayer. The reason of this is as follows: Gods and temples are not easily instituted, and to establish them rightly is the work of a mighty intellect. And women especially, and men too, when they are sick or in danger, or in any sort of difficulty, or again on their receiving any good fortune, have a way of consecrating the occasion, vowing sacrifices, and promising shrines to Gods, demigods, and sons of Gods; and when they are awakened by terrible apparitions and dreams or remember visions, they find in altars and temples the remedies of them, and will fill every house and village with them, placing them in the open air, or wherever they may have had such visions; and with a view to all these cases we should obey the law. The law has also regard to the impious, and would not have them fancy that by the secret performance of these actions—by raising temples and by building altars in private houses, they can propitiate the God secretly with sacrifices and prayers, while they are really multiplying their crimes infinitely, bringing guilt from heaven upon themselves, and also upon those who permit them, and who are better men than they are; and the consequence is that the whole state reaps the fruit of their impiety, which, in a certain sense, is deserved. Assuredly God will not blame the legislator, who will enact the following law: No one shall possess shrines of the Gods in private houses, and he who is found to possess them, and perform any sacred rites not publicly authorised—supposing the offender to be some man or woman who is not guilty of any other great and impious crime—shall be informed against by him who is acquainted with the fact, which shall be announced by him to the guardians of the law; and let them issue orders that he or she shall carry away their private rites to the public temples, and if they do not persuade them, let them inflict a penalty on them until they comply. And if a person be proven guilty of impiety, not merely from childish levity, but such as grown-up men may be guilty of, whether he have sacrificed publicly or privately to any Gods, let him be punished with death, for his sacrifice is impure. Whether the deed has been done in earnest, or only from childish levity, let the guardians of the law determine, before they bring the matter into court and prosecute the offender for impiety.

BOOK XI.

In the next place, dealings between man and man require to be suitably regulated. The principle of them is very simple: Thou shalt not, if thou canst help, touch that which is mine, or remove the least thing which belongs to me without my consent; and may I be of a sound mind, and do to others as I

would that they should do to me. First, let us speak of treasure-trove: May I never pray the Gods to find the hidden treasure, which another has laid up for himself and his family, he not being one of my ancestors, nor lift, if I should find, such a treasure. And may I never have any dealings with those who are called diviners, and who in any way or manner counsel me to take up the deposit entrusted to the earth, for I should not gain so much in the increase of my possessions, if I take up the prize, as I should grow in justice and virtue of soul, if I abstain; and this will be a better possession to me than the other in a better part of myself; for the possession of justice in the soul is preferable to the possession of wealth. And of many things it is well said—'Move not the immovables,' and this may be regarded as one of them. And we shall do well to believe the common tradition which says, that such deeds prevent a man from having a family. Now as to him who is careless about having children and regardless of the legislator, taking up that which neither he deposited, nor any ancestor of his, without the consent of the depositor, violating the simplest and noblest of laws which was the enactment of no mean man: 'Take not up that which was not laid down by thee'—of him, I say, who despises these two legislators, and takes up, not some small matter which he has not deposited, but perhaps a great heap of treasure, what he ought to suffer at the hands of the Gods, God only knows; but I would have the first person who sees him go and tell the wardens of the city, if the occurrence has taken place in the city, or if the occurrence has taken place in the agora he shall tell the wardens of the agora, or if in the country he shall tell the wardens of the country and their commanders. When information has been received the city shall send to Delphi, and, whatever the God answers about the money and the remover of the money, that the city shall do in obedience to the oracle; the informer, if he be a freeman, shall have the honour of doing rightly, and he who informs not, the dishonour of doing wrongly; and if he be a slave who gives information, let him be freed, as he ought to be, by the state, which shall give his master the price of him; but if he do not inform he shall be punished with death. Next in order shall follow a similar law, which shall apply equally to matters great and small: If a man happens to leave behind him some part of his property, whether intentionally or unintentionally, let him who may come upon the left property suffer it to remain, reflecting that such things are under the protection of the Goddess of ways, and are dedicated to her by the law. But if any one defies the law, and takes the property home with him, let him, if the thing is of little worth, and the man who takes it a slave, be beaten with many stripes by him who meets him, being a person of not less than thirty years of age. Or if he be a freeman, in addition to being thought a mean person and a despiser of the laws, let him pay ten times the value of the treasure which he has moved to the leaver. And if some one accuses another of having anything which belongs to him, whether little or much, and the other admits that he has this thing, but denies that the property in dispute belongs to the other, if the property be registered with the magistrates according to law, the claimant shall summon the possessor, who shall bring it before the magistrates; and when it is brought into court, if it be registered in the public registers, to which of the litigants it belonged, let him take it and go his way. Or if the property be registered as belonging to some one who is not present, whoever will offer sufficient surety on behalf of the absent person that he will give it up to him, shall take it away as the representative of the other. But if the property which is deposited be not registered with the magistrates, let it remain until the time of trial with three of the eldest of the magistrates; and if it be an animal which is deposited, then he who loses the suit shall pay the magistrates for its keep, and they shall determine the cause within three days.

Any one who is of sound mind may arrest his own slave, and do with him whatever he will of such things as are lawful; and he may arrest the runaway slave of any of his friends or kindred with a view to his safe-keeping. And if any one takes away him who is being carried off as a slave, intending to

liberate him, he who is carrying him off shall let him go; but he who takes him away shall give three sufficient sureties; and if he give them, and not without giving them, he may take him away, but if he take him away after any other manner he shall be deemed guilty of violence, and being convicted shall pay as a penalty double the amount of the damages claimed to him who has been deprived of the slave. Any man may also carry off a freedman, if he do not pay respect or sufficient respect to him who freed him. Now the respect shall be, that the freedman go three times in the month to the hearth of the person who freed him, and offer to do whatever he ought, so far as he can; and he shall agree to make such a marriage as his former master approves. He shall not be permitted to have more property than he who gave him liberty, and what more he has shall belong to his master. The freedman shall not remain in the state more than twenty years, but like other foreigners shall go away, taking his entire property with him, unless he has the consent of the magistrates and of his former master to remain. If a freedman or any other stranger has a property greater than the census of the third class, at the expiration of thirty days from the day on which this comes to pass, he shall take that which is his and go his way, and in this case he shall not be allowed to remain any longer by the magistrates. And if any one disobeys this regulation, and is brought into court and convicted, he shall be punished with death, and his property shall be confiscated. Suits about these matters shall take place before the tribes, unless the plaintiff and defendant have got rid of the accusation either before their neighbours or before judges chosen by them. If a man lay claim to any animal or anything else which he declares to be his, let the possessor refer to the seller or to some honest and trustworthy person, who has given, or in some legitimate way made over the property to him; if he be a citizen or a metic, sojourning in the city, within thirty days, or, if the property have been delivered to him by a stranger, within five months, of which the middle month shall include the summer solstice. When goods are exchanged by selling and buying, a man shall deliver them, and receive the price of them, at a fixed place in the agora, and have done with the matter; but he shall not buy or sell anywhere else, nor give credit. And if in any other manner or in any other place there be an exchange of one thing for another, and the seller give credit to the man who buys from him, he must do this on the understanding that the law gives no protection in cases of things sold not in accordance with these regulations. Again, as to contributions, any man who likes may go about collecting contributions as a friend among friends, but if any difference arises about the collection, he is to act on the understanding that the law gives no protection in such cases. He who sells anything above the value of fifty drachmas shall be required to remain in the city for ten days, and the purchaser shall be informed of the house of the seller, with a view to the sort of charges which are apt to arise in such cases, and the restitutions which the law allows. And let legal restitution be on this wise: If a man sells a slave who is in a consumption, or who has the disease of the stone, or of strangury, or epilepsy, or some other tedious and incurable disorder of body or mind, which is not discernible to the ordinary man, if the purchaser be a physician or trainer, he shall have no right of restitution; nor shall there be any right of restitution if the seller has told the truth beforehand to the buyer. But if a skilled person sells to another who is not skilled, let the buyer appeal for restitution within six months, except in the case of epilepsy, and then the appeal may be made within a year. The cause shall be determined by such physicians as the parties may agree to choose; and the defendant, if he lose the suit, shall pay double the price at which he sold. If a private person sell to another private person, he shall have the right of restitution, and the decision shall be given as before, but the defendant, if he be cast, shall only pay back the price of the slave. If a person sells a homicide to another, and they both know of the fact, let there be no restitution in such a case, but if he do not know of the fact, there shall be a right of restitution, whenever the buyer makes the discovery; and the decision shall rest with the five youngest guardians of the law, and if the decision be that the seller was cognisant of the fact, he shall

purify the house of the purchaser, according to the law of the interpreters, and shall pay back three times the purchase-money.

If a man exchanges either money for money, or anything whatever for anything else, either with or without life, let him give and receive them genuine and unadulterated, in accordance with the law. And let us have a prelude about all this sort of roguery, like the preludes of our other laws. Every man should regard adulteration as of one and the same class with falsehood and deceit, concerning which the many are too fond of saying that at proper times and places the practice may often be right. But they leave the occasion, and the when, and the where, undefined and unsettled, and from this want of definiteness in their language they do a great deal of harm to themselves and to others. Now a legislator ought not to leave the matter undetermined; he ought to prescribe some limit, either greater or less. Let this be the rule prescribed: No one shall call the Gods to witness, when he says or does anything false or deceitful or dishonest, unless he would be the most hateful of mankind to them. And he is most hateful to them who takes a false oath, and pays no heed to the Gods; and in the next degree, he who tells a falsehood in the presence of his superiors. Now better men are the superiors of worse men, and in general elders are the superiors of the young; wherefore also parents are the superiors of their offspring, and men of women and children, and rulers of their subjects; for all men ought to reverence any one who is in any position of authority, and especially those who are in state offices. And this is the reason why I have spoken of these matters. For every one who is guilty of adulteration in the agora tells a falsehood, and deceives, and when he invokes the Gods, according to the customs and cautions of the wardens of the agora, he does but swear without any respect for God or man. Certainly, it is an excellent rule not lightly to defile the names of the Gods, after the fashion of men in general, who care little about piety and purity in their religious actions. But if a man will not conform to this rule, let the law be as follows: He who sells anything in the agora shall not ask two prices for that which he sells, but he shall ask one price, and if he do not obtain this, he shall take away his goods; and on that day he shall not value them either at more or less; and there shall be no praising of any goods, or oath taken about them. If a person disobeys this command, any citizen who is present, not being less than thirty years of age, may with impunity chastise and beat the swearer, but if instead of obeying the laws he takes no heed, he shall be liable to the charge of having betrayed them. If a man sells any adulterated goods and will not obey these regulations, he who knows and can prove the fact, and does prove it in the presence of the magistrates, if he be a slave or a metic, shall have the adulterated goods; but if he be a citizen, and do not pursue the charge, he shall be called a rogue, and deemed to have robbed the Gods of the agora; or if he proves the charge, he shall dedicate the goods to the Gods of the agora. He who is proved to have sold any adulterated goods, in addition to losing the goods themselves, shall be beaten with stripes—a stripe for a drachma, according to the price of the goods; and the herald shall proclaim in the agora the offence for which he is going to be beaten. The wardens of the agora and the guardians of the law shall obtain information from experienced persons about the rogueries and adulterations of the sellers, and shall write up what the seller ought and ought not to do in each case; and let them inscribe their laws on a column in front of the court of the wardens of the agora, that they may be clear instructors of those who have business in the agora. Enough has been said in what has preceded about the wardens of the city, and if anything seems to be wanting, let them communicate with the guardians of the law, and write down the omission, and place on a column in the court of the wardens of the city the primary and secondary regulations which are laid down for them about their office.

After the practices of adulteration naturally follow the practices of retail trade. Concerning these, we will first of all give a word of counsel and reason, and the law shall come afterwards. Retail trade in a city is not by nature intended to do any harm, but quite the contrary; for is not he a benefactor who reduces the inequalities and incommensurabilities of goods to equality and common measure? And this is what the power of money accomplishes, and the merchant may be said to be appointed for this purpose. The hireling and the tavern-keeper, and many other occupations, some of them more and others less seemly—all alike have this object—they seek to satisfy our needs and equalize our possessions. Let us then endeavour to see what has brought retail trade into ill-odour, and wherein lies the dishonour and unseemliness of it, in order that if not entirely, we may yet partially, cure the evil by legislation. To effect this is no easy matter, and requires a great deal of virtue.

CLEINIAS: What do you mean?

ATHENIAN: Dear Cleinias, the class of men is small—they must have been rarely gifted by nature, and trained by education—who, when assailed by wants and desires, are able to hold out and observe moderation, and when they might make a great deal of money are sober in their wishes, and prefer a moderate to a large gain. But the mass of mankind are the very opposite: their desires are unbounded, and when they might gain in moderation they prefer gains without limit; wherefore all that relates to retail trade, and merchandise, and the keeping of taverns, is denounced and numbered among dishonourable things. For if what I trust may never be and will not be, we were to compel, if I may venture to say a ridiculous thing, the best men everywhere to keep taverns for a time, or carry on retail trade, or do anything of that sort; or if, in consequence of some fate or necessity, the best women were compelled to follow similar callings, then we should know how agreeable and pleasant all these things are; and if all such occupations were managed on incorrupt principles, they would be honoured as we honour a mother or a nurse. But now that a man goes to desert places and builds houses which can only be reached by long journeys, for the sake of retail trade, and receives strangers who are in need at the welcome resting-place, and gives them peace and calm when they are tossed by the storm, or cool shade in the heat; and then instead of behaving to them as friends, and showing the duties of hospitality to his guests, treats them as enemies and captives who are at his mercy, and will not release them until they have paid the most unjust, abominable, and extortionate ransom—these are the sort of practises, and foul evils they are, which cast a reproach upon the succour of adversity. And the legislator ought always to be devising a remedy for evils of this nature. There is an ancient saying, which is also a true one—'To fight against two opponents is a difficult thing,' as is seen in diseases and in many other cases. And in this case also the war is against two enemies—wealth and poverty; one of whom corrupts the soul of man with luxury, while the other drives him by pain into utter shamelessness. What remedy can a city of sense find against this disease? In the first place, they must have as few retail traders as possible; and in the second place, they must assign the occupation to that class of men whose corruption will be the least injury to the state; and in the third place, they must devise some way whereby the followers of these occupations themselves will not readily fall into habits of unbridled shamelessness and meanness.

After this preface let our law run as follows, and may fortune favour us: No landowner among the Magnetes, whose city the God is restoring and resettling—no one, that is, of the 5040 families, shall become a retail trader either voluntarily or involuntarily; neither shall he be a merchant, or do any service for private persons unless they equally serve him, except for his father or his mother, and their fathers and mothers; and in general for his elders who are freemen, and whom he serves as a

freeman. Now it is difficult to determine accurately the things which are worthy or unworthy of a freeman, but let those who have obtained the prize of virtue give judgment about them in accordance with their feelings of right and wrong. He who in any way shares in the illiberality of retail trades may be indicted for dishonouring his race by any one who likes, before those who have been judged to be the first in virtue; and if he appear to throw dirt upon his father's house by an unworthy occupation, let him be imprisoned for a year and abstain from that sort of thing; and if he repeat the offence, for two years; and every time that he is convicted let the length of his imprisonment be doubled. This shall be the second law: He who engages in retail trade must be either a metic or a stranger. And a third law shall be: In order that the retail trader who dwells in our city may be as good or as little bad as possible, the guardians of the law shall remember that they are not only guardians of those who may be easily watched and prevented from becoming lawless or bad, because they are well-born and bred; but still more should they have a watch over those who are of another sort, and follow pursuits which have a very strong tendency to make men bad. And, therefore, in respect of the multifarious occupations of retail trade, that is to say, in respect of such of them as are allowed to remain, because they seem to be quite necessary in a state—about these the guardians of the law should meet and take counsel with those who have experience of the several kinds of retail trade, as we before commanded concerning adulteration (which is a matter akin to this), and when they meet they shall consider what amount of receipts, after deducting expenses, will produce a moderate gain to the retail trades, and they shall fix in writing and strictly maintain what they find to be the right percentage of profit; this shall be seen to by the wardens of the agora, and by the wardens of the city, and by the wardens of the country. And so retail trade will benefit every one, and do the least possible injury to those in the state who practise it.

When a man makes an agreement which he does not fulfil, unless the agreement be of a nature which the law or a vote of the assembly does not allow, or which he has made under the influence of some unjust compulsion, or which he is prevented from fulfilling against his will by some unexpected chance, the other party may go to law with him in the courts of the tribes, for not having completed his agreement, if the parties are not able previously to come to terms before arbiters or before their neighbours. The class of craftsmen who have furnished human life with the arts is dedicated to Hephaestus and Athene; and there is a class of craftsmen who preserve the works of all craftsmen by arts of defence, the votaries of Ares and Athene, to which divinities they too are rightly dedicated. All these continue through life serving the country and the people; some of them are leaders in battle; others make for hire implements and works, and they ought not to deceive in such matters, out of respect to the Gods who are their ancestors. If any craftsman through indolence omit to execute his work in a given time, not reverencing the God who gives him the means of life, but considering, foolish fellow, that he is his own God and will let him off easily, in the first place, he shall suffer at the hands of the God, and in the second place, the law shall follow in a similar spirit. He shall owe to him who contracted with him the price of the works which he has failed in performing, and he shall begin again and execute them gratis in the given time. When a man undertakes a work, the law gives him the same advice which was given to the seller, that he should not attempt to raise the price, but simply ask the value; this the law enjoins also on the contractor; for the craftsman assuredly knows the value of his work. Wherefore, in free states the man of art ought not to attempt to impose upon private individuals by the help of his art, which is by nature a true thing; and he who is wronged in a matter of this sort, shall have a right of action against the party who has wronged him. And if any one lets out work to a craftsman, and does not pay him duly according to the lawful agreement, disregarding Zeus the guardian of the city and Athene, who are the partners of the state, and

overthrows the foundations of society for the sake of a little gain, in his case let the law and the Gods maintain the common bonds of the state. And let him who, having already received the work in exchange, does not pay the price in the time agreed, pay double the price; and if a year has elapsed, although interest is not to be taken on loans, yet for every drachma which he owes to the contractor let him pay a monthly interest of an obol. Suits about these matters are to be decided by the courts of the tribes; and by the way, since we have mentioned craftsmen at all, we must not forget that other craft of war, in which generals and tacticians are the craftsmen, who undertake voluntarily or involuntarily the work of our safety, as other craftsmen undertake other public works—if they execute their work well the law will never tire of praising him who gives them those honours which are the just rewards of the soldier; but if any one, having already received the benefit of any noble service in war, does not make the due return of honour, the law will blame him. Let this then be the law, having an ingredient of praise, not compelling but advising the great body of the citizens to honour the brave men who are the saviours of the whole state, whether by their courage or by their military skill—they should honour them, I say, in the second place; for the first and highest tribute of respect is to be given to those who are able above other men to honour the words of good legislators.

The greater part of the dealings between man and man have been now regulated by us with the exception of those that relate to orphans and the supervision of orphans by their guardians. These follow next in order, and must be regulated in some way. But to arrive at them we must begin with the testamentary wishes of the dying and the case of those who may have happened to die intestate. When I said, Cleinias, that we must regulate them, I had in my mind the difficulty and perplexity in which all such matters are involved. You cannot leave them unregulated, for individuals would make regulations at variance with one another, and repugnant to the laws and habits of the living and to their own previous habits, if a person were simply allowed to make any will which he pleased, and this were to take effect in whatever state he may have been at the end of his life; for most of us lose our senses in a manner, and feel crushed when we think that we are about to die.

CLEINIAS: What do you mean, Stranger?

ATHENIAN: O Cleinias, a man when he is about to die is an intractable creature, and is apt to use language which causes a great deal of anxiety and trouble to the legislator.

CLEINIAS: In what way?

ATHENIAN: He wants to have the entire control of all his property, and will use angry words.

CLEINIAS: Such as what?

ATHENIAN: O ye Gods, he will say, how monstrous that I am not allowed to give, or not to give, my own to whom I will—less to him who has been bad to me, and more to him who has been good to me, and whose badness and goodness have been tested by me in time of sickness or in old age and in every other sort of fortune!

CLEINIAS: Well, Stranger, and may he not very fairly say so?

ATHENIAN: In my opinion, Cleinias, the ancient legislators were too good-natured, and made laws without sufficient observation or consideration of human things.

CLEINIAS: What do you mean?

ATHENIAN: I mean, my friend, that they were afraid of the testator's reproaches, and so they passed a law to the effect that a man should be allowed to dispose of his property in all respects as he liked; but you and I, if I am not mistaken, will have something better to say to our departing citizens.

CLEINIAS: What?

ATHENIAN: O my friends, we will say to them, hard is it for you, who are creatures of a day, to know what is yours—hard too, as the Delphic oracle says, to know yourselves at this hour. Now I, as the legislator, regard you and your possessions, not as belonging to yourselves, but as belonging to your whole family, both past and future, and yet more do I regard both family and possessions as belonging to the state; wherefore, if some one steals upon you with flattery, when you are tossed on the sea of disease or old age, and persuades you to dispose of your property in a way that is not for the best, I will not, if I can help, allow this; but I will legislate with a view to the whole, considering what is best both for the state and for the family, esteeming as I ought the feelings of an individual at a lower rate; and I hope that you will depart in peace and kindness towards us, as you are going the way of all mankind; and we will impartially take care of all your concerns, not neglecting any of them, if we can possibly help. Let this be our prelude and consolation to the living and dying, Cleinias, and let the law be as follows: He who makes a disposition in a testament, if he be the father of a family, shall first of all inscribe as his heir any one of his sons whom he may think fit; and if he gives any of his children to be adopted by another citizen, let the adoption be inscribed. And if he has a son remaining over and above who has not been adopted upon any lot, and who may be expected to be sent out to a colony according to law, to him his father may give as much as he pleases of the rest of his property, with the exception of the paternal lot and the fixtures on the lot. And if there are other sons, let him distribute among them what there is more than the lot in such portions as he pleases. And if one of the sons has already a house of his own, he shall not give him of the money, nor shall he give money to a daughter who has been betrothed, but if she is not betrothed he may give her money. And if any of the sons or daughters shall be found to have another lot of land in the country, which has accrued after the testament has been made, they shall leave the lot which they have inherited to the heir of the man who has made the will. If the testator has no sons, but only daughters, let him choose the husband of any one of his daughters whom he pleases, and leave and inscribe him as his son and heir. And if a man have lost his son, when he was a child, and before he could be reckoned among grown up men, whether his own or an adopted son, let the testator make mention of the circumstance and inscribe whom he will to be his second son in hope of better fortune. If the testator has no children at all, he may select and give to any one whom he pleases the tenth part of the property which he has acquired; but let him not be blamed if he gives all the rest to his adopted son, and makes a friend of him according to the law. If the sons of a man require guardians, and the father when he dies leaves a will appointing guardians, those who have been named by him, whoever they are and whatever their number be, if they are able and willing to take charge of the children, shall be recognised according to the provisions of the will. But if he dies and has made no will, or a will in which he has appointed no guardians, then the next of kin, two on the father's and two on the mother's side, and one of the friends of the deceased, shall have the authority of guardians, whom

the guardians of the law shall appoint when the orphans require guardians. And the fifteen eldest guardians of the law shall have the whole care and charge of the orphans, divided into threes according to seniority—a body of three for one year, and then another body of three for the next year, until the cycle of the five periods is complete; and this, as far as possible, is to continue always. If a man dies, having made no will at all, and leaves sons who require the care of guardians, they shall share in the protection which is afforded by these laws. And if a man dying by some unexpected fate leaves daughters behind him, let him pardon the legislator if when he gives them in marriage, he have a regard only to two out of three conditions—nearness of kin and the preservation of the lot, and omits the third condition, which a father would naturally consider, for he would choose out of all the citizens a son for himself, and a husband for his daughter, with a view to his character and disposition—the father, I say, shall forgive the legislator if he disregards this, which to him is an impossible consideration. Let the law about these matters where practicable be as follows: If a man dies without making a will, and leaves behind him daughters, let his brother, being the son of the same father or of the same mother, having no lot, marry the daughter and have the lot of the dead man. And if he have no brother, but only a brother's son, in like manner let them marry, if they be of a suitable age; and if there be not even a brother's son, but only the son of a sister, let them do likewise, and so in the fourth degree, if there be only the testator's father's brother, or in the fifth degree, his father's brother's son, or in the sixth degree, the child of his father's sister. Let kindred be always reckoned in this way: if a person leaves daughters the relationship shall proceed upwards through brothers and sisters, and brothers' and sisters' children, and first the males shall come, and after them the females in the same family. The judge shall consider and determine the suitableness or unsuitableness of age in marriage; he shall make an inspection of the males naked, and of the women naked down to the navel. And if there be a lack of kinsmen in a family extending to grandchildren of a brother, or to the grandchildren of a grandfather's children, the maiden may choose with the consent of her guardians any one of the citizens who is willing and whom she wills, and he shall be the heir of the dead man, and the husband of his daughter. Circumstances vary, and there may sometimes be a still greater lack of relations within the limits of the state; and if any maiden has no kindred living in the city, and there is some one who has been sent out to a colony, and she is disposed to make him the heir of her father's possessions, if he be indeed of her kindred, let him proceed to take the lot according to the regulation of the law; but if he be not of her kindred, she having no kinsmen within the city, and he be chosen by the daughter of the dead man, and empowered to marry by the guardians, let him return home and take the lot of him who died intestate. And if a man has no children, either male or female, and dies without making a will, let the previous law in general hold; and let a man and a woman go forth from the family and share the deserted house, and let the lot belong absolutely to them; and let the heiress in the first degree be a sister, and in a second degree a daughter of a brother, and in the third, a daughter of a sister, in the fourth degree the sister of a father, and in the fifth degree the daughter of a father's brother, and in a sixth degree of a father's sister; and these shall dwell with their male kinsmen, according to the degree of relationship and right, as we enacted before. Now we must not conceal from ourselves that such laws are apt to be oppressive and that there may sometimes be a hardship in the lawgiver commanding the kinsman of the dead man to marry his relation; he may be thought not to have considered the innumerable hindrances which may arise among men in the execution of such ordinances; for there may be cases in which the parties refuse to obey, and are ready to do anything rather than marry, when there is some bodily or mental malady or defect among those who are bidden to marry or be married. Persons may fancy that the legislator never thought of this, but they are mistaken; wherefore let us make a common prelude on behalf of the lawgiver and of his subjects, the law begging the

latter to forgive the legislator, in that he, having to take care of the common weal, cannot order at the same time the various circumstances of individuals, and begging him to pardon them if naturally they are sometimes unable to fulfil the act which he in his ignorance imposes upon them.

CLEINIAS: And how, Stranger, can we act most fairly under the circumstances?

ATHENIAN: There must be arbiters chosen to deal with such laws and the subjects of them.

CLEINIAS: What do you mean?

ATHENIAN: I mean to say, that a case may occur in which the nephew, having a rich father, will be unwilling to marry the daughter of his uncle; he will have a feeling of pride, and he will wish to look higher. And there are cases in which the legislator will be imposing upon him the greatest calamity, and he will be compelled to disobey the law, if he is required, for example, to take a wife who is mad, or has some other terrible malady of soul or body, such as makes life intolerable to the sufferer. Then let what we are saying concerning these cases be embodied in a law: If any one finds fault with the established laws respecting testaments, both as to other matters and especially in what relates to marriage, and asserts that the legislator, if he were alive and present, would not compel him to obey—that is to say, would not compel those who are by our law required to marry or be given in marriage, to do either—and some kinsman or guardian dispute this, the reply is that the legislator left fifteen of the guardians of the law to be arbiters and fathers of orphans, male or female, and to them let the disputants have recourse, and by their aid determine any matters of the kind, admitting their decision to be final. But if any one thinks that too great power is thus given to the guardians of the law, let him bring his adversaries into the court of the select judges, and there have the points in dispute determined. And he who loses the cause shall have censure and blame from the legislator, which, by a man of sense, is felt to be a penalty far heavier than a great loss of money.

Thus will orphan children have a second birth. After their first birth we spoke of their nurture and education, and after their second birth, when they have lost their parents, we ought to take measures that the misfortune of orphanhood may be as little sad to them as possible. In the first place, we say that the guardians of the law are lawgivers and fathers to them, not inferior to their natural fathers. Moreover, they shall take charge of them year by year as of their own kindred; and we have given both to them and to the children's own guardians as suitable admonition concerning the nurture of orphans. And we seem to have spoken opportunely in our former discourse, when we said that the souls of the dead have the power after death of taking an interest in human affairs, about which there are many tales and traditions, long indeed, but true; and seeing that they are so many and so ancient, we must believe them, and we must also believe the lawgivers, who tell us that these things are true, if they are not to be regarded as utter fools. But if these things are really so, in the first place men should have a fear of the Gods above, who regard the loneliness of the orphans; and in the second place of the souls of the departed, who by nature incline to take an especial care of their own children, and are friendly to those who honour, and unfriendly to those who dishonour them. Men should also fear the souls of the living who are aged and high in honour; wherever a city is well ordered and prosperous, their descendants cherish them, and so live happily; old persons are quick to see and hear all that relates to them, and are propitious to those who are just in the fulfilment of such duties, and they punish those who wrong the orphan and the desolate, considering that they are the greatest and most sacred of trusts. To all which matters the guardian and magistrate ought to

apply his mind, if he has any, and take heed of the nurture and education of the orphans, seeking in every possible way to do them good, for he is making a contribution to his own good and that of his children. He who obeys the tale which precedes the law, and does no wrong to an orphan, will never experience the wrath of the legislator. But he who is disobedient, and wrongs any one who is bereft of father or mother, shall pay twice the penalty which he would have paid if he had wronged one whose parents had been alive. As touching other legislation concerning guardians in their relation to orphans, or concerning magistrates and their superintendence of the guardians, if they did not possess examples of the manner in which children of freemen would be brought up in the bringing up of their own children, and of the care of their property in the care of their own, or if they had not just laws fairly stated about these very things—there would have been reason in making laws for them, under the idea that they were a peculiar class, and we might distinguish and make separate rules for the life of those who are orphans and of those who are not orphans. But as the case stands, the condition of orphans with us is not different from the case of those who have a father, though in regard to honour and dishonour, and the attention given to them, the two are not usually placed upon a level. Wherefore, touching the legislation about orphans, the law speaks in serious accents, both of persuasion and threatening, and such a threat as the following will be by no means out of place: He who is the guardian of an orphan of either sex, and he among the guardians of the law to whom the superintendence of this guardian has been assigned, shall love the unfortunate orphan as though he were his own child, and he shall be as careful and diligent in the management of his possessions as he would be if they were his own, or even more careful and diligent. Let every one who has the care of an orphan observe this law. But any one who acts contrary to the law on these matters, if he be a guardian of the child, may be fined by a magistrate, or, if he be himself a magistrate, the guardian may bring him before the court of select judges, and punish him, if convicted, by exacting a fine of double the amount of that inflicted by the court. And if a guardian appears to the relations of the orphan, or to any other citizen, to act negligently or dishonestly, let them bring him before the same court, and whatever damages are given against him, let him pay fourfold, and let half belong to the orphan and half to him who procured the conviction. If any orphan arrives at years of discretion, and thinks that he has been ill-used by his guardians, let him within five years of the expiration of the guardianship be allowed to bring them to trial; and if any of them be convicted, the court shall determine what he shall pay or suffer. And if a magistrate shall appear to have wronged the orphan by neglect, and he be convicted, let the court determine what he shall suffer or pay to the orphan, and if there be dishonesty in addition to neglect, besides paying the fine, let him be deposed from his office of guardian of the law, and let the state appoint another guardian of the law for the city and for the country in his room.

Greater differences than there ought to be sometimes arise between fathers and sons, on the part either of fathers who will be of opinion that the legislator should enact that they may, if they wish, lawfully renounce their son by the proclamation of a herald in the face of the world, or of sons who think that they should be allowed to indict their fathers on the charge of imbecility when they are disabled by disease or old age. These things only happen, as a matter of fact, where the natures of men are utterly bad; for where only half is bad, as, for example, if the father be not bad, but the son be bad, or conversely, no great calamity is the result of such an amount of hatred as this. In another state, a son disowned by his father would not of necessity cease to be a citizen, but in our state, of which these are to be the laws, the disinherited must necessarily emigrate into another country, for no addition can be made even of a single family to the 5040 households; and, therefore, he who deserves to suffer these things must be renounced not only by his father, who is a single person, but

by the whole family, and what is done in these cases must be regulated by some such law as the following: He who in the sad disorder of his soul has a mind, justly or unjustly, to expel from his family a son whom he has begotten and brought up, shall not lightly or at once execute his purpose; but first of all he shall collect together his own kinsmen, extending to cousins, and in like manner his son's kinsmen by the mother's side, and in their presence he shall accuse his son, setting forth that he deserves at the hands of them all to be dismissed from the family; and the son shall be allowed to address them in a similar manner, and show that he does not deserve to suffer any of these things. And if the father persuades them, and obtains the suffrages of more than half of his kindred, exclusive of the father and mother and the offender himself—I say, if he obtains more than half the suffrages of all the other grown-up members of the family, of both sexes, the father shall be permitted to put away his son, but not otherwise. And if any other citizen is willing to adopt the son who is put away, no law shall hinder him; for the characters of young men are subject to many changes in the course of their lives. And if he has been put away, and in a period of ten years no one is willing to adopt him, let those who have the care of the superabundant population which is sent out into colonies, see to him, in order that he may be suitably provided for in the colony. And if disease or age or harshness of temper, or all these together, makes a man to be more out of his mind than the rest of the world are—but this is not observable, except to those who live with him—and he, being master of his property, is the ruin of the house, and his son doubts and hesitates about indicting his father for insanity, let the law in that case ordain that he shall first of all go to the eldest guardians of the law and tell them of his father's misfortune, and they shall duly look into the matter, and take counsel as to whether he shall indict him or not. And if they advise him to proceed, they shall be both his witnesses and his advocates; and if the father is cast, he shall henceforth be incapable of ordering the least particular of his life; let him be as a child dwelling in the house for the remainder of his days. And if a man and his wife have an unfortunate incompatibility of temper, ten of the guardians of the law, who are impartial, and ten of the women who regulate marriages, shall look to the matter, and if they are able to reconcile them they shall be formally reconciled; but if their souls are too much tossed with passion, they shall endeavour to find other partners. Now they are not likely to have very gentle tempers; and, therefore, we must endeavour to associate with them deeper and softer natures. Those who have no children, or only a few, at the time of their separation, should choose their new partners with a view to the procreation of children; but those who have a sufficient number of children should separate and marry again in order that they may have some one to grow old with and that the pair may take care of one another in age. If a woman dies, leaving children, male or female, the law will advise rather than compel the husband to bring up the children without introducing into the house a stepmother. But if he have no children, then he shall be compelled to marry until he has begotten a sufficient number of sons to his family and to the state. And if a man dies leaving a sufficient number of children, the mother of his children shall remain with them and bring them up. But if she appears to be too young to live virtuously without a husband, let her relations communicate with the women who superintend marriage, and let both together do what they think best in these matters; if there is a lack of children, let the choice be made with a view to having them; two children, one of either sex, shall be deemed sufficient in the eye of the law. When a child is admitted to be the offspring of certain parents and is acknowledged by them, but there is need of a decision as to which parent the child is to follow—in case a female slave have intercourse with a male slave, or with a freeman or freedman, the offspring shall always belong to the master of the female slave. Again, if a free woman have intercourse with a male slave, the offspring shall belong to the master of the slave; but if a child be born either of a slave by her master, or of his mistress by a slave—and this be proven—the offspring of the woman and its

father shall be sent away by the women who superintend marriage into another country, and the guardians of the law shall send away the offspring of the man and its mother.

Neither God, nor a man who has understanding, will ever advise any one to neglect his parents. To a discourse concerning the honour and dishonour of parents, a prelude such as the following, about the service of the Gods, will be a suitable introduction: There are ancient customs about the Gods which are universal, and they are of two kinds: some of the Gods we see with our eyes and we honour them, of others we honour the images, raising statues of them which we adore; and though they are lifeless, yet we imagine that the living Gods have a good will and gratitude to us on this account. Now, if a man has a father or mother, or their fathers or mothers treasured up in his house stricken in years, let him consider that no statue can be more potent to grant his requests than they are, who are sitting at his hearth, if only he knows how to show true service to them.

CLEINIAS: And what do you call the true mode of service?

ATHENIAN: I will tell you, O my friend, for such things are worth listening to.

CLEINIAS: Proceed.

ATHENIAN: Oedipus, as tradition says, when dishonoured by his sons, invoked on them curses which every one declares to have been heard and ratified by the Gods, and Amyntor in his wrath invoked curses on his son Phoenix, and Theseus upon Hippolytus, and innumerable others have also called down wrath upon their children, whence it is clear that the Gods listen to the imprecations of parents; for the curses of parents are, as they ought to be, mighty against their children as no others are. And shall we suppose that the prayers of a father or mother who is specially dishonoured by his or her children, are heard by the Gods in accordance with nature; and that if a parent is honoured by them, and in the gladness of his heart earnestly entreats the Gods in his prayers to do them good, he is not equally heard, and that they do not minister to his request? If not, they would be very unjust ministers of good, and that we affirm to be contrary to their nature.

CLEINIAS: Certainly.

ATHENIAN: May we not think, as I was saying just now, that we can possess no image which is more honoured by the Gods, than that of a father or grandfather, or of a mother stricken in years? whom when a man honours, the heart of the God rejoices, and he is ready to answer their prayers. And, truly, the figure of an ancestor is a wonderful thing, far higher than that of a lifeless image. For the living, when they are honoured by us, join in our prayers, and when they are dishonoured, they utter imprecations against us; but lifeless objects do neither. And therefore, if a man makes a right use of his father and grandfather and other aged relations, he will have images which above all others will win him the favour of the Gods.

CLEINIAS: Excellent.

ATHENIAN: Every man of any understanding fears and respects the prayers of parents, knowing well that many times and to many persons they have been accomplished. Now these things being thus ordered by nature, good men think it a blessing from heaven if their parents live to old age and reach

the utmost limit of human life, or if taken away before their time they are deeply regretted by them; but to bad men parents are always a cause of terror. Wherefore let every man honour with every sort of lawful honour his own parents, agreeably to what has now been said. But if this prelude be an unmeaning sound in the ears of any one, let the law follow, which may be rightly imposed in these terms: If any one in this city be not sufficiently careful of his parents, and do not regard and gratify in every respect their wishes more than those of his sons and of his other offspring or of himself—let him who experiences this sort of treatment either come himself, or send some one to inform the three eldest guardians of the law, and three of the women who have the care of marriages; and let them look to the matter and punish youthful evil-doers with stripes and bonds if they are under thirty years of age, that is to say, if they be men, or if they be women, let them undergo the same punishment up to forty years of age. But if, when they are still more advanced in years, they continue the same neglect of their parents, and do any hurt to any of them, let them be brought before a court in which every single one of the eldest citizens shall be the judges, and if the offender be convicted, let the court determine what he ought to pay or suffer, and any penalty may be imposed on him which a man can pay or suffer. If the person who has been wronged be unable to inform the magistrates, let any freeman who hears of his case inform, and if he do not, he shall be deemed base, and shall be liable to have a suit for damage brought against him by any one who likes. And if a slave inform, he shall receive freedom; and if he be the slave of the injurer or injured party, he shall be set free by the magistrates, or if he belong to any other citizen, the public shall pay a price on his behalf to the owner; and let the magistrates take heed that no one wrongs him out of revenge, because he has given information.

Cases in which one man injures another by poisons, and which prove fatal, have been already discussed; but about other cases in which a person intentionally and of malice harms another with meats, or drinks, or ointments, nothing has as yet been determined. For there are two kinds of poisons used among men, which cannot clearly be distinguished. There is the kind just now explicitly mentioned, which injures bodies by the use of other bodies according to a natural law; there is also another kind which persuades the more daring class that they can do injury by sorceries, and incantations, and magic knots, as they are termed, and makes others believe that they above all persons are injured by the powers of the magician. Now it is not easy to know the nature of all these things; nor if a man do know can he readily persuade others to believe him. And when men are disturbed in their minds at the sight of waxen images fixed either at their doors, or in a place where three ways meet, or on the sepulchres of parents, there is no use in trying to persuade them that they should despise all such things because they have no certain knowledge about them. But we must have a law in two parts, concerning poisoning, in whichever of the two ways the attempt is made, and we must entreat, and exhort, and advise men not to have recourse to such practises, by which they scare the multitude out of their wits, as if they were children, compelling the legislator and the judge to heal the fears which the sorcerer arouses, and to tell them in the first place, that he who attempts to poison or enchant others knows not what he is doing, either as regards the body (unless he has a knowledge of medicine), or as regards his enchantments (unless he happens to be a prophet or diviner). Let the law, then, run as follows about poisoning or witchcraft: He who employs poison to do any injury, not fatal, to a man himself, or to his servants, or any injury, whether fatal or not, to his cattle or his bees, if he be a physician, and be convicted of poisoning, shall be punished with death; or if he be a private person, the court shall determine what he is to pay or suffer. But he who seems to be the sort of man who injures others by magic knots, or enchantments, or incantations, or any of

the like practices, if he be a prophet or diviner, let him die; and if, not being a prophet, he be convicted of witchcraft, as in the previous case, let the court fix what he ought to pay or suffer.

When a man does another any injury by theft or violence, for the greater injury let him pay greater damages to the injured man, and less for the smaller injury; but in all cases, whatever the injury may have been, as much as will compensate the loss. And besides the compensation of the wrong, let a man pay a further penalty for the chastisement of his offence: he who has done the wrong instigated by the folly of another, through the lightheartedness of youth or the like, shall pay a lighter penalty; but he who has injured another through his own folly, when overcome by pleasure or pain, in cowardly fear, or lust, or envy, or implacable anger, shall endure a heavier punishment. Not that he is punished because he did wrong, for that which is done can never be undone, but in order that in future times, he, and those who see him corrected, may utterly hate injustice, or at any rate abate much of their evil-doing. Having an eye to all these things, the law, like a good archer, should aim at the right measure of punishment, and in all cases at the deserved punishment. In the attainment of this the judge shall be a fellow-worker with the legislator, whenever the law leaves to him to determine what the offender shall suffer or pay; and the legislator, like a painter, shall give a rough sketch of the cases in which the law is to be applied. This is what we must do, Megillus and Cleinias, in the best and fairest manner that we can, saying what the punishments are to be of all actions of theft and violence, and giving laws of such a kind as the Gods and sons of Gods would have us give.

If a man is mad he shall not be at large in the city, but his relations shall keep him at home in any way which they can; or if not, let them pay a penalty—he who is of the highest class shall pay a penalty of one hundred drachmas, whether he be a slave or a freeman whom he neglects; and he of the second class shall pay four-fifths of a mina; and he of the third class three-fifths; and he of the fourth class two-fifths. Now there are many sorts of madness, some arising out of disease, which we have already mentioned; and there are other kinds, which originate in an evil and passionate temperament, and are increased by bad education; out of a slight quarrel this class of madmen will often raise a storm of abuse against one another, and nothing of that sort ought to be allowed to occur in a well-ordered state. Let this, then, be the law about abuse, which shall relate to all cases: No one shall speak evil of another; and when a man disputes with another he shall teach and learn of the disputant and the company, but he shall abstain from evil-speaking; for out of the imprecations which men utter against one another, and the feminine habit of casting aspersions on one another, and using foul names, out of words light as air, in very deed the greatest enmities and hatreds spring up. For the speaker gratifies his anger, which is an ungracious element of his nature; and nursing up his wrath by the entertainment of evil thoughts, and exacerbating that part of his soul which was formerly civilised by education, he lives in a state of savageness and moroseness, and pays a bitter penalty for his anger. And in such cases almost all men take to saying something ridiculous about their opponent, and there is no man who is in the habit of laughing at another who does not miss virtue and earnestness altogether, or lose the better half of greatness. Wherefore let no one utter any taunting word at a temple, or at the public sacrifices, or at the games, or in the agora, or in a court of justice, or in any public assembly. And let the magistrate who presides on these occasions chastise an offender, and he shall be blameless; but if he fails in doing so, he shall not claim the prize of virtue; for he is one who heeds not the laws, and does not do what the legislator commands. And if in any other place any one indulges in these sort of revilings, whether he has begun the quarrel or is only retaliating, let any elder who is present support the law, and control with blows those who indulge in passion, which is another great evil; and if he do not, let him be liable to pay the appointed penalty. And we say now,

that he who deals in reproaches against others cannot reproach them without attempting to ridicule them; and this, when done in a moment of anger, is what we make matter of reproach against him. But then, do we admit into our state the comic writers who are so fond of making mankind ridiculous, if they attempt in a good-natured manner to turn the laugh against our citizens? or do we draw the distinction of jest and earnest, and allow a man to make use of ridicule in jest and without anger about any thing or person; though as we were saying, not if he be angry and have a set purpose? We forbid earnest—that is unalterably fixed; but we have still to say who are to be sanctioned or not to be sanctioned by the law in the employment of innocent humour. A comic poet, or maker of iambic or satirical lyric verse, shall not be permitted to ridicule any of the citizens, either by word or likeness, either in anger or without anger. And if any one is disobedient, the judges shall either at once expel him from the country, or he shall pay a fine of three minae, which shall be dedicated to the God who presides over the contests. Those only who have received permission shall be allowed to write verses at one another, but they shall be without anger and in jest; in anger and in serious earnest they shall not be allowed. The decision of this matter shall be left to the superintendent of the general education of the young, and whatever he may license, the writer shall be allowed to produce, and whatever he rejects let not the poet himself exhibit, or ever teach anybody else, slave or freeman, under the penalty of being dishonoured, and held disobedient to the laws.

Now he is not to be pitied who is hungry, or who suffers any bodily pain, but he who is temperate, or has some other virtue, or part of a virtue, and at the same time suffers from misfortune; it would be an extraordinary thing if such an one, whether slave or freeman, were utterly forsaken and fell into the extremes of poverty in any tolerably well-ordered city or government. Wherefore the legislator may safely make a law applicable to such cases in the following terms: Let there be no beggars in our state; and if anybody begs, seeking to pick up a livelihood by unavailing prayers, let the wardens of the agora turn him out of the agora, and the wardens of the city out of the city, and the wardens of the country send him out of any other parts of the land across the border, in order that the land may be cleared of this sort of animal.

If a slave of either sex injure anything, which is not his or her own, through inexperience, or some improper practice, and the person who suffers damage be not himself in part to blame, the master of the slave who has done the harm shall either make full satisfaction, or give up the slave who has done the injury. But if the master argue that the charge has arisen by collusion between the injured party and the injurer, with the view of obtaining the slave, let him sue the person, who says that he has been injured, for malpractices. And if he gain a conviction, let him receive double the value which the court fixes as the price of the slave; and if he lose his suit, let him make amends for the injury, and give up the slave. And if a beast of burden, or horse, or dog, or any other animal, injure the property of a neighbour, the owner shall in like manner pay for the injury.

If any man refuses to be a witness, he who wants him shall summon him, and he who is summoned shall come to the trial; and if he knows and is willing to bear witness, let him bear witness, but if he says he does not know let him swear by the three divinities Zeus, and Apollo, and Themis, that he does not, and have no more to do with the cause. And he who is summoned to give witness and does not answer to his summoner, shall be liable for the harm which ensues according to law. And if a person calls up as a witness any one who is acting as a judge, let him give his witness, but he shall not afterwards vote in the cause. A free woman may give her witness and plead, if she be more than forty years of age, and may bring an action if she have no husband; but if her husband be alive she

shall only be allowed to bear witness. A slave of either sex and a child shall be allowed to give evidence and to plead, but only in cases of murder; and they must produce sufficient sureties that they will certainly remain until the trial, in case they should be charged with false witness. And either of the parties in a cause may bring an accusation of perjury against witnesses, touching their evidence in whole or in part, if he asserts that such evidence has been given; but the accusation must be brought previous to the final decision of the cause. The magistrates shall preserve the accusations of false witness, and have them kept under the seal of both parties, and produce them on the day when the trial for false witness takes place. If a man be twice convicted of false witness, he shall not be required, and if thrice, he shall not be allowed to bear witness; and if he dare to witness after he has been convicted three times, let any one who pleases inform against him to the magistrates, and let the magistrates hand him over to the court, and if he be convicted he shall be punished with death. And in any case in which the evidence is rightly found to be false, and yet to have given the victory to him who wins the suit, and more than half the witnesses are condemned, the decision which was gained by these means shall be rescinded, and there shall be a discussion and a decision as to whether the suit was determined by that false evidence or not; and in whichever way the decision may be given, the previous suit shall be determined accordingly.

There are many noble things in human life, but to most of them attach evils which are fated to corrupt and spoil them. Is not justice noble, which has been the civiliser of humanity? How then can the advocate of justice be other than noble? And yet upon this profession which is presented to us under the fair name of art has come an evil reputation. In the first place, we are told that by ingenious pleas and the help of an advocate the law enables a man to win a particular cause, whether just or unjust; and that both the art, and the power of speech which is thereby imparted, are at the service of him who is willing to pay for them. Now in our state this so-called art, whether really an art or only an experience and practice destitute of any art, ought if possible never to come into existence, or if existing among us should listen to the request of the legislator and go away into another land, and not speak contrary to justice. If the offenders obey we say no more; but for those who disobey, the voice of the law is as follows: If any one thinks that he will pervert the power of justice in the minds of the judges, and unseasonably litigate or advocate, let any one who likes indict him for malpractices of law and dishonest advocacy, and let him be judged in the court of select judges; and if he be convicted, let the court determine whether he may be supposed to act from a love of money or from contentiousness. And if he is supposed to act from contentiousness, the court shall fix a time during which he shall not be allowed to institute or plead a cause; and if he is supposed to act as he does from love of money, in case he be a stranger, he shall leave the country, and never return under penalty of death; but if he be a citizen, he shall die, because he is a lover of money, in whatever manner gained; and equally, if he be judged to have acted more than once from contentiousness, he shall die.

BOOK XII.

If a herald or an ambassador carry a false message from our city to any other, or bring back a false message from the city to which he is sent, or be proved to have brought back, whether from friends or

enemies, in his capacity of herald or ambassador, what they have never said, let him be indicted for having violated, contrary to the law, the commands and duties imposed upon him by Hermes and Zeus, and let there be a penalty fixed, which he shall suffer or pay if he be convicted.

Theft is a mean, and robbery a shameless thing; and none of the sons of Zeus delight in fraud and violence, or ever practised either. Wherefore let no one be deluded by poets or mythologers into a mistaken belief of such things, nor let him suppose, when he thieves or is guilty of violence, that he is doing nothing base, but only what the Gods themselves do. For such tales are untrue and improbable; and he who steals or robs contrary to the law, is never either a God or the son of a God; of this the legislator ought to be better informed than all the poets put together. Happy is he and may he be for ever happy, who is persuaded and listens to our words; but he who disobeys shall have to contend against the following law: If a man steal anything belonging to the public, whether that which he steals be much or little, he shall have the same punishment. For he who steals a little steals with the same wish as he who steals much, but with less power, and he who takes up a greater amount, not having deposited it, is wholly unjust. Wherefore the law is not disposed to inflict a less penalty on the one than on the other because his theft is less, but on the ground that the thief may possibly be in one case still curable, and may in another case be incurable. If any one convict in a court of law a stranger or a slave of a theft of public property, let the court determine what punishment he shall suffer, or what penalty he shall pay, bearing in mind that he is probably not incurable. But the citizen who has been brought up as our citizens will have been, if he be found guilty of robbing his country by fraud or violence, whether he be caught in the act or not, shall be punished with death; for he is incurable.

Now for expeditions of war much consideration and many laws are required; the great principle of all is that no one of either sex should be without a commander; nor should the mind of any one be accustomed to do anything, either in jest or earnest, of his own motion, but in war and in peace he should look to and follow his leader, even in the least things being under his guidance; for example, he should stand or move, or exercise, or wash, or take his meals, or get up in the night to keep guard and deliver messages when he is bidden; and in the hour of danger he should not pursue and not retreat except by order of his superior; and in a word, not teach the soul or accustom her to know or understand how to do anything apart from others. Of all soldiers the life should be always and in all things as far as possible in common and together; there neither is nor ever will be a higher, or better, or more scientific principle than this for the attainment of salvation and victory in war. And we ought in time of peace from youth upwards to practise this habit of commanding others, and of being commanded by others; anarchy should have no place in the life of man or of the beasts who are subject to man. I may add that all dances ought to be performed with a view to military excellence; and agility and ease should be cultivated for the same object, and also endurance of the want of meats and drinks, and of winter cold and summer heat, and of hard couches; and, above all, care should be taken not to destroy the peculiar qualities of the head and the feet by surrounding them with extraneous coverings, and so hindering their natural growth of hair and soles. For these are the extremities, and of all the parts of the body, whether they are preserved or not is of the greatest consequence; the one is the servant of the whole body, and the other the master, in whom all the ruling senses are by nature set. Let the young men imagine that he hears in what has preceded the praises of the military life; the law shall be as follows: He shall serve in war who is on the roll or appointed to some special service, and if any one is absent from cowardice, and without the leave of the generals, he shall be indicted before the military commanders for failure of service when the army

comes home; and the soldiers shall be his judges; the heavy-armed, and the cavalry, and the other arms of the service shall form separate courts; and they shall bring the heavy-armed before the heavy-armed, and the horsemen before the horsemen, and the others in like manner before their peers; and he who is found guilty shall never be allowed to compete for any prize of valour, or indict another for not serving on an expedition, or be an accuser at all in any military matters. Moreover, the court shall further determine what punishment he shall suffer, or what penalty he shall pay. When the suits for failure of service are completed, the leaders of the several kinds of troops shall again hold an assembly, and they shall adjudge the prizes of valour; and he who likes searching for judgment in his own branch of the service, saying nothing about any former expedition, nor producing any proof or witnesses to confirm his statement, but speaking only of the present occasion. The crown of victory shall be an olive wreath which the victor shall offer up at the temple of any war-god whom he likes, adding an inscription for a testimony to last during life, that such an one has received the first, the second, or the third prize. If any one goes on an expedition, and returns home before the appointed time, when the generals have not withdrawn the army, he shall be indicted for desertion before the same persons who took cognizance of failure of service, and if he be found guilty, the same punishment shall be inflicted on him. Now every man who is engaged in any suit ought to be very careful of bringing false witness against any one, either intentionally or unintentionally, if he can help; for justice is truly said to be an honourable maiden, and falsehood is naturally repugnant to honour and justice. A witness ought to be very careful not to sin against justice, as for example in what relates to the throwing away of arms—he must distinguish the throwing them away when necessary, and not make that a reproach, or bring an action against some innocent person on that account. To make the distinction may be difficult; but still the law must attempt to define the different kinds in some way. Let me endeavour to explain my meaning by an ancient tale: If Patroclus had been brought to the tent still alive but without his arms (and this has happened to innumerable persons), the original arms, which the poet says were presented to Peleus by the Gods as a nuptial gift when he married Thetis, remaining in the hands of Hector, then the base spirits of that day might have reproached the son of Menoetius with having cast away his arms. Again, there is the case of those who have been thrown down precipices and lost their arms; and of those who at sea, and in stormy places, have been suddenly overwhelmed by floods of water; and there are numberless things of this kind which one might adduce by way of extenuation, and with the view of justifying a misfortune which is easily misrepresented. We must, therefore, endeavour to divide to the best of our power the greater and more serious evil from the lesser. And a distinction may be drawn in the use of terms of reproach. A man does not always deserve to be called the thrower away of his shield; he may be only the loser of his arms. For there is a great or rather absolute difference between him who is deprived of his arms by a sufficient force, and him who voluntarily lets his shield go. Let the law then be as follows: If a person having arms is overtaken by the enemy and does not turn round and defend himself, but lets them go voluntarily or throws them away, choosing a base life and a swift escape rather than a courageous and noble and blessed death—in such a case of the throwing away of arms let justice be done, but the judge need take no note of the case just now mentioned; for the bad men ought always to be punished, in the hope that he may be improved, but not the unfortunate, for there is no advantage in that. And what shall be the punishment suited to him who has thrown away his weapons of defence? Tradition says that Caeneus, the Thessalian, was changed by a God from a woman into a man; but the converse miracle cannot now be wrought, or no punishment would be more proper than that the man who throws away his shield should be changed into a woman. This however is impossible, and therefore let us make a law as nearly like this as we can—that he who loves his life too well shall be in no danger for the remainder of his days, but shall live for ever under the stigma of

cowardice. And let the law be in the following terms: When a man is found guilty of disgracefully throwing away his arms in war, no general or military officer shall allow him to serve as a soldier, or give him any place at all in the ranks of soldiers; and the officer who gives the coward any place, shall suffer a penalty which the public examiner shall exact of him; and if he be of the highest class, he shall pay a thousand drachmae; or if he be of the second class, five minae; or if he be of the third, three minae; or if he be of the fourth class, one mina. And he who is found guilty of cowardice, shall not only be dismissed from manly dangers, which is a disgrace appropriate to his nature, but he shall pay a thousand drachmae, if he be of the highest class, and five minae if he be of the second class, and three if he be of the third class, and a mina, like the preceding, if he be of the fourth class.

What regulations will be proper about examiners, seeing that some of our magistrates are elected by lot, and for a year, and some for a longer time and from selected persons? Of such magistrates, who will be a sufficient censor or examiner, if any of them, weighed down by the pressure of office or his own inability to support the dignity of his office, be guilty of any crooked practice? It is by no means easy to find a magistrate who excels other magistrates in virtue, but still we must endeavour to discover some censor or examiner who is more than man. For the truth is, that there are many elements of dissolution in a state, as there are also in a ship, or in an animal; they all have their cords, and girders, and sinews—one nature diffused in many places, and called by many names; and the office of examiner is a most important element in the preservation and dissolution of states. For if the examiners are better than the magistrates, and their duty is fulfilled justly and without blame, then the whole state and country flourishes and is happy; but if the examination of the magistrates is carried on in a wrong way, then, by the relaxation of that justice which is the uniting principle of all constitutions, every power in the state is rent asunder from every other; they no longer incline in the same direction, but fill the city with faction, and make many cities out of one, and soon bring all to destruction. Wherefore the examiners ought to be admirable in every sort of virtue. Let us invent a mode of creating them, which shall be as follows: Every year, after the summer solstice, the whole city shall meet in the common precincts of Helios and Apollo, and shall present to the God three men out of their own number in the manner following: Each citizen shall select, not himself, but some other citizen whom he deems in every way the best, and who is not less than fifty years of age. And out of the selected persons who have the greatest number of votes, they shall make a further selection until they reduce them to one-half, if they are an even number; but if they are not an even number, they shall subtract the one who has the smallest number of votes, and make them an even number, and then leave the half which have the greater number of votes. And if two persons have an equal number of votes, and thus increase the number beyond one-half, they shall withdraw the younger of the two and do away the excess; and then including all the rest they shall again vote, until there are left three having an unequal number of votes. But if all the three, or two out of the three, have equal votes, let them commit the election to good fate and fortune, and separate off by lot the first, and the second, and the third; these they shall crown with an olive wreath and give them the prize of excellence, at the same time proclaiming to all the world that the city of the Magnetes, by the providence of the Gods, is again preserved, and presents to the Sun and to Apollo her three best men as first-fruits, to be a common offering to them, according to the ancient law, as long as their lives answer to the judgment formed of them. And these shall appoint in their first year twelve examiners, to continue until each has completed seventy-five years, to whom three shall afterwards be added yearly; and let these divide all the magistracies into twelve parts, and prove the holders of them by every sort of test to which a freeman may be subjected; and let them live while they hold office in the precinct of Helios and Apollo, in which they were chosen, and let each one form a

judgment of some things individually, and of others in company with his colleagues; and let him place a writing in the agora about each magistracy, and what the magistrate ought to suffer or pay, according to the decision of the examiners. And if a magistrate does not admit that he has been justly judged, let him bring the examiners before the select judges, and if he be acquitted by their decision, let him, if he will, accuse the examiners themselves; if, however, he be convicted, and have been condemned to death by the examiners, let him die (and of course he can only die once): but any other penalties which admit of being doubled let him suffer twice over.

And now let us pass under review the examiners themselves; what will their examination be, and how conducted? During the life of these men, whom the whole state counts worthy of the rewards of virtue, they shall have the first seat at all public assemblies, and at all Hellenic sacrifices and sacred missions, and other public and holy ceremonies in which they share. The chiefs of each sacred mission shall be selected from them, and they only of all the citizens shall be adorned with a crown of laurel; they shall all be priests of Apollo and Helios; and one of them, who is judged first of the priests created in that year, shall be high priest; and they shall write up his name in each year to be a measure of time as long as the city lasts; and after their death they shall be laid out and carried to the grave and entombed in a manner different from the other citizens. They shall be decked in a robe all of white, and there shall be no crying or lamentation over them; but a chorus of fifteen maidens, and another of boys, shall stand around the bier on either side, hymning the praises of the departed priests in alternate responses, declaring their blessedness in song all day long; and at dawn a hundred of the youths who practise gymnastic exercises, and whom the relations of the departed shall choose, shall carry the bier to the sepulchre, the young men marching first, dressed in the garb of warriors—the cavalry with their horses, the heavy-armed with their arms, and the others in like manner. And boys near the bier and in front of it shall sing their national hymn, and maidens shall follow behind, and with them the women who have passed the age of child-bearing; next, although they are interdicted from other burials, let priests and priestesses follow, unless the Pythian oracle forbid them; for this burial is free from pollution. The place of burial shall be an oblong vaulted chamber underground, constructed of tufa, which will last for ever, having stone couches placed side by side. And here they will lay the blessed person, and cover the sepulchre with a circular mound of earth and plant a grove of trees around on every side but one; and on that side the sepulchre shall be allowed to extend for ever, and a new mound will not be required. Every year they shall have contests in music and gymnastics, and in horsemanship, in honour of the dead. These are the honours which shall be given to those who at the examination are found blameless; but if any of them, trusting to the scrutiny being over, should, after the judgment has been given, manifest the wickedness of human nature, let the law ordain that he who pleases shall indict him, and let the cause be tried in the following manner. In the first place, the court shall be composed of the guardians of the law, and to them the surviving examiners shall be added, as well as the court of select judges; and let the pursuer lay his indictment in this form—he shall say that so-and-so is unworthy of the prize of virtue and of his office; and if the defendant be convicted let him be deprived of his office, and of the burial, and of the other honours given him. But if the prosecutor do not obtain the fifth part of the votes, let him, if he be of the first-class, pay twelve minae, and eight if he be of the second class, and six if he be of the third class, and two minae if he be of the fourth class.

The so-called decision of Rhadamanthus is worthy of all admiration. He knew that the men of his own time believed and had no doubt that there were Gods, which was a reasonable belief in those days, because most men were the sons of Gods, and according to tradition he was one himself. He

appears to have thought that he ought to commit judgment to no man, but to the Gods only, and in this way suits were simply and speedily decided by him. For he made the two parties take an oath respecting the points in dispute, and so got rid of the matter speedily and safely. But now that a certain portion of mankind do not believe at all in the existence of the Gods, and others imagine that they have no care of us, and the opinion of most men, and of the worst men, is that in return for a small sacrifice and a few flattering words they will be their accomplices in purloining large sums and save them from many terrible punishments, the way of Rhadamanthus is no longer suited to the needs of justice; for as the opinions of men about the Gods are changed, the laws should also be changed—in the granting of suits a rational legislation ought to do away with the oaths of the parties on either side—he who obtains leave to bring an action should write down the charges, but should not add an oath; and the defendant in like manner should give his denial to the magistrates in writing, and not swear; for it is a dreadful thing to know, when many lawsuits are going on in a state, that almost half the people who meet one another quite unconcernedly at the public meals and in other companies and relations of private life are perjured. Let the law, then, be as follows: A judge who is about to give judgment shall take an oath, and he who is choosing magistrates for the state shall either vote on oath or with a voting tablet which he brings from a temple; so too the judge of dances and of all music, and the superintendents and umpires of gymnastic and equestrian contests, and any matters in which, as far as men can judge, there is nothing to be gained by a false oath; but all cases in which a denial confirmed by an oath clearly results in a great advantage to the taker of the oath, shall be decided without the oath of the parties to the suit, and the presiding judges shall not permit either of them to use an oath for the sake of persuading, nor to call down curses on himself and his race, nor to use unseemly supplications or womanish laments. But they shall ever be teaching and learning what is just in auspicious words; and he who does otherwise shall be supposed to speak beside the point, and the judges shall again bring him back to the question at issue. On the other hand, strangers in their dealings with strangers shall as at present have power to give and receive oaths, for they will not often grow old in the city or leave a fry of young ones like themselves to be the sons and heirs of the land.

As to the initiation of private suits, let the manner of deciding causes between all citizens be the same as in cases in which any freeman is disobedient to the state in minor matters, of which the penalty is not stripes, imprisonment, or death. But as regards attendance at choruses or processions or other shows, and as regards public services, whether the celebration of sacrifice in peace, or the payment of contributions in war—in all these cases, first comes the necessity of providing a remedy for the loss; and by those who will not obey, there shall be security given to the officers whom the city and the law empower to exact the sum due; and if they forfeit their security, let the goods which they have pledged be sold and the money given to the city; but if they ought to pay a larger sum, the several magistrates shall impose upon the disobedient a suitable penalty, and bring them before the court, until they are willing to do what they are ordered.

Now a state which makes money from the cultivation of the soil only, and has no foreign trade, must consider what it will do about the emigration of its own people to other countries, and the reception of strangers from elsewhere. About these matters the legislator has to consider, and he will begin by trying to persuade men as far as he can. The intercourse of cities with one another is apt to create a confusion of manners; strangers are always suggesting novelties to strangers. When states are well governed by good laws the mixture causes the greatest possible injury; but seeing that most cities are the reverse of well-ordered, the confusion which arises in them from the reception of strangers, and

from the citizens themselves rushing off into other cities, when any one either young or old desires to travel anywhere abroad at whatever time, is of no consequence. On the other hand, the refusal of states to receive others, and for their own citizens never to go to other places, is an utter impossibility, and to the rest of the world is likely to appear ruthless and uncivilised; it is a practice adopted by people who use harsh words, such as xenelasia or banishment of strangers, and who have harsh and morose ways, as men think. And to be thought or not to be thought well of by the rest of the world is no light matter; for the many are not so far wrong in their judgment of who are bad and who are good, as they are removed from the nature of virtue in themselves. Even bad men have a divine instinct which guesses rightly, and very many who are utterly depraved form correct notions and judgments of the differences between the good and bad. And the generality of cities are quite right in exhorting us to value a good reputation in the world, for there is no truth greater and more important than this—that he who is really good (I am speaking of the men who would be perfect) seeks for reputation with, but not without, the reality of goodness. And our Cretan colony ought also to acquire the fairest and noblest reputation for virtue from other men; and there is every reason to expect that, if the reality answers to the idea, she will be one of the few well-ordered cities which the sun and the other Gods behold. Wherefore, in the matter of journeys to other countries and the reception of strangers, we enact as follows: In the first place, let no one be allowed to go anywhere at all into a foreign country who is less than forty years of age; and no one shall go in a private capacity, but only in some public one, as a herald, or on an embassy, or on a sacred mission. Going abroad on an expedition or in war is not to be included among travels of the class authorised by the state. To Apollo at Delphi and to Zeus at Olympia and to Nemea and to the Isthmus, citizens should be sent to take part in the sacrifices and games there dedicated to the Gods; and they should send as many as possible, and the best and fairest that can be found, and they will make the city renowned at holy meetings in time of peace, procuring a glory which shall be the converse of that which is gained in war; and when they come home they shall teach the young that the institutions of other states are inferior to their own. And they shall send spectators of another sort, if they have the consent of the guardians, being such citizens as desire to look a little more at leisure at the doings of other men; and these no law shall hinder. For a city which has no experience of good and bad men or intercourse with them, can never be thoroughly and perfectly civilised, nor, again, can the citizens of a city properly observe the laws by habit only, and without an intelligent understanding of them. And there always are in the world a few inspired men whose acquaintance is beyond price, and who spring up quite as much in ill-ordered as in well-ordered cities. These are they whom the citizens of a well-ordered city should be ever seeking out, going forth over sea and over land to find him who is incorruptible—that he may establish more firmly institutions in his own state which are good already, and amend what is deficient; for without this examination and enquiry a city will never continue perfect any more than if the examination is ill-conducted.

CLEINIAS: How can we have an examination and also a good one?

ATHENIAN: In this way: In the first place, our spectator shall be of not less than fifty years of age; he must be a man of reputation, especially in war, if he is to exhibit to other cities a model of the guardians of the law, but when he is more than sixty years of age he shall no longer continue in his office of spectator. And when he has carried on his inspection during as many out of the ten years of his office as he pleases, on his return home let him go to the assembly of those who review the laws. This shall be a mixed body of young and old men, who shall be required to meet daily between the hour of dawn and the rising of the sun. They shall consist, in the first place, of the priests who have

obtained the rewards of virtue; and, in the second place, of guardians of the law, the ten eldest being chosen; the general superintendent of education shall also be a member, as well as the last appointed as those who have been released from the office; and each of them shall take with him as his companion a young man, whomsoever he chooses, between the ages of thirty and forty. These shall be always holding conversation and discourse about the laws of their own city or about any specially good ones which they may hear to be existing elsewhere; also about kinds of knowledge which may appear to be of use and will throw light upon the examination, or of which the want will make the subject of laws dark and uncertain to them. Any knowledge of this sort which the elders approve, the younger men shall learn with all diligence; and if any one of those who have been invited appear to be unworthy, the whole assembly shall blame him who invited him. The rest of the city shall watch over those among the young men who distinguish themselves, having an eye upon them, and especially honouring them if they succeed, but dishonouring them above the rest if they turn out to be inferior. This is the assembly to which he who has visited the institutions of other men, on his return home shall straightway go, and if he have discovered any one who has anything to say about the enactment of laws or education or nurture, or if he have himself made any observations, let him communicate his discoveries to the whole assembly. And if he be seen to have come home neither better nor worse, let him be praised at any rate for his enthusiasm; and if he be much better, let him be praised so much the more; and not only while he lives but after his death let the assembly honour him with fitting honours. But if on his return home he appear to have been corrupted, pretending to be wise when he is not, let him hold no communication with any one, whether young or old; and if he will hearken to the rulers, then he shall be permitted to live as a private individual; but if he will not, let him die, if he be convicted in a court of law of interfering about education and the laws. And if he deserve to be indicted, and none of the magistrates indict him, let that be counted as a disgrace to them when the rewards of virtue are decided.

Let such be the character of the person who goes abroad, and let him go abroad under these conditions. In the next place, the stranger who comes from abroad should be received in a friendly spirit. Now there are four kinds of strangers, of whom we must make some mention—the first is he who comes and stays throughout the summer; this class are like birds of passage, taking wing in pursuit of commerce, and flying over the sea to other cities, while the season lasts; he shall be received in market-places and harbours and public buildings, near the city but outside, by those magistrates who are appointed to superintend these matters; and they shall take care that a stranger, whoever he be, duly receives justice; but he shall not be allowed to make any innovation. They shall hold the intercourse with him which is necessary, and this shall be as little as possible. The second kind is just a spectator who comes to see with his eyes and hear with his ears the festivals of the Muses; such ought to have entertainment provided them at the temples by hospitable persons, and the priests and ministers of the temples should see and attend to them. But they should not remain more than a reasonable time; let them see and hear that for the sake of which they came, and then go away, neither having suffered nor done any harm. The priests shall be their judges, if any of them receive or do any wrong up to the sum of fifty drachmae, but if any greater charge be brought, in such cases the suit shall come before the wardens of the agora. The third kind of stranger is he who comes on some public business from another land, and is to be received with public honours. He is to be received only by the generals and commanders of horse and foot, and the host by whom he is entertained, in conjunction with the Prytanes, shall have the sole charge of what concerns him. There is a fourth class of persons answering to our spectators, who come from another land to look at ours. In the first place, such visits will be rare, and the visitor should be at least fifty years of age; he may

possibly be wanting to see something that is rich and rare in other states, or himself to show something in like manner to another city. Let such an one, then, go unbidden to the doors of the wise and rich, being one of them himself: let him go, for example, to the house of the superintendent of education, confident that he is a fitting guest of such a host, or let him go to the house of some of those who have gained the prize of virtue and hold discourse with them, both learning from them, and also teaching them; and when he has seen and heard all, he shall depart, as a friend taking leave of friends, and be honoured by them with gifts and suitable tributes of respect. These are the customs, according to which our city should receive all strangers of either sex who come from other countries, and should send forth her own citizens, showing respect to Zeus, the God of hospitality, not forbidding strangers at meals and sacrifices, as is the manner which prevails among the children of the Nile, nor driving them away by savage proclamations.

When a man becomes surety, let him give the security in a distinct form, acknowledging the whole transaction in a written document, and in the presence of not less than three witnesses if the sum be under a thousand drachmae, and of not less than five witnesses if the sum be above a thousand drachmae. The agent of a dishonest or untrustworthy seller shall himself be responsible; both the agent and the principal shall be equally liable. If a person wishes to find anything in the house of another, he shall enter naked, or wearing only a short tunic and without a girdle, having first taken an oath by the customary Gods that he expects to find it there; he shall then make his search, and the other shall throw open his house and allow him to search things both sealed and unsealed. And if a person will not allow the searcher to make his search, he who is prevented shall go to law with him, estimating the value of the goods after which he is searching, and if the other be convicted he shall pay twice the value of the article. If the master be absent from home, the dwellers in the house shall let him search the unsealed property, and on the sealed property the searcher shall set another seal, and shall appoint any one whom he likes to guard them during five days; and if the master of the house be absent during a longer time, he shall take with him the wardens of the city, and so make his search, opening the sealed property as well as the unsealed, and then, together with the members of the family and the wardens of the city, he shall seal them up again as they were before. There shall be a limit of time in the case of disputed things, and he who has had possession of them during a certain time shall no longer be liable to be disturbed. As to houses and lands there can be no dispute in this state of ours; but if a man has any other possessions which he has used and openly shown in the city and in the agora and in the temples, and no one has put in a claim to them, and some one says that he was looking for them during this time, and the possessor is proved to have made no concealment, if they have continued for a year, the one having the goods and the other looking for them, the claim of the seeker shall not be allowed after the expiration of the year; or if he does not use or show the lost property in the market or in the city, but only in the country, and no one offers himself as the owner during five years, at the expiration of the five years the claim shall be barred for ever after; or if he uses them in the city but within the house, then the appointed time of claiming the goods shall be three years, or ten years if he has them in the country in private. And if he has them in another land, there shall be no limit of time or prescription, but whenever the owner finds them he may claim them.

If any one prevents another by force from being present at a trial, whether a principal party or his witnesses; if the person prevented be a slave, whether his own or belonging to another, the suit shall be incomplete and invalid; but if he who is prevented be a freeman, besides the suit being incomplete, the other who has prevented him shall be imprisoned for a year, and shall be prosecuted

for kidnapping by any one who pleases. And if any one hinders by force a rival competitor in gymnastic or music, or any other sort of contest, from being present at the contest, let him who has a mind inform the presiding judges, and they shall liberate him who is desirous of competing; and if they are not able, and he who hinders the other from competing wins the prize, then they shall give the prize of victory to him who is prevented, and inscribe him as the conqueror in any temples which he pleases; and he who hinders the other shall not be permitted to make any offering or inscription having reference to that contest, and in any case he shall be liable for damages, whether he be defeated or whether he conquer.

If any one knowingly receives anything which has been stolen, he shall undergo the same punishment as the thief, and if a man receives an exile he shall be punished with death. Every man should regard the friend and enemy of the state as his own friend and enemy; and if any one makes peace or war with another on his own account, and without the authority of the state, he, like the receiver of the exile, shall undergo the penalty of death. And if any fraction of the city declare war or peace against any, the generals shall indict the authors of this proceeding, and if they are convicted death shall be the penalty. Those who serve their country ought to serve without receiving gifts, and there ought to be no excusing or approving the saying, 'Men should receive gifts as the reward of good, but not of evil deeds'; for to know which we are doing, and to stand fast by our knowledge, is no easy matter. The safest course is to obey the law which says, 'Do no service for a bribe,' and let him who disobeys, if he be convicted, simply die. With a view to taxation, for various reasons, every man ought to have had his property valued: and the tribesmen should likewise bring a register of the yearly produce to the wardens of the country, that in this way there may be two valuations; and the public officers may use annually whichever on consideration they deem the best, whether they prefer to take a certain portion of the whole value, or of the annual revenue, after subtracting what is paid to the common tables.

Touching offerings to the Gods, a moderate man should observe moderation in what he offers. Now the land and the hearth of the house of all men is sacred to all Gods; wherefore let no man dedicate them a second time to the Gods. Gold and silver, whether possessed by private persons or in temples, are in other cities provocative of envy, and ivory, the product of a dead body, is not a proper offering; brass and iron, again, are instruments of war; but of wood let a man bring what offering he likes, provided it be a single block, and in like manner of stone, to the public temples; of woven work let him not offer more than one woman can execute in a month. White is a colour suitable to the Gods, especially in woven works, but dyes should only be used for the adornments of war. The most divine of gifts are birds and images, and they should be such as one painter can execute in a single day. And let all other offerings follow a similar rule.

Now that the whole city has been divided into parts of which the nature and number have been described, and laws have been given about all the most important contracts as far as this was possible, the next thing will be to have justice done. The first of the courts shall consist of elected judges, who shall be chosen by the plaintiff and the defendant in common: these shall be called arbiters rather than judges. And in the second court there shall be judges of the villages and tribes corresponding to the twelvefold division of the land, and before these the litigants shall go to contend for greater damages, if the suit be not decided before the first judges; the defendant, if he be defeated the second time, shall pay a fifth more than the damages mentioned in the indictment; and if he find fault with his judges and would try a third time, let him carry the suit before the select judges, and if he

be again defeated, let him pay the whole of the damages and half as much again. And the plaintiff, if when defeated before the first judges he persist in going on to the second, shall if he wins receive in addition to the damages a fifth part more, and if defeated he shall pay a like sum; but if he is not satisfied with the previous decision, and will insist on proceeding to a third court, then if he win he shall receive from the defendant the amount of the damages and, as I said before, half as much again, and the plaintiff, if he lose, shall pay half of the damages claimed. Now the assignment by lot of judges to courts and the completion of the number of them, and the appointment of servants to the different magistrates, and the times at which the several causes should be heard, and the votings and delays, and all the things that necessarily concern suits, and the order of causes, and the time in which answers have to be put in and parties are to appear—of these and other things akin to these we have indeed already spoken, but there is no harm in repeating what is right twice or thrice: All lesser and easier matters which the elder legislator has omitted may be supplied by the younger one. Private courts will be sufficiently regulated in this way, and the public and state courts, and those which the magistrates must use in the administration of their several offices, exist in many other states. Many very respectable institutions of this sort have been framed by good men, and from them the guardians of the law may by reflection derive what is necessary for the order of our new state, considering and correcting them, and bringing them to the test of experience, until every detail appears to be satisfactorily determined; and then putting the final seal upon them, and making them irreversible, they shall use them for ever afterwards. As to what relates to the silence of judges and the abstinence from words of evil omen and the reverse, and the different notions of the just and good and honourable which exist in our own as compared with other states, they have been partly mentioned already, and another part of them will be mentioned hereafter as we draw near the end. To all these matters he who would be an equal judge shall justly look, and he shall possess writings about them that he may learn them. For of all kinds of knowledge the knowledge of good laws has the greatest power of improving the learner; otherwise there would be no meaning in the divine and admirable law possessing a name akin to mind (nous, nomos). And of all other words, such as the praises and censures of individuals which occur in poetry and also in prose, whether written down or uttered in daily conversation, whether men dispute about them in the spirit of contention or weakly assent to them, as is often the case—of all these the one sure test is the writings of the legislator, which the righteous judge ought to have in his mind as the antidote of all other words, and thus make himself and the city stand upright, procuring for the good the continuance and increase of justice, and for the bad, on the other hand, a conversion from ignorance and intemperance, and in general from all unrighteousness, as far as their evil minds can be healed, but to those whose web of life is in reality finished, giving death, which is the only remedy for souls in their condition, as I may say truly again and again. And such judges and chiefs of judges will be worthy of receiving praise from the whole city.

When the suits of the year are completed the following laws shall regulate their execution: In the first place, the judge shall assign to the party who wins the suit the whole property of him who loses, with the exception of mere necessaries, and the assignment shall be made through the herald immediately after each decision in the hearing of the judges; and when the month arrives following the month in which the courts are sitting, (unless the gainer of the suit has been previously satisfied) the court shall follow up the case, and hand over to the winner the goods of the loser; but if they find that he has not the means of paying, and the sum deficient is not less than a drachma, the insolvent person shall not have any right of going to law with any other man until he have satisfied the debt of the winning party; but other persons shall still have the right of bringing suits against him. And if any

one after he is condemned refuses to acknowledge the authority which condemned him, let the magistrates who are thus deprived of their authority bring him before the court of the guardians of the law, and if he be cast, let him be punished with death, as a subverter of the whole state and of the laws.

Thus a man is born and brought up, and after this manner he begets and brings up his own children, and has his share of dealings with other men, and suffers if he has done wrong to any one, and receives satisfaction if he has been wronged, and so at length in due time he grows old under the protection of the laws, and his end comes in the order of nature. Concerning the dead of either sex, the religious ceremonies which may fittingly be performed, whether appertaining to the Gods of the under-world or of this, shall be decided by the interpreters with absolute authority. Their sepulchres are not to be in places which are fit for cultivation, and there shall be no monuments in such spots, either large or small, but they shall occupy that part of the country which is naturally adapted for receiving and concealing the bodies of the dead with as little hurt as possible to the living. No man, living or dead, shall deprive the living of the sustenance which the earth, their foster-parent, is naturally inclined to provide for them. And let not the mound be piled higher than would be the work of five men completed in five days; nor shall the stone which is placed over the spot be larger than would be sufficient to receive the praises of the dead included in four heroic lines. Nor shall the laying out of the dead in the house continue for a longer time than is sufficient to distinguish between him who is in a trance only and him who is really dead, and speaking generally, the third day after death will be a fair time for carrying out the body to the sepulchre. Now we must believe the legislator when he tells us that the soul is in all respects superior to the body, and that even in life what makes each one of us to be what we are is only the soul; and that the body follows us about in the likeness of each of us, and therefore, when we are dead, the bodies of the dead are quite rightly said to be our shades or images; for the true and immortal being of each one of us which is called the soul goes on her way to other Gods, before them to give an account—which is an inspiring hope to the good, but very terrible to the bad, as the laws of our fathers tell us; and they also say that not much can be done in the way of helping a man after he is dead. But the living—he should be helped by all his kindred, that while in life he may be the holiest and justest of men, and after death may have no great sins to be punished in the world below. If this be true, a man ought not to waste his substance under the idea that all this lifeless mass of flesh which is in process of burial is connected with him; he should consider that the son, or brother, or the beloved one, whoever he may be, whom he thinks he is laying in the earth, has gone away to complete and fulfil his own destiny, and that his duty is rightly to order the present, and to spend moderately on the lifeless altar of the Gods below. But the legislator does not intend moderation to be taken in the sense of meanness. Let the law, then, be as follows: The expenditure on the entire funeral of him who is of the highest class, shall not exceed five minae; and for him who is of the second class, three minae, and for him who is of the third class, two minae, and for him who is of the fourth class, one mina, will be a fair limit of expense. The guardians of the law ought to take especial care of the different ages of life, whether childhood, or manhood, or any other age. And at the end of all, let there be some one guardian of the law presiding, who shall be chosen by the friends of the deceased to superintend, and let it be glory to him to manage with fairness and moderation what relates to the dead, and a discredit to him if they are not well managed. Let the laying out and other ceremonies be in accordance with custom, but to the statesman who adopts custom as his law we must give way in certain particulars. It would be monstrous for example that he should command any man to weep or abstain from weeping over the dead; but he may forbid cries of lamentation, and not allow the voice of the mourner to be heard outside the house; also, he

may forbid the bringing of the dead body into the open streets, or the processions of mourners in the streets, and may require that before daybreak they should be outside the city. Let these, then, be our laws relating to such matters, and let him who obeys be free from penalty; but he who disobeys even a single guardian of the law shall be punished by them all with a fitting penalty. Other modes of burial, or again the denial of burial, which is to be refused in the case of robbers of temples and parricides and the like, have been devised and are embodied in the preceding laws, so that now our work of legislation is pretty nearly at an end; but in all cases the end does not consist in doing something or acquiring something or establishing something—the end will be attained and finally accomplished, when we have provided for the perfect and lasting continuance of our institutions; until then our creation is incomplete.

CLEINIAS: That is very good, Stranger; but I wish you would tell me more clearly what you mean.

ATHENIAN: O Cleinias, many things of old time were well said and sung; and the saying about the Fates was one of them.

CLEINIAS: What is it?

ATHENIAN: The saying that Lachesis or the giver of the lots is the first of them, and that Clotho or the spinster is the second of them, and that Atropos or the unchanging one is the third of them; and that she is the preserver of the things which we have spoken, and which have been compared in a figure to things woven by fire, they both (i.e. Atropos and the fire) producing the quality of unchangeableness. I am speaking of the things which in a state and government give not only health and salvation to the body, but law, or rather preservation of the law, in the soul; and, if I am not mistaken, this seems to be still wanting in our laws: we have still to see how we can implant in them this irreversible nature.

CLEINIAS: It will be no small matter if we can only discover how such a nature can be implanted in anything.

ATHENIAN: But it certainly can be; so much I clearly see.

CLEINIAS: Then let us not think of desisting until we have imparted this quality to our laws; for it is ridiculous, after a great deal of labour has been spent, to place a thing at last on an insecure foundation.

ATHENIAN: I approve of your suggestion, and am quite of the same mind with you.

CLEINIAS: Very good: And now what, according to you, is to be the salvation of our government and of our laws, and how is it to be effected?

ATHENIAN: Were we not saying that there must be in our city a council which was to be of this sort: The ten oldest guardians of the law, and all those who have obtained prizes of virtue, were to meet in the same assembly, and the council was also to include those who had visited foreign countries in the hope of hearing something that might be of use in the preservation of the laws, and who, having come safely home, and having been tested in these same matters, had proved themselves to be

worthy to take part in the assembly—each of the members was to select some young man of not less than thirty years of age, he himself judging in the first instance whether the young man was worthy by nature and education, and then suggesting him to the others, and if he seemed to them also to be worthy they were to adopt him; but if not, the decision at which they arrived was to be kept a secret from the citizens at large, and, more especially, from the rejected candidate. The meeting of the council was to be held early in the morning, when everybody was most at leisure from all other business, whether public or private—was not something of this sort said by us before?

CLEINIAS: True.

ATHENIAN: Then, returning to the council, I would say further, that if we let it down to be the anchor of the state, our city, having everything which is suitable to her, will preserve all that we wish to preserve.

CLEINIAS: What do you mean?

ATHENIAN: Now is the time for me to speak the truth in all earnestness.

CLEINIAS: Well said, and I hope that you will fulfil your intention.

ATHENIAN: Know, Cleinias, that everything, in all that it does, has a natural saviour, as of an animal the soul and the head are the chief saviours.

CLEINIAS: Once more, what do you mean?

ATHENIAN: The well-being of those two is obviously the preservation of every living thing.

CLEINIAS: How is that?

ATHENIAN: The soul, besides other things, contains mind, and the head, besides other things, contains sight and hearing; and the mind, mingling with the noblest of the senses, and becoming one with them, may be truly called the salvation of all.

CLEINIAS: Yes, quite so.

ATHENIAN: Yes, indeed; but with what is that intellect concerned which, mingling with the senses, is the salvation of ships in storms as well as in fair weather? In a ship, when the pilot and the sailors unite their perceptions with the piloting mind, do they not save both themselves and their craft?

CLEINIAS: Very true.

ATHENIAN: We do not want many illustrations about such matters: What aim would the general of an army, or what aim would a physician propose to himself, if he were seeking to attain salvation?

CLEINIAS: Very good.

ATHENIAN: Does not the general aim at victory and superiority in war, and do not the physician and his assistants aim at producing health in the body?

CLEINIAS: Certainly.

ATHENIAN: And a physician who is ignorant about the body, that is to say, who knows not that which we just now called health, or a general who knows not victory, or any others who are ignorant of the particulars of the arts which we mentioned, cannot be said to have understanding about any of these matters.

CLEINIAS: They cannot.

ATHENIAN: And what would you say of the state? If a person proves to be ignorant of the aim to which the statesman should look, ought he, in the first place, to be called a ruler at all; and further, will he ever be able to preserve that of which he does not even know the aim?

CLEINIAS: Impossible.

ATHENIAN: And therefore, if our settlement of the country is to be perfect, we ought to have some institution, which, as I was saying, will tell what is the aim of the state, and will inform us how we are to attain this, and what law or what man will advise us to that end. Any state which has no such institution is likely to be devoid of mind and sense, and in all her actions will proceed by mere chance.

CLEINIAS: Very true.

ATHENIAN: In which, then, of the parts or institutions of the state is any such guardian power to be found? Can we say?

CLEINIAS: I am not quite certain, Stranger; but I have a suspicion that you are referring to the assembly which you just now said was to meet at night.

ATHENIAN: You understand me perfectly, Cleinias; and we must assume, as the argument implies, that this council possesses all virtue; and the beginning of virtue is not to make mistakes by guessing many things, but to look steadily at one thing, and on this to fix all our aims.

CLEINIAS: Quite true.

ATHENIAN: Then now we shall see why there is nothing wonderful in states going astray—the reason is that their legislators have such different aims; nor is there anything wonderful in some laying down as their rule of justice, that certain individuals should bear rule in the state, whether they be good or bad, and others that the citizens should be rich, not caring whether they are the slaves of other men or not. The tendency of others, again, is towards freedom; and some legislate with a view to two things at once—they want to be at the same time free and the lords of other states; but the wisest men, as they deem themselves to be, look to all these and similar aims, and there is no one of them which they exclusively honour, and to which they would have all things look.

CLEINIAS: Then, Stranger, our former assertion will hold; for we were saying that laws generally should look to one thing only; and this, as we admitted, was rightly said to be virtue.

ATHENIAN: Yes.

CLEINIAS: And we said that virtue was of four kinds?

ATHENIAN: Quite true.

CLEINIAS: And that mind was the leader of the four, and that to her the three other virtues and all other things ought to have regard?

ATHENIAN: You follow me capitally, Cleinias, and I would ask you to follow me to the end, for we have already said that the mind of the pilot, the mind of the physician and of the general look to that one thing to which they ought to look; and now we may turn to mind political, of which, as of a human creature, we will ask a question: O wonderful being, and to what are you looking? The physician is able to tell his single aim in life, but you, the superior, as you declare yourself to be, of all intelligent beings, when you are asked are not able to tell. Can you, Megillus, and you, Cleinias, say distinctly what is the aim of mind political, in return for the many explanations of things which I have given you?

CLEINIAS: We cannot, Stranger.

ATHENIAN: Well, but ought we not to desire to see it, and to see where it is to be found?

CLEINIAS: For example, where?

ATHENIAN: For example, we were saying that there are four kinds of virtue, and as there are four of them, each of them must be one.

CLEINIAS: Certainly.

ATHENIAN: And further, all four of them we call one; for we say that courage is virtue, and that prudence is virtue, and the same of the two others, as if they were in reality not many but one, that is, virtue.

CLEINIAS: Quite so.

ATHENIAN: There is no difficulty in seeing in what way the two differ from one another, and have received two names, and so of the rest. But there is more difficulty in explaining why we call these two and the rest of them by the single name of virtue.

CLEINIAS: How do you mean?

ATHENIAN: I have no difficulty in explaining what I mean. Let us distribute the subject into questions and answers.

CLEINIAS: Once more, what do you mean?

ATHENIAN: Ask me what is that one thing which I call virtue, and then again speak of as two, one part being courage and the other wisdom. I will tell you how that occurs: One of them has to do with fear; in this the beasts also participate, and quite young children—I mean courage; for a courageous temper is a gift of nature and not of reason. But without reason there never has been, or is, or will be a wise and understanding soul; it is of a different nature.

CLEINIAS: That is true.

ATHENIAN: I have now told you in what way the two are different, and do you in return tell me in what way they are one and the same. Suppose that I ask you in what way the four are one, and when you have answered me, you will have a right to ask of me in return in what way they are four; and then let us proceed to enquire whether in the case of things which have a name and also a definition to them, true knowledge consists in knowing the name only and not the definition. Can he who is good for anything be ignorant of all this without discredit where great and glorious truths are concerned?

CLEINIAS: I suppose not.

ATHENIAN: And is there anything greater to the legislator and the guardian of the law, and to him who thinks that he excels all other men in virtue, and has won the palm of excellence, than these very qualities of which we are now speaking—courage, temperance, wisdom, justice?

CLEINIAS: How can there be anything greater?

ATHENIAN: And ought not the interpreters, the teachers, the lawgivers, the guardians of the other citizens, to excel the rest of mankind, and perfectly to show him who desires to learn and know or whose evil actions require to be punished and reproved, what is the nature of virtue and vice? Or shall some poet who has found his way into the city, or some chance person who pretends to be an instructor of youth, show himself to be better than him who has won the prize for every virtue? And can we wonder that when the guardians are not adequate in speech or action, and have no adequate knowledge of virtue, the city being unguarded should experience the common fate of cities in our day?

CLEINIAS: Wonder! no.

ATHENIAN: Well, then, must we do as we said? Or can we give our guardians a more precise knowledge of virtue in speech and action than the many have? or is there any way in which our city can be made to resemble the head and senses of rational beings because possessing such a guardian power?

CLEINIAS: What, Stranger, is the drift of your comparison?

ATHENIAN: Do we not see that the city is the trunk, and are not the younger guardians, who are chosen for their natural gifts, placed in the head of the state, having their souls all full of eyes, with which they look about the whole city? They keep watch and hand over their perceptions to the

memory, and inform the elders of all that happens in the city; and those whom we compared to the mind, because they have many wise thoughts—that is to say, the old men—take counsel, and making use of the younger men as their ministers, and advising with them—in this way both together truly preserve the whole state: Shall this or some other be the order of our state? Are all our citizens to be equal in acquirements, or shall there be special persons among them who have received a more careful training and education?

CLEINIAS: That they should be equal, my good sir, is impossible.

ATHENIAN: Then we ought to proceed to some more exact training than any which has preceded.

CLEINIAS: Certainly.

ATHENIAN: And must not that of which we are in need be the one to which we were just now alluding?

CLEINIAS: Very true.

ATHENIAN: Did we not say that the workman or guardian, if he be perfect in every respect, ought not only to be able to see the many aims, but he should press onward to the one? This he should know, and knowing, order all things with a view to it.

CLEINIAS: True.

ATHENIAN: And can any one have a more exact way of considering or contemplating anything, than the being able to look at one idea gathered from many different things?

CLEINIAS: Perhaps not.

ATHENIAN: Not 'Perhaps not,' but 'Certainly not,' my good sir, is the right answer. There never has been a truer method than this discovered by any man.

CLEINIAS: I bow to your authority, Stranger; let us proceed in the way which you propose.

ATHENIAN: Then, as would appear, we must compel the guardians of our divine state to perceive, in the first place, what that principle is which is the same in all the four—the same, as we affirm, in courage and in temperance, and in justice and in prudence, and which, being one, we call as we ought, by the single name of virtue. To this, my friends, we will, if you please, hold fast, and not let go until we have sufficiently explained what that is to which we are to look, whether to be regarded as one, or as a whole, or as both, or in whatever way. Are we likely ever to be in a virtuous condition, if we cannot tell whether virtue is many, or four, or one? Certainly, if we take counsel among ourselves, we shall in some way contrive that this principle has a place amongst us; but if you have made up your mind that we should let the matter alone, we will.

CLEINIAS: We must not, Stranger, by the God of strangers I swear that we must not, for in our opinion you speak most truly; but we should like to know how you will accomplish your purpose.

ATHENIAN: Wait a little before you ask; and let us, first of all, be quite agreed with one another that the purpose has to be accomplished.

CLEINIAS: Certainly, it ought to be, if it can be.

ATHENIAN: Well, and about the good and the honourable, are we to take the same view? Are our guardians only to know that each of them is many, or also how and in what way they are one?

CLEINIAS: They must consider also in what sense they are one.

ATHENIAN: And are they to consider only, and to be unable to set forth what they think?

CLEINIAS: Certainly not; that would be the state of a slave.

ATHENIAN: And may not the same be said of all good things—that the true guardians of the laws ought to know the truth about them, and to be able to interpret them in words, and carry them out in action, judging of what is and of what is not well, according to nature?

CLEINIAS: Certainly.

ATHENIAN: Is not the knowledge of the Gods which we have set forth with so much zeal one of the noblest sorts of knowledge—to know that they are, and know how great is their power, as far as in man lies? We do indeed excuse the mass of the citizens, who only follow the voice of the laws, but we refuse to admit as guardians any who do not labour to obtain every possible evidence that there is respecting the Gods; our city is forbidden and not allowed to choose as a guardian of the law, or to place in the select order of virtue, him who is not an inspired man, and has not laboured at these things.

CLEINIAS: It is certainly just, as you say, that he who is indolent about such matters or incapable should be rejected, and that things honourable should be put away from him.

ATHENIAN: Are we assured that there are two things which lead men to believe in the Gods, as we have already stated?

CLEINIAS: What are they?

ATHENIAN: One is the argument about the soul, which has been already mentioned—that it is the eldest and most divine of all things, to which motion attaining generation gives perpetual existence; the other was an argument from the order of the motion of the stars, and of all things under the dominion of the mind which ordered the universe. If a man look upon the world not lightly or ignorantly, there was never any one so godless who did not experience an effect opposite to that which the many imagine. For they think that those who handle these matters by the help of astronomy, and the accompanying arts of demonstration, may become godless, because they see, as far as they can see, things happening by necessity, and not by an intelligent will accomplishing good.

CLEINIAS: But what is the fact?

ATHENIAN: Just the opposite, as I said, of the opinion which once prevailed among men, that the sun and stars are without soul. Even in those days men wondered about them, and that which is now ascertained was then conjectured by some who had a more exact knowledge of them—that if they had been things without soul, and had no mind, they could never have moved with numerical exactness so wonderful; and even at that time some ventured to hazard the conjecture that mind was the orderer of the universe. But these same persons again mistaking the nature of the soul, which they conceived to be younger and not older than the body, once more overturned the world, or rather, I should say, themselves; for the bodies which they saw moving in heaven all appeared to be full of stones, and earth, and many other lifeless substances, and to these they assigned the causes of all things. Such studies gave rise to much atheism and perplexity, and the poets took occasion to be abusive—comparing the philosophers to she-dogs uttering vain howlings, and talking other nonsense of the same sort. But now, as I said, the case is reversed.

CLEINIAS: How so?

ATHENIAN: No man can be a true worshipper of the Gods who does not know these two principles—that the soul is the eldest of all things which are born, and is immortal and rules over all bodies; moreover, as I have now said several times, he who has not contemplated the mind of nature which is said to exist in the stars, and gone through the previous training, and seen the connexion of music with these things, and harmonized them all with laws and institutions, is not able to give a reason of such things as have a reason. And he who is unable to acquire this in addition to the ordinary virtues of a citizen, can hardly be a good ruler of a whole state; but he should be the subordinate of other rulers. Wherefore, Cleinias and Megillus, let us consider whether we may not add to all the other laws which we have discussed this further one—that the nocturnal assembly of the magistrates, which has also shared in the whole scheme of education proposed by us, shall be a guard set according to law for the salvation of the state. Shall we propose this?

CLEINIAS: Certainly, my good friend, we will if the thing is in any degree possible.

ATHENIAN: Let us make a common effort to gain such an object; for I too will gladly share in the attempt. Of these matters I have had much experience, and have often considered them, and I dare say that I shall be able to find others who will also help.

CLEINIAS: I agree, Stranger, that we should proceed along the road in which God is guiding us; and how we can proceed rightly has now to be investigated and explained.

ATHENIAN: O Megillus and Cleinias, about these matters we cannot legislate further until the council is constituted; when that is done, then we will determine what authority they shall have of their own; but the explanation of how this is all to be ordered would only be given rightly in a long discourse.

CLEINIAS: What do you mean, and what new thing is this?

ATHENIAN: In the first place, a list would have to be made out of those who by their ages and studies and dispositions and habits are well fitted for the duty of a guardian. In the next place, it will not be easy for them to discover themselves what they ought to learn, or become the disciple of one who has already made the discovery. Furthermore, to write down the times at which, and during which,

they ought to receive the several kinds of instruction, would be a vain thing; for the learners themselves do not know what is learned to advantage until the knowledge which is the result of learning has found a place in the soul of each. And so these details, although they could not be truly said to be secret, might be said to be incapable of being stated beforehand, because when stated they would have no meaning.

CLEINIAS: What then are we to do, Stranger, under these circumstances?

ATHENIAN: As the proverb says, the answer is no secret, but open to all of us: We must risk the whole on the chance of throwing, as they say, thrice six or thrice ace, and I am willing to share with you the danger by stating and explaining to you my views about education and nurture, which is the question coming to the surface again. The danger is not a slight or ordinary one, and I would advise you, Cleinias, in particular, to see to the matter; for if you order rightly the city of the Magnetes, or whatever name God may give it, you will obtain the greatest glory; or at any rate you will be thought the most courageous of men in the estimation of posterity. Dear companions, if this our divine assembly can only be established, to them we will hand over the city; none of the present company of legislators, as I may call them, would hesitate about that. And the state will be perfected and become a waking reality, which a little while ago we attempted to create as a dream and in idea only, mingling together reason and mind in one image, in the hope that our citizens might be duly mingled and rightly educated; and being educated, and dwelling in the citadel of the land, might become perfect guardians, such as we have never seen in all our previous life, by reason of the saving virtue which is in them.

MEGILLUS: Dear Cleinias, after all that has been said, either we must detain the Stranger, and by supplications and in all manner of ways make him share in the foundation of the city, or we must give up the undertaking.

CLEINIAS: Very true, Megillus; and you must join with me in detaining him.

MEGILLUS: I will.

LYSIS

By Plato

Translated by Benjamin Jowett

INTRODUCTION.

No answer is given in the Lysis to the question, 'What is Friendship?' any more than in the Charmides to the question, 'What is Temperance?' There are several resemblances in the two Dialogues: the same youthfulness and sense of beauty pervades both of them; they are alike rich in the description of Greek life. The question is again raised of the relation of knowledge to virtue and good, which also recurs in the Laches; and Socrates appears again as the elder friend of the two boys, Lysis and Menexenus. In the Charmides, as also in the Laches, he is described as middle-aged; in the Lysis he is advanced in years.

The Dialogue consists of two scenes or conversations which seem to have no relation to each other. The first is a conversation between Socrates and Lysis, who, like Charmides, is an Athenian youth of noble descent and of great beauty, goodness, and intelligence: this is carried on in the absence of Menexenus, who is called away to take part in a sacrifice. Socrates asks Lysis whether his father and mother do not love him very much? 'To be sure they do.' 'Then of course they allow him to do exactly as he likes.' 'Of course not: the very slaves have more liberty than he has.' 'But how is this?' 'The reason is that he is not old enough.' 'No; the real reason is that he is not wise enough: for are there not some things which he is allowed to do, although he is not allowed to do others?' 'Yes, because he knows them, and does not know the others.' This leads to the conclusion that all men everywhere will trust him in what he knows, but not in what he does not know; for in such matters he will be unprofitable to them, and do them no good. And no one will love him, if he does them no good; and he can only do them good by knowledge; and as he is still without knowledge, he can have as yet no conceit of knowledge. In this manner Socrates reads a lesson to Hippothales, the foolish lover of Lysis, respecting the style of conversation which he should address to his beloved.

After the return of Menexenus, Socrates, at the request of Lysis, asks him a new question: 'What is friendship? You, Menexenus, who have a friend already, can tell me, who am always longing to find one, what is the secret of this great blessing.'

When one man loves another, which is the friend—he who loves, or he who is loved? Or are both friends? From the first of these suppositions they are driven to the second; and from the second to the third; and neither the two boys nor Socrates are satisfied with any of the three or with all of them. Socrates turns to the poets, who affirm that God brings like to like (Homer), and to philosophers (Empedocles), who also assert that like is the friend of like. But the bad are not friends, for they are not even like themselves, and still less are they like one another. And the good have no need of one another, and therefore do not care about one another. Moreover there are others who say that likeness is a cause of aversion, and unlikeness of love and friendship; and they too adduce the authority of poets and philosophers in support of their doctrines; for Hesiod says that 'potter is jealous of potter, bard of bard;' and subtle doctors tell us that 'moist is the friend of dry, hot of cold,' and the like. But neither can their doctrine be maintained; for then the just would be the friend of the unjust, good of evil.

Thus we arrive at the conclusion that like is not the friend of like, nor unlike of unlike; and therefore good is not the friend of good, nor evil of evil, nor good of evil, nor evil of good. What remains but that the indifferent, which is neither good nor evil, should be the friend (not of the indifferent, for that would be 'like the friend of like,' but) of the good, or rather of the beautiful?

But why should the indifferent have this attachment to the beautiful or good? There are circumstances under which such an attachment would be natural. Suppose the indifferent, say the human body, to be desirous of getting rid of some evil, such as disease, which is not essential but only accidental to it (for if the evil were essential the body would cease to be indifferent, and would become evil)—in such a case the indifferent becomes a friend of the good for the sake of getting rid of the evil. In this intermediate 'indifferent' position the philosopher or lover of wisdom stands: he is not wise, and yet not unwise, but he has ignorance accidentally clinging to him, and he yearns for wisdom as the cure of the evil. (Symp.)

After this explanation has been received with triumphant accord, a fresh dissatisfaction begins to steal over the mind of Socrates: Must not friendship be for the sake of some ulterior end? and what can that final cause or end of friendship be, other than the good? But the good is desired by us only as the cure of evil; and therefore if there were no evil there would be no friendship. Some other explanation then has to be devised. May not desire be the source of friendship? And desire is of what a man wants and of what is congenial to him. But then the congenial cannot be the same as the like; for like, as has been already shown, cannot be the friend of like. Nor can the congenial be the good; for good is not the friend of good, as has been also shown. The problem is unsolved, and the three friends, Socrates, Lysis, and Menexenus, are still unable to find out what a friend is.

Thus, as in the Charmides and Laches, and several of the other Dialogues of Plato (compare especially the Protagoras and Theaetetus), no conclusion is arrived at. Socrates maintains his character of a 'know nothing;' but the boys have already learned the lesson which he is unable to teach them, and they are free from the conceit of knowledge. (Compare Chrm.) The dialogue is what would be called in the language of Thrasyllus tentative or inquisitive. The subject is continued in the Phaedrus and Symposium, and treated, with a manifest reference to the Lysis, in the eighth and ninth books of the Nicomachean Ethics of Aristotle. As in other writings of Plato (for example, the Republic), there is a progress from unconscious morality, illustrated by the friendship of the two youths, and also by the sayings of the poets ('who are our fathers in wisdom,' and yet only tell us half the truth, and in this particular instance are not much improved upon by the philosophers), to a more comprehensive notion of friendship. This, however, is far from being cleared of its perplexity. Two notions appear to be struggling or balancing in the mind of Socrates:—First, the sense that friendship arises out of human needs and wants; Secondly, that the higher form or ideal of friendship exists only for the sake of the good. That friends are not necessarily either like or unlike, is also a truth confirmed by experience. But the use of the terms 'like' or 'good' is too strictly limited; Socrates has allowed himself to be carried away by a sort of eristic or illogical logic against which no definition of friendship would be able to stand. In the course of the argument he makes a distinction between property and accident which is a real contribution to the science of logic. Some higher truths appear through the mist. The manner in which the field of argument is widened, as in the Charmides and Laches by the introduction of the idea of knowledge, so here by the introduction of the good, is deserving of attention. The sense of the inter-dependence of good and evil, and the allusion to the possibility of the non-existence of evil, are also very remarkable.

The dialectical interest is fully sustained by the dramatic accompaniments. Observe, first, the scene, which is a Greek Palaestra, at a time when a sacrifice is going on, and the Hermaea are in course of celebration; secondly, the 'accustomed irony' of Socrates, who declares, as in the Symposium, that he is ignorant of all other things, but claims to have a knowledge of the mysteries of love. There are

likewise several contrasts of character; first of the dry, caustic Ctesippus, of whom Socrates professes a humorous sort of fear, and Hippothales the flighty lover, who murders sleep by bawling out the name of his beloved; there is also a contrast between the false, exaggerated, sentimental love of Hippothales towards Lysis, and the childlike and innocent friendship of the boys with one another. Some difference appears to be intended between the characters of the more talkative Menexenus and the reserved and simple Lysis. Socrates draws out the latter by a new sort of irony, which is sometimes adopted in talking to children, and consists in asking a leading question which can only be answered in a sense contrary to the intention of the question: 'Your father and mother of course allow you to drive the chariot?' 'No they do not.' When Menexenus returns, the serious dialectic begins. He is described as 'very pugnacious,' and we are thus prepared for the part which a mere youth takes in a difficult argument. But Plato has not forgotten dramatic propriety, and Socrates proposes at last to refer the question to some older person.

SOME QUESTIONS RELATING TO FRIENDSHIP.

The subject of friendship has a lower place in the modern than in the ancient world, partly because a higher place is assigned by us to love and marriage. The very meaning of the word has become slighter and more superficial; it seems almost to be borrowed from the ancients, and has nearly disappeared in modern treatises on Moral Philosophy. The received examples of friendship are to be found chiefly among the Greeks and Romans. Hence the casuistical or other questions which arise out of the relations of friends have not often been considered seriously in modern times. Many of them will be found to be the same which are discussed in the Lysis. We may ask with Socrates, 1) whether friendship is 'of similars or dissimilars,' or of both; 2) whether such a tie exists between the good only and for the sake of the good; or 3) whether there may not be some peculiar attraction, which draws together 'the neither good nor evil' for the sake of the good and because of the evil; 4) whether friendship is always mutual,—may there not be a one-sided and unrequited friendship? This question, which, like many others, is only one of a laxer or stricter use of words, seems to have greatly exercised the minds both of Aristotle and Plato.

5) Can we expect friendship to be permanent, or must we acknowledge with Cicero, 'Nihil difficilius quam amicitiam usque ad extremum vitae permanere'? Is not friendship, even more than love, liable to be swayed by the caprices of fancy? The person who pleased us most at first sight or upon a slight acquaintance, when we have seen him again, and under different circumstances, may make a much less favourable impression on our minds. Young people swear 'eternal friendships,' but at these innocent perjuries their elders laugh. No one forms a friendship with the intention of renouncing it; yet in the course of a varied life it is practically certain that many changes will occur of feeling, opinion, locality, occupation, fortune, which will divide us from some persons and unite us to others. 6) There is an ancient saying, Qui amicos amicum non habet. But is not some less exclusive form of friendship better suited to the condition and nature of man? And in those especially who have no family ties, may not the feeling pass beyond one or a few, and embrace all with whom we come into contact, and, perhaps in a few passionate and exalted natures, all men everywhere? 7) The ancients had their three kinds of friendship, 'for the sake of the pleasant, the useful, and the good:' is the last to be resolved into the two first; or are the two first to be included in the last? The subject was puzzling to them: they could not say that friendship was only a quality, or a relation, or a virtue, or a kind of virtue; and they had not in the age of Plato reached the point of regarding it, like justice, as a form or

attribute of virtue. They had another perplexity: 8) How could one of the noblest feelings of human nature be so near to one of the most detestable corruptions of it? (Compare Symposium; Laws).

Leaving the Greek or ancient point of view, we may regard the question in a more general way. Friendship is the union of two persons in mutual affection and remembrance of one another. The friend can do for his friend what he cannot do for himself. He can give him counsel in time of difficulty; he can teach him 'to see himself as others see him'; he can stand by him, when all the world are against him; he can gladden and enlighten him by his presence; he 'can divide his sorrows,' he can 'double his joys;' he can anticipate his wants. He will discover ways of helping him without creating a sense of his own superiority; he will find out his mental trials, but only that he may minister to them. Among true friends jealousy has no place: they do not complain of one another for making new friends, or for not revealing some secret of their lives; (in friendship too there must be reserves;) they do not intrude upon one another, and they mutually rejoice in any good which happens to either of them, though it may be to the loss of the other. They may live apart and have little intercourse, but when they meet, the old tie is as strong as ever—according to the common saying, they find one another always the same. The greatest good of friendship is not daily intercourse, for circumstances rarely admit of this; but on the great occasions of life, when the advice of a friend is needed, then the word spoken in season about conduct, about health, about marriage, about business,—the letter written from a distance by a disinterested person who sees with clearer eyes may be of inestimable value. When the heart is failing and despair is setting in, then to hear the voice or grasp the hand of a friend, in a shipwreck, in a defeat, in some other failure or misfortune, may restore the necessary courage and composure to the paralysed and disordered mind, and convert the feeble person into a hero; (compare Symposium).

It is true that friendships are apt to be disappointing: either we expect too much from them; or we are indolent and do not 'keep them in repair;' or being admitted to intimacy with another, we see his faults too clearly and lose our respect for him; and he loses his affection for us. Friendships may be too violent; and they may be too sensitive. The egotism of one of the parties may be too much for the other. The word of counsel or sympathy has been uttered too obtrusively, at the wrong time, or in the wrong manner; or the need of it has not been perceived until too late. 'Oh if he had only told me' has been the silent thought of many a troubled soul. And some things have to be indicated rather than spoken, because the very mention of them tends to disturb the equability of friendship. The alienation of friends, like many other human evils, is commonly due to a want of tact and insight. There is not enough of the Scimus et hanc veniam petimusque damusque vicissim. The sweet draught of sympathy is not inexhaustible; and it tends to weaken the person who too freely partakes of it. Thus we see that there are many causes which impair the happiness of friends.

We may expect a friendship almost divine, such as philosophers have sometimes dreamed of: we find what is human. The good of it is necessarily limited; it does not take the place of marriage; it affords rather a solace than an arm of support. It had better not be based on pecuniary obligations; these more often mar than make a friendship. It is most likely to be permanent when the two friends are equal and independent, or when they are engaged together in some common work or have some public interest in common. It exists among the bad or inferior sort of men almost as much as among the good; the bad and good, and 'the neither bad nor good,' are drawn together in a strange manner by personal attachment. The essence of it is loyalty, without which it would cease to be friendship.

Another question 9) may be raised, whether friendship can safely exist between young persons of different sexes, not connected by ties of relationship, and without the thought of love or marriage; whether, again, a wife or a husband should have any intimate friend, besides his or her partner in marriage. The answer to this latter question is rather perplexing, and would probably be different in different countries (compare Sympos.). While we do not deny that great good may result from such attachments, for the mind may be drawn out and the character enlarged by them; yet we feel also that they are attended with many dangers, and that this Romance of Heavenly Love requires a strength, a freedom from passion, a self-control, which, in youth especially, are rarely to be found. The propriety of such friendships must be estimated a good deal by the manner in which public opinion regards them; they must be reconciled with the ordinary duties of life; and they must be justified by the result.

Yet another question, 10). Admitting that friendships cannot be always permanent, we may ask when and upon what conditions should they be dissolved. It would be futile to retain the name when the reality has ceased to be. That two friends should part company whenever the relation between them begins to drag may be better for both of them. But then arises the consideration, how should these friends in youth or friends of the past regard or be regarded by one another? They are parted, but there still remain duties mutually owing by them. They will not admit the world to share in their difference any more than in their friendship; the memory of an old attachment, like the memory of the dead, has a kind of sacredness for them on which they will not allow others to intrude. Neither, if they were ever worthy to bear the name of friends, will either of them entertain any enmity or dislike of the other who was once so much to him. Neither will he by 'shadowed hint reveal' the secrets great or small which an unfortunate mistake has placed within his reach. He who is of a noble mind will dwell upon his own faults rather than those of another, and will be ready to take upon himself the blame of their separation. He will feel pain at the loss of a friend; and he will remember with gratitude his ancient kindness. But he will not lightly renew a tie which has not been lightly broken...These are a few of the Problems of Friendship, some of them suggested by the Lysis, others by modern life, which he who wishes to make or keep a friend may profitably study. (Compare Bacon, Essay on Friendship; Cic. de Amicitia.)

LYSIS, OR FRIENDSHIP

PERSONS OF THE DIALOGUE:

Socrates, who is the narrator, Menexenus, Hippothales, Lysis, Ctesippus.

SCENE: A newly-erected Palaestra outside the walls of Athens.

I was going from the Academy straight to the Lyceum, intending to take the outer road, which is close under the wall. When I came to the postern gate of the city, which is by the fountain of Panops, I fell in with Hippothales, the son of Hieronymus, and Ctesippus the Paeanian, and a company of young men who were standing with them. Hippothales, seeing me approach, asked whence I came and whither I was going.

I am going, I replied, from the Academy straight to the Lyceum.

Then come straight to us, he said, and put in here; you may as well.

Who are you, I said; and where am I to come?

He showed me an enclosed space and an open door over against the wall. And there, he said, is the building at which we all meet: and a goodly company we are.

And what is this building, I asked; and what sort of entertainment have you?

The building, he replied, is a newly erected Palaestra; and the entertainment is generally conversation, to which you are welcome.

Thank you, I said; and is there any teacher there?

Yes, he said, your old friend and admirer, Miccus.

Indeed, I replied; he is a very eminent professor.

Are you disposed, he said, to go with me and see them?

Yes, I said; but I should like to know first, what is expected of me, and who is the favourite among you?

Some persons have one favourite, Socrates, and some another, he said.

And who is yours? I asked: tell me that, Hippothales.

At this he blushed; and I said to him, O Hippothales, thou son of Hieronymus! do not say that you are, or that you are not, in love; the confession is too late; for I see that you are not only in love, but are already far gone in your love. Simple and foolish as I am, the Gods have given me the power of understanding affections of this kind.

Whereupon he blushed more and more.

Ctesippus said: I like to see you blushing, Hippothales, and hesitating to tell Socrates the name; when, if he were with you but for a very short time, you would have plagued him to death by talking

about nothing else. Indeed, Socrates, he has literally deafened us, and stopped our ears with the praises of Lysis; and if he is a little intoxicated, there is every likelihood that we may have our sleep murdered with a cry of Lysis. His performances in prose are bad enough, but nothing at all in comparison with his verse; and when he drenches us with his poems and other compositions, it is really too bad; and worse still is his manner of singing them to his love; he has a voice which is truly appalling, and we cannot help hearing him: and now having a question put to him by you, behold he is blushing.

Who is Lysis? I said: I suppose that he must be young; for the name does not recall any one to me.

Why, he said, his father being a very well-known man, he retains his patronymic, and is not as yet commonly called by his own name; but, although you do not know his name, I am sure that you must know his face, for that is quite enough to distinguish him.

But tell me whose son he is, I said.

He is the eldest son of Democrates, of the deme of Aexone.

Ah, Hippothales, I said; what a noble and really perfect love you have found! I wish that you would favour me with the exhibition which you have been making to the rest of the company, and then I shall be able to judge whether you know what a lover ought to say about his love, either to the youth himself, or to others.

Nay, Socrates, he said; you surely do not attach any importance to what he is saying.

Do you mean, I said, that you disown the love of the person whom he says that you love?

No; but I deny that I make verses or address compositions to him.

He is not in his right mind, said Ctesippus; he is talking nonsense, and is stark mad.

O Hippothales, I said, if you have ever made any verses or songs in honour of your favourite, I do not want to hear them; but I want to know the purport of them, that I may be able to judge of your mode of approaching your fair one.

Ctesippus will be able to tell you, he said; for if, as he avers, the sound of my words is always dinning in his ears, he must have a very accurate knowledge and recollection of them.

Yes, indeed, said Ctesippus; I know only too well; and very ridiculous the tale is: for although he is a lover, and very devotedly in love, he has nothing particular to talk about to his beloved which a child might not say. Now is not that ridiculous? He can only speak of the wealth of Democrates, which the whole city celebrates, and grandfather Lysis, and the other ancestors of the youth, and their stud of horses, and their victory at the Pythian games, and at the Isthmus, and at Nemea with four horses and single horses—these are the tales which he composes and repeats. And there is greater twaddle still. Only the day before yesterday he made a poem in which he described the entertainment of Heracles, who was a connexion of the family, setting forth how in virtue of this relationship he was

hospitably received by an ancestor of Lysis; this ancestor was himself begotten of Zeus by the daughter of the founder of the deme. And these are the sort of old wives' tales which he sings and recites to us, and we are obliged to listen to him.

When I heard this, I said: O ridiculous Hippothales! how can you be making and singing hymns in honour of yourself before you have won?

But my songs and verses, he said, are not in honour of myself, Socrates.

You think not? I said.

Nay, but what do you think? he replied.

Most assuredly, I said, those songs are all in your own honour; for if you win your beautiful love, your discourses and songs will be a glory to you, and may be truly regarded as hymns of praise composed in honour of you who have conquered and won such a love; but if he slips away from you, the more you have praised him, the more ridiculous you will look at having lost this fairest and best of blessings; and therefore the wise lover does not praise his beloved until he has won him, because he is afraid of accidents. There is also another danger; the fair, when any one praises or magnifies them, are filled with the spirit of pride and vain-glory. Do you not agree with me?

Yes, he said.

And the more vain-glorious they are, the more difficult is the capture of them?

I believe you.

What should you say of a hunter who frightened away his prey, and made the capture of the animals which he is hunting more difficult?

He would be a bad hunter, undoubtedly.

Yes; and if, instead of soothing them, he were to infuriate them with words and songs, that would show a great want of wit: do you not agree.

Yes.

And now reflect, Hippothales, and see whether you are not guilty of all these errors in writing poetry. For I can hardly suppose that you will affirm a man to be a good poet who injures himself by his poetry.

Assuredly not, he said; such a poet would be a fool. And this is the reason why I take you into my counsels, Socrates, and I shall be glad of any further advice which you may have to offer. Will you tell me by what words or actions I may become endeared to my love?

That is not easy to determine, I said; but if you will bring your love to me, and will let me talk with him, I may perhaps be able to show you how to converse with him, instead of singing and reciting in the fashion of which you are accused.

There will be no difficulty in bringing him, he replied; if you will only go with Ctesippus into the Palaestra, and sit down and talk, I believe that he will come of his own accord; for he is fond of listening, Socrates. And as this is the festival of the Hermaea, the young men and boys are all together, and there is no separation between them. He will be sure to come: but if he does not, Ctesippus with whom he is familiar, and whose relation Menexenus is his great friend, shall call him.

That will be the way, I said. Thereupon I led Ctesippus into the Palaestra, and the rest followed.

Upon entering we found that the boys had just been sacrificing; and this part of the festival was nearly at an end. They were all in their white array, and games at dice were going on among them. Most of them were in the outer court amusing themselves; but some were in a corner of the Apodyterium playing at odd and even with a number of dice, which they took out of little wicker baskets. There was also a circle of lookers-on; among them was Lysis. He was standing with the other boys and youths, having a crown upon his head, like a fair vision, and not less worthy of praise for his goodness than for his beauty. We left them, and went over to the opposite side of the room, where, finding a quiet place, we sat down; and then we began to talk. This attracted Lysis, who was constantly turning round to look at us—he was evidently wanting to come to us. For a time he hesitated and had not the courage to come alone; but first of all, his friend Menexenus, leaving his play, entered the Palaestra from the court, and when he saw Ctesippus and myself, was going to take a seat by us; and then Lysis, seeing him, followed, and sat down by his side; and the other boys joined. I should observe that Hippothales, when he saw the crowd, got behind them, where he thought that he would be out of sight of Lysis, lest he should anger him; and there he stood and listened.

I turned to Menexenus, and said: Son of Demophon, which of you two youths is the elder?

That is a matter of dispute between us, he said.

And which is the nobler? Is that also a matter of dispute?

Yes, certainly.

And another disputed point is, which is the fairer?

The two boys laughed.

I shall not ask which is the richer of the two, I said; for you are friends, are you not?

Certainly, they replied.

And friends have all things in common, so that one of you can be no richer than the other, if you say truly that you are friends.

They assented. I was about to ask which was the juster of the two, and which was the wiser of the two; but at this moment Menexenus was called away by some one who came and said that the gymnastic-master wanted him. I supposed that he had to offer sacrifice. So he went away, and I asked Lysis some more questions. I dare say, Lysis, I said, that your father and mother love you very much.

Certainly, he said.

And they would wish you to be perfectly happy.

Yes.

But do you think that any one is happy who is in the condition of a slave, and who cannot do what he likes?

I should think not indeed, he said.

And if your father and mother love you, and desire that you should be happy, no one can doubt that they are very ready to promote your happiness.

Certainly, he replied.

And do they then permit you to do what you like, and never rebuke you or hinder you from doing what you desire?

Yes, indeed, Socrates; there are a great many things which they hinder me from doing.

What do you mean? I said. Do they want you to be happy, and yet hinder you from doing what you like? for example, if you want to mount one of your father's chariots, and take the reins at a race, they will not allow you to do so—they will prevent you?

Certainly, he said, they will not allow me to do so.

Whom then will they allow?

There is a charioteer, whom my father pays for driving.

And do they trust a hireling more than you? and may he do what he likes with the horses? and do they pay him for this?

They do.

But I dare say that you may take the whip and guide the mule-cart if you like;—they will permit that?

Permit me! indeed they will not.

Then, I said, may no one use the whip to the mules?

Yes, he said, the muleteer.

And is he a slave or a free man?

A slave, he said.

And do they esteem a slave of more value than you who are their son? And do they entrust their property to him rather than to you? and allow him to do what he likes, when they prohibit you? Answer me now: Are you your own master, or do they not even allow that?

Nay, he said; of course they do not allow it.

Then you have a master?

Yes, my tutor; there he is.

And is he a slave?

To be sure; he is our slave, he replied.

Surely, I said, this is a strange thing, that a free man should be governed by a slave. And what does he do with you?

He takes me to my teachers.

You do not mean to say that your teachers also rule over you?

Of course they do.

Then I must say that your father is pleased to inflict many lords and masters on you. But at any rate when you go home to your mother, she will let you have your own way, and will not interfere with your happiness; her wool, or the piece of cloth which she is weaving, are at your disposal: I am sure that there is nothing to hinder you from touching her wooden spathe, or her comb, or any other of her spinning implements.

Nay, Socrates, he replied, laughing; not only does she hinder me, but I should be beaten if I were to touch one of them.

Well, I said, this is amazing. And did you ever behave ill to your father or your mother?

No, indeed, he replied.

But why then are they so terribly anxious to prevent you from being happy, and doing as you like?—keeping you all day long in subjection to another, and, in a word, doing nothing which you desire; so

that you have no good, as would appear, out of their great possessions, which are under the control of anybody rather than of you, and have no use of your own fair person, which is tended and taken care of by another; while you, Lysis, are master of nobody, and can do nothing?

Why, he said, Socrates, the reason is that I am not of age.

I doubt whether that is the real reason, I said; for I should imagine that your father Democrates, and your mother, do permit you to do many things already, and do not wait until you are of age: for example, if they want anything read or written, you, I presume, would be the first person in the house who is summoned by them.

Very true.

And you would be allowed to write or read the letters in any order which you please, or to take up the lyre and tune the notes, and play with the fingers, or strike with the plectrum, exactly as you please, and neither father nor mother would interfere with you.

That is true, he said.

Then what can be the reason, Lysis, I said, why they allow you to do the one and not the other?

I suppose, he said, because I understand the one, and not the other.

Yes, my dear youth, I said, the reason is not any deficiency of years, but a deficiency of knowledge; and whenever your father thinks that you are wiser than he is, he will instantly commit himself and his possessions to you.

I think so.

Aye, I said; and about your neighbour, too, does not the same rule hold as about your father? If he is satisfied that you know more of housekeeping than he does, will he continue to administer his affairs himself, or will he commit them to you?

I think that he will commit them to me.

Will not the Athenian people, too, entrust their affairs to you when they see that you have wisdom enough to manage them?

Yes.

And oh! let me put another case, I said: There is the great king, and he has an eldest son, who is the Prince of Asia;—suppose that you and I go to him and establish to his satisfaction that we are better cooks than his son, will he not entrust to us the prerogative of making soup, and putting in anything that we like while the pot is boiling, rather than to the Prince of Asia, who is his son?

To us, clearly.

And we shall be allowed to throw in salt by handfuls, whereas the son will not be allowed to put in as much as he can take up between his fingers?

Of course.

Or suppose again that the son has bad eyes, will he allow him, or will he not allow him, to touch his own eyes if he thinks that he has no knowledge of medicine?

He will not allow him.

Whereas, if he supposes us to have a knowledge of medicine, he will allow us to do what we like with him—even to open the eyes wide and sprinkle ashes upon them, because he supposes that we know what is best?

That is true.

And everything in which we appear to him to be wiser than himself or his son he will commit to us?

That is very true, Socrates, he replied.

Then now, my dear Lysis, I said, you perceive that in things which we know every one will trust us,—Hellenes and barbarians, men and women,—and we may do as we please about them, and no one will like to interfere with us; we shall be free, and masters of others; and these things will be really ours, for we shall be benefited by them. But in things of which we have no understanding, no one will trust us to do as seems good to us—they will hinder us as far as they can; and not only strangers, but father and mother, and the friend, if there be one, who is dearer still, will also hinder us; and we shall be subject to others; and these things will not be ours, for we shall not be benefited by them. Do you agree?

He assented.

And shall we be friends to others, and will any others love us, in as far as we are useless to them?

Certainly not.

Neither can your father or mother love you, nor can anybody love anybody else, in so far as they are useless to them?

No.

And therefore, my boy, if you are wise, all men will be your friends and kindred, for you will be useful and good; but if you are not wise, neither father, nor mother, nor kindred, nor any one else, will be your friends. And in matters of which you have as yet no knowledge, can you have any conceit of knowledge?

That is impossible, he replied.

And you, Lysis, if you require a teacher, have not yet attained to wisdom.

True.

And therefore you are not conceited, having nothing of which to be conceited.

Indeed, Socrates, I think not.

When I heard him say this, I turned to Hippothales, and was very nearly making a blunder, for I was going to say to him: That is the way, Hippothales, in which you should talk to your beloved, humbling and lowering him, and not as you do, puffing him up and spoiling him. But I saw that he was in great excitement and confusion at what had been said, and I remembered that, although he was in the neighbourhood, he did not want to be seen by Lysis; so upon second thoughts I refrained.

In the meantime Menexenus came back and sat down in his place by Lysis; and Lysis, in a childish and affectionate manner, whispered privately in my ear, so that Menexenus should not hear: Do, Socrates, tell Menexenus what you have been telling me.

Suppose that you tell him yourself, Lysis, I replied; for I am sure that you were attending.

Certainly, he replied.

Try, then, to remember the words, and be as exact as you can in repeating them to him, and if you have forgotten anything, ask me again the next time that you see me.

I will be sure to do so, Socrates; but go on telling him something new, and let me hear, as long as I am allowed to stay.

I certainly cannot refuse, I said, since you ask me; but then, as you know, Menexenus is very pugnacious, and therefore you must come to the rescue if he attempts to upset me.

Yes, indeed, he said; he is very pugnacious, and that is the reason why I want you to argue with him.

That I may make a fool of myself?

No, indeed, he said; but I want you to put him down.

That is no easy matter, I replied; for he is a terrible fellow—a pupil of Ctesippus. And there is Ctesippus himself: do you see him?

Never mind, Socrates, you shall argue with him.

Well, I suppose that I must, I replied.

Hereupon Ctesippus complained that we were talking in secret, and keeping the feast to ourselves.

I shall be happy, I said, to let you have a share. Here is Lysis, who does not understand something that I was saying, and wants me to ask Menexenus, who, as he thinks, is likely to know.

And why do you not ask him? he said.

Very well, I said, I will; and do you, Menexenus, answer. But first I must tell you that I am one who from my childhood upward have set my heart upon a certain thing. All people have their fancies; some desire horses, and others dogs; and some are fond of gold, and others of honour. Now, I have no violent desire of any of these things; but I have a passion for friends; and I would rather have a good friend than the best cock or quail in the world: I would even go further, and say the best horse or dog. Yea, by the dog of Egypt, I should greatly prefer a real friend to all the gold of Darius, or even to Darius himself: I am such a lover of friends as that. And when I see you and Lysis, at your early age, so easily possessed of this treasure, and so soon, he of you, and you of him, I am amazed and delighted, seeing that I myself, although I am now advanced in years, am so far from having made a similar acquisition, that I do not even know in what way a friend is acquired. But I want to ask you a question about this, for you have experience: tell me then, when one loves another, is the lover or the beloved the friend; or may either be the friend?

Either may, I should think, be the friend of either.

Do you mean, I said, that if only one of them loves the other, they are mutual friends?

Yes, he said; that is my meaning.

But what if the lover is not loved in return? which is a very possible case.

Yes.

Or is, perhaps, even hated? which is a fancy which sometimes is entertained by lovers respecting their beloved. Nothing can exceed their love; and yet they imagine either that they are not loved in return, or that they are hated. Is not that true?

Yes, he said, quite true.

In that case, the one loves, and the other is loved?

Yes.

Then which is the friend of which? Is the lover the friend of the beloved, whether he be loved in return, or hated; or is the beloved the friend; or is there no friendship at all on either side, unless they both love one another?

There would seem to be none at all.

Then this notion is not in accordance with our previous one. We were saying that both were friends, if one only loved; but now, unless they both love, neither is a friend.

That appears to be true.

Then nothing which does not love in return is beloved by a lover?

I think not.

Then they are not lovers of horses, whom the horses do not love in return; nor lovers of quails, nor of dogs, nor of wine, nor of gymnastic exercises, who have no return of love; no, nor of wisdom, unless wisdom loves them in return. Or shall we say that they do love them, although they are not beloved by them; and that the poet was wrong who sings—

'Happy the man to whom his children are dear, and steeds having single hoofs, and dogs of chase, and the stranger of another land'?

I do not think that he was wrong.

You think that he is right?

Yes.

Then, Menexenus, the conclusion is, that what is beloved, whether loving or hating, may be dear to the lover of it: for example, very young children, too young to love, or even hating their father or mother when they are punished by them, are never dearer to them than at the time when they are being hated by them.

I think that what you say is true.

And, if so, not the lover, but the beloved, is the friend or dear one?

Yes.

And the hated one, and not the hater, is the enemy?

Clearly.

Then many men are loved by their enemies, and hated by their friends, and are the friends of their enemies, and the enemies of their friends. Yet how absurd, my dear friend, or indeed impossible is this paradox of a man being an enemy to his friend or a friend to his enemy.

I quite agree, Socrates, in what you say.

But if this cannot be, the lover will be the friend of that which is loved?

True.

And the hater will be the enemy of that which is hated?

Certainly.

Yet we must acknowledge in this, as in the preceding instance, that a man may be the friend of one who is not his friend, or who may be his enemy, when he loves that which does not love him or which even hates him. And he may be the enemy of one who is not his enemy, and is even his friend: for example, when he hates that which does not hate him, or which even loves him.

That appears to be true.

But if the lover is not a friend, nor the beloved a friend, nor both together, what are we to say? Whom are we to call friends to one another? Do any remain?

Indeed, Socrates, I cannot find any.

But, O Menexenus! I said, may we not have been altogether wrong in our conclusions?

I am sure that we have been wrong, Socrates, said Lysis. And he blushed as he spoke, the words seeming to come from his lips involuntarily, because his whole mind was taken up with the argument; there was no mistaking his attentive look while he was listening.

I was pleased at the interest which was shown by Lysis, and I wanted to give Menexenus a rest, so I turned to him and said, I think, Lysis, that what you say is true, and that, if we had been right, we should never have gone so far wrong; let us proceed no further in this direction (for the road seems to be getting troublesome), but take the other path into which we turned, and see what the poets have to say; for they are to us in a manner the fathers and authors of wisdom, and they speak of friends in no light or trivial manner, but God himself, as they say, makes them and draws them to one another; and this they express, if I am not mistaken, in the following words:—

'God is ever drawing like towards like, and making them acquainted.'

I dare say that you have heard those words.

Yes, he said; I have.

And have you not also met with the treatises of philosophers who say that like must love like? they are the people who argue and write about nature and the universe.

Very true, he replied.

And are they right in saying this?

They may be.

Perhaps, I said, about half, or possibly, altogether, right, if their meaning were rightly apprehended by us. For the more a bad man has to do with a bad man, and the more nearly he is brought into contact

with him, the more he will be likely to hate him, for he injures him; and injurer and injured cannot be friends. Is not that true?

Yes, he said.

Then one half of the saying is untrue, if the wicked are like one another?

That is true.

But the real meaning of the saying, as I imagine, is, that the good are like one another, and friends to one another; and that the bad, as is often said of them, are never at unity with one another or with themselves; for they are passionate and restless, and anything which is at variance and enmity with itself is not likely to be in union or harmony with any other thing. Do you not agree?

Yes, I do.

Then, my friend, those who say that the like is friendly to the like mean to intimate, if I rightly apprehend them, that the good only is the friend of the good, and of him only; but that the evil never attains to any real friendship, either with good or evil. Do you agree?

He nodded assent.

Then now we know how to answer the question 'Who are friends?' for the argument declares 'That the good are friends.'

Yes, he said, that is true.

Yes, I replied; and yet I am not quite satisfied with this answer. By heaven, and shall I tell you what I suspect? I will. Assuming that like, inasmuch as he is like, is the friend of like, and useful to him—or rather let me try another way of putting the matter: Can like do any good or harm to like which he could not do to himself, or suffer anything from his like which he would not suffer from himself? And if neither can be of any use to the other, how can they be loved by one another? Can they now?

They cannot.

And can he who is not loved be a friend?

Certainly not.

But say that the like is not the friend of the like in so far as he is like; still the good may be the friend of the good in so far as he is good?

True.

But then again, will not the good, in so far as he is good, be sufficient for himself? Certainly he will. And he who is sufficient wants nothing—that is implied in the word sufficient.

Of course not.

And he who wants nothing will desire nothing?

He will not.

Neither can he love that which he does not desire?

He cannot.

And he who loves not is not a lover or friend?

Clearly not.

What place then is there for friendship, if, when absent, good men have no need of one another (for even when alone they are sufficient for themselves), and when present have no use of one another? How can such persons ever be induced to value one another?

They cannot.

And friends they cannot be, unless they value one another?

Very true.

But see now, Lysis, whether we are not being deceived in all this—are we not indeed entirely wrong?

How so? he replied.

Have I not heard some one say, as I just now recollect, that the like is the greatest enemy of the like, the good of the good?—Yes, and he quoted the authority of Hesiod, who says:

'Potter quarrels with potter, bard with bard, Beggar with beggar;'

and of all other things he affirmed, in like manner, 'That of necessity the most like are most full of envy, strife, and hatred of one another, and the most unlike, of friendship. For the poor man is compelled to be the friend of the rich, and the weak requires the aid of the strong, and the sick man of the physician; and every one who is ignorant, has to love and court him who knows.' And indeed he went on to say in grandiloquent language, that the idea of friendship existing between similars is not the truth, but the very reverse of the truth, and that the most opposed are the most friendly; for that everything desires not like but that which is most unlike: for example, the dry desires the moist, the cold the hot, the bitter the sweet, the sharp the blunt, the void the full, the full the void, and so of all other things; for the opposite is the food of the opposite, whereas like receives nothing from like. And I thought that he who said this was a charming man, and that he spoke well. What do the rest of you say?

I should say, at first hearing, that he is right, said Menexenus.

Then we are to say that the greatest friendship is of opposites?

Exactly.

Yes, Menexenus; but will not that be a monstrous answer? and will not the all-wise eristics be down upon us in triumph, and ask, fairly enough, whether love is not the very opposite of hate; and what answer shall we make to them—must we not admit that they speak the truth?

We must.

They will then proceed to ask whether the enemy is the friend of the friend, or the friend the friend of the enemy?

Neither, he replied.

Well, but is a just man the friend of the unjust, or the temperate of the intemperate, or the good of the bad?

I do not see how that is possible.

And yet, I said, if friendship goes by contraries, the contraries must be friends.

They must.

Then neither like and like nor unlike and unlike are friends.

I suppose not.

And yet there is a further consideration: may not all these notions of friendship be erroneous? but may not that which is neither good nor evil still in some cases be the friend of the good?

How do you mean? he said.

Why really, I said, the truth is that I do not know; but my head is dizzy with thinking of the argument, and therefore I hazard the conjecture, that 'the beautiful is the friend,' as the old proverb says. Beauty is certainly a soft, smooth, slippery thing, and therefore of a nature which easily slips in and permeates our souls. For I affirm that the good is the beautiful. You will agree to that?

Yes.

This I say from a sort of notion that what is neither good nor evil is the friend of the beautiful and the good, and I will tell you why I am inclined to think so: I assume that there are three principles—the good, the bad, and that which is neither good nor bad. You would agree—would you not?

I agree.

And neither is the good the friend of the good, nor the evil of the evil, nor the good of the evil;—these alternatives are excluded by the previous argument; and therefore, if there be such a thing as friendship or love at all, we must infer that what is neither good nor evil must be the friend, either of the good, or of that which is neither good nor evil, for nothing can be the friend of the bad.

True.

But neither can like be the friend of like, as we were just now saying.

True.

And if so, that which is neither good nor evil can have no friend which is neither good nor evil.

Clearly not.

Then the good alone is the friend of that only which is neither good nor evil.

That may be assumed to be certain.

And does not this seem to put us in the right way? Just remark, that the body which is in health requires neither medical nor any other aid, but is well enough; and the healthy man has no love of the physician, because he is in health.

He has none.

But the sick loves him, because he is sick?

Certainly.

And sickness is an evil, and the art of medicine a good and useful thing?

Yes.

But the human body, regarded as a body, is neither good nor evil?

True.

And the body is compelled by reason of disease to court and make friends of the art of medicine?

Yes.

Then that which is neither good nor evil becomes the friend of good, by reason of the presence of evil?

So we may infer.

And clearly this must have happened before that which was neither good nor evil had become altogether corrupted with the element of evil—if itself had become evil it would not still desire and love the good; for, as we were saying, the evil cannot be the friend of the good.

Impossible.

Further, I must observe that some substances are assimilated when others are present with them; and there are some which are not assimilated: take, for example, the case of an ointment or colour which is put on another substance.

Very good.

In such a case, is the substance which is anointed the same as the colour or ointment?

What do you mean? he said.

This is what I mean: Suppose that I were to cover your auburn locks with white lead, would they be really white, or would they only appear to be white?

They would only appear to be white, he replied.

And yet whiteness would be present in them?

True.

But that would not make them at all the more white, notwithstanding the presence of white in them—they would not be white any more than black?

No.

But when old age infuses whiteness into them, then they become assimilated, and are white by the presence of white.

Certainly.

Now I want to know whether in all cases a substance is assimilated by the presence of another substance; or must the presence be after a peculiar sort?

The latter, he said.

Then that which is neither good nor evil may be in the presence of evil, but not as yet evil, and that has happened before now?

Yes.

And when anything is in the presence of evil, not being as yet evil, the presence of good arouses the desire of good in that thing; but the presence of evil, which makes a thing evil, takes away the desire and friendship of the good; for that which was once both good and evil has now become evil only, and the good was supposed to have no friendship with the evil?

None.

And therefore we say that those who are already wise, whether Gods or men, are no longer lovers of wisdom; nor can they be lovers of wisdom who are ignorant to the extent of being evil, for no evil or ignorant person is a lover of wisdom. There remain those who have the misfortune to be ignorant, but are not yet hardened in their ignorance, or void of understanding, and do not as yet fancy that they know what they do not know: and therefore those who are the lovers of wisdom are as yet neither good nor bad. But the bad do not love wisdom any more than the good; for, as we have already seen, neither is unlike the friend of unlike, nor like of like. You remember that?

Yes, they both said.

And so, Lysis and Menexenus, we have discovered the nature of friendship—there can be no doubt of it: Friendship is the love which by reason of the presence of evil the neither good nor evil has of the good, either in the soul, or in the body, or anywhere.

They both agreed and entirely assented, and for a moment I rejoiced and was satisfied like a huntsman just holding fast his prey. But then a most unaccountable suspicion came across me, and I felt that the conclusion was untrue. I was pained, and said, Alas! Lysis and Menexenus, I am afraid that we have been grasping at a shadow only.

Why do you say so? said Menexenus.

I am afraid, I said, that the argument about friendship is false: arguments, like men, are often pretenders.

How do you mean? he asked.

Well, I said; look at the matter in this way: a friend is the friend of some one; is he not?

Certainly he is.

And has he a motive and object in being a friend, or has he no motive and object?

He has a motive and object.

And is the object which makes him a friend, dear to him, or neither dear nor hateful to him?

I do not quite follow you, he said.

I do not wonder at that, I said. But perhaps, if I put the matter in another way, you will be able to follow me, and my own meaning will be clearer to myself. The sick man, as I was just now saying, is the friend of the physician—is he not?

Yes.

And he is the friend of the physician because of disease, and for the sake of health?

Yes.

And disease is an evil?

Certainly.

And what of health? I said. Is that good or evil, or neither?

Good, he replied.

And we were saying, I believe, that the body being neither good nor evil, because of disease, that is to say because of evil, is the friend of medicine, and medicine is a good: and medicine has entered into this friendship for the sake of health, and health is a good.

True.

And is health a friend, or not a friend?

A friend.

And disease is an enemy?

Yes.

Then that which is neither good nor evil is the friend of the good because of the evil and hateful, and for the sake of the good and the friend?

Clearly.

Then the friend is a friend for the sake of the friend, and because of the enemy?

That is to be inferred.

Then at this point, my boys, let us take heed, and be on our guard against deceptions. I will not again repeat that the friend is the friend of the friend, and the like of the like, which has been declared by us to be an impossibility; but, in order that this new statement may not delude us, let us attentively examine another point, which I will proceed to explain: Medicine, as we were saying, is a friend, or dear to us for the sake of health?

Yes.

And health is also dear?

Certainly.

And if dear, then dear for the sake of something?

Yes.

And surely this object must also be dear, as is implied in our previous admissions?

Yes.

And that something dear involves something else dear?

Yes.

But then, proceeding in this way, shall we not arrive at some first principle of friendship or dearness which is not capable of being referred to any other, for the sake of which, as we maintain, all other things are dear, and, having there arrived, we shall stop?

True.

My fear is that all those other things, which, as we say, are dear for the sake of another, are illusions and deceptions only, but where that first principle is, there is the true ideal of friendship. Let me put the matter thus: Suppose the case of a great treasure (this may be a son, who is more precious to his father than all his other treasures); would not the father, who values his son above all things, value other things also for the sake of his son? I mean, for instance, if he knew that his son had drunk hemlock, and the father thought that wine would save him, he would value the wine?

He would.

And also the vessel which contains the wine?

Certainly.

But does he therefore value the three measures of wine, or the earthen vessel which contains them, equally with his son? Is not this rather the true state of the case? All his anxiety has regard not to the means which are provided for the sake of an object, but to the object for the sake of which they are provided. And although we may often say that gold and silver are highly valued by us, that is not the truth; for there is a further object, whatever it may be, which we value most of all, and for the sake of which gold and all our other possessions are acquired by us. Am I not right?

Yes, certainly.

And may not the same be said of the friend? That which is only dear to us for the sake of something else is improperly said to be dear, but the truly dear is that in which all these so-called dear friendships terminate.

That, he said, appears to be true.

And the truly dear or ultimate principle of friendship is not for the sake of any other or further dear.

True.

Then we have done with the notion that friendship has any further object. May we then infer that the good is the friend?

I think so.

And the good is loved for the sake of the evil? Let me put the case in this way: Suppose that of the three principles, good, evil, and that which is neither good nor evil, there remained only the good and the neutral, and that evil went far away, and in no way affected soul or body, nor ever at all that class of things which, as we say, are neither good nor evil in themselves;—would the good be of any use, or other than useless to us? For if there were nothing to hurt us any longer, we should have no need of anything that would do us good. Then would be clearly seen that we did but love and desire the good because of the evil, and as the remedy of the evil, which was the disease; but if there had been no disease, there would have been no need of a remedy. Is not this the nature of the good—to be loved by us who are placed between the two, because of the evil? but there is no use in the good for its own sake.

I suppose not.

Then the final principle of friendship, in which all other friendships terminated, those, I mean, which are relatively dear and for the sake of something else, is of another and a different nature from them. For they are called dear because of another dear or friend. But with the true friend or dear, the case is quite the reverse; for that is proved to be dear because of the hated, and if the hated were away it would be no longer dear.

Very true, he replied: at any rate not if our present view holds good.

But, oh! will you tell me, I said, whether if evil were to perish, we should hunger any more, or thirst any more, or have any similar desire? Or may we suppose that hunger will remain while men and animals remain, but not so as to be hurtful? And the same of thirst and the other desires,—that they will remain, but will not be evil because evil has perished? Or rather shall I say, that to ask what either will be then or will not be is ridiculous, for who knows? This we do know, that in our present condition hunger may injure us, and may also benefit us:—Is not that true?

Yes.

And in like manner thirst or any similar desire may sometimes be a good and sometimes an evil to us, and sometimes neither one nor the other?

To be sure.

But is there any reason why, because evil perishes, that which is not evil should perish with it?

None.

Then, even if evil perishes, the desires which are neither good nor evil will remain?

Clearly they will.

And must not a man love that which he desires and affects?

He must.

Then, even if evil perishes, there may still remain some elements of love or friendship?

Yes.

But not if evil is the cause of friendship: for in that case nothing will be the friend of any other thing after the destruction of evil; for the effect cannot remain when the cause is destroyed.

True.

And have we not admitted already that the friend loves something for a reason? and at the time of making the admission we were of opinion that the neither good nor evil loves the good because of the evil?

Very true.

But now our view is changed, and we conceive that there must be some other cause of friendship?

I suppose so.

May not the truth be rather, as we were saying just now, that desire is the cause of friendship; for that which desires is dear to that which is desired at the time of desiring it? and may not the other theory have been only a long story about nothing?

Likely enough.

But surely, I said, he who desires, desires that of which he is in want?

Yes.

And that of which he is in want is dear to him?

True.

And he is in want of that of which he is deprived?

Certainly.

Then love, and desire, and friendship would appear to be of the natural or congenial. Such, Lysis and Menexenus, is the inference.

They assented.

Then if you are friends, you must have natures which are congenial to one another?

Certainly, they both said.

And I say, my boys, that no one who loves or desires another would ever have loved or desired or affected him, if he had not been in some way congenial to him, either in his soul, or in his character, or in his manners, or in his form.

Yes, yes, said Menexenus. But Lysis was silent.

Then, I said, the conclusion is, that what is of a congenial nature must be loved.

It follows, he said.

Then the lover, who is true and no counterfeit, must of necessity be loved by his love.

Lysis and Menexenus gave a faint assent to this; and Hippothales changed into all manner of colours with delight.

Here, intending to revise the argument, I said: Can we point out any difference between the congenial and the like? For if that is possible, then I think, Lysis and Menexenus, there may be some sense in our argument about friendship. But if the congenial is only the like, how will you get rid of the other argument, of the uselessness of like to like in as far as they are like; for to say that what is useless is dear, would be absurd? Suppose, then, that we agree to distinguish between the congenial and the like—in the intoxication of argument, that may perhaps be allowed.

Very true.

And shall we further say that the good is congenial, and the evil uncongenial to every one? Or again that the evil is congenial to the evil, and the good to the good; and that which is neither good nor evil to that which is neither good nor evil?

They agreed to the latter alternative.

Then, my boys, we have again fallen into the old discarded error; for the unjust will be the friend of the unjust, and the bad of the bad, as well as the good of the good.

That appears to be the result.

But again, if we say that the congenial is the same as the good, in that case the good and he only will be the friend of the good.

True.

But that too was a position of ours which, as you will remember, has been already refuted by ourselves.

We remember.

Then what is to be done? Or rather is there anything to be done? I can only, like the wise men who argue in courts, sum up the arguments:—If neither the beloved, nor the lover, nor the like, nor the unlike, nor the good, nor the congenial, nor any other of whom we spoke—for there were such a number of them that I cannot remember all—if none of these are friends, I know not what remains to be said.

Here I was going to invite the opinion of some older person, when suddenly we were interrupted by the tutors of Lysis and Menexenus, who came upon us like an evil apparition with their brothers, and bade them go home, as it was getting late. At first, we and the by-standers drove them off; but afterwards, as they would not mind, and only went on shouting in their barbarous dialect, and got angry, and kept calling the boys—they appeared to us to have been drinking rather too much at the Hermaea, which made them difficult to manage—we fairly gave way and broke up the company.

I said, however, a few words to the boys at parting: O Menexenus and Lysis, how ridiculous that you two boys, and I, an old boy, who would fain be one of you, should imagine ourselves to be friends—this is what the by-standers will go away and say—and as yet we have not been able to discover what is a friend!

MENEXENUS

by Plato

(see Appendix I)

Translated by Benjamin Jowett

APPENDIX I.

It seems impossible to separate by any exact line the genuine writings of Plato from the spurious. The only external evidence to them which is of much value is that of Aristotle; for the Alexandrian catalogues of a century later include manifest forgeries. Even the value of the Aristotelian authority is a good deal impaired by the uncertainty concerning the date and authorship of the writings which are ascribed to him. And several of the citations of Aristotle omit the name of Plato, and some of them omit the name of the dialogue from which they are taken. Prior, however, to the enquiry about the writings of a particular author, general considerations which equally affect all evidence to the genuineness of ancient writings are the following: Shorter works are more likely to have been forged, or to have received an erroneous designation, than longer ones; and some kinds of composition, such as epistles or panegyrical orations, are more liable to suspicion than others; those, again, which have a taste of sophistry in them, or the ring of a later age, or the slighter character of a rhetorical exercise, or in which a motive or some affinity to spurious writings can be detected, or which seem to have originated in a name or statement really occurring in some classical author, are also of doubtful credit; while there is no instance of any ancient writing proved to be a forgery, which combines excellence with length. A really great and original writer would have no object in fathering his works on Plato; and to the forger or imitator, the 'literary hack' of Alexandria and Athens, the Gods did not grant originality or genius. Further, in attempting to balance the evidence for and against a Platonic dialogue, we must not forget that the form of the Platonic writing was common to several of his contemporaries. Aeschines, Euclid, Phaedo, Antisthenes, and in the next generation Aristotle, are all said to have composed dialogues; and mistakes of names are very likely to have occurred. Greek literature in the third century before Christ was almost as voluminous as our own, and without the safeguards of regular publication, or printing, or binding, or even of distinct titles. An unknown writing was naturally attributed to a known writer whose works bore the same character; and the name once appended easily obtained authority. A tendency may also be observed to blend the works and opinions of the master with those of his scholars. To a later Platonist, the difference between Plato and his imitators was not so perceptible as to ourselves. The Memorabilia of Xenophon and the Dialogues of Plato are but a part of a considerable Socratic literature which has passed away. And we must consider how we should regard the question of the genuineness of a particular writing, if this lost literature had been preserved to us.

These considerations lead us to adopt the following criteria of genuineness: (1) That is most certainly Plato's which Aristotle attributes to him by name, which (2) is of considerable length, of (3) great excellence, and also (4) in harmony with the general spirit of the Platonic writings. But the testimony of Aristotle cannot always be distinguished from that of a later age (see above); and has various degrees of importance. Those writings which he cites without mentioning Plato, under their own names, e.g. the Hippias, the Funeral Oration, the Phaedo, etc., have an inferior degree of evidence in their favour. They may have been supposed by him to be the writings of another, although in the case of really great works, e.g. the Phaedo, this is not credible; those again which are quoted but not named, are still more defective in their external credentials. There may be also a possibility that Aristotle was mistaken, or may have confused the master and his scholars in the case of a short writing; but this is inconceivable about a more important work, e.g. the Laws, especially when we remember that he was living at Athens, and a frequenter of the groves of the Academy, during the last twenty years of Plato's life. Nor must we forget that in all his numerous citations from the Platonic writings he never attributes any passage found in the extant dialogues to any one but Plato. And

lastly, we may remark that one or two great writings, such as the Parmenides and the Politicus, which are wholly devoid of Aristotelian (1) credentials may be fairly attributed to Plato, on the ground of (2) length, (3) excellence, and (4) accordance with the general spirit of his writings. Indeed the greater part of the evidence for the genuineness of ancient Greek authors may be summed up under two heads only: (1) excellence; and (2) uniformity of tradition—a kind of evidence, which though in many cases sufficient, is of inferior value.

Proceeding upon these principles we appear to arrive at the conclusion that nineteen-twentieths of all the writings which have ever been ascribed to Plato, are undoubtedly genuine. There is another portion of them, including the Epistles, the Epinomis, the dialogues rejected by the ancients themselves, namely, the Axiochus, De justo, De virtute, Demodocus, Sisyphus, Eryxias, which on grounds, both of internal and external evidence, we are able with equal certainty to reject. But there still remains a small portion of which we are unable to affirm either that they are genuine or spurious. They may have been written in youth, or possibly like the works of some painters, may be partly or wholly the compositions of pupils; or they may have been the writings of some contemporary transferred by accident to the more celebrated name of Plato, or of some Platonist in the next generation who aspired to imitate his master. Not that on grounds either of language or philosophy we should lightly reject them. Some difference of style, or inferiority of execution, or inconsistency of thought, can hardly be considered decisive of their spurious character. For who always does justice to himself, or who writes with equal care at all times? Certainly not Plato, who exhibits the greatest differences in dramatic power, in the formation of sentences, and in the use of words, if his earlier writings are compared with his later ones, say the Protagoras or Phaedrus with the Laws. Or who can be expected to think in the same manner during a period of authorship extending over above fifty years, in an age of great intellectual activity, as well as of political and literary transition? Certainly not Plato, whose earlier writings are separated from his later ones by as wide an interval of philosophical speculation as that which separates his later writings from Aristotle.

The dialogues which have been translated in the first Appendix, and which appear to have the next claim to genuineness among the Platonic writings, are the Lesser Hippias, the Menexenus or Funeral Oration, the First Alcibiades. Of these, the Lesser Hippias and the Funeral Oration are cited by Aristotle; the first in the Metaphysics, the latter in the Rhetoric. Neither of them are expressly attributed to Plato, but in his citation of both of them he seems to be referring to passages in the extant dialogues. From the mention of 'Hippias' in the singular by Aristotle, we may perhaps infer that he was unacquainted with a second dialogue bearing the same name. Moreover, the mere existence of a Greater and Lesser Hippias, and of a First and Second Alcibiades, does to a certain extent throw a doubt upon both of them. Though a very clever and ingenious work, the Lesser Hippias does not appear to contain anything beyond the power of an imitator, who was also a careful student of the earlier Platonic writings, to invent. The motive or leading thought of the dialogue may be detected in Xen. Mem., and there is no similar instance of a 'motive' which is taken from Xenophon in an undoubted dialogue of Plato. On the other hand, the upholders of the genuineness of the dialogue will find in the Hippias a true Socratic spirit; they will compare the Ion as being akin both in subject and treatment; they will urge the authority of Aristotle; and they will detect in the treatment of the Sophist, in the satirical reasoning upon Homer, in the reductio ad absurdum of the doctrine that vice is ignorance, traces of a Platonic authorship. In reference to the last point we are doubtful, as in some of the other dialogues, whether the author is asserting or overthrowing the paradox of Socrates, or merely following the argument 'whither the wind blows.' That no conclusion is arrived at is also in

accordance with the character of the earlier dialogues. The resemblances or imitations of the Gorgias, Protagoras, and Euthydemus, which have been observed in the Hippias, cannot with certainty be adduced on either side of the argument. On the whole, more may be said in favour of the genuineness of the Hippias than against it.

The Menexenus or Funeral Oration is cited by Aristotle, and is interesting as supplying an example of the manner in which the orators praised 'the Athenians among the Athenians,' falsifying persons and dates, and casting a veil over the gloomier events of Athenian history. It exhibits an acquaintance with the funeral oration of Thucydides, and was, perhaps, intended to rival that great work. If genuine, the proper place of the Menexenus would be at the end of the Phaedrus. The satirical opening and the concluding words bear a great resemblance to the earlier dialogues; the oration itself is professedly a mimetic work, like the speeches in the Phaedrus, and cannot therefore be tested by a comparison of the other writings of Plato. The funeral oration of Pericles is expressly mentioned in the Phaedrus, and this may have suggested the subject, in the same manner that the Cleitophon appears to be suggested by the slight mention of Cleitophon and his attachment to Thrasymachus in the Republic; and the Theages by the mention of Theages in the Apology and Republic; or as the Second Alcibiades seems to be founded upon the text of Xenophon, Mem. A similar taste for parody appears not only in the Phaedrus, but in the Protagoras, in the Symposium, and to a certain extent in the Parmenides.

To these two doubtful writings of Plato I have added the First Alcibiades, which, of all the disputed dialogues of Plato, has the greatest merit, and is somewhat longer than any of them, though not verified by the testimony of Aristotle, and in many respects at variance with the Symposium in the description of the relations of Socrates and Alcibiades. Like the Lesser Hippias and the Menexenus, it is to be compared to the earlier writings of Plato. The motive of the piece may, perhaps, be found in that passage of the Symposium in which Alcibiades describes himself as self-convicted by the words of Socrates. For the disparaging manner in which Schleiermacher has spoken of this dialogue there seems to be no sufficient foundation. At the same time, the lesson imparted is simple, and the irony more transparent than in the undoubted dialogues of Plato. We know, too, that Alcibiades was a favourite thesis, and that at least five or six dialogues bearing this name passed current in antiquity, and are attributed to contemporaries of Socrates and Plato. (1) In the entire absence of real external evidence (for the catalogues of the Alexandrian librarians cannot be regarded as trustworthy); and (2) in the absence of the highest marks either of poetical or philosophical excellence; and (3) considering that we have express testimony to the existence of contemporary writings bearing the name of Alcibiades, we are compelled to suspend our judgment on the genuineness of the extant dialogue.

Neither at this point, nor at any other, do we propose to draw an absolute line of demarcation between genuine and spurious writings of Plato. They fade off imperceptibly from one class to another. There may have been degrees of genuineness in the dialogues themselves, as there are certainly degrees of evidence by which they are supported. The traditions of the oral discourses both of Socrates and Plato may have formed the basis of semi-Platonic writings; some of them may be of the same mixed character which is apparent in Aristotle and Hippocrates, although the form of them is different. But the writings of Plato, unlike the writings of Aristotle, seem never to have been confused with the writings of his disciples: this was probably due to their definite form, and to their inimitable excellence. The three dialogues which we have offered in the Appendix to the criticism of the reader may be partly spurious and partly genuine; they may be altogether spurious;—that is an

alternative which must be frankly admitted. Nor can we maintain of some other dialogues, such as the Parmenides, and the Sophist, and Politicus, that no considerable objection can be urged against them, though greatly overbalanced by the weight (chiefly) of internal evidence in their favour. Nor, on the other hand, can we exclude a bare possibility that some dialogues which are usually rejected, such as the Greater Hippias and the Cleitophon, may be genuine. The nature and object of these semi-Platonic writings require more careful study and more comparison of them with one another, and with forged writings in general, than they have yet received, before we can finally decide on their character. We do not consider them all as genuine until they can be proved to be spurious, as is often maintained and still more often implied in this and similar discussions; but should say of some of them, that their genuineness is neither proven nor disproven until further evidence about them can be adduced. And we are as confident that the Epistles are spurious, as that the Republic, the Timaeus, and the Laws are genuine.

On the whole, not a twentieth part of the writings which pass under the name of Plato, if we exclude the works rejected by the ancients themselves and two or three other plausible inventions, can be fairly doubted by those who are willing to allow that a considerable change and growth may have taken place in his philosophy (see above). That twentieth debatable portion scarcely in any degree affects our judgment of Plato, either as a thinker or a writer, and though suggesting some interesting questions to the scholar and critic, is of little importance to the general reader.

MENEXENUS

INTRODUCTION.

The Menexenus has more the character of a rhetorical exercise than any other of the Platonic works. The writer seems to have wished to emulate Thucydides, and the far slighter work of Lysias. In his rivalry with the latter, to whom in the Phaedrus Plato shows a strong antipathy, he is entirely successful, but he is not equal to Thucydides. The Menexenus, though not without real Hellenic interest, falls very far short of the rugged grandeur and political insight of the great historian. The fiction of the speech having been invented by Aspasia is well sustained, and is in the manner of Plato, notwithstanding the anachronism which puts into her mouth an allusion to the peace of Antalcidas, an event occurring forty years after the date of the supposed oration. But Plato, like Shakespeare, is careless of such anachronisms, which are not supposed to strike the mind of the reader. The effect produced by these grandiloquent orations on Socrates, who does not recover after having heard one of them for three days and more, is truly Platonic.

Such discourses, if we may form a judgment from the three which are extant (for the so-called Funeral Oration of Demosthenes is a bad and spurious imitation of Thucydides and Lysias), conformed to a regular type. They began with Gods and ancestors, and the legendary history of Athens, to which succeeded an almost equally fictitious account of later times. The Persian war usually formed the centre of the narrative; in the age of Isocrates and Demosthenes the Athenians were still living on the glories of Marathon and Salamis. The Menexenus veils in panegyric the weak places of Athenian history. The war of Athens and Boeotia is a war of liberation; the Athenians gave back the Spartans taken at Sphacteria out of kindness—indeed, the only fault of the city was too great kindness to their enemies, who were more honoured than the friends of others (compare Thucyd., which seems to contain the germ of the idea); we democrats are the aristocracy of virtue, and the like. These are the platitudes and falsehoods in which history is disguised. The taking of Athens is hardly mentioned.

The author of the Menexenus, whether Plato or not, is evidently intending to ridicule the practice, and at the same time to show that he can beat the rhetoricians in their own line, as in the Phaedrus he may be supposed to offer an example of what Lysias might have said, and of how much better he might have written in his own style. The orators had recourse to their favourite loci communes, one of which, as we find in Lysias, was the shortness of the time allowed them for preparation. But Socrates points out that they had them always ready for delivery, and that there was no difficulty in improvising any number of such orations. To praise the Athenians among the Athenians was easy,—to praise them among the Lacedaemonians would have been a much more difficult task. Socrates himself has turned rhetorician, having learned of a woman, Aspasia, the mistress of Pericles; and any one whose teachers had been far inferior to his own—say, one who had learned from Antiphon the Rhamnusian—would be quite equal to the task of praising men to themselves. When we remember that Antiphon is described by Thucydides as the best pleader of his day, the satire on him and on the whole tribe of rhetoricians is transparent.

The ironical assumption of Socrates, that he must be a good orator because he had learnt of Aspasia, is not coarse, as Schleiermacher supposes, but is rather to be regarded as fanciful. Nor can we say that the offer of Socrates to dance naked out of love for Menexenus, is any more un-Platonic than the threat of physical force which Phaedrus uses towards Socrates. Nor is there any real vulgarity in the fear which Socrates expresses that he will get a beating from his mistress, Aspasia: this is the natural exaggeration of what might be expected from an imperious woman. Socrates is not to be taken seriously in all that he says, and Plato, both in the Symposium and elsewhere, is not slow to admit a sort of Aristophanic humour. How a great original genius like Plato might or might not have written, what was his conception of humour, or what limits he would have prescribed to himself, if any, in drawing the picture of the Silenus Socrates, are problems which no critical instinct can determine.

On the other hand, the dialogue has several Platonic traits, whether original or imitated may be uncertain. Socrates, when he departs from his character of a 'know nothing' and delivers a speech, generally pretends that what he is speaking is not his own composition. Thus in the Cratylus he is run away with; in the Phaedrus he has heard somebody say something—is inspired by the genius loci; in the Symposium he derives his wisdom from Diotima of Mantinea, and the like. But he does not impose on Menexenus by his dissimulation. Without violating the character of Socrates, Plato, who knows so well how to give a hint, or some one writing in his name, intimates clearly enough that the speech in the Menexenus like that in the Phaedrus is to be attributed to Socrates. The address of the

dead to the living at the end of the oration may also be compared to the numerous addresses of the same kind which occur in Plato, in whom the dramatic element is always tending to prevail over the rhetorical. The remark has been often made, that in the Funeral Oration of Thucydides there is no allusion to the existence of the dead. But in the Menexenus a future state is clearly, although not strongly, asserted.

Whether the Menexenus is a genuine writing of Plato, or an imitation only, remains uncertain. In either case, the thoughts are partly borrowed from the Funeral Oration of Thucydides; and the fact that they are so, is not in favour of the genuineness of the work. Internal evidence seems to leave the question of authorship in doubt. There are merits and there are defects which might lead to either conclusion. The form of the greater part of the work makes the enquiry difficult; the introduction and the finale certainly wear the look either of Plato or of an extremely skilful imitator. The excellence of the forgery may be fairly adduced as an argument that it is not a forgery at all. In this uncertainty the express testimony of Aristotle, who quotes, in the Rhetoric, the well-known words, 'It is easy to praise the Athenians among the Athenians,' from the Funeral Oration, may perhaps turn the balance in its favour. It must be remembered also that the work was famous in antiquity, and is included in the Alexandrian catalogues of Platonic writings.

PERSONS OF THE DIALOGUE: Socrates and Menexenus.

SOCRATES: Whence come you, Menexenus? Are you from the Agora?

MENEXENUS: Yes, Socrates; I have been at the Council.

SOCRATES: And what might you be doing at the Council? And yet I need hardly ask, for I see that you, believing yourself to have arrived at the end of education and of philosophy, and to have had enough of them, are mounting upwards to things higher still, and, though rather young for the post, are intending to govern us elder men, like the rest of your family, which has always provided some one who kindly took care of us.

MENEXENUS: Yes, Socrates, I shall be ready to hold office, if you allow and advise that I should, but not if you think otherwise. I went to the council chamber because I heard that the Council was about to choose some one who was to speak over the dead. For you know that there is to be a public funeral?

SOCRATES: Yes, I know. And whom did they choose?

MENEXENUS: No one; they delayed the election until tomorrow, but I believe that either Archinus or Dion will be chosen.

SOCRATES: O Menexenus! Death in battle is certainly in many respects a noble thing. The dead man gets a fine and costly funeral, although he may have been poor, and an elaborate speech is made over him by a wise man who has long ago prepared what he has to say, although he who is praised may not have been good for much. The speakers praise him for what he has done and for what he has not done—that is the beauty of them—and they steal away our souls with their embellished words; in every conceivable form they praise the city; and they praise those who died in war, and all our ancestors who went before us; and they praise ourselves also who are still alive, until I feel quite elevated by their laudations, and I stand listening to their words, Menexenus, and become enchanted by them, and all in a moment I imagine myself to have become a greater and nobler and finer man than I was before. And if, as often happens, there are any foreigners who accompany me to the speech, I become suddenly conscious of having a sort of triumph over them, and they seem to experience a corresponding feeling of admiration at me, and at the greatness of the city, which appears to them, when they are under the influence of the speaker, more wonderful than ever. This consciousness of dignity lasts me more than three days, and not until the fourth or fifth day do I come to my senses and know where I am; in the meantime I have been living in the Islands of the Blest. Such is the art of our rhetoricians, and in such manner does the sound of their words keep ringing in my ears.

MENEXENUS: You are always making fun of the rhetoricians, Socrates; this time, however, I am inclined to think that the speaker who is chosen will not have much to say, for he has been called upon to speak at a moment's notice, and he will be compelled almost to improvise.

SOCRATES: But why, my friend, should he not have plenty to say? Every rhetorician has speeches ready made; nor is there any difficulty in improvising that sort of stuff. Had the orator to praise Athenians among Peloponnesians, or Peloponnesians among Athenians, he must be a good rhetorician who could succeed and gain credit. But there is no difficulty in a man's winning applause when he is contending for fame among the persons whom he is praising.

MENEXENUS: Do you think not, Socrates?

SOCRATES: Certainly 'not.'

MENEXENUS: Do you think that you could speak yourself if there should be a necessity, and if the Council were to choose you?

SOCRATES: That I should be able to speak is no great wonder, Menexenus, considering that I have an excellent mistress in the art of rhetoric,—she who has made so many good speakers, and one who was the best among all the Hellenes—Pericles, the son of Xanthippus.

MENEXENUS: And who is she? I suppose that you mean Aspasia.

SOCRATES: Yes, I do; and besides her I had Connus, the son of Metrobius, as a master, and he was my master in music, as she was in rhetoric. No wonder that a man who has received such an education should be a finished speaker; even the pupil of very inferior masters, say, for example, one who had learned music of Lamprus, and rhetoric of Antiphon the Rhamnusian, might make a figure if he were to praise the Athenians among the Athenians.

MENEXENUS: And what would you be able to say if you had to speak?

SOCRATES: Of my own wit, most likely nothing; but yesterday I heard Aspasia composing a funeral oration about these very dead. For she had been told, as you were saying, that the Athenians were going to choose a speaker, and she repeated to me the sort of speech which he should deliver, partly improvising and partly from previous thought, putting together fragments of the funeral oration which Pericles spoke, but which, as I believe, she composed.

MENEXENUS: And can you remember what Aspasia said?

SOCRATES: I ought to be able, for she taught me, and she was ready to strike me because I was always forgetting.

MENEXENUS: Then why will you not rehearse what she said?

SOCRATES: Because I am afraid that my mistress may be angry with me if I publish her speech.

MENEXENUS: Nay, Socrates, let us have the speech, whether Aspasia's or any one else's, no matter. I hope that you will oblige me.

SOCRATES: But I am afraid that you will laugh at me if I continue the games of youth in old age.

MENEXENUS: Far otherwise, Socrates; let us by all means have the speech.

SOCRATES: Truly I have such a disposition to oblige you, that if you bid me dance naked I should not like to refuse, since we are alone. Listen then: If I remember rightly, she began as follows, with the mention of the dead:—(Thucyd.)

There is a tribute of deeds and of words. The departed have already had the first, when going forth on their destined journey they were attended on their way by the state and by their friends; the tribute of words remains to be given to them, as is meet and by law ordained. For noble words are a memorial and a crown of noble actions, which are given to the doers of them by the hearers. A word is needed which will duly praise the dead and gently admonish the living, exhorting the brethren and descendants of the departed to imitate their virtue, and consoling their fathers and mothers and the survivors, if any, who may chance to be alive of the previous generation. What sort of a word will this be, and how shall we rightly begin the praises of these brave men? In their life they rejoiced their own friends with their valour, and their death they gave in exchange for the salvation of the living. And I think that we should praise them in the order in which nature made them good, for they were good because they were sprung from good fathers. Wherefore let us first of all praise the goodness of their birth; secondly, their nurture and education; and then let us set forth how noble their actions were, and how worthy of the education which they had received.

And first as to their birth. Their ancestors were not strangers, nor are these their descendants sojourners only, whose fathers have come from another country; but they are the children of the soil, dwelling and living in their own land. And the country which brought them up is not like other countries, a stepmother to her children, but their own true mother; she bore them and nourished them

and received them, and in her bosom they now repose. It is meet and right, therefore, that we should begin by praising the land which is their mother, and that will be a way of praising their noble birth.

The country is worthy to be praised, not only by us, but by all mankind; first, and above all, as being dear to the Gods. This is proved by the strife and contention of the Gods respecting her. And ought not the country which the Gods praise to be praised by all mankind? The second praise which may be fairly claimed by her, is that at the time when the whole earth was sending forth and creating diverse animals, tame and wild, she our mother was free and pure from savage monsters, and out of all animals selected and brought forth man, who is superior to the rest in understanding, and alone has justice and religion. And a great proof that she brought forth the common ancestors of us and of the departed, is that she provided the means of support for her offspring. For as a woman proves her motherhood by giving milk to her young ones (and she who has no fountain of milk is not a mother), so did this our land prove that she was the mother of men, for in those days she alone and first of all brought forth wheat and barley for human food, which is the best and noblest sustenance for man, whom she regarded as her true offspring. And these are truer proofs of motherhood in a country than in a woman, for the woman in her conception and generation is but the imitation of the earth, and not the earth of the woman. And of the fruit of the earth she gave a plenteous supply, not only to her own, but to others also; and afterwards she made the olive to spring up to be a boon to her children, and to help them in their toils. And when she had herself nursed them and brought them up to manhood, she gave them Gods to be their rulers and teachers, whose names are well known, and need not now be repeated. They are the Gods who first ordered our lives, and instructed us in the arts for the supply of our daily needs, and taught us the acquisition and use of arms for the defence of the country.

Thus born into the world and thus educated, the ancestors of the departed lived and made themselves a government, which I ought briefly to commemorate. For government is the nurture of man, and the government of good men is good, and of bad men bad. And I must show that our ancestors were trained under a good government, and for this reason they were good, and our contemporaries are also good, among whom our departed friends are to be reckoned. Then as now, and indeed always, from that time to this, speaking generally, our government was an aristocracy—a form of government which receives various names, according to the fancies of men, and is sometimes called democracy, but is really an aristocracy or government of the best which has the approval of the many. For kings we have always had, first hereditary and then elected, and authority is mostly in the hands of the people, who dispense offices and power to those who appear to be most deserving of them. Neither is a man rejected from weakness or poverty or obscurity of origin, nor honoured by reason of the opposite, as in other states, but there is one principle—he who appears to be wise and good is a governor and ruler. The basis of this our government is equality of birth; for other states are made up of all sorts and unequal conditions of men, and therefore their governments are unequal; there are tyrannies and there are oligarchies, in which the one party are slaves and the others masters. But we and our citizens are brethren, the children all of one mother, and we do not think it right to be one another's masters or servants; but the natural equality of birth compels us to seek for legal equality, and to recognize no superiority except in the reputation of virtue and wisdom.

And so their and our fathers, and these, too, our brethren, being nobly born and having been brought up in all freedom, did both in their public and private capacity many noble deeds famous over the whole world. They were the deeds of men who thought that they ought to fight both against Hellenes for the sake of Hellenes on behalf of freedom, and against barbarians in the common interest of

Hellas. Time would fail me to tell of their defence of their country against the invasion of Eumolpus and the Amazons, or of their defence of the Argives against the Cadmeians, or of the Heracleids against the Argives; besides, the poets have already declared in song to all mankind their glory, and therefore any commemoration of their deeds in prose which we might attempt would hold a second place. They already have their reward, and I say no more of them; but there are other worthy deeds of which no poet has worthily sung, and which are still wooing the poet's muse. Of these I am bound to make honourable mention, and shall invoke others to sing of them also in lyric and other strains, in a manner becoming the actors. And first I will tell how the Persians, lords of Asia, were enslaving Europe, and how the children of this land, who were our fathers, held them back. Of these I will speak first, and praise their valour, as is meet and fitting. He who would rightly estimate them should place himself in thought at that time, when the whole of Asia was subject to the third king of Persia. The first king, Cyrus, by his valour freed the Persians, who were his countrymen, and subjected the Medes, who were their lords, and he ruled over the rest of Asia, as far as Egypt; and after him came his son, who ruled all the accessible part of Egypt and Libya; the third king was Darius, who extended the land boundaries of the empire to Scythia, and with his fleet held the sea and the islands. None presumed to be his equal; the minds of all men were enthralled by him—so many and mighty and warlike nations had the power of Persia subdued. Now Darius had a quarrel against us and the Eretrians, because, as he said, we had conspired against Sardis, and he sent 500,000 men in transports and vessels of war, and 300 ships, and Datis as commander, telling him to bring the Eretrians and Athenians to the king, if he wished to keep his head on his shoulders. He sailed against the Eretrians, who were reputed to be amongst the noblest and most warlike of the Hellenes of that day, and they were numerous, but he conquered them all in three days; and when he had conquered them, in order that no one might escape, he searched the whole country after this manner: his soldiers, coming to the borders of Eretria and spreading from sea to sea, joined hands and passed through the whole country, in order that they might be able to tell the king that no one had escaped them. And from Eretria they went to Marathon with a like intention, expecting to bind the Athenians in the same yoke of necessity in which they had bound the Eretrians. Having effected one-half of their purpose, they were in the act of attempting the other, and none of the Hellenes dared to assist either the Eretrians or the Athenians, except the Lacedaemonians, and they arrived a day too late for the battle; but the rest were panic-stricken and kept quiet, too happy in having escaped for a time. He who has present to his mind that conflict will know what manner of men they were who received the onset of the barbarians at Marathon, and chastened the pride of the whole of Asia, and by the victory which they gained over the barbarians first taught other men that the power of the Persians was not invincible, but that hosts of men and the multitude of riches alike yield to valour. And I assert that those men are the fathers not only of ourselves, but of our liberties and of the liberties of all who are on the continent, for that was the action to which the Hellenes looked back when they ventured to fight for their own safety in the battles which ensued: they became disciples of the men of Marathon. To them, therefore, I assign in my speech the first place, and the second to those who fought and conquered in the sea fights at Salamis and Artemisium; for of them, too, one might have many things to say—of the assaults which they endured by sea and land, and how they repelled them. I will mention only that act of theirs which appears to me to be the noblest, and which followed that of Marathon and came nearest to it; for the men of Marathon only showed the Hellenes that it was possible to ward off the barbarians by land, the many by the few; but there was no proof that they could be defeated by ships, and at sea the Persians retained the reputation of being invincible in numbers and wealth and skill and strength. This is the glory of the men who fought at sea, that they dispelled the second terror which had hitherto possessed the Hellenes, and so made the fear of numbers, whether of ships or

men, to cease among them. And so the soldiers of Marathon and the sailors of Salamis became the schoolmasters of Hellas; the one teaching and habituating the Hellenes not to fear the barbarians at sea, and the others not to fear them by land. Third in order, for the number and valour of the combatants, and third in the salvation of Hellas, I place the battle of Plataea. And now the Lacedaemonians as well as the Athenians took part in the struggle; they were all united in this greatest and most terrible conflict of all; wherefore their virtues will be celebrated in times to come, as they are now celebrated by us. But at a later period many Hellenic tribes were still on the side of the barbarians, and there was a report that the great king was going to make a new attempt upon the Hellenes, and therefore justice requires that we should also make mention of those who crowned the previous work of our salvation, and drove and purged away all barbarians from the sea. These were the men who fought by sea at the river Eurymedon, and who went on the expedition to Cyprus, and who sailed to Egypt and divers other places; and they should be gratefully remembered by us, because they compelled the king in fear for himself to look to his own safety instead of plotting the destruction of Hellas.

And so the war against the barbarians was fought out to the end by the whole city on their own behalf, and on behalf of their countrymen. There was peace, and our city was held in honour; and then, as prosperity makes men jealous, there succeeded a jealousy of her, and jealousy begat envy, and so she became engaged against her will in a war with the Hellenes. On the breaking out of war, our citizens met the Lacedaemonians at Tanagra, and fought for the freedom of the Boeotians; the issue was doubtful, and was decided by the engagement which followed. For when the Lacedaemonians had gone on their way, leaving the Boeotians, whom they were aiding, on the third day after the battle of Tanagra, our countrymen conquered at Oenophyta, and righteously restored those who had been unrighteously exiled. And they were the first after the Persian war who fought on behalf of liberty in aid of Hellenes against Hellenes; they were brave men, and freed those whom they aided, and were the first too who were honourably interred in this sepulchre by the state. Afterwards there was a mighty war, in which all the Hellenes joined, and devastated our country, which was very ungrateful of them; and our countrymen, after defeating them in a naval engagement and taking their leaders, the Spartans, at Sphagia, when they might have destroyed them, spared their lives, and gave them back, and made peace, considering that they should war with the fellow-countrymen only until they gained a victory over them, and not because of the private anger of the state destroy the common interest of Hellas; but that with barbarians they should war to the death. Worthy of praise are they also who waged this war, and are here interred; for they proved, if any one doubted the superior prowess of the Athenians in the former war with the barbarians, that their doubts had no foundation—showing by their victory in the civil war with Hellas, in which they subdued the other chief state of the Hellenes, that they could conquer single-handed those with whom they had been allied in the war against the barbarians. After the peace there followed a third war, which was of a terrible and desperate nature, and in this many brave men who are here interred lost their lives—many of them had won victories in Sicily, whither they had gone over the seas to fight for the liberties of the Leontines, to whom they were bound by oaths; but, owing to the distance, the city was unable to help them, and they lost heart and came to misfortune, their very enemies and opponents winning more renown for valour and temperance than the friends of others. Many also fell in naval engagements at the Hellespont, after having in one day taken all the ships of the enemy, and defeated them in other naval engagements. And what I call the terrible and desperate nature of the war, is that the other Hellenes, in their extreme animosity towards the city, should have entered into negotiations with their bitterest enemy, the king of Persia, whom they, together with us, had expelled;—him, without us, they

again brought back, barbarian against Hellenes, and all the hosts, both of Hellenes and barbarians, were united against Athens. And then shone forth the power and valour of our city. Her enemies had supposed that she was exhausted by the war, and our ships were blockaded at Mitylene. But the citizens themselves embarked, and came to the rescue with sixty other ships, and their valour was confessed of all men, for they conquered their enemies and delivered their friends. And yet by some evil fortune they were left to perish at sea, and therefore are not interred here. Ever to be remembered and honoured are they, for by their valour not only that sea-fight was won for us, but the entire war was decided by them, and through them the city gained the reputation of being invincible, even though attacked by all mankind. And that reputation was a true one, for the defeat which came upon us was our own doing. We were never conquered by others, and to this day we are still unconquered by them; but we were our own conquerors, and received defeat at our own hands. Afterwards there was quiet and peace abroad, but there sprang up war at home; and, if men are destined to have civil war, no one could have desired that his city should take the disorder in a milder form. How joyful and natural was the reconciliation of those who came from the Piraeus and those who came from the city; with what moderation did they order the war against the tyrants in Eleusis, and in a manner how unlike what the other Hellenes expected! And the reason of this gentleness was the veritable tie of blood, which created among them a friendship as of kinsmen, faithful not in word only, but in deed. And we ought also to remember those who then fell by one another's hands, and on such occasions as these to reconcile them with sacrifices and prayers, praying to those who have power over them, that they may be reconciled even as we are reconciled. For they did not attack one another out of malice or enmity, but they were unfortunate. And that such was the fact we ourselves are witnesses, who are of the same race with them, and have mutually received and granted forgiveness of what we have done and suffered. After this there was perfect peace, and the city had rest; and her feeling was that she forgave the barbarians, who had severely suffered at her hands and severely retaliated, but that she was indignant at the ingratitude of the Hellenes, when she remembered how they had received good from her and returned evil, having made common cause with the barbarians, depriving her of the ships which had once been their salvation, and dismantling our walls, which had preserved their own from falling. She thought that she would no longer defend the Hellenes, when enslaved either by one another or by the barbarians, and did accordingly. This was our feeling, while the Lacedaemonians were thinking that we who were the champions of liberty had fallen, and that their business was to subject the remaining Hellenes. And why should I say more? for the events of which I am speaking happened not long ago and we can all of us remember how the chief peoples of Hellas, Argives and Boeotians and Corinthians, came to feel the need of us, and, what is the greatest miracle of all, the Persian king himself was driven to such extremity as to come round to the opinion, that from this city, of which he was the destroyer, and from no other, his salvation would proceed.

And if a person desired to bring a deserved accusation against our city, he would find only one charge which he could justly urge—that she was too compassionate and too favourable to the weaker side. And in this instance she was not able to hold out or keep her resolution of refusing aid to her injurers when they were being enslaved, but she was softened, and did in fact send out aid, and delivered the Hellenes from slavery, and they were free until they afterwards enslaved themselves. Whereas, to the great king she refused to give the assistance of the state, for she could not forget the trophies of Marathon and Salamis and Plataea; but she allowed exiles and volunteers to assist him, and they were his salvation. And she herself, when she was compelled, entered into the war, and built walls and ships, and fought with the Lacedaemonians on behalf of the Parians. Now the king

fearing this city and wanting to stand aloof, when he saw the Lacedaemonians growing weary of the war at sea, asked of us, as the price of his alliance with us and the other allies, to give up the Hellenes in Asia, whom the Lacedaemonians had previously handed over to him, he thinking that we should refuse, and that then he might have a pretence for withdrawing from us. About the other allies he was mistaken, for the Corinthians and Argives and Boeotians, and the other states, were quite willing to let them go, and swore and covenanted, that, if he would pay them money, they would make over to him the Hellenes of the continent, and we alone refused to give them up and swear. Such was the natural nobility of this city, so sound and healthy was the spirit of freedom among us, and the instinctive dislike of the barbarian, because we are pure Hellenes, having no admixture of barbarism in us. For we are not like many others, descendants of Pelops or Cadmus or Egyptus or Danaus, who are by nature barbarians, and yet pass for Hellenes, and dwell in the midst of us; but we are pure Hellenes, uncontaminated by any foreign element, and therefore the hatred of the foreigner has passed unadulterated into the life-blood of the city. And so, notwithstanding our noble sentiments, we were again isolated, because we were unwilling to be guilty of the base and unholy act of giving up Hellenes to barbarians. And we were in the same case as when we were subdued before; but, by the favour of Heaven, we managed better, for we ended the war without the loss of our ships or walls or colonies; the enemy was only too glad to be quit of us. Yet in this war we lost many brave men, such as were those who fell owing to the ruggedness of the ground at the battle of Corinth, or by treason at Lechaeum. Brave men, too, were those who delivered the Persian king, and drove the Lacedaemonians from the sea. I remind you of them, and you must celebrate them together with me, and do honour to their memories.

Such were the actions of the men who are here interred, and of others who have died on behalf of their country; many and glorious things I have spoken of them, and there are yet many more and more glorious things remaining to be told—many days and nights would not suffice to tell of them. Let them not be forgotten, and let every man remind their descendants that they also are soldiers who must not desert the ranks of their ancestors, or from cowardice fall behind. Even as I exhort you this day, and in all future time, whenever I meet with any of you, shall continue to remind and exhort you, O ye sons of heroes, that you strive to be the bravest of men. And I think that I ought now to repeat what your fathers desired to have said to you who are their survivors, when they went out to battle, in case anything happened to them. I will tell you what I heard them say, and what, if they had only speech, they would fain be saying, judging from what they then said. And you must imagine that you hear them saying what I now repeat to you:—

'Sons, the event proves that your fathers were brave men; for we might have lived dishonourably, but have preferred to die honourably rather than bring you and your children into disgrace, and rather than dishonour our own fathers and forefathers; considering that life is not life to one who is a dishonour to his race, and that to such a one neither men nor Gods are friendly, either while he is on the earth or after death in the world below. Remember our words, then, and whatever is your aim let virtue be the condition of the attainment of your aim, and know that without this all possessions and pursuits are dishonourable and evil. For neither does wealth bring honour to the owner, if he be a coward; of such a one the wealth belongs to another, and not to himself. Nor does beauty and strength of body, when dwelling in a base and cowardly man, appear comely, but the reverse of comely, making the possessor more conspicuous, and manifesting forth his cowardice. And all knowledge, when separated from justice and virtue, is seen to be cunning and not wisdom; wherefore make this your first and last and constant and all-absorbing aim, to exceed, if possible, not only us but

all your ancestors in virtue; and know that to excel you in virtue only brings us shame, but that to be excelled by you is a source of happiness to us. And we shall most likely be defeated, and you will most likely be victors in the contest, if you learn so to order your lives as not to abuse or waste the reputation of your ancestors, knowing that to a man who has any self-respect, nothing is more dishonourable than to be honoured, not for his own sake, but on account of the reputation of his ancestors. The honour of parents is a fair and noble treasure to their posterity, but to have the use of a treasure of wealth and honour, and to leave none to your successors, because you have neither money nor reputation of your own, is alike base and dishonourable. And if you follow our precepts you will be received by us as friends, when the hour of destiny brings you hither; but if you neglect our words and are disgraced in your lives, no one will welcome or receive you. This is the message which is to be delivered to our children.

'Some of us have fathers and mothers still living, and we would urge them, if, as is likely, we shall die, to bear the calamity as lightly as possible, and not to condole with one another; for they have sorrows enough, and will not need any one to stir them up. While we gently heal their wounds, let us remind them that the Gods have heard the chief part of their prayers; for they prayed, not that their children might live for ever, but that they might be brave and renowned. And this, which is the greatest good, they have attained. A mortal man cannot expect to have everything in his own life turning out according to his will; and they, if they bear their misfortunes bravely, will be truly deemed brave fathers of the brave. But if they give way to their sorrows, either they will be suspected of not being our parents, or we of not being such as our panegyrists declare. Let not either of the two alternatives happen, but rather let them be our chief and true panegyrists, who show in their lives that they are true men, and had men for their sons. Of old the saying, "Nothing too much," appeared to be, and really was, well said. For he whose happiness rests with himself, if possible, wholly, and if not, as far as is possible,—who is not hanging in suspense on other men, or changing with the vicissitude of their fortune,—has his life ordered for the best. He is the temperate and valiant and wise; and when his riches come and go, when his children are given and taken away, he will remember the proverb—"Neither rejoicing overmuch nor grieving overmuch," for he relies upon himself. And such we would have our parents to be—that is our word and wish, and as such we now offer ourselves, neither lamenting overmuch, nor fearing overmuch, if we are to die at this time. And we entreat our fathers and mothers to retain these feelings throughout their future life, and to be assured that they will not please us by sorrowing and lamenting over us. But, if the dead have any knowledge of the living, they will displease us most by making themselves miserable and by taking their misfortunes too much to heart, and they will please us best if they bear their loss lightly and temperately. For our life will have the noblest end which is vouchsafed to man, and should be glorified rather than lamented. And if they will direct their minds to the care and nurture of our wives and children, they will soonest forget their misfortunes, and live in a better and nobler way, and be dearer to us.

'This is all that we have to say to our families: and to the state we would say—Take care of our parents and of our sons: let her worthily cherish the old age of our parents, and bring up our sons in the right way. But we know that she will of her own accord take care of them, and does not need any exhortation of ours.'

This, O ye children and parents of the dead, is the message which they bid us deliver to you, and which I do deliver with the utmost seriousness. And in their name I beseech you, the children, to imitate your fathers, and you, parents, to be of good cheer about yourselves; for we will nourish your

age, and take care of you both publicly and privately in any place in which one of us may meet one of you who are the parents of the dead. And the care of you which the city shows, you know yourselves; for she has made provision by law concerning the parents and children of those who die in war; the highest authority is specially entrusted with the duty of watching over them above all other citizens, and they will see that your fathers and mothers have no wrong done to them. The city herself shares in the education of the children, desiring as far as it is possible that their orphanhood may not be felt by them; while they are children she is a parent to them, and when they have arrived at man's estate she sends them to their several duties, in full armour clad; and bringing freshly to their minds the ways of their fathers, she places in their hands the instruments of their fathers' virtues; for the sake of the omen, she would have them from the first begin to rule over their own houses arrayed in the strength and arms of their fathers. And as for the dead, she never ceases honouring them, celebrating in common for all rites which become the property of each; and in addition to this, holding gymnastic and equestrian contests, and musical festivals of every sort. She is to the dead in the place of a son and heir, and to their sons in the place of a father, and to their parents and elder kindred in the place of a guardian—ever and always caring for them. Considering this, you ought to bear your calamity the more gently; for thus you will be most endeared to the dead and to the living, and your sorrows will heal and be healed. And now do you and all, having lamented the dead in common according to the law, go your ways.

You have heard, Menexenus, the oration of Aspasia the Milesian.

MENEXENUS: Truly, Socrates, I marvel that Aspasia, who is only a woman, should be able to compose such a speech; she must be a rare one.

SOCRATES: Well, if you are incredulous, you may come with me and hear her.

MENEXENUS: I have often met Aspasia, Socrates, and know what she is like.

SOCRATES: Well, and do you not admire her, and are you not grateful for her speech?

MENEXENUS: Yes, Socrates, I am very grateful to her or to him who told you, and still more to you who have told me.

SOCRATES: Very good. But you must take care not to tell of me, and then at some future time I will repeat to you many other excellent political speeches of hers.

MENEXENUS: Fear not, only let me hear them, and I will keep the secret.

SOCRATES: Then I will keep my promise.

MENO

by Plato

Translated by Benjamin Jowett

INTRODUCTION.

This Dialogue begins abruptly with a question of Meno, who asks, 'whether virtue can be taught.' Socrates replies that he does not as yet know what virtue is, and has never known anyone who did. 'Then he cannot have met Gorgias when he was at Athens.' Yes, Socrates had met him, but he has a bad memory, and has forgotten what Gorgias said. Will Meno tell him his own notion, which is probably not very different from that of Gorgias? 'O yes—nothing easier: there is the virtue of a man, of a woman, of an old man, and of a child; there is a virtue of every age and state of life, all of which may be easily described.'

Socrates reminds Meno that this is only an enumeration of the virtues and not a definition of the notion which is common to them all. In a second attempt Meno defines virtue to be 'the power of command.' But to this, again, exceptions are taken. For there must be a virtue of those who obey, as well as of those who command; and the power of command must be justly or not unjustly exercised. Meno is very ready to admit that justice is virtue: 'Would you say virtue or a virtue, for there are other virtues, such as courage, temperance, and the like; just as round is a figure, and black and white are colours, and yet there are other figures and other colours. Let Meno take the examples of figure and colour, and try to define them.' Meno confesses his inability, and after a process of interrogation, in which Socrates explains to him the nature of a 'simile in multis,' Socrates himself defines figure as 'the accompaniment of colour.' But some one may object that he does not know the meaning of the word 'colour;' and if he is a candid friend, and not a mere disputant, Socrates is willing to furnish him with a simpler and more philosophical definition, into which no disputed word is allowed to intrude: 'Figure is the limit of form.' Meno imperiously insists that he must still have a definition of colour. Some raillery follows; and at length Socrates is induced to reply, 'that colour is the effluence of form, sensible, and in due proportion to the sight.' This definition is exactly suited to the taste of Meno, who welcomes the familiar language of Gorgias and Empedocles. Socrates is of opinion that the more abstract or dialectical definition of figure is far better.

Now that Meno has been made to understand the nature of a general definition, he answers in the spirit of a Greek gentleman, and in the words of a poet, 'that virtue is to delight in things honourable, and to have the power of getting them.' This is a nearer approximation than he has yet made to a complete definition, and, regarded as a piece of proverbial or popular morality, is not far from the truth. But the objection is urged, 'that the honourable is the good,' and as every one equally desires the good, the point of the definition is contained in the words, 'the power of getting them.' 'And they must be got justly or with justice.' The definition will then stand thus: 'Virtue is the power of getting good with justice.' But justice is a part of virtue, and therefore virtue is the getting of good with a part of virtue. The definition repeats the word defined.

Meno complains that the conversation of Socrates has the effect of a torpedo's shock upon him. When he talks with other persons he has plenty to say about virtue; in the presence of Socrates, his thoughts desert him. Socrates replies that he is only the cause of perplexity in others, because he is himself perplexed. He proposes to continue the enquiry. But how, asks Meno, can he enquire either into what he knows or into what he does not know? This is a sophistical puzzle, which, as Socrates remarks, saves a great deal of trouble to him who accepts it. But the puzzle has a real difficulty latent under it, to which Socrates will endeavour to find a reply. The difficulty is the origin of knowledge:—

He has heard from priests and priestesses, and from the poet Pindar, of an immortal soul which is born again and again in successive periods of existence, returning into this world when she has paid the penalty of ancient crime, and, having wandered over all places of the upper and under world, and seen and known all things at one time or other, is by association out of one thing capable of recovering all. For nature is of one kindred; and every soul has a seed or germ which may be developed into all knowledge. The existence of this latent knowledge is further proved by the interrogation of one of Meno's slaves, who, in the skilful hands of Socrates, is made to acknowledge some elementary relations of geometrical figures. The theorem that the square of the diagonal is double the square of the side—that famous discovery of primitive mathematics, in honour of which the legendary Pythagoras is said to have sacrificed a hecatomb—is elicited from him. The first step in the process of teaching has made him conscious of his own ignorance. He has had the 'torpedo's shock' given him, and is the better for the operation. But whence had the uneducated man this knowledge? He had never learnt geometry in this world; nor was it born with him; he must therefore have had it when he was not a man. And as he always either was or was not a man, he must have always had it. (Compare Phaedo.)

After Socrates has given this specimen of the true nature of teaching, the original question of the teachableness of virtue is renewed. Again he professes a desire to know 'what virtue is' first. But he is willing to argue the question, as mathematicians say, under an hypothesis. He will assume that if virtue is knowledge, then virtue can be taught. (This was the stage of the argument at which the Protagoras concluded.)

Socrates has no difficulty in showing that virtue is a good, and that goods, whether of body or mind, must be under the direction of knowledge. Upon the assumption just made, then, virtue is teachable. But where are the teachers? There are none to be found. This is extremely discouraging. Virtue is no sooner discovered to be teachable, than the discovery follows that it is not taught. Virtue, therefore, is and is not teachable.

In this dilemma an appeal is made to Anytus, a respectable and well-to-do citizen of the old school, and a family friend of Meno, who happens to be present. He is asked 'whether Meno shall go to the Sophists and be taught.' The suggestion throws him into a rage. 'To whom, then, shall Meno go?' asks Socrates. To any Athenian gentleman—to the great Athenian statesmen of past times. Socrates replies here, as elsewhere (Laches, Prot.), that Themistocles, Pericles, and other great men, had sons to whom they would surely, if they could have done so, have imparted their own political wisdom; but no one ever heard that these sons of theirs were remarkable for anything except riding and wrestling and similar accomplishments. Anytus is angry at the imputation which is cast on his favourite statesmen, and on a class to which he supposes himself to belong; he breaks off with a significant hint. The mention of another opportunity of talking with him, and the suggestion that Meno may do the Athenian people a service by pacifying him, are evident allusions to the trial of Socrates.

Socrates returns to the consideration of the question 'whether virtue is teachable,' which was denied on the ground that there are no teachers of it: (for the Sophists are bad teachers, and the rest of the world do not profess to teach). But there is another point which we failed to observe, and in which Gorgias has never instructed Meno, nor Prodicus Socrates. This is the nature of right opinion. For virtue may be under the guidance of right opinion as well as of knowledge; and right opinion is for practical purposes as good as knowledge, but is incapable of being taught, and is also liable, like the

images of Daedalus, to 'walk off,' because not bound by the tie of the cause. This is the sort of instinct which is possessed by statesmen, who are not wise or knowing persons, but only inspired or divine. The higher virtue, which is identical with knowledge, is an ideal only. If the statesman had this knowledge, and could teach what he knew, he would be like Tiresias in the world below,—'he alone has wisdom, but the rest flit like shadows.'

This Dialogue is an attempt to answer the question, Can virtue be taught? No one would either ask or answer such a question in modern times. But in the age of Socrates it was only by an effort that the mind could rise to a general notion of virtue as distinct from the particular virtues of courage, liberality, and the like. And when a hazy conception of this ideal was attained, it was only by a further effort that the question of the teachableness of virtue could be resolved.

The answer which is given by Plato is paradoxical enough, and seems rather intended to stimulate than to satisfy enquiry. Virtue is knowledge, and therefore virtue can be taught. But virtue is not taught, and therefore in this higher and ideal sense there is no virtue and no knowledge. The teaching of the Sophists is confessedly inadequate, and Meno, who is their pupil, is ignorant of the very nature of general terms. He can only produce out of their armoury the sophism, 'that you can neither enquire into what you know nor into what you do not know;' to which Socrates replies by his theory of reminiscence.

To the doctrine that virtue is knowledge, Plato has been constantly tending in the previous Dialogues. But the new truth is no sooner found than it vanishes away. 'If there is knowledge, there must be teachers; and where are the teachers?' There is no knowledge in the higher sense of systematic, connected, reasoned knowledge, such as may one day be attained, and such as Plato himself seems to see in some far off vision of a single science. And there are no teachers in the higher sense of the word; that is to say, no real teachers who will arouse the spirit of enquiry in their pupils, and not merely instruct them in rhetoric or impart to them ready-made information for a fee of 'one' or of 'fifty drachms.' Plato is desirous of deepening the notion of education, and therefore he asserts the paradox that there are no educators. This paradox, though different in form, is not really different from the remark which is often made in modern times by those who would depreciate either the methods of education commonly employed, or the standard attained—that 'there is no true education among us.'

There remains still a possibility which must not be overlooked. Even if there be no true knowledge, as is proved by 'the wretched state of education,' there may be right opinion, which is a sort of guessing or divination resting on no knowledge of causes, and incommunicable to others. This is the gift which our statesmen have, as is proved by the circumstance that they are unable to impart their knowledge to their sons. Those who are possessed of it cannot be said to be men of science or philosophers, but they are inspired and divine.

There may be some trace of irony in this curious passage, which forms the concluding portion of the Dialogue. But Plato certainly does not mean to intimate that the supernatural or divine is the true basis of human life. To him knowledge, if only attainable in this world, is of all things the most divine. Yet, like other philosophers, he is willing to admit that 'probability is the guide of life (Butler's Analogy.);' and he is at the same time desirous of contrasting the wisdom which governs the world with a higher wisdom. There are many instincts, judgments, and anticipations of the human mind which cannot be reduced to rule, and of which the grounds cannot always be given in words. A

person may have some skill or latent experience which he is able to use himself and is yet unable to teach others, because he has no principles, and is incapable of collecting or arranging his ideas. He has practice, but not theory; art, but not science. This is a true fact of psychology, which is recognized by Plato in this passage. But he is far from saying, as some have imagined, that inspiration or divine grace is to be regarded as higher than knowledge. He would not have preferred the poet or man of action to the philosopher, or the virtue of custom to the virtue based upon ideas.

Also here, as in the Ion and Phaedrus, Plato appears to acknowledge an unreasoning element in the higher nature of man. The philosopher only has knowledge, and yet the statesman and the poet are inspired. There may be a sort of irony in regarding in this way the gifts of genius. But there is no reason to suppose that he is deriding them, any more than he is deriding the phenomena of love or of enthusiasm in the Symposium, or of oracles in the Apology, or of divine intimations when he is speaking of the daemonium of Socrates. He recognizes the lower form of right opinion, as well as the higher one of science, in the spirit of one who desires to include in his philosophy every aspect of human life; just as he recognizes the existence of popular opinion as a fact, and the Sophists as the expression of it.

This Dialogue contains the first intimation of the doctrine of reminiscence and of the immortality of the soul. The proof is very slight, even slighter than in the Phaedo and Republic. Because men had abstract ideas in a previous state, they must have always had them, and their souls therefore must have always existed. For they must always have been either men or not men. The fallacy of the latter words is transparent. And Socrates himself appears to be conscious of their weakness; for he adds immediately afterwards, 'I have said some things of which I am not altogether confident.' (Compare Phaedo.) It may be observed, however, that the fanciful notion of pre-existence is combined with a true but partial view of the origin and unity of knowledge, and of the association of ideas. Knowledge is prior to any particular knowledge, and exists not in the previous state of the individual, but of the race. It is potential, not actual, and can only be appropriated by strenuous exertion.

The idealism of Plato is here presented in a less developed form than in the Phaedo and Phaedrus. Nothing is said of the pre-existence of ideas of justice, temperance, and the like. Nor is Socrates positive of anything but the duty of enquiry. The doctrine of reminiscence too is explained more in accordance with fact and experience as arising out of the affinities of nature (ate tes thuseos oles suggenous ouses). Modern philosophy says that all things in nature are dependent on one another; the ancient philosopher had the same truth latent in his mind when he affirmed that out of one thing all the rest may be recovered. The subjective was converted by him into an objective; the mental phenomenon of the association of ideas (compare Phaedo) became a real chain of existences. The germs of two valuable principles of education may also be gathered from the 'words of priests and priestesses:' (1) that true knowledge is a knowledge of causes (compare Aristotle's theory of episteme); and (2) that the process of learning consists not in what is brought to the learner, but in what is drawn out of him.

Some lesser points of the dialogue may be noted, such as (1) the acute observation that Meno prefers the familiar definition, which is embellished with poetical language, to the better and truer one; or (2) the shrewd reflection, which may admit of an application to modern as well as to ancient teachers, that the Sophists having made large fortunes; this must surely be a criterion of their powers of teaching, for that no man could get a living by shoemaking who was not a good shoemaker; or (3)

the remark conveyed, almost in a word, that the verbal sceptic is saved the labour of thought and enquiry (ouden dei to toiouto zeteseos). Characteristic also of the temper of the Socratic enquiry is, (4) the proposal to discuss the teachableness of virtue under an hypothesis, after the manner of the mathematicians; and (5) the repetition of the favourite doctrine which occurs so frequently in the earlier and more Socratic Dialogues, and gives a colour to all of them—that mankind only desire evil through ignorance; (6) the experiment of eliciting from the slave-boy the mathematical truth which is latent in him, and (7) the remark that he is all the better for knowing his ignorance.

The character of Meno, like that of Critias, has no relation to the actual circumstances of his life. Plato is silent about his treachery to the ten thousand Greeks, which Xenophon has recorded, as he is also silent about the crimes of Critias. He is a Thessalian Alcibiades, rich and luxurious—a spoilt child of fortune, and is described as the hereditary friend of the great king. Like Alcibiades he is inspired with an ardent desire of knowledge, and is equally willing to learn of Socrates and of the Sophists. He may be regarded as standing in the same relation to Gorgias as Hippocrates in the Protagoras to the other great Sophist. He is the sophisticated youth on whom Socrates tries his cross-examining powers, just as in the Charmides, the Lysis, and the Euthydemus, ingenuous boyhood is made the subject of a similar experiment. He is treated by Socrates in a half-playful manner suited to his character; at the same time he appears not quite to understand the process to which he is being subjected. For he is exhibited as ignorant of the very elements of dialectics, in which the Sophists have failed to instruct their disciple. His definition of virtue as 'the power and desire of attaining things honourable,' like the first definition of justice in the Republic, is taken from a poet. His answers have a sophistical ring, and at the same time show the sophistical incapacity to grasp a general notion.

Anytus is the type of the narrow-minded man of the world, who is indignant at innovation, and equally detests the popular teacher and the true philosopher. He seems, like Aristophanes, to regard the new opinions, whether of Socrates or the Sophists, as fatal to Athenian greatness. He is of the same class as Callicles in the Gorgias, but of a different variety; the immoral and sophistical doctrines of Callicles are not attributed to him. The moderation with which he is described is remarkable, if he be the accuser of Socrates, as is apparently indicated by his parting words. Perhaps Plato may have been desirous of showing that the accusation of Socrates was not to be attributed to badness or malevolence, but rather to a tendency in men's minds. Or he may have been regardless of the historical truth of the characters of his dialogue, as in the case of Meno and Critias. Like Chaerephon (Apol.) the real Anytus was a democrat, and had joined Thrasybulus in the conflict with the thirty.

The Protagoras arrived at a sort of hypothetical conclusion, that if 'virtue is knowledge, it can be taught.' In the Euthydemus, Socrates himself offered an example of the manner in which the true teacher may draw out the mind of youth; this was in contrast to the quibbling follies of the Sophists. In the Meno the subject is more developed; the foundations of the enquiry are laid deeper, and the nature of knowledge is more distinctly explained. There is a progression by antagonism of two opposite aspects of philosophy. But at the moment when we approach nearest, the truth doubles upon us and passes out of our reach. We seem to find that the ideal of knowledge is irreconcilable with experience. In human life there is indeed the profession of knowledge, but right opinion is our actual guide. There is another sort of progress from the general notions of Socrates, who asked simply, 'what is friendship?' 'what is temperance?' 'what is courage?' as in the Lysis, Charmides, Laches, to the transcendentalism of Plato, who, in the second stage of his philosophy, sought to find the nature of knowledge in a prior and future state of existence.

The difficulty in framing general notions which has appeared in this and in all the previous Dialogues recurs in the Gorgias and Theaetetus as well as in the Republic. In the Gorgias too the statesmen reappear, but in stronger opposition to the philosopher. They are no longer allowed to have a divine insight, but, though acknowledged to have been clever men and good speakers, are denounced as 'blind leaders of the blind.' The doctrine of the immortality of the soul is also carried further, being made the foundation not only of a theory of knowledge, but of a doctrine of rewards and punishments. In the Republic the relation of knowledge to virtue is described in a manner more consistent with modern distinctions. The existence of the virtues without the possession of knowledge in the higher or philosophical sense is admitted to be possible. Right opinion is again introduced in the Theaetetus as an account of knowledge, but is rejected on the ground that it is irrational (as here, because it is not bound by the tie of the cause), and also because the conception of false opinion is given up as hopeless. The doctrines of Plato are necessarily different at different times of his life, as new distinctions are realized, or new stages of thought attained by him. We are not therefore justified, in order to take away the appearance of inconsistency, in attributing to him hidden meanings or remote allusions.

There are no external criteria by which we can determine the date of the Meno. There is no reason to suppose that any of the Dialogues of Plato were written before the death of Socrates; the Meno, which appears to be one of the earliest of them, is proved to have been of a later date by the allusion of Anytus.

We cannot argue that Plato was more likely to have written, as he has done, of Meno before than after his miserable death; for we have already seen, in the examples of Charmides and Critias, that the characters in Plato are very far from resembling the same characters in history. The repulsive picture which is given of him in the Anabasis of Xenophon, where he also appears as the friend of Aristippus 'and a fair youth having lovers,' has no other trait of likeness to the Meno of Plato.

The place of the Meno in the series is doubtfully indicated by internal evidence. The main character of the Dialogue is Socrates; but to the 'general definitions' of Socrates is added the Platonic doctrine of reminiscence. The problems of virtue and knowledge have been discussed in the Lysis, Laches, Charmides, and Protagoras; the puzzle about knowing and learning has already appeared in the Euthydemus. The doctrines of immortality and pre-existence are carried further in the Phaedrus and Phaedo; the distinction between opinion and knowledge is more fully developed in the Theaetetus. The lessons of Prodicus, whom he facetiously calls his master, are still running in the mind of Socrates. Unlike the later Platonic Dialogues, the Meno arrives at no conclusion. Hence we are led to place the Dialogue at some point of time later than the Protagoras, and earlier than the Phaedrus and Gorgias. The place which is assigned to it in this work is due mainly to the desire to bring together in a single volume all the Dialogues which contain allusions to the trial and death of Socrates.

ON THE IDEAS OF PLATO.

Plato's doctrine of ideas has attained an imaginary clearness and definiteness which is not to be found in his own writings. The popular account of them is partly derived from one or two passages in his Dialogues interpreted without regard to their poetical environment. It is due also to the misunderstanding of him by the Aristotelian school; and the erroneous notion has been further narrowed and has become fixed by the realism of the schoolmen. This popular view of the Platonic ideas may be summed up in some such formula as the following: 'Truth consists not in particulars, but in universals, which have a place in the mind of God, or in some far-off heaven. These were revealed to men in a former state of existence, and are recovered by reminiscence (anamnesis) or association from sensible things. The sensible things are not realities, but shadows only, in relation to the truth.' These unmeaning propositions are hardly suspected to be a caricature of a great theory of knowledge, which Plato in various ways and under many figures of speech is seeking to unfold. Poetry has been converted into dogma; and it is not remarked that the Platonic ideas are to be found only in about a third of Plato's writings and are not confined to him. The forms which they assume are numerous, and if taken literally, inconsistent with one another. At one time we are in the clouds of mythology, at another among the abstractions of mathematics or metaphysics; we pass imperceptibly from one to the other. Reason and fancy are mingled in the same passage. The ideas are sometimes described as many, coextensive with the universals of sense and also with the first principles of ethics; or again they are absorbed into the single idea of good, and subordinated to it. They are not more certain than facts, but they are equally certain (Phaedo). They are both personal and impersonal. They are abstract terms: they are also the causes of things; and they are even transformed into the demons or spirits by whose help God made the world. And the idea of good (Republic) may without violence be converted into the Supreme Being, who 'because He was good' created all things (Tim.).

It would be a mistake to try and reconcile these differing modes of thought. They are not to be regarded seriously as having a distinct meaning. They are parables, prophecies, myths, symbols, revelations, aspirations after an unknown world. They derive their origin from a deep religious and contemplative feeling, and also from an observation of curious mental phenomena. They gather up the elements of the previous philosophies, which they put together in a new form. Their great diversity shows the tentative character of early endeavours to think. They have not yet settled down into a single system. Plato uses them, though he also criticises them; he acknowledges that both he and others are always talking about them, especially about the Idea of Good; and that they are not peculiar to himself (Phaedo; Republic; Soph.). But in his later writings he seems to have laid aside the old forms of them. As he proceeds he makes for himself new modes of expression more akin to the Aristotelian logic.

Yet amid all these varieties and incongruities, there is a common meaning or spirit which pervades his writings, both those in which he treats of the ideas and those in which he is silent about them. This is the spirit of idealism, which in the history of philosophy has had many names and taken many forms, and has in a measure influenced those who seemed to be most averse to it. It has often been charged with inconsistency and fancifulness, and yet has had an elevating effect on human nature, and has exercised a wonderful charm and interest over a few spirits who have been lost in the thought of it. It has been banished again and again, but has always returned. It has attempted to leave the earth and soar heavenwards, but soon has found that only in experience could any solid foundation of knowledge be laid. It has degenerated into pantheism, but has again emerged. No other knowledge has given an equal stimulus to the mind. It is the science of sciences, which are also

ideas, and under either aspect require to be defined. They can only be thought of in due proportion when conceived in relation to one another. They are the glasses through which the kingdoms of science are seen, but at a distance. All the greatest minds, except when living in an age of reaction against them, have unconsciously fallen under their power.

The account of the Platonic ideas in the Meno is the simplest and clearest, and we shall best illustrate their nature by giving this first and then comparing the manner in which they are described elsewhere, e.g. in the Phaedrus, Phaedo, Republic; to which may be added the criticism of them in the Parmenides, the personal form which is attributed to them in the Timaeus, the logical character which they assume in the Sophist and Philebus, and the allusion to them in the Laws. In the Cratylus they dawn upon him with the freshness of a newly-discovered thought.

The Meno goes back to a former state of existence, in which men did and suffered good and evil, and received the reward or punishment of them until their sin was purged away and they were allowed to return to earth. This is a tradition of the olden time, to which priests and poets bear witness. The souls of men returning to earth bring back a latent memory of ideas, which were known to them in a former state. The recollection is awakened into life and consciousness by the sight of the things which resemble them on earth. The soul evidently possesses such innate ideas before she has had time to acquire them. This is proved by an experiment tried on one of Meno's slaves, from whom Socrates elicits truths of arithmetic and geometry, which he had never learned in this world. He must therefore have brought them with him from another.

The notion of a previous state of existence is found in the verses of Empedocles and in the fragments of Heracleitus. It was the natural answer to two questions, 'Whence came the soul? What is the origin of evil?' and prevailed far and wide in the east. It found its way into Hellas probably through the medium of Orphic and Pythagorean rites and mysteries. It was easier to think of a former than of a future life, because such a life has really existed for the race though not for the individual, and all men come into the world, if not 'trailing clouds of glory,' at any rate able to enter into the inheritance of the past. In the Phaedrus, as well as in the Meno, it is this former rather than a future life on which Plato is disposed to dwell. There the Gods, and men following in their train, go forth to contemplate the heavens, and are borne round in the revolutions of them. There they see the divine forms of justice, temperance, and the like, in their unchangeable beauty, but not without an effort more than human. The soul of man is likened to a charioteer and two steeds, one mortal, the other immortal. The charioteer and the mortal steed are in fierce conflict; at length the animal principle is finally overpowered, though not extinguished, by the combined energies of the passionate and rational elements. This is one of those passages in Plato which, partaking both of a philosophical and poetical character, is necessarily indistinct and inconsistent. The magnificent figure under which the nature of the soul is described has not much to do with the popular doctrine of the ideas. Yet there is one little trait in the description which shows that they are present to Plato's mind, namely, the remark that the soul, which had seen truths in the form of the universal, cannot again return to the nature of an animal.

In the Phaedo, as in the Meno, the origin of ideas is sought for in a previous state of existence. There was no time when they could have been acquired in this life, and therefore they must have been recovered from another. The process of recovery is no other than the ordinary law of association, by which in daily life the sight of one thing or person recalls another to our minds, and by which in

scientific enquiry from any part of knowledge we may be led on to infer the whole. It is also argued that ideas, or rather ideals, must be derived from a previous state of existence because they are more perfect than the sensible forms of them which are given by experience. But in the Phaedo the doctrine of ideas is subordinate to the proof of the immortality of the soul. 'If the soul existed in a previous state, then it will exist in a future state, for a law of alternation pervades all things.' And, 'If the ideas exist, then the soul exists; if not, not.' It is to be observed, both in the Meno and the Phaedo, that Socrates expresses himself with diffidence. He speaks in the Phaedo of the words with which he has comforted himself and his friends, and will not be too confident that the description which he has given of the soul and her mansions is exactly true, but he 'ventures to think that something of the kind is true.' And in the Meno, after dwelling upon the immortality of the soul, he adds, 'Of some things which I have said I am not altogether confident' (compare Apology; Gorgias). From this class of uncertainties he exempts the difference between truth and appearance, of which he is absolutely convinced.

In the Republic the ideas are spoken of in two ways, which though not contradictory are different. In the tenth book they are represented as the genera or general ideas under which individuals having a common name are contained. For example, there is the bed which the carpenter makes, the picture of the bed which is drawn by the painter, the bed existing in nature of which God is the author. Of the latter all visible beds are only the shadows or reflections. This and similar illustrations or explanations are put forth, not for their own sake, or as an exposition of Plato's theory of ideas, but with a view of showing that poetry and the mimetic arts are concerned with an inferior part of the soul and a lower kind of knowledge. On the other hand, in the 6th and 7th books of the Republic we reach the highest and most perfect conception, which Plato is able to attain, of the nature of knowledge. The ideas are now finally seen to be one as well as many, causes as well as ideas, and to have a unity which is the idea of good and the cause of all the rest. They seem, however, to have lost their first aspect of universals under which individuals are contained, and to have been converted into forms of another kind, which are inconsistently regarded from the one side as images or ideals of justice, temperance, holiness and the like; from the other as hypotheses, or mathematical truths or principles.

In the Timaeus, which in the series of Plato's works immediately follows the Republic, though probably written some time afterwards, no mention occurs of the doctrine of ideas. Geometrical forms and arithmetical ratios furnish the laws according to which the world is created. But though the conception of the ideas as genera or species is forgotten or laid aside, the distinction of the visible and intellectual is as firmly maintained as ever. The IDEA of good likewise disappears and is superseded by the conception of a personal God, who works according to a final cause or principle of goodness which he himself is. No doubt is expressed by Plato, either in the Timaeus or in any other dialogue, of the truths which he conceives to be the first and highest. It is not the existence of God or the idea of good which he approaches in a tentative or hesitating manner, but the investigations of physiology. These he regards, not seriously, as a part of philosophy, but as an innocent recreation (Tim.).

Passing on to the Parmenides, we find in that dialogue not an exposition or defence of the doctrine of ideas, but an assault upon them, which is put into the mouth of the veteran Parmenides, and might be ascribed to Aristotle himself, or to one of his disciples. The doctrine which is assailed takes two or three forms, but fails in any of them to escape the dialectical difficulties which are urged against it. It is admitted that there are ideas of all things, but the manner in which individuals partake of them,

whether of the whole or of the part, and in which they become like them, or how ideas can be either within or without the sphere of human knowledge, or how the human and divine can have any relation to each other, is held to be incapable of explanation. And yet, if there are no universal ideas, what becomes of philosophy? (Parmenides.) In the Sophist the theory of ideas is spoken of as a doctrine held not by Plato, but by another sect of philosophers, called 'the Friends of Ideas,' probably the Megarians, who were very distinct from him, if not opposed to him (Sophist). Nor in what may be termed Plato's abridgement of the history of philosophy (Soph.), is any mention made such as we find in the first book of Aristotle's Metaphysics, of the derivation of such a theory or of any part of it from the Pythagoreans, the Eleatics, the Heracleiteans, or even from Socrates. In the Philebus, probably one of the latest of the Platonic Dialogues, the conception of a personal or semi-personal deity expressed under the figure of mind, the king of all, who is also the cause, is retained. The one and many of the Phaedrus and Theaetetus is still working in the mind of Plato, and the correlation of ideas, not of 'all with all,' but of 'some with some,' is asserted and explained. But they are spoken of in a different manner, and are not supposed to be recovered from a former state of existence. The metaphysical conception of truth passes into a psychological one, which is continued in the Laws, and is the final form of the Platonic philosophy, so far as can be gathered from his own writings (see especially Laws). In the Laws he harps once more on the old string, and returns to general notions:—these he acknowledges to be many, and yet he insists that they are also one. The guardian must be made to recognize the truth, for which he has contended long ago in the Protagoras, that the virtues are four, but they are also in some sense one (Laws; compare Protagoras).

So various, and if regarded on the surface only, inconsistent, are the statements of Plato respecting the doctrine of ideas. If we attempted to harmonize or to combine them, we should make out of them, not a system, but the caricature of a system. They are the ever-varying expression of Plato's Idealism. The terms used in them are in their substance and general meaning the same, although they seem to be different. They pass from the subject to the object, from earth (diesseits) to heaven (jenseits) without regard to the gulf which later theology and philosophy have made between them. They are also intended to supplement or explain each other. They relate to a subject of which Plato himself would have said that 'he was not confident of the precise form of his own statements, but was strong in the belief that something of the kind was true.' It is the spirit, not the letter, in which they agree—the spirit which places the divine above the human, the spiritual above the material, the one above the many, the mind before the body.

The stream of ancient philosophy in the Alexandrian and Roman times widens into a lake or sea, and then disappears underground to reappear after many ages in a distant land. It begins to flow again under new conditions, at first confined between high and narrow banks, but finally spreading over the continent of Europe. It is and is not the same with ancient philosophy. There is a great deal in modern philosophy which is inspired by ancient. There is much in ancient philosophy which was 'born out of due time; and before men were capable of understanding it. To the fathers of modern philosophy, their own thoughts appeared to be new and original, but they carried with them an echo or shadow of the past, coming back by recollection from an elder world. Of this the enquirers of the seventeenth century, who to themselves appeared to be working out independently the enquiry into all truth, were unconscious. They stood in a new relation to theology and natural philosophy, and for a time maintained towards both an attitude of reserve and separation. Yet the similarities between modern and ancient thought are greater far than the differences. All philosophy, even that part of it which is

said to be based upon experience, is really ideal; and ideas are not only derived from facts, but they are also prior to them and extend far beyond them, just as the mind is prior to the senses.

Early Greek speculation culminates in the ideas of Plato, or rather in the single idea of good. His followers, and perhaps he himself, having arrived at this elevation, instead of going forwards went backwards from philosophy to psychology, from ideas to numbers. But what we perceive to be the real meaning of them, an explanation of the nature and origin of knowledge, will always continue to be one of the first problems of philosophy.

Plato also left behind him a most potent instrument, the forms of logic—arms ready for use, but not yet taken out of their armoury. They were the late birth of the early Greek philosophy, and were the only part of it which has had an uninterrupted hold on the mind of Europe. Philosophies come and go; but the detection of fallacies, the framing of definitions, the invention of methods still continue to be the main elements of the reasoning process.

Modern philosophy, like ancient, begins with very simple conceptions. It is almost wholly a reflection on self. It might be described as a quickening into life of old words and notions latent in the semi-barbarous Latin, and putting a new meaning into them. Unlike ancient philosophy, it has been unaffected by impressions derived from outward nature: it arose within the limits of the mind itself. From the time of Descartes to Hume and Kant it has had little or nothing to do with facts of science. On the other hand, the ancient and mediaeval logic retained a continuous influence over it, and a form like that of mathematics was easily impressed upon it; the principle of ancient philosophy which is most apparent in it is scepticism; we must doubt nearly every traditional or received notion, that we may hold fast one or two. The being of God in a personal or impersonal form was a mental necessity to the first thinkers of modern times: from this alone all other ideas could be deduced. There had been an obscure presentiment of 'cognito, ergo sum' more than 2000 years previously. The Eleatic notion that being and thought were the same was revived in a new form by Descartes. But now it gave birth to consciousness and self-reflection: it awakened the 'ego' in human nature. The mind naked and abstract has no other certainty but the conviction of its own existence. 'I think, therefore I am;' and this thought is God thinking in me, who has also communicated to the reason of man his own attributes of thought and extension—these are truly imparted to him because God is true (compare Republic). It has been often remarked that Descartes, having begun by dismissing all presuppositions, introduces several: he passes almost at once from scepticism to dogmatism. It is more important for the illustration of Plato to observe that he, like Plato, insists that God is true and incapable of deception (Republic)—that he proceeds from general ideas, that many elements of mathematics may be found in him. A certain influence of mathematics both on the form and substance of their philosophy is discernible in both of them. After making the greatest opposition between thought and extension, Descartes, like Plato, supposes them to be reunited for a time, not in their own nature but by a special divine act (compare Phaedrus), and he also supposes all the parts of the human body to meet in the pineal gland, that alone affording a principle of unity in the material frame of man. It is characteristic of the first period of modern philosophy, that having begun (like the Presocratics) with a few general notions, Descartes first falls absolutely under their influence, and then quickly discards them. At the same time he is less able to observe facts, because they are too much magnified by the glasses through which they are seen. The common logic says 'the greater the extension, the less the comprehension,' and we may put the same thought in another way and say of

abstract or general ideas, that the greater the abstraction of them, the less are they capable of being applied to particular and concrete natures.

Not very different from Descartes in his relation to ancient philosophy is his successor Spinoza, who lived in the following generation. The system of Spinoza is less personal and also less dualistic than that of Descartes. In this respect the difference between them is like that between Xenophanes and Parmenides. The teaching of Spinoza might be described generally as the Jewish religion reduced to an abstraction and taking the form of the Eleatic philosophy. Like Parmenides, he is overpowered and intoxicated with the idea of Being or God. The greatness of both philosophies consists in the immensity of a thought which excludes all other thoughts; their weakness is the necessary separation of this thought from actual existence and from practical life. In neither of them is there any clear opposition between the inward and outward world. The substance of Spinoza has two attributes, which alone are cognizable by man, thought and extension; these are in extreme opposition to one another, and also in inseparable identity. They may be regarded as the two aspects or expressions under which God or substance is unfolded to man. Here a step is made beyond the limits of the Eleatic philosophy. The famous theorem of Spinoza, 'Omnis determinatio est negatio,' is already contained in the 'negation is relation' of Plato's Sophist. The grand description of the philosopher in Republic VI, as the spectator of all time and all existence, may be paralleled with another famous expression of Spinoza, 'Contemplatio rerum sub specie eternitatis.' According to Spinoza finite objects are unreal, for they are conditioned by what is alien to them, and by one another. Human beings are included in the number of them. Hence there is no reality in human action and no place for right and wrong. Individuality is accident. The boasted freedom of the will is only a consciousness of necessity. Truth, he says, is the direction of the reason towards the infinite, in which all things repose; and herein lies the secret of man's well-being. In the exaltation of the reason or intellect, in the denial of the voluntariness of evil (Timaeus; Laws) Spinoza approaches nearer to Plato than in his conception of an infinite substance. As Socrates said that virtue is knowledge, so Spinoza would have maintained that knowledge alone is good, and what contributes to knowledge useful. Both are equally far from any real experience or observation of nature. And the same difficulty is found in both when we seek to apply their ideas to life and practice. There is a gulf fixed between the infinite substance and finite objects or individuals of Spinoza, just as there is between the ideas of Plato and the world of sense.

Removed from Spinoza by less than a generation is the philosopher Leibnitz, who after deepening and intensifying the opposition between mind and matter, reunites them by his preconcerted harmony (compare again Phaedrus). To him all the particles of matter are living beings which reflect on one another, and in the least of them the whole is contained. Here we catch a reminiscence both of the omoiomere, or similar particles of Anaxagoras, and of the world-animal of the Timaeus.

In Bacon and Locke we have another development in which the mind of man is supposed to receive knowledge by a new method and to work by observation and experience. But we may remark that it is the idea of experience, rather than experience itself, with which the mind is filled. It is a symbol of knowledge rather than the reality which is vouchsafed to us. The Organon of Bacon is not much nearer to actual facts than the Organon of Aristotle or the Platonic idea of good. Many of the old rags and ribbons which defaced the garment of philosophy have been stripped off, but some of them still adhere. A crude conception of the ideas of Plato survives in the 'forms' of Bacon. And on the other hand, there are many passages of Plato in which the importance of the investigation of facts is as

much insisted upon as by Bacon. Both are almost equally superior to the illusions of language, and are constantly crying out against them, as against other idols.

Locke cannot be truly regarded as the author of sensationalism any more than of idealism. His system is based upon experience, but with him experience includes reflection as well as sense. His analysis and construction of ideas has no foundation in fact; it is only the dialectic of the mind 'talking to herself.' The philosophy of Berkeley is but the transposition of two words. For objects of sense he would substitute sensations. He imagines himself to have changed the relation of the human mind towards God and nature; they remain the same as before, though he has drawn the imaginary line by which they are divided at a different point. He has annihilated the outward world, but it instantly reappears governed by the same laws and described under the same names.

A like remark applies to David Hume, of whose philosophy the central principle is the denial of the relation of cause and effect. He would deprive men of a familiar term which they can ill afford to lose; but he seems not to have observed that this alteration is merely verbal and does not in any degree affect the nature of things. Still less did he remark that he was arguing from the necessary imperfection of language against the most certain facts. And here, again, we may find a parallel with the ancients. He goes beyond facts in his scepticism, as they did in their idealism. Like the ancient Sophists, he relegates the more important principles of ethics to custom and probability. But crude and unmeaning as this philosophy is, it exercised a great influence on his successors, not unlike that which Locke exercised upon Berkeley and Berkeley upon Hume himself. All three were both sceptical and ideal in almost equal degrees. Neither they nor their predecessors had any true conception of language or of the history of philosophy. Hume's paradox has been forgotten by the world, and did not any more than the scepticism of the ancients require to be seriously refuted. Like some other philosophical paradoxes, it would have been better left to die out. It certainly could not be refuted by a philosophy such as Kant's, in which, no less than in the previously mentioned systems, the history of the human mind and the nature of language are almost wholly ignored, and the certainty of objective knowledge is transferred to the subject; while absolute truth is reduced to a figment, more abstract and narrow than Plato's ideas, of 'thing in itself,' to which, if we reason strictly, no predicate can be applied.

The question which Plato has raised respecting the origin and nature of ideas belongs to the infancy of philosophy; in modern times it would no longer be asked. Their origin is only their history, so far as we know it; there can be no other. We may trace them in language, in philosophy, in mythology, in poetry, but we cannot argue a priori about them. We may attempt to shake them off, but they are always returning, and in every sphere of science and human action are tending to go beyond facts. They are thought to be innate, because they have been familiar to us all our lives, and we can no longer dismiss them from our mind. Many of them express relations of terms to which nothing exactly or nothing at all in rerum natura corresponds. We are not such free agents in the use of them as we sometimes imagine. Fixed ideas have taken the most complete possession of some thinkers who have been most determined to renounce them, and have been vehemently affirmed when they could be least explained and were incapable of proof. The world has often been led away by a word to which no distinct meaning could be attached. Abstractions such as 'authority,' 'equality,' 'utility,' 'liberty,' 'pleasure,' 'experience,' 'consciousness,' 'chance,' 'substance,' 'matter,' 'atom,' and a heap of other metaphysical and theological terms, are the source of quite as much error and illusion and have as little relation to actual facts as the ideas of Plato. Few students of theology or philosophy have

sufficiently reflected how quickly the bloom of a philosophy passes away; or how hard it is for one age to understand the writings of another; or how nice a judgment is required of those who are seeking to express the philosophy of one age in the terms of another. The 'eternal truths' of which metaphysicians speak have hardly ever lasted more than a generation. In our own day schools or systems of philosophy which have once been famous have died before the founders of them. We are still, as in Plato's age, groping about for a new method more comprehensive than any of those which now prevail; and also more permanent. And we seem to see at a distance the promise of such a method, which can hardly be any other than the method of idealized experience, having roots which strike far down into the history of philosophy. It is a method which does not divorce the present from the past, or the part from the whole, or the abstract from the concrete, or theory from fact, or the divine from the human, or one science from another, but labours to connect them. Along such a road we have proceeded a few steps, sufficient, perhaps, to make us reflect on the want of method which prevails in our own day. In another age, all the branches of knowledge, whether relating to God or man or nature, will become the knowledge of 'the revelation of a single science' (Symp.), and all things, like the stars in heaven, will shed their light upon one another.

MENO

PERSONS OF THE DIALOGUE: Meno, Socrates, A Slave of Meno (Boy), Anytus.

MENO: Can you tell me, Socrates, whether virtue is acquired by teaching or by practice; or if neither by teaching nor by practice, then whether it comes to man by nature, or in what other way?

SOCRATES: O Meno, there was a time when the Thessalians were famous among the other Hellenes only for their riches and their riding; but now, if I am not mistaken, they are equally famous for their wisdom, especially at Larisa, which is the native city of your friend Aristippus. And this is Gorgias' doing; for when he came there, the flower of the Aleuadae, among them your admirer Aristippus, and the other chiefs of the Thessalians, fell in love with his wisdom. And he has taught you the habit of answering questions in a grand and bold style, which becomes those who know, and is the style in which he himself answers all comers; and any Hellene who likes may ask him anything. How different is our lot! my dear Meno. Here at Athens there is a dearth of the commodity, and all wisdom seems to have emigrated from us to you. I am certain that if you were to ask any Athenian whether virtue was natural or acquired, he would laugh in your face, and say: 'Stranger, you have far too good an opinion of me, if you think that I can answer your question. For I literally do not know what virtue is, and much less whether it is acquired by teaching or not.' And I myself, Meno, living as I do in this region of poverty, am as poor as the rest of the world; and I confess with shame that I know literally nothing about virtue; and when I do not know the 'quid' of anything how can I know the 'quale'? How, if I knew nothing at all of Meno, could I tell if he was fair, or the opposite of fair; rich and noble, or the reverse of rich and noble? Do you think that I could?

MENO: No, indeed. But are you in earnest, Socrates, in saying that you do not know what virtue is? And am I to carry back this report of you to Thessaly?

SOCRATES: Not only that, my dear boy, but you may say further that I have never known of any one else who did, in my judgment.

MENO: Then you have never met Gorgias when he was at Athens?

SOCRATES: Yes, I have.

MENO: And did you not think that he knew?

SOCRATES: I have not a good memory, Meno, and therefore I cannot now tell what I thought of him at the time. And I dare say that he did know, and that you know what he said: please, therefore, to remind me of what he said; or, if you would rather, tell me your own view; for I suspect that you and he think much alike.

MENO: Very true.

SOCRATES: Then as he is not here, never mind him, and do you tell me: By the gods, Meno, be generous, and tell me what you say that virtue is; for I shall be truly delighted to find that I have been mistaken, and that you and Gorgias do really have this knowledge; although I have been just saying that I have never found anybody who had.

MENO: There will be no difficulty, Socrates, in answering your question. Let us take first the virtue of a man—he should know how to administer the state, and in the administration of it to benefit his friends and harm his enemies; and he must also be careful not to suffer harm himself. A woman's virtue, if you wish to know about that, may also be easily described: her duty is to order her house, and keep what is indoors, and obey her husband. Every age, every condition of life, young or old, male or female, bond or free, has a different virtue: there are virtues numberless, and no lack of definitions of them; for virtue is relative to the actions and ages of each of us in all that we do. And the same may be said of vice, Socrates (Compare Arist. Pol.).

SOCRATES: How fortunate I am, Meno! When I ask you for one virtue, you present me with a swarm of them (Compare Theaet.), which are in your keeping. Suppose that I carry on the figure of the swarm, and ask of you, What is the nature of the bee? and you answer that there are many kinds of bees, and I reply: But do bees differ as bees, because there are many and different kinds of them; or are they not rather to be distinguished by some other quality, as for example beauty, size, or shape? How would you answer me?

MENO: I should answer that bees do not differ from one another, as bees.

SOCRATES: And if I went on to say: That is what I desire to know, Meno; tell me what is the quality in which they do not differ, but are all alike;—would you be able to answer?

MENO: I should.

SOCRATES: And so of the virtues, however many and different they may be, they have all a common nature which makes them virtues; and on this he who would answer the question, 'What is virtue?' would do well to have his eye fixed: Do you understand?

MENO: I am beginning to understand; but I do not as yet take hold of the question as I could wish.

SOCRATES: When you say, Meno, that there is one virtue of a man, another of a woman, another of a child, and so on, does this apply only to virtue, or would you say the same of health, and size, and strength? Or is the nature of health always the same, whether in man or woman?

MENO: I should say that health is the same, both in man and woman.

SOCRATES: And is not this true of size and strength? If a woman is strong, she will be strong by reason of the same form and of the same strength subsisting in her which there is in the man. I mean to say that strength, as strength, whether of man or woman, is the same. Is there any difference?

MENO: I think not.

SOCRATES: And will not virtue, as virtue, be the same, whether in a child or in a grown-up person, in a woman or in a man?

MENO: I cannot help feeling, Socrates, that this case is different from the others.

SOCRATES: But why? Were you not saying that the virtue of a man was to order a state, and the virtue of a woman was to order a house?

MENO: I did say so.

SOCRATES: And can either house or state or anything be well ordered without temperance and without justice?

MENO: Certainly not.

SOCRATES: Then they who order a state or a house temperately or justly order them with temperance and justice?

MENO: Certainly.

SOCRATES: Then both men and women, if they are to be good men and women, must have the same virtues of temperance and justice?

MENO: True.

SOCRATES: And can either a young man or an elder one be good, if they are intemperate and unjust?

MENO: They cannot.

SOCRATES: They must be temperate and just?

MENO: Yes.

SOCRATES: Then all men are good in the same way, and by participation in the same virtues?

MENO: Such is the inference.

SOCRATES: And they surely would not have been good in the same way, unless their virtue had been the same?

MENO: They would not.

SOCRATES: Then now that the sameness of all virtue has been proven, try and remember what you and Gorgias say that virtue is.

MENO: Will you have one definition of them all?

SOCRATES: That is what I am seeking.

MENO: If you want to have one definition of them all, I know not what to say, but that virtue is the power of governing mankind.

SOCRATES: And does this definition of virtue include all virtue? Is virtue the same in a child and in a slave, Meno? Can the child govern his father, or the slave his master; and would he who governed be any longer a slave?

MENO: I think not, Socrates.

SOCRATES: No, indeed; there would be small reason in that. Yet once more, fair friend; according to you, virtue is 'the power of governing;' but do you not add 'justly and not unjustly'?

MENO: Yes, Socrates; I agree there; for justice is virtue.

SOCRATES: Would you say 'virtue,' Meno, or 'a virtue'?

MENO: What do you mean?

SOCRATES: I mean as I might say about anything; that a round, for example, is 'a figure' and not simply 'figure,' and I should adopt this mode of speaking, because there are other figures.

MENO: Quite right; and that is just what I am saying about virtue—that there are other virtues as well as justice.

SOCRATES: What are they? tell me the names of them, as I would tell you the names of the other figures if you asked me.

MENO: Courage and temperance and wisdom and magnanimity are virtues; and there are many others.

SOCRATES: Yes, Meno; and again we are in the same case: in searching after one virtue we have found many, though not in the same way as before; but we have been unable to find the common virtue which runs through them all.

MENO: Why, Socrates, even now I am not able to follow you in the attempt to get at one common notion of virtue as of other things.

SOCRATES: No wonder; but I will try to get nearer if I can, for you know that all things have a common notion. Suppose now that some one asked you the question which I asked before: Meno, he would say, what is figure? And if you answered 'roundness,' he would reply to you, in my way of speaking, by asking whether you would say that roundness is 'figure' or 'a figure;' and you would answer 'a figure.'

MENO: Certainly.

SOCRATES: And for this reason—that there are other figures?

MENO: Yes.

SOCRATES: And if he proceeded to ask, What other figures are there? you would have told him.

MENO: I should.

SOCRATES: And if he similarly asked what colour is, and you answered whiteness, and the questioner rejoined, Would you say that whiteness is colour or a colour? you would reply, A colour, because there are other colours as well.

MENO: I should.

SOCRATES: And if he had said, Tell me what they are?—you would have told him of other colours which are colours just as much as whiteness.

MENO: Yes.

SOCRATES: And suppose that he were to pursue the matter in my way, he would say: Ever and anon we are landed in particulars, but this is not what I want; tell me then, since you call them by a common name, and say that they are all figures, even when opposed to one another, what is that common nature which you designate as figure—which contains straight as well as round, and is no more one than the other—that would be your mode of speaking?

MENO: Yes.

SOCRATES: And in speaking thus, you do not mean to say that the round is round any more than straight, or the straight any more straight than round?

MENO: Certainly not.

SOCRATES: You only assert that the round figure is not more a figure than the straight, or the straight than the round?

MENO: Very true.

SOCRATES: To what then do we give the name of figure? Try and answer. Suppose that when a person asked you this question either about figure or colour, you were to reply, Man, I do not understand what you want, or know what you are saying; he would look rather astonished and say: Do you not understand that I am looking for the 'simile in multis'? And then he might put the question in another form: Meno, he might say, what is that 'simile in multis' which you call figure, and which includes not only round and straight figures, but all? Could you not answer that question, Meno? I wish that you would try; the attempt will be good practice with a view to the answer about virtue.

MENO: I would rather that you should answer, Socrates.

SOCRATES: Shall I indulge you?

MENO: By all means.

SOCRATES: And then you will tell me about virtue?

MENO: I will.

SOCRATES: Then I must do my best, for there is a prize to be won.

MENO: Certainly.

SOCRATES: Well, I will try and explain to you what figure is. What do you say to this answer?—Figure is the only thing which always follows colour. Will you be satisfied with it, as I am sure that I should be, if you would let me have a similar definition of virtue?

MENO: But, Socrates, it is such a simple answer.

SOCRATES: Why simple?

MENO: Because, according to you, figure is that which always follows colour.

(SOCRATES: Granted.)

MENO: But if a person were to say that he does not know what colour is, any more than what figure is—what sort of answer would you have given him?

SOCRATES: I should have told him the truth. And if he were a philosopher of the eristic and antagonistic sort, I should say to him: You have my answer, and if I am wrong, your business is to take up the argument and refute me. But if we were friends, and were talking as you and I are now, I should reply in a milder strain and more in the dialectician's vein; that is to say, I should not only speak the truth, but I should make use of premises which the person interrogated would be willing to admit. And this is the way in which I shall endeavour to approach you. You will acknowledge, will you not, that there is such a thing as an end, or termination, or extremity?—all which words I use in the same sense, although I am aware that Prodicus might draw distinctions about them: but still you, I am sure, would speak of a thing as ended or terminated—that is all which I am saying—not anything very difficult.

MENO: Yes, I should; and I believe that I understand your meaning.

SOCRATES: And you would speak of a surface and also of a solid, as for example in geometry.

MENO: Yes.

SOCRATES: Well then, you are now in a condition to understand my definition of figure. I define figure to be that in which the solid ends; or, more concisely, the limit of solid.

MENO: And now, Socrates, what is colour?

SOCRATES: You are outrageous, Meno, in thus plaguing a poor old man to give you an answer, when you will not take the trouble of remembering what is Gorgias' definition of virtue.

MENO: When you have told me what I ask, I will tell you, Socrates.

SOCRATES: A man who was blindfolded has only to hear you talking, and he would know that you are a fair creature and have still many lovers.

MENO: Why do you think so?

SOCRATES: Why, because you always speak in imperatives: like all beauties when they are in their prime, you are tyrannical; and also, as I suspect, you have found out that I have weakness for the fair, and therefore to humour you I must answer.

MENO: Please do.

SOCRATES: Would you like me to answer you after the manner of Gorgias, which is familiar to you?

MENO: I should like nothing better.

SOCRATES: Do not he and you and Empedocles say that there are certain effluences of existence?

MENO: Certainly.

SOCRATES: And passages into which and through which the effluences pass?

MENO: Exactly.

SOCRATES: And some of the effluences fit into the passages, and some of them are too small or too large?

MENO: True.

SOCRATES: And there is such a thing as sight?

MENO: Yes.

SOCRATES: And now, as Pindar says, 'read my meaning:'—colour is an effluence of form, commensurate with sight, and palpable to sense.

MENO: That, Socrates, appears to me to be an admirable answer.

SOCRATES: Why, yes, because it happens to be one which you have been in the habit of hearing: and your wit will have discovered, I suspect, that you may explain in the same way the nature of sound and smell, and of many other similar phenomena.

MENO: Quite true.

SOCRATES: The answer, Meno, was in the orthodox solemn vein, and therefore was more acceptable to you than the other answer about figure.

MENO: Yes.

SOCRATES: And yet, O son of Alexidemus, I cannot help thinking that the other was the better; and I am sure that you would be of the same opinion, if you would only stay and be initiated, and were not compelled, as you said yesterday, to go away before the mysteries.

MENO: But I will stay, Socrates, if you will give me many such answers.

SOCRATES: Well then, for my own sake as well as for yours, I will do my very best; but I am afraid that I shall not be able to give you very many as good: and now, in your turn, you are to fulfil your promise, and tell me what virtue is in the universal; and do not make a singular into a plural, as the facetious say of those who break a thing, but deliver virtue to me whole and sound, and not broken into a number of pieces: I have given you the pattern.

MENO: Well then, Socrates, virtue, as I take it, is when he, who desires the honourable, is able to provide it for himself; so the poet says, and I say too—

'Virtue is the desire of things honourable and the power of attaining them.'

SOCRATES: And does he who desires the honourable also desire the good?

MENO: Certainly.

SOCRATES: Then are there some who desire the evil and others who desire the good? Do not all men, my dear sir, desire good?

MENO: I think not.

SOCRATES: There are some who desire evil?

MENO: Yes.

SOCRATES: Do you mean that they think the evils which they desire, to be good; or do they know that they are evil and yet desire them?

MENO: Both, I think.

SOCRATES: And do you really imagine, Meno, that a man knows evils to be evils and desires them notwithstanding?

MENO: Certainly I do.

SOCRATES: And desire is of possession?

MENO: Yes, of possession.

SOCRATES: And does he think that the evils will do good to him who possesses them, or does he know that they will do him harm?

MENO: There are some who think that the evils will do them good, and others who know that they will do them harm.

SOCRATES: And, in your opinion, do those who think that they will do them good know that they are evils?

MENO: Certainly not.

SOCRATES: Is it not obvious that those who are ignorant of their nature do not desire them; but they desire what they suppose to be goods although they are really evils; and if they are mistaken and suppose the evils to be goods they really desire goods?

MENO: Yes, in that case.

SOCRATES: Well, and do those who, as you say, desire evils, and think that evils are hurtful to the possessor of them, know that they will be hurt by them?

MENO: They must know it.

SOCRATES: And must they not suppose that those who are hurt are miserable in proportion to the hurt which is inflicted upon them?

MENO: How can it be otherwise?

SOCRATES: But are not the miserable ill-fated?

MENO: Yes, indeed.

SOCRATES: And does any one desire to be miserable and ill-fated?

MENO: I should say not, Socrates.

SOCRATES: But if there is no one who desires to be miserable, there is no one, Meno, who desires evil; for what is misery but the desire and possession of evil?

MENO: That appears to be the truth, Socrates, and I admit that nobody desires evil.

SOCRATES: And yet, were you not saying just now that virtue is the desire and power of attaining good?

MENO: Yes, I did say so.

SOCRATES: But if this be affirmed, then the desire of good is common to all, and one man is no better than another in that respect?

MENO: True.

SOCRATES: And if one man is not better than another in desiring good, he must be better in the power of attaining it?

MENO: Exactly.

SOCRATES: Then, according to your definition, virtue would appear to be the power of attaining good?

MENO: I entirely approve, Socrates, of the manner in which you now view this matter.

SOCRATES: Then let us see whether what you say is true from another point of view; for very likely you may be right:—You affirm virtue to be the power of attaining goods?

MENO: Yes.

SOCRATES: And the goods which you mean are such as health and wealth and the possession of gold and silver, and having office and honour in the state—those are what you would call goods?

MENO: Yes, I should include all those.

SOCRATES: Then, according to Meno, who is the hereditary friend of the great king, virtue is the power of getting silver and gold; and would you add that they must be gained piously, justly, or do you deem this to be of no consequence? And is any mode of acquisition, even if unjust and dishonest, equally to be deemed virtue?

MENO: Not virtue, Socrates, but vice.

SOCRATES: Then justice or temperance or holiness, or some other part of virtue, as would appear, must accompany the acquisition, and without them the mere acquisition of good will not be virtue.

MENO: Why, how can there be virtue without these?

SOCRATES: And the non-acquisition of gold and silver in a dishonest manner for oneself or another, or in other words the want of them, may be equally virtue?

MENO: True.

SOCRATES: Then the acquisition of such goods is no more virtue than the non-acquisition and want of them, but whatever is accompanied by justice or honesty is virtue, and whatever is devoid of justice is vice.

MENO: It cannot be otherwise, in my judgment.

SOCRATES: And were we not saying just now that justice, temperance, and the like, were each of them a part of virtue?

MENO: Yes.

SOCRATES: And so, Meno, this is the way in which you mock me.

MENO: Why do you say that, Socrates?

SOCRATES: Why, because I asked you to deliver virtue into my hands whole and unbroken, and I gave you a pattern according to which you were to frame your answer; and you have forgotten already, and tell me that virtue is the power of attaining good justly, or with justice; and justice you acknowledge to be a part of virtue.

MENO: Yes.

SOCRATES: Then it follows from your own admissions, that virtue is doing what you do with a part of virtue; for justice and the like are said by you to be parts of virtue.

MENO: What of that?

SOCRATES: What of that! Why, did not I ask you to tell me the nature of virtue as a whole? And you are very far from telling me this; but declare every action to be virtue which is done with a part of virtue; as though you had told me and I must already know the whole of virtue, and this too when frittered away into little pieces. And, therefore, my dear Meno, I fear that I must begin again and repeat the same question: What is virtue? for otherwise, I can only say, that every action done with a part of virtue is virtue; what else is the meaning of saying that every action done with justice is virtue? Ought I not to ask the question over again; for can any one who does not know virtue know a part of virtue?

MENO: No; I do not say that he can.

SOCRATES: Do you remember how, in the example of figure, we rejected any answer given in terms which were as yet unexplained or unadmitted?

MENO: Yes, Socrates; and we were quite right in doing so.

SOCRATES: But then, my friend, do not suppose that we can explain to any one the nature of virtue as a whole through some unexplained portion of virtue, or anything at all in that fashion; we should only have to ask over again the old question, What is virtue? Am I not right?

MENO: I believe that you are.

SOCRATES: Then begin again, and answer me, What, according to you and your friend Gorgias, is the definition of virtue?

MENO: O Socrates, I used to be told, before I knew you, that you were always doubting yourself and making others doubt; and now you are casting your spells over me, and I am simply getting bewitched and enchanted, and am at my wits' end. And if I may venture to make a jest upon you, you seem to me both in your appearance and in your power over others to be very like the flat torpedo fish, who torpifies those who come near him and touch him, as you have now torpified me, I think. For my soul and my tongue are really torpid, and I do not know how to answer you; and though I have been delivered of an infinite variety of speeches about virtue before now, and to many persons—and very good ones they were, as I thought—at this moment I cannot even say what virtue is. And I think that you are very wise in not voyaging and going away from home, for if you did in other places as you do in Athens, you would be cast into prison as a magician.

SOCRATES: You are a rogue, Meno, and had all but caught me.

MENO: What do you mean, Socrates?

SOCRATES: I can tell why you made a simile about me.

MENO: Why?

SOCRATES: In order that I might make another simile about you. For I know that all pretty young gentlemen like to have pretty similes made about them—as well they may—but I shall not return the compliment. As to my being a torpedo, if the torpedo is torpid as well as the cause of torpidity in others, then indeed I am a torpedo, but not otherwise; for I perplex others, not because I am clear, but because I am utterly perplexed myself. And now I know not what virtue is, and you seem to be in the same case, although you did once perhaps know before you touched me. However, I have no objection to join with you in the enquiry.

MENO: And how will you enquire, Socrates, into that which you do not know? What will you put forth as the subject of enquiry? And if you find what you want, how will you ever know that this is the thing which you did not know?

SOCRATES: I know, Meno, what you mean; but just see what a tiresome dispute you are introducing. You argue that a man cannot enquire either about that which he knows, or about that which he does not know; for if he knows, he has no need to enquire; and if not, he cannot; for he does not know the very subject about which he is to enquire (Compare Aristot. Post. Anal.).

MENO: Well, Socrates, and is not the argument sound?

SOCRATES: I think not.

MENO: Why not?

SOCRATES: I will tell you why: I have heard from certain wise men and women who spoke of things divine that—

MENO: What did they say?

SOCRATES: They spoke of a glorious truth, as I conceive.

MENO: What was it? and who were they?

SOCRATES: Some of them were priests and priestesses, who had studied how they might be able to give a reason of their profession: there have been poets also, who spoke of these things by inspiration, like Pindar, and many others who were inspired. And they say—mark, now, and see whether their words are true—they say that the soul of man is immortal, and at one time has an end, which is termed dying, and at another time is born again, but is never destroyed. And the moral is, that a man ought to live always in perfect holiness. 'For in the ninth year Persephone sends the souls of those from whom she has received the penalty of ancient crime back again from beneath into the light of the sun above, and these are they who become noble kings and mighty men and great in wisdom and are called saintly heroes in after ages.' The soul, then, as being immortal, and having been born again many times, and having seen all things that exist, whether in this world or in the world below, has knowledge of them all; and it is no wonder that she should be able to call to remembrance all that she ever knew about virtue, and about everything; for as all nature is akin, and

the soul has learned all things; there is no difficulty in her eliciting or as men say learning, out of a single recollection all the rest, if a man is strenuous and does not faint; for all enquiry and all learning is but recollection. And therefore we ought not to listen to this sophistical argument about the impossibility of enquiry: for it will make us idle; and is sweet only to the sluggard; but the other saying will make us active and inquisitive. In that confiding, I will gladly enquire with you into the nature of virtue.

MENO: Yes, Socrates; but what do you mean by saying that we do not learn, and that what we call learning is only a process of recollection? Can you teach me how this is?

SOCRATES: I told you, Meno, just now that you were a rogue, and now you ask whether I can teach you, when I am saying that there is no teaching, but only recollection; and thus you imagine that you will involve me in a contradiction.

MENO: Indeed, Socrates, I protest that I had no such intention. I only asked the question from habit; but if you can prove to me that what you say is true, I wish that you would.

SOCRATES: It will be no easy matter, but I will try to please you to the utmost of my power. Suppose that you call one of your numerous attendants, that I may demonstrate on him.

MENO: Certainly. Come hither, boy.

SOCRATES: He is Greek, and speaks Greek, does he not?

MENO: Yes, indeed; he was born in the house.

SOCRATES: Attend now to the questions which I ask him, and observe whether he learns of me or only remembers.

MENO: I will.

SOCRATES: Tell me, boy, do you know that a figure like this is a square?

BOY: I do.

SOCRATES: And you know that a square figure has these four lines equal?

BOY: Certainly.

SOCRATES: And these lines which I have drawn through the middle of the square are also equal?

BOY: Yes.

SOCRATES: A square may be of any size?

BOY: Certainly.

SOCRATES: And if one side of the figure be of two feet, and the other side be of two feet, how much will the whole be? Let me explain: if in one direction the space was of two feet, and in the other direction of one foot, the whole would be of two feet taken once?

BOY: Yes.

SOCRATES: But since this side is also of two feet, there are twice two feet?

BOY: There are.

SOCRATES: Then the square is of twice two feet?

BOY: Yes.

SOCRATES: And how many are twice two feet? count and tell me.

BOY: Four, Socrates.

SOCRATES: And might there not be another square twice as large as this, and having like this the lines equal?

BOY: Yes.

SOCRATES: And of how many feet will that be?

BOY: Of eight feet.

SOCRATES: And now try and tell me the length of the line which forms the side of that double square: this is two feet—what will that be?

BOY: Clearly, Socrates, it will be double.

SOCRATES: Do you observe, Meno, that I am not teaching the boy anything, but only asking him questions; and now he fancies that he knows how long a line is necessary in order to produce a figure of eight square feet; does he not?

MENO: Yes.

SOCRATES: And does he really know?

MENO: Certainly not.

SOCRATES: He only guesses that because the square is double, the line is double.

MENO: True.

SOCRATES: Observe him while he recalls the steps in regular order. (To the Boy:) Tell me, boy, do you assert that a double space comes from a double line? Remember that I am not speaking of an oblong, but of a figure equal every way, and twice the size of this—that is to say of eight feet; and I want to know whether you still say that a double square comes from double line?

BOY: Yes.

SOCRATES: But does not this line become doubled if we add another such line here?

BOY: Certainly.

SOCRATES: And four such lines will make a space containing eight feet?

BOY: Yes.

SOCRATES: Let us describe such a figure: Would you not say that this is the figure of eight feet?

BOY: Yes.

SOCRATES: And are there not these four divisions in the figure, each of which is equal to the figure of four feet?

BOY: True.

SOCRATES: And is not that four times four?

BOY: Certainly.

SOCRATES: And four times is not double?

BOY: No, indeed.

SOCRATES: But how much?

BOY: Four times as much.

SOCRATES: Therefore the double line, boy, has given a space, not twice, but four times as much.

BOY: True.

SOCRATES: Four times four are sixteen—are they not?

BOY: Yes.

SOCRATES: What line would give you a space of eight feet, as this gives one of sixteen feet;—do you see?

BOY: Yes.

SOCRATES: And the space of four feet is made from this half line?

BOY: Yes.

SOCRATES: Good; and is not a space of eight feet twice the size of this, and half the size of the other?

BOY: Certainly.

SOCRATES: Such a space, then, will be made out of a line greater than this one, and less than that one?

BOY: Yes; I think so.

SOCRATES: Very good; I like to hear you say what you think. And now tell me, is not this a line of two feet and that of four?

BOY: Yes.

SOCRATES: Then the line which forms the side of eight feet ought to be more than this line of two feet, and less than the other of four feet?

BOY: It ought.

SOCRATES: Try and see if you can tell me how much it will be.

BOY: Three feet.

SOCRATES: Then if we add a half to this line of two, that will be the line of three. Here are two and there is one; and on the other side, here are two also and there is one: and that makes the figure of which you speak?

BOY: Yes.

SOCRATES: But if there are three feet this way and three feet that way, the whole space will be three times three feet?

BOY: That is evident.

SOCRATES: And how much are three times three feet?

BOY: Nine.

SOCRATES: And how much is the double of four?

BOY: Eight.

SOCRATES: Then the figure of eight is not made out of a line of three?

BOY: No.

SOCRATES: But from what line?—tell me exactly; and if you would rather not reckon, try and show me the line.

BOY: Indeed, Socrates, I do not know.

SOCRATES: Do you see, Meno, what advances he has made in his power of recollection? He did not know at first, and he does not know now, what is the side of a figure of eight feet: but then he thought that he knew, and answered confidently as if he knew, and had no difficulty; now he has a difficulty, and neither knows nor fancies that he knows.

MENO: True.

SOCRATES: Is he not better off in knowing his ignorance?

MENO: I think that he is.

SOCRATES: If we have made him doubt, and given him the 'torpedo's shock,' have we done him any harm?

MENO: I think not.

SOCRATES: We have certainly, as would seem, assisted him in some degree to the discovery of the truth; and now he will wish to remedy his ignorance, but then he would have been ready to tell all the world again and again that the double space should have a double side.

MENO: True.

SOCRATES: But do you suppose that he would ever have enquired into or learned what he fancied that he knew, though he was really ignorant of it, until he had fallen into perplexity under the idea that he did not know, and had desired to know?

MENO: I think not, Socrates.

SOCRATES: Then he was the better for the torpedo's touch?

MENO: I think so.

SOCRATES: Mark now the farther development. I shall only ask him, and not teach him, and he shall share the enquiry with me: and do you watch and see if you find me telling or explaining anything to him, instead of eliciting his opinion. Tell me, boy, is not this a square of four feet which I have drawn?

BOY: Yes.

SOCRATES: And now I add another square equal to the former one?

BOY: Yes.

SOCRATES: And a third, which is equal to either of them?

BOY: Yes.

SOCRATES: Suppose that we fill up the vacant corner?

BOY: Very good.

SOCRATES: Here, then, there are four equal spaces?

BOY: Yes.

SOCRATES: And how many times larger is this space than this other?

BOY: Four times.

SOCRATES: But it ought to have been twice only, as you will remember.

BOY: True.

SOCRATES: And does not this line, reaching from corner to corner, bisect each of these spaces?

BOY: Yes.

SOCRATES: And are there not here four equal lines which contain this space?

BOY: There are.

SOCRATES: Look and see how much this space is.

BOY: I do not understand.

SOCRATES: Has not each interior line cut off half of the four spaces?

BOY: Yes.

SOCRATES: And how many spaces are there in this section?

BOY: Four.

SOCRATES: And how many in this?

BOY: Two.

SOCRATES: And four is how many times two?

BOY: Twice.

SOCRATES: And this space is of how many feet?

BOY: Of eight feet.

SOCRATES: And from what line do you get this figure?

BOY: From this.

SOCRATES: That is, from the line which extends from corner to corner of the figure of four feet?

BOY: Yes.

SOCRATES: And that is the line which the learned call the diagonal. And if this is the proper name, then you, Meno's slave, are prepared to affirm that the double space is the square of the diagonal?

BOY: Certainly, Socrates.

SOCRATES: What do you say of him, Meno? Were not all these answers given out of his own head?

MENO: Yes, they were all his own.

SOCRATES: And yet, as we were just now saying, he did not know?

MENO: True.

SOCRATES: But still he had in him those notions of his—had he not?

MENO: Yes.

SOCRATES: Then he who does not know may still have true notions of that which he does not know?

MENO: He has.

SOCRATES: And at present these notions have just been stirred up in him, as in a dream; but if he were frequently asked the same questions, in different forms, he would know as well as any one at last?

MENO: I dare say.

SOCRATES: Without any one teaching him he will recover his knowledge for himself, if he is only asked questions?

MENO: Yes.

SOCRATES: And this spontaneous recovery of knowledge in him is recollection?

MENO: True.

SOCRATES: And this knowledge which he now has must he not either have acquired or always possessed?

MENO: Yes.

SOCRATES: But if he always possessed this knowledge he would always have known; or if he has acquired the knowledge he could not have acquired it in this life, unless he has been taught geometry; for he may be made to do the same with all geometry and every other branch of knowledge. Now, has any one ever taught him all this? You must know about him, if, as you say, he was born and bred in your house.

MENO: And I am certain that no one ever did teach him.

SOCRATES: And yet he has the knowledge?

MENO: The fact, Socrates, is undeniable.

SOCRATES: But if he did not acquire the knowledge in this life, then he must have had and learned it at some other time?

MENO: Clearly he must.

SOCRATES: Which must have been the time when he was not a man?

MENO: Yes.

SOCRATES: And if there have been always true thoughts in him, both at the time when he was and was not a man, which only need to be awakened into knowledge by putting questions to him, his soul must have always possessed this knowledge, for he always either was or was not a man?

MENO: Obviously.

SOCRATES: And if the truth of all things always existed in the soul, then the soul is immortal. Wherefore be of good cheer, and try to recollect what you do not know, or rather what you do not remember.

MENO: I feel, somehow, that I like what you are saying.

SOCRATES: And I, Meno, like what I am saying. Some things I have said of which I am not altogether confident. But that we shall be better and braver and less helpless if we think that we ought to enquire, than we should have been if we indulged in the idle fancy that there was no knowing and no use in seeking to know what we do not know;—that is a theme upon which I am ready to fight, in word and deed, to the utmost of my power.

MENO: There again, Socrates, your words seem to me excellent.

SOCRATES: Then, as we are agreed that a man should enquire about that which he does not know, shall you and I make an effort to enquire together into the nature of virtue?

MENO: By all means, Socrates. And yet I would much rather return to my original question, Whether in seeking to acquire virtue we should regard it as a thing to be taught, or as a gift of nature, or as coming to men in some other way?

SOCRATES: Had I the command of you as well as of myself, Meno, I would not have enquired whether virtue is given by instruction or not, until we had first ascertained 'what it is.' But as you think only of controlling me who am your slave, and never of controlling yourself,—such being your notion of freedom, I must yield to you, for you are irresistible. And therefore I have now to enquire into the qualities of a thing of which I do not as yet know the nature. At any rate, will you condescend a little, and allow the question 'Whether virtue is given by instruction, or in any other way,' to be argued upon hypothesis? As the geometrician, when he is asked whether a certain triangle is capable being inscribed in a certain circle (Or, whether a certain area is capable of being inscribed as a triangle in a certain circle.), will reply: 'I cannot tell you as yet; but I will offer a hypothesis which may assist us in forming a conclusion: If the figure be such that when you have produced a given side of it (Or, when you apply it to the given line, i.e. the diameter of the circle (autou).), the given area of the triangle falls short by an area corresponding to the part produced (Or, similar to the area so applied.), then one consequence follows, and if this is impossible then some other; and therefore I wish to assume a hypothesis before I tell you whether this triangle is capable of being inscribed in the circle':—that is a geometrical hypothesis. And we too, as we know not the nature and qualities of virtue, must ask, whether virtue is or is not taught, under a hypothesis: as thus, if virtue is of such a class of mental goods, will it be taught or not? Let the first hypothesis be that virtue is or is not knowledge,—in that case will it be taught or not? or, as we were just now saying, 'remembered'? For there is no use in disputing about the name. But is virtue taught or not? or rather, does not every one see that knowledge alone is taught?

MENO: I agree.

SOCRATES: Then if virtue is knowledge, virtue will be taught?

MENO: Certainly.

SOCRATES: Then now we have made a quick end of this question: if virtue is of such a nature, it will be taught; and if not, not?

MENO: Certainly.

SOCRATES: The next question is, whether virtue is knowledge or of another species?

MENO: Yes, that appears to be the question which comes next in order.

SOCRATES: Do we not say that virtue is a good?—This is a hypothesis which is not set aside.

MENO: Certainly.

SOCRATES: Now, if there be any sort of good which is distinct from knowledge, virtue may be that good; but if knowledge embraces all good, then we shall be right in thinking that virtue is knowledge?

MENO: True.

SOCRATES: And virtue makes us good?

MENO: Yes.

SOCRATES: And if we are good, then we are profitable; for all good things are profitable?

MENO: Yes.

SOCRATES: Then virtue is profitable?

MENO: That is the only inference.

SOCRATES: Then now let us see what are the things which severally profit us. Health and strength, and beauty and wealth—these, and the like of these, we call profitable?

MENO: True.

SOCRATES: And yet these things may also sometimes do us harm: would you not think so?

MENO: Yes.

SOCRATES: And what is the guiding principle which makes them profitable or the reverse? Are they not profitable when they are rightly used, and hurtful when they are not rightly used?

MENO: Certainly.

SOCRATES: Next, let us consider the goods of the soul: they are temperance, justice, courage, quickness of apprehension, memory, magnanimity, and the like?

MENO: Surely.

SOCRATES: And such of these as are not knowledge, but of another sort, are sometimes profitable and sometimes hurtful; as, for example, courage wanting prudence, which is only a sort of

confidence? When a man has no sense he is harmed by courage, but when he has sense he is profited?

MENO: True.

SOCRATES: And the same may be said of temperance and quickness of apprehension; whatever things are learned or done with sense are profitable, but when done without sense they are hurtful?

MENO: Very true.

SOCRATES: And in general, all that the soul attempts or endures, when under the guidance of wisdom, ends in happiness; but when she is under the guidance of folly, in the opposite?

MENO: That appears to be true.

SOCRATES: If then virtue is a quality of the soul, and is admitted to be profitable, it must be wisdom or prudence, since none of the things of the soul are either profitable or hurtful in themselves, but they are all made profitable or hurtful by the addition of wisdom or of folly; and therefore if virtue is profitable, virtue must be a sort of wisdom or prudence?

MENO: I quite agree.

SOCRATES: And the other goods, such as wealth and the like, of which we were just now saying that they are sometimes good and sometimes evil, do not they also become profitable or hurtful, accordingly as the soul guides and uses them rightly or wrongly; just as the things of the soul herself are benefited when under the guidance of wisdom and harmed by folly?

MENO: True.

SOCRATES: And the wise soul guides them rightly, and the foolish soul wrongly.

MENO: Yes.

SOCRATES: And is not this universally true of human nature? All other things hang upon the soul, and the things of the soul herself hang upon wisdom, if they are to be good; and so wisdom is inferred to be that which profits—and virtue, as we say, is profitable?

MENO: Certainly.

SOCRATES: And thus we arrive at the conclusion that virtue is either wholly or partly wisdom?

MENO: I think that what you are saying, Socrates, is very true.

SOCRATES: But if this is true, then the good are not by nature good?

MENO: I think not.

SOCRATES: If they had been, there would assuredly have been discerners of characters among us who would have known our future great men; and on their showing we should have adopted them, and when we had got them, we should have kept them in the citadel out of the way of harm, and set a stamp upon them far rather than upon a piece of gold, in order that no one might tamper with them; and when they grew up they would have been useful to the state?

MENO: Yes, Socrates, that would have been the right way.

SOCRATES: But if the good are not by nature good, are they made good by instruction?

MENO: There appears to be no other alternative, Socrates. On the supposition that virtue is knowledge, there can be no doubt that virtue is taught.

SOCRATES: Yes, indeed; but what if the supposition is erroneous?

MENO: I certainly thought just now that we were right.

SOCRATES: Yes, Meno; but a principle which has any soundness should stand firm not only just now, but always.

MENO: Well; and why are you so slow of heart to believe that knowledge is virtue?

SOCRATES: I will try and tell you why, Meno. I do not retract the assertion that if virtue is knowledge it may be taught; but I fear that I have some reason in doubting whether virtue is knowledge: for consider now and say whether virtue, and not only virtue but anything that is taught, must not have teachers and disciples?

MENO: Surely.

SOCRATES: And conversely, may not the art of which neither teachers nor disciples exist be assumed to be incapable of being taught?

MENO: True; but do you think that there are no teachers of virtue?

SOCRATES: I have certainly often enquired whether there were any, and taken great pains to find them, and have never succeeded; and many have assisted me in the search, and they were the persons whom I thought the most likely to know. Here at the moment when he is wanted we fortunately have sitting by us Anytus, the very person of whom we should make enquiry; to him then let us repair. In the first place, he is the son of a wealthy and wise father, Anthemion, who acquired his wealth, not by accident or gift, like Ismenias the Theban (who has recently made himself as rich as Polycrates), but by his own skill and industry, and who is a well-conditioned, modest man, not insolent, or overbearing, or annoying; moreover, this son of his has received a good education, as the Athenian people certainly appear to think, for they choose him to fill the highest offices. And these are the sort of men from whom you are likely to learn whether there are any teachers of virtue, and who they are. Please, Anytus, to help me and your friend Meno in answering our question, Who are the

teachers? Consider the matter thus: If we wanted Meno to be a good physician, to whom should we send him? Should we not send him to the physicians?

ANYTUS: Certainly.

SOCRATES: Or if we wanted him to be a good cobbler, should we not send him to the cobblers?

ANYTUS: Yes.

SOCRATES: And so forth?

ANYTUS: Yes.

SOCRATES: Let me trouble you with one more question. When we say that we should be right in sending him to the physicians if we wanted him to be a physician, do we mean that we should be right in sending him to those who profess the art, rather than to those who do not, and to those who demand payment for teaching the art, and profess to teach it to any one who will come and learn? And if these were our reasons, should we not be right in sending him?

ANYTUS: Yes.

SOCRATES: And might not the same be said of flute-playing, and of the other arts? Would a man who wanted to make another a flute-player refuse to send him to those who profess to teach the art for money, and be plaguing other persons to give him instruction, who are not professed teachers and who never had a single disciple in that branch of knowledge which he wishes him to acquire—would not such conduct be the height of folly?

ANYTUS: Yes, by Zeus, and of ignorance too.

SOCRATES: Very good. And now you are in a position to advise with me about my friend Meno. He has been telling me, Anytus, that he desires to attain that kind of wisdom and virtue by which men order the state or the house, and honour their parents, and know when to receive and when to send away citizens and strangers, as a good man should. Now, to whom should he go in order that he may learn this virtue? Does not the previous argument imply clearly that we should send him to those who profess and avouch that they are the common teachers of all Hellas, and are ready to impart instruction to any one who likes, at a fixed price?

ANYTUS: Whom do you mean, Socrates?

SOCRATES: You surely know, do you not, Anytus, that these are the people whom mankind call Sophists?

ANYTUS: By Heracles, Socrates, forbear! I only hope that no friend or kinsman or acquaintance of mine, whether citizen or stranger, will ever be so mad as to allow himself to be corrupted by them; for they are a manifest pest and corrupting influence to those who have to do with them.

SOCRATES: What, Anytus? Of all the people who profess that they know how to do men good, do you mean to say that these are the only ones who not only do them no good, but positively corrupt those who are entrusted to them, and in return for this disservice have the face to demand money? Indeed, I cannot believe you; for I know of a single man, Protagoras, who made more out of his craft than the illustrious Pheidias, who created such noble works, or any ten other statuaries. How could that be? A mender of old shoes, or patcher up of clothes, who made the shoes or clothes worse than he received them, could not have remained thirty days undetected, and would very soon have starved; whereas during more than forty years, Protagoras was corrupting all Hellas, and sending his disciples from him worse than he received them, and he was never found out. For, if I am not mistaken, he was about seventy years old at his death, forty of which were spent in the practice of his profession; and during all that time he had a good reputation, which to this day he retains: and not only Protagoras, but many others are well spoken of; some who lived before him, and others who are still living. Now, when you say that they deceived and corrupted the youth, are they to be supposed to have corrupted them consciously or unconsciously? Can those who were deemed by many to be the wisest men of Hellas have been out of their minds?

ANYTUS: Out of their minds! No, Socrates; the young men who gave their money to them were out of their minds, and their relations and guardians who entrusted their youth to the care of these men were still more out of their minds, and most of all, the cities who allowed them to come in, and did not drive them out, citizen and stranger alike.

SOCRATES: Has any of the Sophists wronged you, Anytus? What makes you so angry with them?

ANYTUS: No, indeed, neither I nor any of my belongings has ever had, nor would I suffer them to have, anything to do with them.

SOCRATES: Then you are entirely unacquainted with them?

ANYTUS: And I have no wish to be acquainted.

SOCRATES: Then, my dear friend, how can you know whether a thing is good or bad of which you are wholly ignorant?

ANYTUS: Quite well; I am sure that I know what manner of men these are, whether I am acquainted with them or not.

SOCRATES: You must be a diviner, Anytus, for I really cannot make out, judging from your own words, how, if you are not acquainted with them, you know about them. But I am not enquiring of you who are the teachers who will corrupt Meno (let them be, if you please, the Sophists); I only ask you to tell him who there is in this great city who will teach him how to become eminent in the virtues which I was just now describing. He is the friend of your family, and you will oblige him.

ANYTUS: Why do you not tell him yourself?

SOCRATES: I have told him whom I supposed to be the teachers of these things; but I learn from you that I am utterly at fault, and I dare say that you are right. And now I wish that you, on your part, would tell me to whom among the Athenians he should go. Whom would you name?

ANYTUS: Why single out individuals? Any Athenian gentleman, taken at random, if he will mind him, will do far more good to him than the Sophists.

SOCRATES: And did those gentlemen grow of themselves; and without having been taught by any one, were they nevertheless able to teach others that which they had never learned themselves?

ANYTUS: I imagine that they learned of the previous generation of gentlemen. Have there not been many good men in this city?

SOCRATES: Yes, certainly, Anytus; and many good statesmen also there always have been and there are still, in the city of Athens. But the question is whether they were also good teachers of their own virtue;—not whether there are, or have been, good men in this part of the world, but whether virtue can be taught, is the question which we have been discussing. Now, do we mean to say that the good men of our own and of other times knew how to impart to others that virtue which they had themselves; or is virtue a thing incapable of being communicated or imparted by one man to another? That is the question which I and Meno have been arguing. Look at the matter in your own way: Would you not admit that Themistocles was a good man?

ANYTUS: Certainly; no man better.

SOCRATES: And must not he then have been a good teacher, if any man ever was a good teacher, of his own virtue?

ANYTUS: Yes certainly,—if he wanted to be so.

SOCRATES: But would he not have wanted? He would, at any rate, have desired to make his own son a good man and a gentleman; he could not have been jealous of him, or have intentionally abstained from imparting to him his own virtue. Did you never hear that he made his son Cleophantus a famous horseman; and had him taught to stand upright on horseback and hurl a javelin, and to do many other marvellous things; and in anything which could be learned from a master he was well trained? Have you not heard from our elders of him?

ANYTUS: I have.

SOCRATES: Then no one could say that his son showed any want of capacity?

ANYTUS: Very likely not.

SOCRATES: But did any one, old or young, ever say in your hearing that Cleophantus, son of Themistocles, was a wise or good man, as his father was?

ANYTUS: I have certainly never heard any one say so.

SOCRATES: And if virtue could have been taught, would his father Themistocles have sought to train him in these minor accomplishments, and allowed him who, as you must remember, was his own son, to be no better than his neighbours in those qualities in which he himself excelled?

ANYTUS: Indeed, indeed, I think not.

SOCRATES: Here was a teacher of virtue whom you admit to be among the best men of the past. Let us take another,—Aristides, the son of Lysimachus: would you not acknowledge that he was a good man?

ANYTUS: To be sure I should.

SOCRATES: And did not he train his son Lysimachus better than any other Athenian in all that could be done for him by the help of masters? But what has been the result? Is he a bit better than any other mortal? He is an acquaintance of yours, and you see what he is like. There is Pericles, again, magnificent in his wisdom; and he, as you are aware, had two sons, Paralus and Xanthippus.

ANYTUS: I know.

SOCRATES: And you know, also, that he taught them to be unrivalled horsemen, and had them trained in music and gymnastics and all sorts of arts—in these respects they were on a level with the best—and had he no wish to make good men of them? Nay, he must have wished it. But virtue, as I suspect, could not be taught. And that you may not suppose the incompetent teachers to be only the meaner sort of Athenians and few in number, remember again that Thucydides had two sons, Melesias and Stephanus, whom, besides giving them a good education in other things, he trained in wrestling, and they were the best wrestlers in Athens: one of them he committed to the care of Xanthias, and the other of Eudorus, who had the reputation of being the most celebrated wrestlers of that day. Do you remember them?

ANYTUS: I have heard of them.

SOCRATES: Now, can there be a doubt that Thucydides, whose children were taught things for which he had to spend money, would have taught them to be good men, which would have cost him nothing, if virtue could have been taught? Will you reply that he was a mean man, and had not many friends among the Athenians and allies? Nay, but he was of a great family, and a man of influence at Athens and in all Hellas, and, if virtue could have been taught, he would have found out some Athenian or foreigner who would have made good men of his sons, if he could not himself spare the time from cares of state. Once more, I suspect, friend Anytus, that virtue is not a thing which can be taught?

ANYTUS: Socrates, I think that you are too ready to speak evil of men: and, if you will take my advice, I would recommend you to be careful. Perhaps there is no city in which it is not easier to do men harm than to do them good, and this is certainly the case at Athens, as I believe that you know.

SOCRATES: O Meno, think that Anytus is in a rage. And he may well be in a rage, for he thinks, in the first place, that I am defaming these gentlemen; and in the second place, he is of opinion that he

is one of them himself. But some day he will know what is the meaning of defamation, and if he ever does, he will forgive me. Meanwhile I will return to you, Meno; for I suppose that there are gentlemen in your region too?

MENO: Certainly there are.

SOCRATES: And are they willing to teach the young? and do they profess to be teachers? and do they agree that virtue is taught?

MENO: No indeed, Socrates, they are anything but agreed; you may hear them saying at one time that virtue can be taught, and then again the reverse.

SOCRATES: Can we call those teachers who do not acknowledge the possibility of their own vocation?

MENO: I think not, Socrates.

SOCRATES: And what do you think of these Sophists, who are the only professors? Do they seem to you to be teachers of virtue?

MENO: I often wonder, Socrates, that Gorgias is never heard promising to teach virtue: and when he hears others promising he only laughs at them; but he thinks that men should be taught to speak.

SOCRATES: Then do you not think that the Sophists are teachers?

MENO: I cannot tell you, Socrates; like the rest of the world, I am in doubt, and sometimes I think that they are teachers and sometimes not.

SOCRATES: And are you aware that not you only and other politicians have doubts whether virtue can be taught or not, but that Theognis the poet says the very same thing?

MENO: Where does he say so?

SOCRATES: In these elegiac verses (Theog.):

'Eat and drink and sit with the mighty, and make yourself agreeable to them; for from the good you will learn what is good, but if you mix with the bad you will lose the intelligence which you already have.'

Do you observe that here he seems to imply that virtue can be taught?

MENO: Clearly.

SOCRATES: But in some other verses he shifts about and says (Theog.):

'If understanding could be created and put into a man, then they' (who were able to perform this feat) 'would have obtained great rewards.'

And again:—

'Never would a bad son have sprung from a good sire, for he would have heard the voice of instruction; but not by teaching will you ever make a bad man into a good one.'

And this, as you may remark, is a contradiction of the other.

MENO: Clearly.

SOCRATES: And is there anything else of which the professors are affirmed not only not to be teachers of others, but to be ignorant themselves, and bad at the knowledge of that which they are professing to teach? or is there anything about which even the acknowledged 'gentlemen' are sometimes saying that 'this thing can be taught,' and sometimes the opposite? Can you say that they are teachers in any true sense whose ideas are in such confusion?

MENO: I should say, certainly not.

SOCRATES: But if neither the Sophists nor the gentlemen are teachers, clearly there can be no other teachers?

MENO: No.

SOCRATES: And if there are no teachers, neither are there disciples?

MENO: Agreed.

SOCRATES: And we have admitted that a thing cannot be taught of which there are neither teachers nor disciples?

MENO: We have.

SOCRATES: And there are no teachers of virtue to be found anywhere?

MENO: There are not.

SOCRATES: And if there are no teachers, neither are there scholars?

MENO: That, I think, is true.

SOCRATES: Then virtue cannot be taught?

MENO: Not if we are right in our view. But I cannot believe, Socrates, that there are no good men: And if there are, how did they come into existence?

SOCRATES: I am afraid, Meno, that you and I are not good for much, and that Gorgias has been as poor an educator of you as Prodicus has been of me. Certainly we shall have to look to ourselves, and try to find some one who will help in some way or other to improve us. This I say, because I observe that in the previous discussion none of us remarked that right and good action is possible to man under other guidance than that of knowledge (episteme);—and indeed if this be denied, there is no seeing how there can be any good men at all.

MENO: How do you mean, Socrates?

SOCRATES: I mean that good men are necessarily useful or profitable. Were we not right in admitting this? It must be so.

MENO: Yes.

SOCRATES: And in supposing that they will be useful only if they are true guides to us of action—there we were also right?

MENO: Yes.

SOCRATES: But when we said that a man cannot be a good guide unless he have knowledge (phrhonesis), this we were wrong.

MENO: What do you mean by the word 'right'?

SOCRATES: I will explain. If a man knew the way to Larisa, or anywhere else, and went to the place and led others thither, would he not be a right and good guide?

MENO: Certainly.

SOCRATES: And a person who had a right opinion about the way, but had never been and did not know, might be a good guide also, might he not?

MENO: Certainly.

SOCRATES: And while he has true opinion about that which the other knows, he will be just as good a guide if he thinks the truth, as he who knows the truth?

MENO: Exactly.

SOCRATES: Then true opinion is as good a guide to correct action as knowledge; and that was the point which we omitted in our speculation about the nature of virtue, when we said that knowledge only is the guide of right action; whereas there is also right opinion.

MENO: True.

SOCRATES: Then right opinion is not less useful than knowledge?

MENO: The difference, Socrates, is only that he who has knowledge will always be right; but he who has right opinion will sometimes be right, and sometimes not.

SOCRATES: What do you mean? Can he be wrong who has right opinion, so long as he has right opinion?

MENO: I admit the cogency of your argument, and therefore, Socrates, I wonder that knowledge should be preferred to right opinion—or why they should ever differ.

SOCRATES: And shall I explain this wonder to you?

MENO: Do tell me.

SOCRATES: You would not wonder if you had ever observed the images of Daedalus (Compare Euthyphro); but perhaps you have not got them in your country?

MENO: What have they to do with the question?

SOCRATES: Because they require to be fastened in order to keep them, and if they are not fastened they will play truant and run away.

MENO: Well, what of that?

SOCRATES: I mean to say that they are not very valuable possessions if they are at liberty, for they will walk off like runaway slaves; but when fastened, they are of great value, for they are really beautiful works of art. Now this is an illustration of the nature of true opinions: while they abide with us they are beautiful and fruitful, but they run away out of the human soul, and do not remain long, and therefore they are not of much value until they are fastened by the tie of the cause; and this fastening of them, friend Meno, is recollection, as you and I have agreed to call it. But when they are bound, in the first place, they have the nature of knowledge; and, in the second place, they are abiding. And this is why knowledge is more honourable and excellent than true opinion, because fastened by a chain.

MENO: What you are saying, Socrates, seems to be very like the truth.

SOCRATES: I too speak rather in ignorance; I only conjecture. And yet that knowledge differs from true opinion is no matter of conjecture with me. There are not many things which I profess to know, but this is most certainly one of them.

MENO: Yes, Socrates; and you are quite right in saying so.

SOCRATES: And am I not also right in saying that true opinion leading the way perfects action quite as well as knowledge?

MENO: There again, Socrates, I think you are right.

SOCRATES: Then right opinion is not a whit inferior to knowledge, or less useful in action; nor is the man who has right opinion inferior to him who has knowledge?

MENO: True.

SOCRATES: And surely the good man has been acknowledged by us to be useful?

MENO: Yes.

SOCRATES: Seeing then that men become good and useful to states, not only because they have knowledge, but because they have right opinion, and that neither knowledge nor right opinion is given to man by nature or acquired by him—(do you imagine either of them to be given by nature?

MENO: Not I.)

SOCRATES: Then if they are not given by nature, neither are the good by nature good?

MENO: Certainly not.

SOCRATES: And nature being excluded, then came the question whether virtue is acquired by teaching?

MENO: Yes.

SOCRATES: If virtue was wisdom (or knowledge), then, as we thought, it was taught?

MENO: Yes.

SOCRATES: And if it was taught it was wisdom?

MENO: Certainly.

SOCRATES: And if there were teachers, it might be taught; and if there were no teachers, not?

MENO: True.

SOCRATES: But surely we acknowledged that there were no teachers of virtue?

MENO: Yes.

SOCRATES: Then we acknowledged that it was not taught, and was not wisdom?

MENO: Certainly.

SOCRATES: And yet we admitted that it was a good?

MENO: Yes.

SOCRATES: And the right guide is useful and good?

MENO: Certainly.

SOCRATES: And the only right guides are knowledge and true opinion—these are the guides of man; for things which happen by chance are not under the guidance of man: but the guides of man are true opinion and knowledge.

MENO: I think so too.

SOCRATES: But if virtue is not taught, neither is virtue knowledge.

MENO: Clearly not.

SOCRATES: Then of two good and useful things, one, which is knowledge, has been set aside, and cannot be supposed to be our guide in political life.

MENO: I think not.

SOCRATES: And therefore not by any wisdom, and not because they were wise, did Themistocles and those others of whom Anytus spoke govern states. This was the reason why they were unable to make others like themselves—because their virtue was not grounded on knowledge.

MENO: That is probably true, Socrates.

SOCRATES: But if not by knowledge, the only alternative which remains is that statesmen must have guided states by right opinion, which is in politics what divination is in religion; for diviners and also prophets say many things truly, but they know not what they say.

MENO: So I believe.

SOCRATES: And may we not, Meno, truly call those men 'divine' who, having no understanding, yet succeed in many a grand deed and word?

MENO: Certainly.

SOCRATES: Then we shall also be right in calling divine those whom we were just now speaking of as diviners and prophets, including the whole tribe of poets. Yes, and statesmen above all may be said to be divine and illumined, being inspired and possessed of God, in which condition they say many grand things, not knowing what they say.

MENO: Yes.

SOCRATES: And the women too, Meno, call good men divine—do they not? and the Spartans, when they praise a good man, say 'that he is a divine man.'

MENO: And I think, Socrates, that they are right; although very likely our friend Anytus may take offence at the word.

SOCRATES: I do not care; as for Anytus, there will be another opportunity of talking with him. To sum up our enquiry—the result seems to be, if we are at all right in our view, that virtue is neither natural nor acquired, but an instinct given by God to the virtuous. Nor is the instinct accompanied by reason, unless there may be supposed to be among statesmen some one who is capable of educating statesmen. And if there be such an one, he may be said to be among the living what Homer says that Tiresias was among the dead, 'he alone has understanding; but the rest are flitting shades'; and he and his virtue in like manner will be a reality among shadows.

MENO: That is excellent, Socrates.

SOCRATES: Then, Meno, the conclusion is that virtue comes to the virtuous by the gift of God. But we shall never know the certain truth until, before asking how virtue is given, we enquire into the actual nature of virtue. I fear that I must go away, but do you, now that you are persuaded yourself, persuade our friend Anytus. And do not let him be so exasperated; if you can conciliate him, you will have done good service to the Athenian people.

PARMENIDES

By Plato

Translated by Benjamin Jowett

INTRODUCTION AND ANALYSIS.

The awe with which Plato regarded the character of 'the great' Parmenides has extended to the dialogue which he calls by his name. None of the writings of Plato have been more copiously illustrated, both in ancient and modern times, and in none of them have the interpreters been more at variance with one another. Nor is this surprising. For the Parmenides is more fragmentary and isolated than any other dialogue, and the design of the writer is not expressly stated. The date is uncertain; the relation to the other writings of Plato is also uncertain; the connexion between the two parts is at first sight extremely obscure; and in the latter of the two we are left in doubt as to whether Plato is speaking his own sentiments by the lips of Parmenides, and overthrowing him out of his own mouth, or whether he is propounding consequences which would have been admitted by Zeno and Parmenides themselves. The contradictions which follow from the hypotheses of the one and many have been regarded by some as transcendental mysteries; by others as a mere illustration, taken at random, of a new method. They seem to have been inspired by a sort of dialectical frenzy, such as may be supposed to have prevailed in the Megarian School (compare Cratylus, etc.). The criticism on his own doctrine of Ideas has also been considered, not as a real criticism, but as an exuberance of the metaphysical imagination which enabled Plato to go beyond himself. To the latter part of the dialogue we may certainly apply the words in which he himself describes the earlier philosophers in the Sophist: 'They went on their way rather regardless of whether we understood them or not.'

The Parmenides in point of style is one of the best of the Platonic writings; the first portion of the dialogue is in no way defective in ease and grace and dramatic interest; nor in the second part, where there was no room for such qualities, is there any want of clearness or precision. The latter half is an exquisite mosaic, of which the small pieces are with the utmost fineness and regularity adapted to one another. Like the Protagoras, Phaedo, and others, the whole is a narrated dialogue, combining with the mere recital of the words spoken, the observations of the reciter on the effect produced by them. Thus we are informed by him that Zeno and Parmenides were not altogether pleased at the request of Socrates that they would examine into the nature of the one and many in the sphere of Ideas, although they received his suggestion with approving smiles. And we are glad to be told that Parmenides was 'aged but well-favoured,' and that Zeno was 'very good-looking'; also that Parmenides affected to decline the great argument, on which, as Zeno knew from experience, he was not unwilling to enter. The character of Antiphon, the half-brother of Plato, who had once been inclined to philosophy, but has now shown the hereditary disposition for horses, is very naturally described. He is the sole depositary of the famous dialogue; but, although he receives the strangers like a courteous gentleman, he is impatient of the trouble of reciting it. As they enter, he has been giving orders to a bridle-maker; by this slight touch Plato verifies the previous description of him. After a little persuasion he is induced to favour the Clazomenians, who come from a distance, with a rehearsal. Respecting the visit of Zeno and Parmenides to Athens, we may observe—first, that such a visit is consistent with dates, and may possibly have occurred; secondly, that Plato is very likely to have invented the meeting ('You, Socrates, can easily invent Egyptian tales or anything else,' Phaedrus); thirdly, that no reliance can be placed on the circumstance as determining the date of

Parmenides and Zeno; fourthly, that the same occasion appears to be referred to by Plato in two other places (Theaet., Soph.).

Many interpreters have regarded the Parmenides as a 'reductio ad absurdum' of the Eleatic philosophy. But would Plato have been likely to place this in the mouth of the great Parmenides himself, who appeared to him, in Homeric language, to be 'venerable and awful,' and to have a 'glorious depth of mind'? (Theaet.). It may be admitted that he has ascribed to an Eleatic stranger in the Sophist opinions which went beyond the doctrines of the Eleatics. But the Eleatic stranger expressly criticises the doctrines in which he had been brought up; he admits that he is going to 'lay hands on his father Parmenides.' Nothing of this kind is said of Zeno and Parmenides. How then, without a word of explanation, could Plato assign to them the refutation of their own tenets?

The conclusion at which we must arrive is that the Parmenides is not a refutation of the Eleatic philosophy. Nor would such an explanation afford any satisfactory connexion of the first and second parts of the dialogue. And it is quite inconsistent with Plato's own relation to the Eleatics. For of all the pre-Socratic philosophers, he speaks of them with the greatest respect. But he could hardly have passed upon them a more unmeaning slight than to ascribe to their great master tenets the reverse of those which he actually held.

Two preliminary remarks may be made. First, that whatever latitude we may allow to Plato in bringing together by a 'tour de force,' as in the Phaedrus, dissimilar themes, yet he always in some way seeks to find a connexion for them. Many threads join together in one the love and dialectic of the Phaedrus. We cannot conceive that the great artist would place in juxtaposition two absolutely divided and incoherent subjects. And hence we are led to make a second remark: viz. that no explanation of the Parmenides can be satisfactory which does not indicate the connexion of the first and second parts. To suppose that Plato would first go out of his way to make Parmenides attack the Platonic Ideas, and then proceed to a similar but more fatal assault on his own doctrine of Being, appears to be the height of absurdity.

Perhaps there is no passage in Plato showing greater metaphysical power than that in which he assails his own theory of Ideas. The arguments are nearly, if not quite, those of Aristotle; they are the objections which naturally occur to a modern student of philosophy. Many persons will be surprised to find Plato criticizing the very conceptions which have been supposed in after ages to be peculiarly characteristic of him. How can he have placed himself so completely without them? How can he have ever persisted in them after seeing the fatal objections which might be urged against them? The consideration of this difficulty has led a recent critic (Ueberweg), who in general accepts the authorised canon of the Platonic writings, to condemn the Parmenides as spurious. The accidental want of external evidence, at first sight, seems to favour this opinion.

In answer, it might be sufficient to say, that no ancient writing of equal length and excellence is known to be spurious. Nor is the silence of Aristotle to be hastily assumed; there is at least a doubt whether his use of the same arguments does not involve the inference that he knew the work. And, if the Parmenides is spurious, like Ueberweg, we are led on further than we originally intended, to pass a similar condemnation on the Theaetetus and Sophist, and therefore on the Politicus (compare Theaet., Soph.). But the objection is in reality fanciful, and rests on the assumption that the doctrine of the Ideas was held by Plato throughout his life in the same form. For the truth is, that the Platonic

Ideas were in constant process of growth and transmutation; sometimes veiled in poetry and mythology, then again emerging as fixed Ideas, in some passages regarded as absolute and eternal, and in others as relative to the human mind, existing in and derived from external objects as well as transcending them. The anamnesis of the Ideas is chiefly insisted upon in the mythical portions of the dialogues, and really occupies a very small space in the entire works of Plato. Their transcendental existence is not asserted, and is therefore implicitly denied in the Philebus; different forms are ascribed to them in the Republic, and they are mentioned in the Theaetetus, the Sophist, the Politicus, and the Laws, much as Universals would be spoken of in modern books. Indeed, there are very faint traces of the transcendental doctrine of Ideas, that is, of their existence apart from the mind, in any of Plato's writings, with the exception of the Meno, the Phaedrus, the Phaedo, and in portions of the Republic. The stereotyped form which Aristotle has given to them is not found in Plato (compare Essay on the Platonic Ideas in the Introduction to the Meno.)

The full discussion of this subject involves a comprehensive survey of the philosophy of Plato, which would be out of place here. But, without digressing further from the immediate subject of the Parmenides, we may remark that Plato is quite serious in his objections to his own doctrines: nor does Socrates attempt to offer any answer to them. The perplexities which surround the one and many in the sphere of the Ideas are also alluded to in the Philebus, and no answer is given to them. Nor have they ever been answered, nor can they be answered by any one else who separates the phenomenal from the real. To suppose that Plato, at a later period of his life, reached a point of view from which he was able to answer them, is a groundless assumption. The real progress of Plato's own mind has been partly concealed from us by the dogmatic statements of Aristotle, and also by the degeneracy of his own followers, with whom a doctrine of numbers quickly superseded Ideas.

As a preparation for answering some of the difficulties which have been suggested, we may begin by sketching the first portion of the dialogue:—

Cephalus, of Clazomenae in Ionia, the birthplace of Anaxagoras, a citizen of no mean city in the history of philosophy, who is the narrator of the dialogue, describes himself as meeting Adeimantus and Glaucon in the Agora at Athens. 'Welcome, Cephalus: can we do anything for you in Athens?' 'Why, yes: I came to ask a favour of you. First, tell me your half-brother's name, which I have forgotten—he was a mere child when I was last here;—I know his father's, which is Pyrilampes.' 'Yes, and the name of our brother is Antiphon. But why do you ask?' 'Let me introduce to you some countrymen of mine, who are lovers of philosophy; they have heard that Antiphon remembers a conversation of Socrates with Parmenides and Zeno, of which the report came to him from Pythodorus, Zeno's friend.' 'That is quite true.' 'And can they hear the dialogue?' 'Nothing easier; in the days of his youth he made a careful study of the piece; at present, his thoughts have another direction: he takes after his grandfather, and has given up philosophy for horses.'

'We went to look for him, and found him giving instructions to a worker in brass about a bridle. When he had done with him, and had learned from his brothers the purpose of our visit, he saluted me as an old acquaintance, and we asked him to repeat the dialogue. At first, he complained of the trouble, but he soon consented. He told us that Pythodorus had described to him the appearance of Parmenides and Zeno; they had come to Athens at the great Panathenaea, the former being at the time about sixty-five years old, aged but well-favoured—Zeno, who was said to have been beloved of Parmenides in the days of his youth, about forty, and very good-looking:—that they lodged with

Pythodorus at the Ceramicus outside the wall, whither Socrates, then a very young man, came to see them: Zeno was reading one of his theses, which he had nearly finished, when Pythodorus entered with Parmenides and Aristoteles, who was afterwards one of the Thirty. When the recitation was completed, Socrates requested that the first thesis of the treatise might be read again.'

'You mean, Zeno,' said Socrates, 'to argue that being, if it is many, must be both like and unlike, which is a contradiction; and each division of your argument is intended to elicit a similar absurdity, which may be supposed to follow from the assumption that being is many.' 'Such is my meaning.' 'I see,' said Socrates, turning to Parmenides, 'that Zeno is your second self in his writings too; you prove admirably that the all is one: he gives proofs no less convincing that the many are nought. To deceive the world by saying the same thing in entirely different forms, is a strain of art beyond most of us.' 'Yes, Socrates,' said Zeno; 'but though you are as keen as a Spartan hound, you do not quite catch the motive of the piece, which was only intended to protect Parmenides against ridicule by showing that the hypothesis of the existence of the many involved greater absurdities than the hypothesis of the one. The book was a youthful composition of mine, which was stolen from me, and therefore I had no choice about the publication.' 'I quite believe you,' said Socrates; 'but will you answer me a question? I should like to know, whether you would assume an idea of likeness in the abstract, which is the contradictory of unlikeness in the abstract, by participation in either or both of which things are like or unlike or partly both. For the same things may very well partake of like and unlike in the concrete, though like and unlike in the abstract are irreconcilable. Nor does there appear to me to be any absurdity in maintaining that the same things may partake of the one and many, though I should be indeed surprised to hear that the absolute one is also many. For example, I, being many, that is to say, having many parts or members, am yet also one, and partake of the one, being one of seven who are here present (compare Philebus). This is not an absurdity, but a truism. But I should be amazed if there were a similar entanglement in the nature of the ideas themselves, nor can I believe that one and many, like and unlike, rest and motion, in the abstract, are capable either of admixture or of separation.'

Pythodorus said that in his opinion Parmenides and Zeno were not very well pleased at the questions which were raised; nevertheless, they looked at one another and smiled in seeming delight and admiration of Socrates. 'Tell me,' said Parmenides, 'do you think that the abstract ideas of likeness, unity, and the rest, exist apart from individuals which partake of them? and is this your own distinction?' 'I think that there are such ideas.' 'And would you make abstract ideas of the just, the beautiful, the good?' 'Yes,' he said. 'And of human beings like ourselves, of water, fire, and the like?' 'I am not certain.' 'And would you be undecided also about ideas of which the mention will, perhaps, appear laughable: of hair, mud, filth, and other things which are base and vile?' 'No, Parmenides; visible things like these are, as I believe, only what they appear to be: though I am sometimes disposed to imagine that there is nothing without an idea; but I repress any such notion, from a fear of falling into an abyss of nonsense.' 'You are young, Socrates, and therefore naturally regard the opinions of men; the time will come when philosophy will have a firmer hold of you, and you will not despise even the meanest things. But tell me, is your meaning that things become like by partaking of likeness, great by partaking of greatness, just and beautiful by partaking of justice and beauty, and so of other ideas?' 'Yes, that is my meaning.' 'And do you suppose the individual to partake of the whole, or of the part?' 'Why not of the whole?' said Socrates. 'Because,' said Parmenides, 'in that case the whole, which is one, will become many.' 'Nay,' said Socrates, 'the whole may be like the day, which is one and in many places: in this way the ideas may be one and also many.' 'In the same sort of way,'

said Parmenides, 'as a sail, which is one, may be a cover to many—that is your meaning?' 'Yes.' 'And would you say that each man is covered by the whole sail, or by a part only?' 'By a part.' 'Then the ideas have parts, and the objects partake of a part of them only?' 'That seems to follow.' 'And would you like to say that the ideas are really divisible and yet remain one?' 'Certainly not.' 'Would you venture to affirm that great objects have a portion only of greatness transferred to them; or that small or equal objects are small or equal because they are only portions of smallness or equality?' 'Impossible.' 'But how can individuals participate in ideas, except in the ways which I have mentioned?' 'That is not an easy question to answer.' 'I should imagine the conception of ideas to arise as follows: you see great objects pervaded by a common form or idea of greatness, which you abstract.' 'That is quite true.' 'And supposing you embrace in one view the idea of greatness thus gained and the individuals which it comprises, a further idea of greatness arises, which makes both great; and this may go on to infinity.' Socrates replies that the ideas may be thoughts in the mind only; in this case, the consequence would no longer follow. 'But must not the thought be of something which is the same in all and is the idea? And if the world partakes in the ideas, and the ideas are thoughts, must not all things think? Or can thought be without thought?' 'I acknowledge the unmeaningness of this,' says Socrates, 'and would rather have recourse to the explanation that the ideas are types in nature, and that other things partake of them by becoming like them.' 'But to become like them is to be comprehended in the same idea; and the likeness of the idea and the individuals implies another idea of likeness, and another without end.' 'Quite true.' 'The theory, then, of participation by likeness has to be given up. You have hardly yet, Socrates, found out the real difficulty of maintaining abstract ideas.' 'What difficulty?' 'The greatest of all perhaps is this: an opponent will argue that the ideas are not within the range of human knowledge; and you cannot disprove the assertion without a long and laborious demonstration, which he may be unable or unwilling to follow. In the first place, neither you nor any one who maintains the existence of absolute ideas will affirm that they are subjective.' 'That would be a contradiction.' 'True; and therefore any relation in these ideas is a relation which concerns themselves only; and the objects which are named after them, are relative to one another only, and have nothing to do with the ideas themselves.' 'How do you mean?' said Socrates. 'I may illustrate my meaning in this way: one of us has a slave; and the idea of a slave in the abstract is relative to the idea of a master in the abstract; this correspondence of ideas, however, has nothing to do with the particular relation of our slave to us.—Do you see my meaning?' 'Perfectly.' 'And absolute knowledge in the same way corresponds to absolute truth and being, and particular knowledge to particular truth and being.' Clearly.' 'And there is a subjective knowledge which is of subjective truth, having many kinds, general and particular. But the ideas themselves are not subjective, and therefore are not within our ken.' 'They are not.' 'Then the beautiful and the good in their own nature are unknown to us?' 'It would seem so.' 'There is a worse consequence yet.' 'What is that?' 'I think we must admit that absolute knowledge is the most exact knowledge, which we must therefore attribute to God. But then see what follows: God, having this exact knowledge, can have no knowledge of human things, as we have divided the two spheres, and forbidden any passing from one to the other:—the gods have knowledge and authority in their world only, as we have in ours.' 'Yet, surely, to deprive God of knowledge is monstrous.'—'These are some of the difficulties which are involved in the assumption of absolute ideas; the learner will find them nearly impossible to understand, and the teacher who has to impart them will require superhuman ability; there will always be a suspicion, either that they have no existence, or are beyond human knowledge.' 'There I agree with you,' said Socrates. 'Yet if these difficulties induce you to give up universal ideas, what becomes of the mind? and where are the reasoning and reflecting powers? philosophy is at an end.' 'I certainly do not see my way.' 'I think,' said Parmenides, 'that this arises out

of your attempting to define abstractions, such as the good and the beautiful and the just, before you have had sufficient previous training; I noticed your deficiency when you were talking with Aristoteles, the day before yesterday. Your enthusiasm is a wonderful gift; but I fear that unless you discipline yourself by dialectic while you are young, truth will elude your grasp.' 'And what kind of discipline would you recommend?' 'The training which you heard Zeno practising; at the same time, I admire your saying to him that you did not care to consider the difficulty in reference to visible objects, but only in relation to ideas.' 'Yes; because I think that in visible objects you may easily show any number of inconsistent consequences.' 'Yes; and you should consider, not only the consequences which follow from a given hypothesis, but the consequences also which follow from the denial of the hypothesis. For example, what follows from the assumption of the existence of the many, and the counter-argument of what follows from the denial of the existence of the many: and similarly of likeness and unlikeness, motion, rest, generation, corruption, being and not being. And the consequences must include consequences to the things supposed and to other things, in themselves and in relation to one another, to individuals whom you select, to the many, and to the all; these must be drawn out both on the affirmative and on the negative hypothesis,—that is, if you are to train yourself perfectly to the intelligence of the truth.' 'What you are suggesting seems to be a tremendous process, and one of which I do not quite understand the nature,' said Socrates; 'will you give me an example?' 'You must not impose such a task on a man of my years,' said Parmenides. 'Then will you, Zeno?' 'Let us rather,' said Zeno, with a smile, 'ask Parmenides, for the undertaking is a serious one, as he truly says; nor could I urge him to make the attempt, except in a select audience of persons who will understand him.' The whole party joined in the request.

Here we have, first of all, an unmistakable attack made by the youthful Socrates on the paradoxes of Zeno. He perfectly understands their drift, and Zeno himself is supposed to admit this. But they appear to him, as he says in the Philebus also, to be rather truisms than paradoxes. For every one must acknowledge the obvious fact, that the body being one has many members, and that, in a thousand ways, the like partakes of the unlike, the many of the one. The real difficulty begins with the relations of ideas in themselves, whether of the one and many, or of any other ideas, to one another and to the mind. But this was a problem which the Eleatic philosophers had never considered; their thoughts had not gone beyond the contradictions of matter, motion, space, and the like.

It was no wonder that Parmenides and Zeno should hear the novel speculations of Socrates with mixed feelings of admiration and displeasure. He was going out of the received circle of disputation into a region in which they could hardly follow him. From the crude idea of Being in the abstract, he was about to proceed to universals or general notions. There is no contradiction in material things partaking of the ideas of one and many; neither is there any contradiction in the ideas of one and many, like and unlike, in themselves. But the contradiction arises when we attempt to conceive ideas in their connexion, or to ascertain their relation to phenomena. Still he affirms the existence of such ideas; and this is the position which is now in turn submitted to the criticisms of Parmenides.

To appreciate truly the character of these criticisms, we must remember the place held by Parmenides in the history of Greek philosophy. He is the founder of idealism, and also of dialectic, or, in modern phraseology, of metaphysics and logic (Theaet., Soph.). Like Plato, he is struggling after something wider and deeper than satisfied the contemporary Pythagoreans. And Plato with a true instinct recognizes him as his spiritual father, whom he 'revered and honoured more than all other philosophers together.' He may be supposed to have thought more than he said, or was able to

express. And, although he could not, as a matter of fact, have criticized the ideas of Plato without an anachronism, the criticism is appropriately placed in the mouth of the founder of the ideal philosophy.

There was probably a time in the life of Plato when the ethical teaching of Socrates came into conflict with the metaphysical theories of the earlier philosophers, and he sought to supplement the one by the other. The older philosophers were great and awful; and they had the charm of antiquity. Something which found a response in his own mind seemed to have been lost as well as gained in the Socratic dialectic. He felt no incongruity in the veteran Parmenides correcting the youthful Socrates. Two points in his criticism are especially deserving of notice. First of all, Parmenides tries him by the test of consistency. Socrates is willing to assume ideas or principles of the just, the beautiful, the good, and to extend them to man (compare Phaedo); but he is reluctant to admit that there are general ideas of hair, mud, filth, etc. There is an ethical universal or idea, but is there also a universal of physics?—of the meanest things in the world as well as of the greatest? Parmenides rebukes this want of consistency in Socrates, which he attributes to his youth. As he grows older, philosophy will take a firmer hold of him, and then he will despise neither great things nor small, and he will think less of the opinions of mankind (compare Soph.). Here is lightly touched one of the most familiar principles of modern philosophy, that in the meanest operations of nature, as well as in the noblest, in mud and filth, as well as in the sun and stars, great truths are contained. At the same time, we may note also the transition in the mind of Plato, to which Aristotle alludes (Met.), when, as he says, he transferred the Socratic universal of ethics to the whole of nature.

The other criticism of Parmenides on Socrates attributes to him a want of practice in dialectic. He has observed this deficiency in him when talking to Aristoteles on a previous occasion. Plato seems to imply that there was something more in the dialectic of Zeno than in the mere interrogation of Socrates. Here, again, he may perhaps be describing the process which his own mind went through when he first became more intimately acquainted, whether at Megara or elsewhere, with the Eleatic and Megarian philosophers. Still, Parmenides does not deny to Socrates the credit of having gone beyond them in seeking to apply the paradoxes of Zeno to ideas; and this is the application which he himself makes of them in the latter part of the dialogue. He then proceeds to explain to him the sort of mental gymnastic which he should practise. He should consider not only what would follow from a given hypothesis, but what would follow from the denial of it, to that which is the subject of the hypothesis, and to all other things. There is no trace in the Memorabilia of Xenophon of any such method being attributed to Socrates; nor is the dialectic here spoken of that 'favourite method' of proceeding by regular divisions, which is described in the Phaedrus and Philebus, and of which examples are given in the Politicus and in the Sophist. It is expressly spoken of as the method which Socrates had heard Zeno practise in the days of his youth (compare Soph.).

The discussion of Socrates with Parmenides is one of the most remarkable passages in Plato. Few writers have ever been able to anticipate 'the criticism of the morrow' on their favourite notions. But Plato may here be said to anticipate the judgment not only of the morrow, but of all after-ages on the Platonic Ideas. For in some points he touches questions which have not yet received their solution in modern philosophy.

The first difficulty which Parmenides raises respecting the Platonic ideas relates to the manner in which individuals are connected with them. Do they participate in the ideas, or do they merely resemble them? Parmenides shows that objections may be urged against either of these modes of

conceiving the connection. Things are little by partaking of littleness, great by partaking of greatness, and the like. But they cannot partake of a part of greatness, for that will not make them great, etc.; nor can each object monopolise the whole. The only answer to this is, that 'partaking' is a figure of speech, really corresponding to the processes which a later logic designates by the terms 'abstraction' and 'generalization.' When we have described accurately the methods or forms which the mind employs, we cannot further criticize them; at least we can only criticize them with reference to their fitness as instruments of thought to express facts.

Socrates attempts to support his view of the ideas by the parallel of the day, which is one and in many places; but he is easily driven from his position by a counter illustration of Parmenides, who compares the idea of greatness to a sail. He truly explains to Socrates that he has attained the conception of ideas by a process of generalization. At the same time, he points out a difficulty, which appears to be involved—viz. that the process of generalization will go on to infinity. Socrates meets the supposed difficulty by a flash of light, which is indeed the true answer 'that the ideas are in our minds only.' Neither realism is the truth, nor nominalism is the truth, but conceptualism; and conceptualism or any other psychological theory falls very far short of the infinite subtlety of language and thought.

But the realism of ancient philosophy will not admit of this answer, which is repelled by Parmenides with another truth or half-truth of later philosophy, 'Every subject or subjective must have an object.' Here is the great though unconscious truth (shall we say?) or error, which underlay the early Greek philosophy. 'Ideas must have a real existence;' they are not mere forms or opinions, which may be changed arbitrarily by individuals. But the early Greek philosopher never clearly saw that true ideas were only universal facts, and that there might be error in universals as well as in particulars.

Socrates makes one more attempt to defend the Platonic Ideas by representing them as paradigms; this is again answered by the 'argumentum ad infinitum.' We may remark, in passing, that the process which is thus described has no real existence. The mind, after having obtained a general idea, does not really go on to form another which includes that, and all the individuals contained under it, and another and another without end. The difficulty belongs in fact to the Megarian age of philosophy, and is due to their illogical logic, and to the general ignorance of the ancients respecting the part played by language in the process of thought. No such perplexity could ever trouble a modern metaphysician, any more than the fallacy of 'calvus' or 'acervus,' or of 'Achilles and the tortoise.' These 'surds' of metaphysics ought to occasion no more difficulty in speculation than a perpetually recurring fraction in arithmetic.

It is otherwise with the objection which follows: How are we to bridge the chasm between human truth and absolute truth, between gods and men? This is the difficulty of philosophy in all ages: How can we get beyond the circle of our own ideas, or how, remaining within them, can we have any criterion of a truth beyond and independent of them? Parmenides draws out this difficulty with great clearness. According to him, there are not only one but two chasms: the first, between individuals and the ideas which have a common name; the second, between the ideas in us and the ideas absolute. The first of these two difficulties mankind, as we may say, a little parodying the language of the Philebus, have long agreed to treat as obsolete; the second remains a difficulty for us as well as for the Greeks of the fourth century before Christ, and is the stumbling-block of Kant's Kritik, and of the Hamiltonian adaptation of Kant, as well as of the Platonic ideas. It has been said that 'you cannot criticize

Revelation.' 'Then how do you know what is Revelation, or that there is one at all,' is the immediate rejoinder—'You know nothing of things in themselves.' 'Then how do you know that there are things in themselves?' In some respects, the difficulty pressed harder upon the Greek than upon ourselves. For conceiving of God more under the attribute of knowledge than we do, he was more under the necessity of separating the divine from the human, as two spheres which had no communication with one another.

It is remarkable that Plato, speaking by the mouth of Parmenides, does not treat even this second class of difficulties as hopeless or insoluble. He says only that they cannot be explained without a long and laborious demonstration: 'The teacher will require superhuman ability, and the learner will be hard of understanding.' But an attempt must be made to find an answer to them; for, as Socrates and Parmenides both admit, the denial of abstract ideas is the destruction of the mind. We can easily imagine that among the Greek schools of philosophy in the fourth century before Christ a panic might arise from the denial of universals, similar to that which arose in the last century from Hume's denial of our ideas of cause and effect. Men do not at first recognize that thought, like digestion, will go on much the same, notwithstanding any theories which may be entertained respecting the nature of the process. Parmenides attributes the difficulties in which Socrates is involved to a want of comprehensiveness in his mode of reasoning; he should consider every question on the negative as well as the positive hypothesis, with reference to the consequences which flow from the denial as well as from the assertion of a given statement.

The argument which follows is the most singular in Plato. It appears to be an imitation, or parody, of the Zenonian dialectic, just as the speeches in the Phaedrus are an imitation of the style of Lysias, or as the derivations in the Cratylus or the fallacies of the Euthydemus are a parody of some contemporary Sophist. The interlocutor is not supposed, as in most of the other Platonic dialogues, to take a living part in the argument; he is only required to say 'Yes' and 'No' in the right places. A hint has been already given that the paradoxes of Zeno admitted of a higher application. This hint is the thread by which Plato connects the two parts of the dialogue.

The paradoxes of Parmenides seem trivial to us, because the words to which they relate have become trivial; their true nature as abstract terms is perfectly understood by us, and we are inclined to regard the treatment of them in Plato as a mere straw-splitting, or legerdemain of words. Yet there was a power in them which fascinated the Neoplatonists for centuries afterwards. Something that they found in them, or brought to them—some echo or anticipation of a great truth or error, exercised a wonderful influence over their minds. To do the Parmenides justice, we should imagine similar aporiai raised on themes as sacred to us, as the notions of One or Being were to an ancient Eleatic. 'If God is, what follows? If God is not, what follows?' Or again: If God is or is not the world; or if God is or is not many, or has or has not parts, or is or is not in the world, or in time; or is or is not finite or infinite. Or if the world is or is not; or has or has not a beginning or end; or is or is not infinite, or infinitely divisible. Or again: if God is or is not identical with his laws; or if man is or is not identical with the laws of nature. We can easily see that here are many subjects for thought, and that from these and similar hypotheses questions of great interest might arise. And we also remark, that the conclusions derived from either of the two alternative propositions might be equally impossible and contradictory.

When we ask what is the object of these paradoxes, some have answered that they are a mere logical puzzle, while others have seen in them an Hegelian propaedeutic of the doctrine of Ideas. The first of these views derives support from the manner in which Parmenides speaks of a similar method being applied to all Ideas. Yet it is hard to suppose that Plato would have furnished so elaborate an example, not of his own but of the Eleatic dialectic, had he intended only to give an illustration of method. The second view has been often overstated by those who, like Hegel himself, have tended to confuse ancient with modern philosophy. We need not deny that Plato, trained in the school of Cratylus and Heracleitus, may have seen that a contradiction in terms is sometimes the best expression of a truth higher than either (compare Soph.). But his ideal theory is not based on antinomies. The correlation of Ideas was the metaphysical difficulty of the age in which he lived; and the Megarian and Cynic philosophy was a 'reductio ad absurdum' of their isolation. To restore them to their natural connexion and to detect the negative element in them is the aim of Plato in the Sophist. But his view of their connexion falls very far short of the Hegelian identity of Being and Not-being. The Being and Not-being of Plato never merge in each other, though he is aware that 'determination is only negation.'

After criticizing the hypotheses of others, it may appear presumptuous to add another guess to the many which have been already offered. May we say, in Platonic language, that we still seem to see vestiges of a track which has not yet been taken? It is quite possible that the obscurity of the Parmenides would not have existed to a contemporary student of philosophy, and, like the similar difficulty in the Philebus, is really due to our ignorance of the mind of the age. There is an obscure Megarian influence on Plato which cannot wholly be cleared up, and is not much illustrated by the doubtful tradition of his retirement to Megara after the death of Socrates. For Megara was within a walk of Athens (Phaedr.), and Plato might have learned the Megarian doctrines without settling there.

We may begin by remarking that the theses of Parmenides are expressly said to follow the method of Zeno, and that the complex dilemma, though declared to be capable of universal application, is applied in this instance to Zeno's familiar question of the 'one and many.' Here, then, is a double indication of the connexion of the Parmenides with the Eristic school. The old Eleatics had asserted the existence of Being, which they at first regarded as finite, then as infinite, then as neither finite nor infinite, to which some of them had given what Aristotle calls 'a form,' others had ascribed a material nature only. The tendency of their philosophy was to deny to Being all predicates. The Megarians, who succeeded them, like the Cynics, affirmed that no predicate could be asserted of any subject; they also converted the idea of Being into an abstraction of Good, perhaps with the view of preserving a sort of neutrality or indifference between the mind and things. As if they had said, in the language of modern philosophy: 'Being is not only neither finite nor infinite, neither at rest nor in motion, but neither subjective nor objective.'

This is the track along which Plato is leading us. Zeno had attempted to prove the existence of the one by disproving the existence of the many, and Parmenides seems to aim at proving the existence of the subject by showing the contradictions which follow from the assertion of any predicates. Take the simplest of all notions, 'unity'; you cannot even assert being or time of this without involving a contradiction. But is the contradiction also the final conclusion? Probably no more than of Zeno's denial of the many, or of Parmenides' assault upon the Ideas; no more than of the earlier dialogues 'of search.' To us there seems to be no residuum of this long piece of dialectics. But to the mind of Parmenides and Plato, 'Gott-betrunkene Menschen,' there still remained the idea of 'being' or 'good,'

which could not be conceived, defined, uttered, but could not be got rid of. Neither of them would have imagined that their disputation ever touched the Divine Being (compare Phil.). The same difficulties about Unity and Being are raised in the Sophist; but there only as preliminary to their final solution.

If this view is correct, the real aim of the hypotheses of Parmenides is to criticize the earlier Eleatic philosophy from the point of view of Zeno or the Megarians. It is the same kind of criticism which Plato has extended to his own doctrine of Ideas. Nor is there any want of poetical consistency in attributing to the 'father Parmenides' the last review of the Eleatic doctrines. The latest phases of all philosophies were fathered upon the founder of the school.

Other critics have regarded the final conclusion of the Parmenides either as sceptical or as Heracleitean. In the first case, they assume that Plato means to show the impossibility of any truth. But this is not the spirit of Plato, and could not with propriety be put into the mouth of Parmenides, who, in this very dialogue, is urging Socrates, not to doubt everything, but to discipline his mind with a view to the more precise attainment of truth. The same remark applies to the second of the two theories. Plato everywhere ridicules (perhaps unfairly) his Heracleitean contemporaries: and if he had intended to support an Heracleitean thesis, would hardly have chosen Parmenides, the condemner of the 'undiscerning tribe who say that things both are and are not,' to be the speaker. Nor, thirdly, can we easily persuade ourselves with Zeller that by the 'one' he means the Idea; and that he is seeking to prove indirectly the unity of the Idea in the multiplicity of phenomena.

We may now endeavour to thread the mazes of the labyrinth which Parmenides knew so well, and trembled at the thought of them.

The argument has two divisions: There is the hypothesis that

1. One is.
2. One is not.

If one is, it is nothing.
If one is not, it is everything.

But is and is not may be taken in two senses:
Either one is one,
Or, one has being,

from which opposite consequences are deduced,
1.a. If one is one, it is nothing.
1.b. If one has being, it is all things.

To which are appended two subordinate consequences:
1.aa. If one has being, all other things are.
1.bb. If one is one, all other things are not.

The same distinction is then applied to the negative hypothesis:
2.a. If one is not one, it is all things.
2.b. If one has not being, it is nothing.

Involving two parallel consequences respecting the other or remainder:
2.aa. If one is not one, other things are all.

2.bb. If one has not being, other things are not.

.....

'I cannot refuse,' said Parmenides, 'since, as Zeno remarks, we are alone, though I may say with Ibycus, who in his old age fell in love, I, like the old racehorse, tremble at the prospect of the course which I am to run, and which I know so well. But as I must attempt this laborious game, what shall be the subject? Suppose I take my own hypothesis of the one.' 'By all means,' said Zeno. 'And who will answer me? Shall I propose the youngest? he will be the most likely to say what he thinks, and his answers will give me time to breathe.' 'I am the youngest,' said Aristoteles, 'and at your service; proceed with your questions.'—The result may be summed up as follows:—

1.a. One is not many, and therefore has no parts, and therefore is not a whole, which is a sum of parts, and therefore has neither beginning, middle, nor end, and is therefore unlimited, and therefore formless, being neither round nor straight, for neither round nor straight can be defined without assuming that they have parts; and therefore is not in place, whether in another which would encircle and touch the one at many points; or in itself, because that which is self-containing is also contained, and therefore not one but two. This being premised, let us consider whether one is capable either of motion or rest. For motion is either change of substance, or motion on an axis, or from one place to another. But the one is incapable of change of substance, which implies that it ceases to be itself, or of motion on an axis, because there would be parts around the axis; and any other motion involves change of place. But existence in place has been already shown to be impossible; and yet more impossible is coming into being in place, which implies partial existence in two places at once, or entire existence neither within nor without the same; and how can this be? And more impossible still is the coming into being either as a whole or parts of that which is neither a whole nor parts. The one, then, is incapable of motion. But neither can the one be in anything, and therefore not in the same, whether itself or some other, and is therefore incapable of rest. Neither is one the same with itself or any other, or other than itself or any other. For if other than itself, then other than one, and therefore not one; and, if the same with other, it would be other, and other than one. Neither can one while remaining one be other than other; for other, and not one, is the other than other. But if not other by virtue of being one, not by virtue of itself; and if not by virtue of itself, not itself other, and if not itself other, not other than anything. Neither will one be the same with itself. For the nature of the same is not that of the one, but a thing which becomes the same with anything does not become one; for example, that which becomes the same with the many becomes many and not one. And therefore if the one is the same with itself, the one is not one with itself; and therefore one and not one. And therefore one is neither other than other, nor the same with itself. Neither will the one be like or unlike itself or other; for likeness is sameness of affections, and the one and the same are different. And one having any affection which is other than being one would be more than one. The one, then, cannot have the same affection with and therefore cannot be like itself or other; nor can the one have any other affection than its own, that is, be unlike itself or any other, for this would imply that it was more than one. The one, then, is neither like nor unlike itself or other. This being the case, neither can the one be equal or unequal to itself or other. For equality implies sameness of measure, as inequality implies a greater or less number of measures. But the one, not having sameness, cannot have sameness of measure; nor a greater or less number of measures, for that would imply parts and multitude. Once more, can one be older or younger than itself or other? or of the same age with itself or other? That would imply likeness and unlikeness, equality and inequality. Therefore one cannot be in time, because that which is in time is ever becoming older and younger than itself, (for older and

younger are relative terms, and he who becomes older becomes younger,) and is also of the same age with itself. None of which, or any other expressions of time, whether past, future, or present, can be affirmed of one. One neither is, has been, nor will be, nor becomes, nor has, nor will become. And, as these are the only modes of being, one is not, and is not one. But to that which is not, there is no attribute or relative, neither name nor word nor idea nor science nor perception nor opinion appertaining. One, then, is neither named, nor uttered, nor known, nor perceived, nor imagined. But can all this be true? 'I think not.'

1.b. Let us, however, commence the inquiry again. We have to work out all the consequences which follow on the assumption that the one is. If one is, one partakes of being, which is not the same with one; the words 'being' and 'one' have different meanings. Observe the consequence: In the one of being or the being of one are two parts, being and one, which form one whole. And each of the two parts is also a whole, and involves the other, and may be further subdivided into one and being, and is therefore not one but two; and thus one is never one, and in this way the one, if it is, becomes many and infinite. Again, let us conceive of a one which by an effort of abstraction we separate from being: will this abstract one be one or many? You say one only; let us see. In the first place, the being of one is other than one; and one and being, if different, are so because they both partake of the nature of other, which is therefore neither one nor being; and whether we take being and other, or being and one, or one and other, in any case we have two things which separately are called either, and together both. And both are two and either of two is severally one, and if one be added to any of the pairs, the sum is three; and two is an even number, three an odd; and two units exist twice, and therefore there are twice two; and three units exist thrice, and therefore there are thrice three, and taken together they give twice three and thrice two: we have even numbers multiplied into even, and odd into even, and even into odd numbers. But if one is, and both odd and even numbers are implied in one, must not every number exist? And number is infinite, and therefore existence must be infinite, for all and every number partakes of being; therefore being has the greatest number of parts, and every part, however great or however small, is equally one. But can one be in many places and yet be a whole? If not a whole it must be divided into parts and represented by a number corresponding to the number of the parts. And if so, we were wrong in saying that being has the greatest number of parts; for being is coequal and coextensive with one, and has no more parts than one; and so the abstract one broken up into parts by being is many and infinite. But the parts are parts of a whole, and the whole is their containing limit, and the one is therefore limited as well as infinite in number; and that which is a whole has beginning, middle, and end, and a middle is equidistant from the extremes; and one is therefore of a certain figure, round or straight, or a combination of the two, and being a whole includes all the parts which are the whole, and is therefore self-contained. But then, again, the whole is not in the parts, whether all or some. Not in all, because, if in all, also in one; for, if wanting in any one, how in all?—not in some, because the greater would then be contained in the less. But if not in all, nor in any, nor in some, either nowhere or in other. And if nowhere, nothing; therefore in other. The one as a whole, then, is in another, but regarded as a sum of parts is in itself; and is, therefore, both in itself and in another. This being the case, the one is at once both at rest and in motion: at rest, because resting in itself; in motion, because it is ever in other. And if there is truth in what has preceded, one is the same and not the same with itself and other. For everything in relation to every other thing is either the same with it or other; or if neither the same nor other, then in the relation of part to a whole or whole to a part. But one cannot be a part or whole in relation to one, nor other than one; and is therefore the same with one. Yet this sameness is again contradicted by one being in another place from itself which is in the same place; this follows from one being in itself and

in another; one, therefore, is other than itself. But if anything is other than anything, will it not be other than other? And the not one is other than the one, and the one than the not one; therefore one is other than all others. But the same and the other exclude one another, and therefore the other can never be in the same; nor can the other be in anything for ever so short a time, as for that time the other will be in the same. And the other, if never in the same, cannot be either in the one or in the not one. And one is not other than not one, either by reason of other or of itself; and therefore they are not other than one another at all. Neither can the not one partake or be part of one, for in that case it would be one; nor can the not one be number, for that also involves one. And therefore, not being other than the one or related to the one as a whole to parts or parts to a whole, not one is the same as one. Wherefore the one is the same and also not the same with the others and also with itself; and is therefore like and unlike itself and the others, and just as different from the others as they are from the one, neither more nor less. But if neither more nor less, equally different; and therefore the one and the others have the same relations. This may be illustrated by the case of names: when you repeat the same name twice over, you mean the same thing; and when you say that the other is other than the one, or the one other than the other, this very word other (eteron), which is attributed to both, implies sameness. One, then, as being other than others, and other as being other than one, are alike in that they have the relation of otherness; and likeness is similarity of relations. And everything as being other of everything is also like everything. Again, same and other, like and unlike, are opposites: and since in virtue of being other than the others the one is like them, in virtue of being the same it must be unlike. Again, one, as having the same relations, has no difference of relation, and is therefore not unlike, and therefore like; or, as having different relations, is different and unlike. Thus, one, as being the same and not the same with itself and others—for both these reasons and for either of them—is also like and unlike itself and the others. Again, how far can one touch itself and the others? As existing in others, it touches the others; and as existing in itself, touches only itself. But from another point of view, that which touches another must be next in order of place; one, therefore, must be next in order of place to itself, and would therefore be two, and in two places. But one cannot be two, and therefore cannot be in contact with itself. Nor again can one touch the other. Two objects are required to make one contact; three objects make two contacts; and all the objects in the world, if placed in a series, would have as many contacts as there are objects, less one. But if one only exists, and not two, there is no contact. And the others, being other than one, have no part in one, and therefore none in number, and therefore two has no existence, and therefore there is no contact. For all which reasons, one has and has not contact with itself and the others.

Once more, Is one equal and unequal to itself and the others? Suppose one and the others to be greater or less than each other or equal to one another, they will be greater or less or equal by reason of equality or greatness or smallness inhering in them in addition to their own proper nature. Let us begin by assuming smallness to be inherent in one: in this case the inherence is either in the whole or in a part. If the first, smallness is either coextensive with the whole one, or contains the whole, and, if coextensive with the one, is equal to the one, or if containing the one will be greater than the one. But smallness thus performs the function of equality or of greatness, which is impossible. Again, if the inherence be in a part, the same contradiction follows: smallness will be equal to the part or greater than the part; therefore smallness will not inhere in anything, and except the idea of smallness there will be nothing small. Neither will greatness; for greatness will have a greater;—and there will be no small in relation to which it is great. And there will be no great or small in objects, but greatness and smallness will be relative only to each other; therefore the others cannot be greater or less than the one; also the one can neither exceed nor be exceeded by the others, and they are therefore equal to

one another. And this will be true also of the one in relation to itself: one will be equal to itself as well as to the others (talla). Yet one, being in itself, must also be about itself, containing and contained, and is therefore greater and less than itself. Further, there is nothing beside the one and the others; and as these must be in something, they must therefore be in one another; and as that in which a thing is is greater than the thing, the inference is that they are both greater and less than one another, because containing and contained in one another. Therefore the one is equal to and greater and less than itself or other, having also measures or parts or numbers equal to or greater or less than itself or other.

But does one partake of time? This must be acknowledged, if the one partakes of being. For 'to be' is the participation of being in present time, 'to have been' in past, 'to be about to be' in future time. And as time is ever moving forward, the one becomes older than itself; and therefore younger than itself; and is older and also younger when in the process of becoming it arrives at the present; and it is always older and younger, for at any moment the one is, and therefore it becomes and is not older and younger than itself but during an equal time with itself, and is therefore contemporary with itself.

And what are the relations of the one to the others? Is it or does it become older or younger than they? At any rate the others are more than one, and one, being the least of all numbers, must be prior in time to greater numbers. But on the other hand, one must come into being in a manner accordant with its own nature. Now one has parts or others, and has therefore a beginning, middle, and end, of which the beginning is first and the end last. And the parts come into existence first; last of all the whole, contemporaneously with the end, being therefore younger, while the parts or others are older than the one. But, again, the one comes into being in each of the parts as much as in the whole, and must be of the same age with them. Therefore one is at once older and younger than the parts or others, and also contemporaneous with them, for no part can be a part which is not one. Is this true of becoming as well as being? Thus much may be affirmed, that the same things which are older or younger cannot become older or younger in a greater degree than they were at first by the addition of equal times. But, on the other hand, the one, if older than others, has come into being a longer time than they have. And when equal time is added to a longer and shorter, the relative difference between them is diminished. In this way that which was older becomes younger, and that which was younger becomes older, that is to say, younger and older than at first; and they ever become and never have become, for then they would be. Thus the one and others always are and are becoming and not becoming younger and also older than one another. And one, partaking of time and also partaking of becoming older and younger, admits of all time, present, past, and future—was, is, shall be—was becoming, is becoming, will become. And there is science of the one, and opinion and name and expression, as is already implied in the fact of our inquiry.

Yet once more, if one be one and many, and neither one nor many, and also participant of time, must there not be a time at which one as being one partakes of being, and a time when one as not being one is deprived of being? But these two contradictory states cannot be experienced by the one both together: there must be a time of transition. And the transition is a process of generation and destruction, into and from being and not-being, the one and the others. For the generation of the one is the destruction of the others, and the generation of the others is the destruction of the one. There is also separation and aggregation, assimilation and dissimilation, increase, diminution, equalization, a passage from motion to rest, and from rest to motion in the one and many. But when do all these changes take place? When does motion become rest, or rest motion? The answer to this question will

throw a light upon all the others. Nothing can be in motion and at rest at the same time; and therefore the change takes place 'in a moment'—which is a strange expression, and seems to mean change in no time. Which is true also of all the other changes, which likewise take place in no time.

1.aa. But if one is, what happens to the others, which in the first place are not one, yet may partake of one in a certain way? The others are other than the one because they have parts, for if they had no parts they would be simply one, and parts imply a whole to which they belong; otherwise each part would be a part of many, and being itself one of them, of itself, and if a part of all, of each one of the other parts, which is absurd. For a part, if not a part of one, must be a part of all but this one, and if so not a part of each one; and if not a part of each one, not a part of any one of many, and so not of one; and if of none, how of all? Therefore a part is neither a part of many nor of all, but of an absolute and perfect whole or one. And if the others have parts, they must partake of the whole, and must be the whole of which they are the parts. And each part, as the word 'each' implies, is also an absolute one. And both the whole and the parts partake of one, for the whole of which the parts are parts is one, and each part is one part of the whole; and whole and parts as participating in one are other than one, and as being other than one are many and infinite; and however small a fraction you separate from them is many and not one. Yet the fact of their being parts furnishes the others with a limit towards other parts and towards the whole; they are finite and also infinite: finite through participation in the one, infinite in their own nature. And as being finite, they are alike; and as being infinite, they are alike; but as being both finite and also infinite, they are in the highest degree unlike. And all other opposites might without difficulty be shown to unite in them.

1.bb. Once more, leaving all this: Is there not also an opposite series of consequences which is equally true of the others, and may be deduced from the existence of one? There is. One is distinct from the others, and the others from one; for one and the others are all things, and there is no third existence besides them. And the whole of one cannot be in others nor parts of it, for it is separated from others and has no parts, and therefore the others have no unity, nor plurality, nor duality, nor any other number, nor any opposition or distinction, such as likeness and unlikeness, some and other, generation and corruption, odd and even. For if they had these they would partake either of one opposite, and this would be a participation in one; or of two opposites, and this would be a participation in two. Thus if one exists, one is all things, and likewise nothing, in relation to one and to the others.

2.a. But, again, assume the opposite hypothesis, that the one is not, and what is the consequence? In the first place, the proposition, that one is not, is clearly opposed to the proposition, that not one is not. The subject of any negative proposition implies at once knowledge and difference. Thus 'one' in the proposition—'The one is not,' must be something known, or the words would be unintelligible; and again this 'one which is not' is something different from other things. Moreover, this and that, some and other, may be all attributed or related to the one which is not, and which though non-existent may and must have plurality, if the one only is non-existent and nothing else; but if all is not-being there is nothing which can be spoken of. Also the one which is not differs, and is different in kind from the others, and therefore unlike them; and they being other than the one, are unlike the one, which is therefore unlike them. But one, being unlike other, must be like itself; for the unlikeness of one to itself is the destruction of the hypothesis; and one cannot be equal to the others; for that would suppose being in the one, and the others would be equal to one and like one; both which are impossible, if one does not exist. The one which is not, then, if not equal is unequal to the others, and in equality implies

great and small, and equality lies between great and small, and therefore the one which is not partakes of equality. Further, the one which is not has being; for that which is true is, and it is true that the one is not. And so the one which is not, if remitting aught of the being of non-existence, would become existent. For not being implies the being of not-being, and being the not-being of not-being; or more truly being partakes of the being of being and not of the being of not-being, and not-being of the being of not-being and not of the not-being of not-being. And therefore the one which is not has being and also not-being. And the union of being and not-being involves change or motion. But how can not-being, which is nowhere, move or change, either from one place to another or in the same place? And whether it is or is not, it would cease to be one if experiencing a change of substance. The one which is not, then, is both in motion and at rest, is altered and unaltered, and becomes and is destroyed, and does not become and is not destroyed.

2.b. Once more, let us ask the question, If one is not, what happens in regard to one? The expression 'is not' implies negation of being:—do we mean by this to say that a thing, which is not, in a certain sense is? or do we mean absolutely to deny being of it? The latter. Then the one which is not can neither be nor become nor perish nor experience change of substance or place. Neither can rest, or motion, or greatness, or smallness, or equality, or unlikeness, or likeness either to itself or other, or attribute or relation, or now or hereafter or formerly, or knowledge or opinion or perception or name or anything else be asserted of that which is not.

2.aa. Once more, if one is not, what becomes of the others? If we speak of them they must be, and their very name implies difference, and difference implies relation, not to the one, which is not, but to one another. And they are others of each other not as units but as infinities, the least of which is also infinity, and capable of infinitesimal division. And they will have no unity or number, but only a semblance of unity and number; and the least of them will appear large and manifold in comparison with the infinitesimal fractions into which it may be divided. Further, each particle will have the appearance of being equal with the fractions. For in passing from the greater to the less it must reach an intermediate point, which is equality. Moreover, each particle although having a limit in relation to itself and to other particles, yet it has neither beginning, middle, nor end; for there is always a beginning before the beginning, and a middle within the middle, and an end beyond the end, because the infinitesimal division is never arrested by the one. Thus all being is one at a distance, and broken up when near, and like at a distance and unlike when near; and also the particles which compose being seem to be like and unlike, in rest and motion, in generation and corruption, in contact and separation, if one is not.

2.bb. Once more, let us inquire, If the one is not, and the others of the one are, what follows? In the first place, the others will not be the one, nor the many, for in that case the one would be contained in them; neither will they appear to be one or many; because they have no communion or participation in that which is not, nor semblance of that which is not. If one is not, the others neither are, nor appear to be one or many, like or unlike, in contact or separation. In short, if one is not, nothing is.

The result of all which is, that whether one is or is not, one and the others, in relation to themselves and to one another, are and are not, and appear to be and appear not to be, in all manner of ways.

I. On the first hypothesis we may remark: first, That one is one is an identical proposition, from which we might expect that no further consequences could be deduced. The train of consequences which

follows, is inferred by altering the predicate into 'not many.' Yet, perhaps, if a strict Eristic had been present, oios aner ei kai nun paren, he might have affirmed that the not many presented a different aspect of the conception from the one, and was therefore not identical with it. Such a subtlety would be very much in character with the Zenonian dialectic. Secondly, We may note, that the conclusion is really involved in the premises. For one is conceived as one, in a sense which excludes all predicates. When the meaning of one has been reduced to a point, there is no use in saying that it has neither parts nor magnitude. Thirdly, The conception of the same is, first of all, identified with the one; and then by a further analysis distinguished from, and even opposed to it. Fourthly, We may detect notions, which have reappeared in modern philosophy, e.g. the bare abstraction of undefined unity, answering to the Hegelian 'Seyn,' or the identity of contradictions 'that which is older is also younger,' etc., or the Kantian conception of an a priori synthetical proposition 'one is.'

II. In the first series of propositions the word 'is' is really the copula; in the second, the verb of existence. As in the first series, the negative consequence followed from one being affirmed to be equivalent to the not many; so here the affirmative consequence is deduced from one being equivalent to the many.

In the former case, nothing could be predicated of the one, but now everything—multitude, relation, place, time, transition. One is regarded in all the aspects of one, and with a reference to all the consequences which flow, either from the combination or the separation of them. The notion of transition involves the singular extra-temporal conception of 'suddenness.' This idea of 'suddenness' is based upon the contradiction which is involved in supposing that anything can be in two places at once. It is a mere fiction; and we may observe that similar antinomies have led modern philosophers to deny the reality of time and space. It is not the infinitesimal of time, but the negative of time. By the help of this invention the conception of change, which sorely exercised the minds of early thinkers, seems to be, but is not really at all explained. The difficulty arises out of the imperfection of language, and should therefore be no longer regarded as a difficulty at all. The only way of meeting it, if it exists, is to acknowledge that this rather puzzling double conception is necessary to the expression of the phenomena of motion or change, and that this and similar double notions, instead of being anomalies, are among the higher and more potent instruments of human thought.

The processes by which Parmenides obtains his remarkable results may be summed up as follows: (1) Compound or correlative ideas which involve each other, such as, being and not-being, one and many, are conceived sometimes in a state of composition, and sometimes of division: (2) The division or distinction is sometimes heightened into total opposition, e.g. between one and same, one and other: or (3) The idea, which has been already divided, is regarded, like a number, as capable of further infinite subdivision: (4) The argument often proceeds 'a dicto secundum quid ad dictum simpliciter' and conversely: (5) The analogy of opposites is misused by him; he argues indiscriminately sometimes from what is like, sometimes from what is unlike in them: (6) The idea of being or not-being is identified with existence or non-existence in place or time: (7) The same ideas are regarded sometimes as in process of transition, sometimes as alternatives or opposites: (8) There are no degrees or kinds of sameness, likeness, difference, nor any adequate conception of motion or change: (9) One, being, time, like space in Zeno's puzzle of Achilles and the tortoise, are regarded sometimes as continuous and sometimes as discrete: (10) In some parts of the argument the abstraction is so rarefied as to become not only fallacious, but almost unintelligible, e.g. in the contradiction which is elicited out of the relative terms older and younger: (11) The relation between

two terms is regarded under contradictory aspects, as for example when the existence of the one and the non-existence of the one are equally assumed to involve the existence of the many: (12) Words are used through long chains of argument, sometimes loosely, sometimes with the precision of numbers or of geometrical figures.

The argument is a very curious piece of work, unique in literature. It seems to be an exposition or rather a 'reductio ad absurdum' of the Megarian philosophy, but we are too imperfectly acquainted with this last to speak with confidence about it. It would be safer to say that it is an indication of the sceptical, hyperlogical fancies which prevailed among the contemporaries of Socrates. It throws an indistinct light upon Aristotle, and makes us aware of the debt which the world owes to him or his school. It also bears a resemblance to some modern speculations, in which an attempt is made to narrow language in such a manner that number and figure may be made a calculus of thought. It exaggerates one side of logic and forgets the rest. It has the appearance of a mathematical process; the inventor of it delights, as mathematicians do, in eliciting or discovering an unexpected result. It also helps to guard us against some fallacies by showing the consequences which flow from them.

In the Parmenides we seem to breathe the spirit of the Megarian philosophy, though we cannot compare the two in detail. But Plato also goes beyond his Megarian contemporaries; he has split their straws over again, and admitted more than they would have desired. He is indulging the analytical tendencies of his age, which can divide but not combine. And he does not stop to inquire whether the distinctions which he makes are shadowy and fallacious, but 'whither the argument blows' he follows.

III. The negative series of propositions contains the first conception of the negation of a negation. Two minus signs in arithmetic or algebra make a plus. Two negatives destroy each other. This abstruse notion is the foundation of the Hegelian logic. The mind must not only admit that determination is negation, but must get through negation into affirmation. Whether this process is real, or in any way an assistance to thought, or, like some other logical forms, a mere figure of speech transferred from the sphere of mathematics, may be doubted. That Plato and the most subtle philosopher of the nineteenth century should have lighted upon the same notion, is a singular coincidence of ancient and modern thought.

IV. The one and the many or others are reduced to their strictest arithmetical meaning. That one is three or three one, is a proposition which has, perhaps, given rise to more controversy in the world than any other. But no one has ever meant to say that three and one are to be taken in the same sense. Whereas the one and many of the Parmenides have precisely the same meaning; there is no notion of one personality or substance having many attributes or qualities. The truth seems to be rather the opposite of that which Socrates implies: There is no contradiction in the concrete, but in the abstract; and the more abstract the idea, the more palpable will be the contradiction. For just as nothing can persuade us that the number one is the number three, so neither can we be persuaded that any abstract idea is identical with its opposite, although they may both inhere together in some external object, or some more comprehensive conception. Ideas, persons, things may be one in one sense and many in another, and may have various degrees of unity and plurality. But in whatever sense and in whatever degree they are one they cease to be many; and in whatever degree or sense they are many they cease to be one.

Two points remain to be considered: 1st, the connexion between the first and second parts of the dialogue; 2ndly, the relation of the Parmenides to the other dialogues.

I. In both divisions of the dialogue the principal speaker is the same, and the method pursued by him is also the same, being a criticism on received opinions: first, on the doctrine of Ideas; secondly, of Being. From the Platonic Ideas we naturally proceed to the Eleatic One or Being which is the foundation of them. They are the same philosophy in two forms, and the simpler form is the truer and deeper. For the Platonic Ideas are mere numerical differences, and the moment we attempt to distinguish between them, their transcendental character is lost; ideas of justice, temperance, and good, are really distinguishable only with reference to their application in the world. If we once ask how they are related to individuals or to the ideas of the divine mind, they are again merged in the aboriginal notion of Being. No one can answer the questions which Parmenides asks of Socrates. And yet these questions are asked with the express acknowledgment that the denial of ideas will be the destruction of the human mind. The true answer to the difficulty here thrown out is the establishment of a rational psychology; and this is a work which is commenced in the Sophist. Plato, in urging the difficulty of his own doctrine of Ideas, is far from denying that some doctrine of Ideas is necessary, and for this he is paving the way.

In a similar spirit he criticizes the Eleatic doctrine of Being, not intending to deny Ontology, but showing that the old Eleatic notion, and the very name 'Being,' is unable to maintain itself against the subtleties of the Megarians. He did not mean to say that Being or Substance had no existence, but he is preparing for the development of his later view, that ideas were capable of relation. The fact that contradictory consequences follow from the existence or non-existence of one or many, does not prove that they have or have not existence, but rather that some different mode of conceiving them is required. Parmenides may still have thought that 'Being was,' just as Kant would have asserted the existence of 'things in themselves,' while denying the transcendental use of the Categories.

Several lesser links also connect the first and second parts of the dialogue: (1) The thesis is the same as that which Zeno has been already discussing: (2) Parmenides has intimated in the first part, that the method of Zeno should, as Socrates desired, be extended to Ideas: (3) The difficulty of participating in greatness, smallness, equality is urged against the Ideas as well as against the One.

II. The Parmenides is not only a criticism of the Eleatic notion of Being, but also of the methods of reasoning then in existence, and in this point of view, as well as in the other, may be regarded as an introduction to the Sophist. Long ago, in the Euthydemus, the vulgar application of the 'both and neither' Eristic had been subjected to a similar criticism, which there takes the form of banter and irony, here of illustration.

The attack upon the Ideas is resumed in the Philebus, and is followed by a return to a more rational philosophy. The perplexity of the One and Many is there confined to the region of Ideas, and replaced by a theory of classification; the Good arranged in classes is also contrasted with the barren abstraction of the Megarians. The war is carried on against the Eristics in all the later dialogues, sometimes with a playful irony, at other times with a sort of contempt. But there is no lengthened refutation of them. The Parmenides belongs to that stage of the dialogues of Plato in which he is partially under their influence, using them as a sort of 'critics or diviners' of the truth of his own, and of the Eleatic theories. In the Theaetetus a similar negative dialectic is employed in the attempt to define

science, which after every effort remains undefined still. The same question is revived from the objective side in the Sophist: Being and Not-being are no longer exhibited in opposition, but are now reconciled; and the true nature of Not-being is discovered and made the basis of the correlation of ideas. Some links are probably missing which might have been supplied if we had trustworthy accounts of Plato's oral teaching.

To sum up: the Parmenides of Plato is a critique, first, of the Platonic Ideas, and secondly, of the Eleatic doctrine of Being. Neither are absolutely denied. But certain difficulties and consequences are shown in the assumption of either, which prove that the Platonic as well as the Eleatic doctrine must be remodelled. The negation and contradiction which are involved in the conception of the One and Many are preliminary to their final adjustment. The Platonic Ideas are tested by the interrogative method of Socrates; the Eleatic One or Being is tried by the severer and perhaps impossible method of hypothetical consequences, negative and affirmative. In the latter we have an example of the Zenonian or Megarian dialectic, which proceeded, not 'by assailing premises, but conclusions'; this is worked out and improved by Plato. When primary abstractions are used in every conceivable sense, any or every conclusion may be deduced from them. The words 'one,' 'other,' 'being,' 'like,' 'same,' 'whole,' and their opposites, have slightly different meanings, as they are applied to objects of thought or objects of sense—to number, time, place, and to the higher ideas of the reason;—and out of their different meanings this 'feast' of contradictions 'has been provided.'

...

The Parmenides of Plato belongs to a stage of philosophy which has passed away. At first we read it with a purely antiquarian or historical interest; and with difficulty throw ourselves back into a state of the human mind in which Unity and Being occupied the attention of philosophers. We admire the precision of the language, in which, as in some curious puzzle, each word is exactly fitted into every other, and long trains of argument are carried out with a sort of geometrical accuracy. We doubt whether any abstract notion could stand the searching cross-examination of Parmenides; and may at last perhaps arrive at the conclusion that Plato has been using an imaginary method to work out an unmeaning conclusion. But the truth is, that he is carrying on a process which is not either useless or unnecessary in any age of philosophy. We fail to understand him, because we do not realize that the questions which he is discussing could have had any value or importance. We suppose them to be like the speculations of some of the Schoolmen, which end in nothing. But in truth he is trying to get rid of the stumbling-blocks of thought which beset his contemporaries. Seeing that the Megarians and Cynics were making knowledge impossible, he takes their 'catch-words' and analyzes them from every conceivable point of view. He is criticizing the simplest and most general of our ideas, in which, as they are the most comprehensive, the danger of error is the most serious; for, if they remain unexamined, as in a mathematical demonstration, all that flows from them is affected, and the error pervades knowledge far and wide. In the beginning of philosophy this correction of human ideas was even more necessary than in our own times, because they were more bound up with words; and words when once presented to the mind exercised a greater power over thought. There is a natural realism which says, 'Can there be a word devoid of meaning, or an idea which is an idea of nothing?' In modern times mankind have often given too great importance to a word or idea. The philosophy of the ancients was still more in slavery to them, because they had not the experience of error, which would have placed them above the illusion.

The method of the Parmenides may be compared with the process of purgation, which Bacon sought to introduce into philosophy. Plato is warning us against two sorts of 'Idols of the Den': first, his own Ideas, which he himself having created is unable to connect in any way with the external world; secondly, against two idols in particular, 'Unity' and 'Being,' which had grown up in the pre-Socratic philosophy, and were still standing in the way of all progress and development of thought. He does not say with Bacon, 'Let us make truth by experiment,' or 'From these vague and inexact notions let us turn to facts.' The time has not yet arrived for a purely inductive philosophy. The instruments of thought must first be forged, that they may be used hereafter by modern inquirers. How, while mankind were disputing about universals, could they classify phenomena? How could they investigate causes, when they had not as yet learned to distinguish between a cause and an end? How could they make any progress in the sciences without first arranging them? These are the deficiencies which Plato is seeking to supply in an age when knowledge was a shadow of a name only. In the earlier dialogues the Socratic conception of universals is illustrated by his genius; in the Phaedrus the nature of division is explained; in the Republic the law of contradiction and the unity of knowledge are asserted; in the later dialogues he is constantly engaged both with the theory and practice of classification. These were the 'new weapons,' as he terms them in the Philebus, which he was preparing for the use of some who, in after ages, would be found ready enough to disown their obligations to the great master, or rather, perhaps, would be incapable of understanding them.

Numberless fallacies, as we are often truly told, have originated in a confusion of the 'copula,' and the 'verb of existence.' Would not the distinction which Plato by the mouth of Parmenides makes between 'One is one' and 'One has being' have saved us from this and many similar confusions? We see again that a long period in the history of philosophy was a barren tract, not uncultivated, but unfruitful, because there was no inquiry into the relation of language and thought, and the metaphysical imagination was incapable of supplying the missing link between words and things. The famous dispute between Nominalists and Realists would never have been heard of, if, instead of transferring the Platonic Ideas into a crude Latin phraseology, the spirit of Plato had been truly understood and appreciated. Upon the term substance at least two celebrated theological controversies appear to hinge, which would not have existed, or at least not in their present form, if we had 'interrogated' the word substance, as Plato has the notions of Unity and Being. These weeds of philosophy have struck their roots deep into the soil, and are always tending to reappear, sometimes in new-fangled forms; while similar words, such as development, evolution, law, and the like, are constantly put in the place of facts, even by writers who profess to base truth entirely upon fact. In an unmetaphysical age there is probably more metaphysics in the common sense (i.e. more a priori assumption) than in any other, because there is more complete unconsciousness that we are resting on our own ideas, while we please ourselves with the conviction that we are resting on facts. We do not consider how much metaphysics are required to place us above metaphysics, or how difficult it is to prevent the forms of expression which are ready made for our use from outrunning actual observation and experiment.

In the last century the educated world were astonished to find that the whole fabric of their ideas was falling to pieces, because Hume amused himself by analyzing the word 'cause' into uniform sequence. Then arose a philosophy which, equally regardless of the history of the mind, sought to save mankind from scepticism by assigning to our notions of 'cause and effect,' 'substance and accident,' 'whole and part,' a necessary place in human thought. Without them we could have no experience, and therefore they were supposed to be prior to experience—to be incrusted on the 'I'; although in the phraseology of Kant there could be no transcendental use of them, or, in other words,

they were only applicable within the range of our knowledge. But into the origin of these ideas, which he obtains partly by an analysis of the proposition, partly by development of the 'ego,' he never inquires—they seem to him to have a necessary existence; nor does he attempt to analyse the various senses in which the word 'cause' or 'substance' may be employed.

The philosophy of Berkeley could never have had any meaning, even to himself, if he had first analyzed from every point of view the conception of 'matter.' This poor forgotten word (which was 'a very good word' to describe the simplest generalization of external objects) is now superseded in the vocabulary of physical philosophers by 'force,' which seems to be accepted without any rigid examination of its meaning, as if the general idea of 'force' in our minds furnished an explanation of the infinite variety of forces which exist in the universe. A similar ambiguity occurs in the use of the favourite word 'law,' which is sometimes regarded as a mere abstraction, and then elevated into a real power or entity, almost taking the place of God. Theology, again, is full of undefined terms which have distracted the human mind for ages. Mankind have reasoned from them, but not to them; they have drawn out the conclusions without proving the premises; they have asserted the premises without examining the terms. The passions of religious parties have been roused to the utmost about words of which they could have given no explanation, and which had really no distinct meaning. One sort of them, faith, grace, justification, have been the symbols of one class of disputes; as the words substance, nature, person, of another, revelation, inspiration, and the like, of a third. All of them have been the subject of endless reasonings and inferences; but a spell has hung over the minds of theologians or philosophers which has prevented them from examining the words themselves. Either the effort to rise above and beyond their own first ideas was too great for them, or there might, perhaps, have seemed to be an irreverence in doing so. About the Divine Being Himself, in whom all true theological ideas live and move, men have spoken and reasoned much, and have fancied that they instinctively know Him. But they hardly suspect that under the name of God even Christians have included two characters or natures as much opposed as the good and evil principle of the Persians.

To have the true use of words we must compare them with things; in using them we acknowledge that they seldom give a perfect representation of our meaning. In like manner when we interrogate our ideas we find that we are not using them always in the sense which we supposed. And Plato, while he criticizes the inconsistency of his own doctrine of universals and draws out the endless consequences which flow from the assertion either that 'Being is' or that 'Being is not,' by no means intends to deny the existence of universals or the unity under which they are comprehended. There is nothing further from his thoughts than scepticism. But before proceeding he must examine the foundations which he and others have been laying; there is nothing true which is not from some point of view untrue, nothing absolute which is not also relative (compare Republic).

And so, in modern times, because we are called upon to analyze our ideas and to come to a distinct understanding about the meaning of words; because we know that the powers of language are very unequal to the subtlety of nature or of mind, we do not therefore renounce the use of them; but we replace them in their old connexion, having first tested their meaning and quality, and having corrected the error which is involved in them; or rather always remembering to make allowance for the adulteration or alloy which they contain. We cannot call a new metaphysical world into existence any more than we can frame a new universal language; in thought as in speech, we are dependent on the past. We know that the words 'cause' and 'effect' are very far from representing to us the

continuity or the complexity of nature or the different modes or degrees in which phenomena are connected. Yet we accept them as the best expression which we have of the correlation of forces or objects. We see that the term 'law' is a mere abstraction, under which laws of matter and of mind, the law of nature and the law of the land are included, and some of these uses of the word are confusing, because they introduce into one sphere of thought associations which belong to another; for example, order or sequence is apt to be confounded with external compulsion and the internal workings of the mind with their material antecedents. Yet none of them can be dispensed with; we can only be on our guard against the error or confusion which arises out of them. Thus in the use of the word 'substance' we are far from supposing that there is any mysterious substratum apart from the objects which we see, and we acknowledge that the negative notion is very likely to become a positive one. Still we retain the word as a convenient generalization, though not without a double sense, substance, and essence, derived from the two-fold translation of the Greek ousia.

So the human mind makes the reflection that God is not a person like ourselves—is not a cause like the material causes in nature, nor even an intelligent cause like a human agent—nor an individual, for He is universal; and that every possible conception which we can form of Him is limited by the human faculties. We cannot by any effort of thought or exertion of faith be in and out of our own minds at the same instant. How can we conceive Him under the forms of time and space, who is out of time and space? How get rid of such forms and see Him as He is? How can we imagine His relation to the world or to ourselves? Innumerable contradictions follow from either of the two alternatives, that God is or that He is not. Yet we are far from saying that we know nothing of Him, because all that we know is subject to the conditions of human thought. To the old belief in Him we return, but with corrections. He is a person, but not like ourselves; a mind, but not a human mind; a cause, but not a material cause, nor yet a maker or artificer. The words which we use are imperfect expressions of His true nature; but we do not therefore lose faith in what is best and highest in ourselves and in the world.

'A little philosophy takes us away from God; a great deal brings us back to Him.' When we begin to reflect, our first thoughts respecting Him and ourselves are apt to be sceptical. For we can analyze our religious as well as our other ideas; we can trace their history; we can criticize their perversion; we see that they are relative to the human mind and to one another. But when we have carried our criticism to the furthest point, they still remain, a necessity of our moral nature, better known and understood by us, and less liable to be shaken, because we are more aware of their necessary imperfection. They come to us with 'better opinion, better confirmation,' not merely as the inspirations either of ourselves or of another, but deeply rooted in history and in the human mind.

PARMENIDES

PERSONS OF THE DIALOGUE: Cephalus, Adeimantus, Glaucon, Antiphon, Pythodorus, Socrates, Zeno, Parmenides, Aristoteles.

Cephalus rehearses a dialogue which is supposed to have been narrated in his presence by Antiphon, the half-brother of Adeimantus and Glaucon, to certain Clazomenians.

We had come from our home at Clazomenae to Athens, and met Adeimantus and Glaucon in the Agora. Welcome, Cephalus, said Adeimantus, taking me by the hand; is there anything which we can do for you in Athens?

Yes; that is why I am here; I wish to ask a favour of you.

What may that be? he said.

I want you to tell me the name of your half brother, which I have forgotten; he was a mere child when I last came hither from Clazomenae, but that was a long time ago; his father's name, if I remember rightly, was Pyrilampes?

Yes, he said, and the name of our brother, Antiphon; but why do you ask?

Let me introduce some countrymen of mine, I said; they are lovers of philosophy, and have heard that Antiphon was intimate with a certain Pythodorus, a friend of Zeno, and remembers a conversation which took place between Socrates, Zeno, and Parmenides many years ago, Pythodorus having often recited it to him.

Quite true.

And could we hear it? I asked.

Nothing easier, he replied; when he was a youth he made a careful study of the piece; at present his thoughts run in another direction; like his grandfather Antiphon he is devoted to horses. But, if that is what you want, let us go and look for him; he dwells at Melita, which is quite near, and he has only just left us to go home.

Accordingly we went to look for him; he was at home, and in the act of giving a bridle to a smith to be fitted. When he had done with the smith, his brothers told him the purpose of our visit; and he saluted me as an acquaintance whom he remembered from my former visit, and we asked him to repeat the dialogue. At first he was not very willing, and complained of the trouble, but at length he consented. He told us that Pythodorus had described to him the appearance of Parmenides and Zeno; they came to Athens, as he said, at the great Panathenaea; the former was, at the time of his visit, about 65 years old, very white with age, but well favoured. Zeno was nearly 40 years of age, tall and fair to look upon; in the days of his youth he was reported to have been beloved by Parmenides. He said that they lodged with Pythodorus in the Ceramicus, outside the wall, whither Socrates, then a very young man, came to see them, and many others with him; they wanted to hear the writings of Zeno, which had been brought to Athens for the first time on the occasion of their visit. These Zeno himself read to them in the absence of Parmenides, and had very nearly finished when Pythodorus entered, and with him Parmenides and Aristoteles who was afterwards one of the Thirty, and heard the little that remained of the dialogue. Pythodorus had heard Zeno repeat them before.

When the recitation was completed, Socrates requested that the first thesis of the first argument might be read over again, and this having been done, he said: What is your meaning, Zeno? Do you

maintain that if being is many, it must be both like and unlike, and that this is impossible, for neither can the like be unlike, nor the unlike like—is that your position?

Just so, said Zeno.

And if the unlike cannot be like, or the like unlike, then according to you, being could not be many; for this would involve an impossibility. In all that you say have you any other purpose except to disprove the being of the many? and is not each division of your treatise intended to furnish a separate proof of this, there being in all as many proofs of the not-being of the many as you have composed arguments? Is that your meaning, or have I misunderstood you?

No, said Zeno; you have correctly understood my general purpose.

I see, Parmenides, said Socrates, that Zeno would like to be not only one with you in friendship but your second self in his writings too; he puts what you say in another way, and would fain make believe that he is telling us something which is new. For you, in your poems, say The All is one, and of this you adduce excellent proofs; and he on the other hand says There is no many; and on behalf of this he offers overwhelming evidence. You affirm unity, he denies plurality. And so you deceive the world into believing that you are saying different things when really you are saying much the same. This is a strain of art beyond the reach of most of us.

Yes, Socrates, said Zeno. But although you are as keen as a Spartan hound in pursuing the track, you do not fully apprehend the true motive of the composition, which is not really such an artificial work as you imagine; for what you speak of was an accident; there was no pretence of a great purpose; nor any serious intention of deceiving the world. The truth is, that these writings of mine were meant to protect the arguments of Parmenides against those who make fun of him and seek to show the many ridiculous and contradictory results which they suppose to follow from the affirmation of the one. My answer is addressed to the partisans of the many, whose attack I return with interest by retorting upon them that their hypothesis of the being of many, if carried out, appears to be still more ridiculous than the hypothesis of the being of one. Zeal for my master led me to write the book in the days of my youth, but some one stole the copy; and therefore I had no choice whether it should be published or not; the motive, however, of writing, was not the ambition of an elder man, but the pugnacity of a young one. This you do not seem to see, Socrates; though in other respects, as I was saying, your notion is a very just one.

I understand, said Socrates, and quite accept your account. But tell me, Zeno, do you not further think that there is an idea of likeness in itself, and another idea of unlikeness, which is the opposite of likeness, and that in these two, you and I and all other things to which we apply the term many, participate—things which participate in likeness become in that degree and manner like; and so far as they participate in unlikeness become in that degree unlike, or both like and unlike in the degree in which they participate in both? And may not all things partake of both opposites, and be both like and unlike, by reason of this participation?—Where is the wonder? Now if a person could prove the absolute like to become unlike, or the absolute unlike to become like, that, in my opinion, would indeed be a wonder; but there is nothing extraordinary, Zeno, in showing that the things which only partake of likeness and unlikeness experience both. Nor, again, if a person were to show that all is one by partaking of one, and at the same time many by partaking of many, would that be very

astonishing. But if he were to show me that the absolute one was many, or the absolute many one, I should be truly amazed. And so of all the rest: I should be surprised to hear that the natures or ideas themselves had these opposite qualities; but not if a person wanted to prove of me that I was many and also one. When he wanted to show that I was many he would say that I have a right and a left side, and a front and a back, and an upper and a lower half, for I cannot deny that I partake of multitude; when, on the other hand, he wants to prove that I am one, he will say, that we who are here assembled are seven, and that I am one and partake of the one. In both instances he proves his case. So again, if a person shows that such things as wood, stones, and the like, being many are also one, we admit that he shows the coexistence of the one and many, but he does not show that the many are one or the one many; he is uttering not a paradox but a truism. If however, as I just now suggested, some one were to abstract simple notions of like, unlike, one, many, rest, motion, and similar ideas, and then to show that these admit of admixture and separation in themselves, I should be very much astonished. This part of the argument appears to be treated by you, Zeno, in a very spirited manner; but, as I was saying, I should be far more amazed if any one found in the ideas themselves which are apprehended by reason, the same puzzle and entanglement which you have shown to exist in visible objects.

While Socrates was speaking, Pythodorus thought that Parmenides and Zeno were not altogether pleased at the successive steps of the argument; but still they gave the closest attention, and often looked at one another, and smiled as if in admiration of him. When he had finished, Parmenides expressed their feelings in the following words:—

Socrates, he said, I admire the bent of your mind towards philosophy; tell me now, was this your own distinction between ideas in themselves and the things which partake of them? and do you think that there is an idea of likeness apart from the likeness which we possess, and of the one and many, and of the other things which Zeno mentioned?

I think that there are such ideas, said Socrates.

Parmenides proceeded: And would you also make absolute ideas of the just and the beautiful and the good, and of all that class?

Yes, he said, I should.

And would you make an idea of man apart from us and from all other human creatures, or of fire and water?

I am often undecided, Parmenides, as to whether I ought to include them or not.

And would you feel equally undecided, Socrates, about things of which the mention may provoke a smile?—I mean such things as hair, mud, dirt, or anything else which is vile and paltry; would you suppose that each of these has an idea distinct from the actual objects with which we come into contact, or not?

Certainly not, said Socrates; visible things like these are such as they appear to us, and I am afraid that there would be an absurdity in assuming any idea of them, although I sometimes get disturbed,

and begin to think that there is nothing without an idea; but then again, when I have taken up this position, I run away, because I am afraid that I may fall into a bottomless pit of nonsense, and perish; and so I return to the ideas of which I was just now speaking, and occupy myself with them.

Yes, Socrates, said Parmenides; that is because you are still young; the time will come, if I am not mistaken, when philosophy will have a firmer grasp of you, and then you will not despise even the meanest things; at your age, you are too much disposed to regard the opinions of men. But I should like to know whether you mean that there are certain ideas of which all other things partake, and from which they derive their names; that similars, for example, become similar, because they partake of similarity; and great things become great, because they partake of greatness; and that just and beautiful things become just and beautiful, because they partake of justice and beauty?

Yes, certainly, said Socrates that is my meaning.

Then each individual partakes either of the whole of the idea or else of a part of the idea? Can there be any other mode of participation?

There cannot be, he said.

Then do you think that the whole idea is one, and yet, being one, is in each one of the many?

Why not, Parmenides? said Socrates.

Because one and the same thing will exist as a whole at the same time in many separate individuals, and will therefore be in a state of separation from itself.

Nay, but the idea may be like the day which is one and the same in many places at once, and yet continuous with itself; in this way each idea may be one and the same in all at the same time.

I like your way, Socrates, of making one in many places at once. You mean to say, that if I were to spread out a sail and cover a number of men, there would be one whole including many—is not that your meaning?

I think so.

And would you say that the whole sail includes each man, or a part of it only, and different parts different men?

The latter.

Then, Socrates, the ideas themselves will be divisible, and things which participate in them will have a part of them only and not the whole idea existing in each of them?

That seems to follow.

Then would you like to say, Socrates, that the one idea is really divisible and yet remains one?

Certainly not, he said.

Suppose that you divide absolute greatness, and that of the many great things, each one is great in virtue of a portion of greatness less than absolute greatness—is that conceivable?

No.

Or will each equal thing, if possessing some small portion of equality less than absolute equality, be equal to some other thing by virtue of that portion only?

Impossible.

Or suppose one of us to have a portion of smallness; this is but a part of the small, and therefore the absolutely small is greater; if the absolutely small be greater, that to which the part of the small is added will be smaller and not greater than before.

How absurd!

Then in what way, Socrates, will all things participate in the ideas, if they are unable to participate in them either as parts or wholes?

Indeed, he said, you have asked a question which is not easily answered.

Well, said Parmenides, and what do you say of another question?

What question?

I imagine that the way in which you are led to assume one idea of each kind is as follows:—You see a number of great objects, and when you look at them there seems to you to be one and the same idea (or nature) in them all; hence you conceive of greatness as one.

Very true, said Socrates.

And if you go on and allow your mind in like manner to embrace in one view the idea of greatness and of great things which are not the idea, and to compare them, will not another greatness arise, which will appear to be the source of all these?

It would seem so.

Then another idea of greatness now comes into view over and above absolute greatness, and the individuals which partake of it; and then another, over and above all these, by virtue of which they will all be great, and so each idea instead of being one will be infinitely multiplied.

But may not the ideas, asked Socrates, be thoughts only, and have no proper existence except in our minds, Parmenides? For in that case each idea may still be one, and not experience this infinite multiplication.

And can there be individual thoughts which are thoughts of nothing?

Impossible, he said.

The thought must be of something?

Yes.

Of something which is or which is not?

Of something which is.

Must it not be of a single something, which the thought recognizes as attaching to all, being a single form or nature?

Yes.

And will not the something which is apprehended as one and the same in all, be an idea?

From that, again, there is no escape.

Then, said Parmenides, if you say that everything else participates in the ideas, must you not say either that everything is made up of thoughts, and that all things think; or that they are thoughts but have no thought?

The latter view, Parmenides, is no more rational than the previous one. In my opinion, the ideas are, as it were, patterns fixed in nature, and other things are like them, and resemblances of them—what is meant by the participation of other things in the ideas, is really assimilation to them.

But if, said he, the individual is like the idea, must not the idea also be like the individual, in so far as the individual is a resemblance of the idea? That which is like, cannot be conceived of as other than the like of like.

Impossible.

And when two things are alike, must they not partake of the same idea?

They must.

And will not that of which the two partake, and which makes them alike, be the idea itself?

Certainly.

Then the idea cannot be like the individual, or the individual like the idea; for if they are alike, some further idea of likeness will always be coming to light, and if that be like anything else, another; and new ideas will be always arising, if the idea resembles that which partakes of it?

Quite true.

The theory, then, that other things participate in the ideas by resemblance, has to be given up, and some other mode of participation devised?

It would seem so.

Do you see then, Socrates, how great is the difficulty of affirming the ideas to be absolute?

Yes, indeed.

And, further, let me say that as yet you only understand a small part of the difficulty which is involved if you make of each thing a single idea, parting it off from other things.

What difficulty? he said.

There are many, but the greatest of all is this:—If an opponent argues that these ideas, being such as we say they ought to be, must remain unknown, no one can prove to him that he is wrong, unless he who denies their existence be a man of great ability and knowledge, and is willing to follow a long and laborious demonstration; he will remain unconvinced, and still insist that they cannot be known.

What do you mean, Parmenides? said Socrates.

In the first place, I think, Socrates, that you, or any one who maintains the existence of absolute essences, will admit that they cannot exist in us.

No, said Socrates; for then they would be no longer absolute.

True, he said; and therefore when ideas are what they are in relation to one another, their essence is determined by a relation among themselves, and has nothing to do with the resemblances, or whatever they are to be termed, which are in our sphere, and from which we receive this or that name when we partake of them. And the things which are within our sphere and have the same names with them, are likewise only relative to one another, and not to the ideas which have the same names with them, but belong to themselves and not to them.

What do you mean? said Socrates.

I may illustrate my meaning in this way, said Parmenides:—A master has a slave; now there is nothing absolute in the relation between them, which is simply a relation of one man to another. But there is also an idea of mastership in the abstract, which is relative to the idea of slavery in the abstract. These natures have nothing to do with us, nor we with them; they are concerned with themselves only, and we with ourselves. Do you see my meaning?

Yes, said Socrates, I quite see your meaning.

And will not knowledge—I mean absolute knowledge—answer to absolute truth?

Certainly.

And each kind of absolute knowledge will answer to each kind of absolute being?

Yes.

But the knowledge which we have, will answer to the truth which we have; and again, each kind of knowledge which we have, will be a knowledge of each kind of being which we have?

Certainly.

But the ideas themselves, as you admit, we have not, and cannot have?

No, we cannot.

And the absolute natures or kinds are known severally by the absolute idea of knowledge?

Yes.

And we have not got the idea of knowledge?

No.

Then none of the ideas are known to us, because we have no share in absolute knowledge?

I suppose not.

Then the nature of the beautiful in itself, and of the good in itself, and all other ideas which we suppose to exist absolutely, are unknown to us?

It would seem so.

I think that there is a stranger consequence still.

What is it?

Would you, or would you not say, that absolute knowledge, if there is such a thing, must be a far more exact knowledge than our knowledge; and the same of beauty and of the rest?

Yes.

And if there be such a thing as participation in absolute knowledge, no one is more likely than God to have this most exact knowledge?

Certainly.

But then, will God, having absolute knowledge, have a knowledge of human things?

Why not?

Because, Socrates, said Parmenides, we have admitted that the ideas are not valid in relation to human things; nor human things in relation to them; the relations of either are limited to their respective spheres.

Yes, that has been admitted.

And if God has this perfect authority, and perfect knowledge, his authority cannot rule us, nor his knowledge know us, or any human thing; just as our authority does not extend to the gods, nor our knowledge know anything which is divine, so by parity of reason they, being gods, are not our masters, neither do they know the things of men.

Yet, surely, said Socrates, to deprive God of knowledge is monstrous.

These, Socrates, said Parmenides, are a few, and only a few of the difficulties in which we are involved if ideas really are and we determine each one of them to be an absolute unity. He who hears what may be said against them will deny the very existence of them—and even if they do exist, he will say that they must of necessity be unknown to man; and he will seem to have reason on his side, and as we were remarking just now, will be very difficult to convince; a man must be gifted with very considerable ability before he can learn that everything has a class and an absolute essence; and still more remarkable will he be who discovers all these things for himself, and having thoroughly investigated them is able to teach them to others.

I agree with you, Parmenides, said Socrates; and what you say is very much to my mind.

And yet, Socrates, said Parmenides, if a man, fixing his attention on these and the like difficulties, does away with ideas of things and will not admit that every individual thing has its own determinate idea which is always one and the same, he will have nothing on which his mind can rest; and so he will utterly destroy the power of reasoning, as you seem to me to have particularly noted.

Very true, he said.

But, then, what is to become of philosophy? Whither shall we turn, if the ideas are unknown?

I certainly do not see my way at present.

Yes, said Parmenides; and I think that this arises, Socrates, out of your attempting to define the beautiful, the just, the good, and the ideas generally, without sufficient previous training. I noticed your deficiency, when I heard you talking here with your friend Aristoteles, the day before yesterday. The impulse that carries you towards philosophy is assuredly noble and divine; but there is an art which is called by the vulgar idle talking, and which is often imagined to be useless; in that you must train and exercise yourself, now that you are young, or truth will elude your grasp.

And what is the nature of this exercise, Parmenides, which you would recommend?

That which you heard Zeno practising; at the same time, I give you credit for saying to him that you did not care to examine the perplexity in reference to visible things, or to consider the question that way; but only in reference to objects of thought, and to what may be called ideas.

Why, yes, he said, there appears to me to be no difficulty in showing by this method that visible things are like and unlike and may experience anything.

Quite true, said Parmenides; but I think that you should go a step further, and consider not only the consequences which flow from a given hypothesis, but also the consequences which flow from denying the hypothesis; and that will be still better training for you.

What do you mean? he said.

I mean, for example, that in the case of this very hypothesis of Zeno's about the many, you should inquire not only what will be the consequences to the many in relation to themselves and to the one, and to the one in relation to itself and the many, on the hypothesis of the being of the many, but also what will be the consequences to the one and the many in their relation to themselves and to each other, on the opposite hypothesis. Or, again, if likeness is or is not, what will be the consequences in either of these cases to the subjects of the hypothesis, and to other things, in relation both to themselves and to one another, and so of unlikeness; and the same holds good of motion and rest, of generation and destruction, and even of being and not-being. In a word, when you suppose anything to be or not to be, or to be in any way affected, you must look at the consequences in relation to the thing itself, and to any other things which you choose,—to each of them singly, to more than one, and to all; and so of other things, you must look at them in relation to themselves and to anything else which you suppose either to be or not to be, if you would train yourself perfectly and see the real truth.

That, Parmenides, is a tremendous business of which you speak, and I do not quite understand you; will you take some hypothesis and go through the steps?—then I shall apprehend you better.

That, Socrates, is a serious task to impose on a man of my years.

Then will you, Zeno? said Socrates.

Zeno answered with a smile:—Let us make our petition to Parmenides himself, who is quite right in saying that you are hardly aware of the extent of the task which you are imposing on him; and if there were more of us I should not ask him, for these are not subjects which any one, especially at his age, can well speak of before a large audience; most people are not aware that this roundabout progress through all things is the only way in which the mind can attain truth and wisdom. And therefore, Parmenides, I join in the request of Socrates, that I may hear the process again which I have not heard for a long time.

When Zeno had thus spoken, Pythodorus, according to Antiphon's report of him, said, that he himself and Aristoteles and the whole company entreated Parmenides to give an example of the process. I

cannot refuse, said Parmenides; and yet I feel rather like Ibycus, who, when in his old age, against his will, he fell in love, compared himself to an old racehorse, who was about to run in a chariot race, shaking with fear at the course he knew so well—this was his simile of himself. And I also experience a trembling when I remember through what an ocean of words I have to wade at my time of life. But I must indulge you, as Zeno says that I ought, and we are alone. Where shall I begin? And what shall be our first hypothesis, if I am to attempt this laborious pastime? Shall I begin with myself, and take my own hypothesis the one? and consider the consequences which follow on the supposition either of the being or of the not-being of one?

By all means, said Zeno.

And who will answer me? he said. Shall I propose the youngest? He will not make difficulties and will be the most likely to say what he thinks; and his answers will give me time to breathe.

I am the one whom you mean, Parmenides, said Aristoteles; for I am the youngest and at your service. Ask, and I will answer.

Parmenides proceeded: 1.a. If one is, he said, the one cannot be many?

Impossible.

Then the one cannot have parts, and cannot be a whole?

Why not?

Because every part is part of a whole; is it not?

Yes.

And what is a whole? would not that of which no part is wanting be a whole?

Certainly.

Then, in either case, the one would be made up of parts; both as being a whole, and also as having parts?

To be sure.

And in either case, the one would be many, and not one?

True.

But, surely, it ought to be one and not many?

It ought.

Then, if the one is to remain one, it will not be a whole, and will not have parts?

No.

But if it has no parts, it will have neither beginning, middle, nor end; for these would of course be parts of it.

Right.

But then, again, a beginning and an end are the limits of everything?

Certainly.

Then the one, having neither beginning nor end, is unlimited?

Yes, unlimited.

And therefore formless; for it cannot partake either of round or straight.

But why?

Why, because the round is that of which all the extreme points are equidistant from the centre?

Yes.

And the straight is that of which the centre intercepts the view of the extremes?

True.

Then the one would have parts and would be many, if it partook either of a straight or of a circular form?

Assuredly.

But having no parts, it will be neither straight nor round?

Right.

And, being of such a nature, it cannot be in any place, for it cannot be either in another or in itself.

How so?

Because if it were in another, it would be encircled by that in which it was, and would touch it at many places and with many parts; but that which is one and indivisible, and does not partake of a circular nature, cannot be touched all round in many places.

Certainly not.

But if, on the other hand, one were in itself, it would also be contained by nothing else but itself; that is to say, if it were really in itself; for nothing can be in anything which does not contain it.

Impossible.

But then, that which contains must be other than that which is contained? for the same whole cannot do and suffer both at once; and if so, one will be no longer one, but two?

True.

Then one cannot be anywhere, either in itself or in another?

No.

Further consider, whether that which is of such a nature can have either rest or motion.

Why not?

Why, because the one, if it were moved, would be either moved in place or changed in nature; for these are the only kinds of motion.

Yes.

And the one, when it changes and ceases to be itself, cannot be any longer one.

It cannot.

It cannot therefore experience the sort of motion which is change of nature?

Clearly not.

Then can the motion of the one be in place?

Perhaps.

But if the one moved in place, must it not either move round and round in the same place, or from one place to another?

It must.

And that which moves in a circle must rest upon a centre; and that which goes round upon a centre must have parts which are different from the centre; but that which has no centre and no parts cannot possibly be carried round upon a centre?

Impossible.

But perhaps the motion of the one consists in change of place?

Perhaps so, if it moves at all.

And have we not already shown that it cannot be in anything?

Yes.

Then its coming into being in anything is still more impossible; is it not?

I do not see why.

Why, because anything which comes into being in anything, can neither as yet be in that other thing while still coming into being, nor be altogether out of it, if already coming into being in it.

Certainly not.

And therefore whatever comes into being in another must have parts, and then one part may be in, and another part out of that other; but that which has no parts can never be at one and the same time neither wholly within nor wholly without anything.

True.

And is there not a still greater impossibility in that which has no parts, and is not a whole, coming into being anywhere, since it cannot come into being either as a part or as a whole?

Clearly.

Then it does not change place by revolving in the same spot, nor by going somewhere and coming into being in something; nor again, by change in itself?

Very true.

Then in respect of any kind of motion the one is immoveable?

Immoveable.

But neither can the one be in anything, as we affirm?

Yes, we said so.

Then it is never in the same?

Why not?

Because if it were in the same it would be in something.

Certainly.

And we said that it could not be in itself, and could not be in other?

True.

Then one is never in the same place?

It would seem not.

But that which is never in the same place is never quiet or at rest?

Never.

One then, as would seem, is neither at rest nor in motion?

It certainly appears so.

Neither will it be the same with itself or other; nor again, other than itself or other.

How is that?

If other than itself it would be other than one, and would not be one.

True.

And if the same with other, it would be that other, and not itself; so that upon this supposition too, it would not have the nature of one, but would be other than one?

It would.

Then it will not be the same with other, or other than itself?

It will not.

Neither will it be other than other, while it remains one; for not one, but only other, can be other than other, and nothing else.

True.

Then not by virtue of being one will it be other?

Certainly not.

But if not by virtue of being one, not by virtue of itself; and if not by virtue of itself, not itself, and itself not being other at all, will not be other than anything?

Right.

Neither will one be the same with itself.

How not?

Surely the nature of the one is not the nature of the same.

Why not?

It is not when anything becomes the same with anything that it becomes one.

What of that?

Anything which becomes the same with the many, necessarily becomes many and not one.

True.

But, if there were no difference between the one and the same, when a thing became the same, it would always become one; and when it became one, the same?

Certainly.

And, therefore, if one be the same with itself, it is not one with itself, and will therefore be one and also not one.

Surely that is impossible.

And therefore the one can neither be other than other, nor the same with itself.

Impossible.

And thus the one can neither be the same, nor other, either in relation to itself or other?

No.

Neither will the one be like anything or unlike itself or other.

Why not?

Because likeness is sameness of affections.

Yes.

And sameness has been shown to be of a nature distinct from oneness?

That has been shown.

But if the one had any other affection than that of being one, it would be affected in such a way as to be more than one; which is impossible.

True.

Then the one can never be so affected as to be the same either with another or with itself?

Clearly not.

Then it cannot be like another, or like itself?

No.

Nor can it be affected so as to be other, for then it would be affected in such a way as to be more than one.

It would.

That which is affected otherwise than itself or another, will be unlike itself or another, for sameness of affections is likeness.

True.

But the one, as appears, never being affected otherwise, is never unlike itself or other?

Never.

Then the one will never be either like or unlike itself or other?

Plainly not.

Again, being of this nature, it can neither be equal nor unequal either to itself or to other.

How is that?

Why, because the one if equal must be of the same measures as that to which it is equal.

True.

And if greater or less than things which are commensurable with it, the one will have more measures than that which is less, and fewer than that which is greater?

Yes.

And so of things which are not commensurate with it, the one will have greater measures than that which is less and smaller than that which is greater.

Certainly.

But how can that which does not partake of sameness, have either the same measures or have anything else the same?

Impossible.

And not having the same measures, the one cannot be equal either with itself or with another?

It appears so.

But again, whether it have fewer or more measures, it will have as many parts as it has measures; and thus again the one will be no longer one but will have as many parts as measures.

Right.

And if it were of one measure, it would be equal to that measure; yet it has been shown to be incapable of equality.

It has.

Then it will neither partake of one measure, nor of many, nor of few, nor of the same at all, nor be equal to itself or another; nor be greater or less than itself, or other?

Certainly.

Well, and do we suppose that one can be older, or younger than anything, or of the same age with it?

Why not?

Why, because that which is of the same age with itself or other, must partake of equality or likeness of time; and we said that the one did not partake either of equality or of likeness?

We did say so.

And we also said, that it did not partake of inequality or unlikeness.

Very true.

How then can one, being of this nature, be either older or younger than anything, or have the same age with it?

In no way.

Then one cannot be older or younger, or of the same age, either with itself or with another?

Clearly not.

Then the one, being of this nature, cannot be in time at all; for must not that which is in time, be always growing older than itself?

Certainly.

And that which is older, must always be older than something which is younger?

True.

Then, that which becomes older than itself, also becomes at the same time younger than itself, if it is to have something to become older than.

What do you mean?

I mean this:—A thing does not need to become different from another thing which is already different; it IS different, and if its different has become, it has become different; if its different will be, it will be different; but of that which is becoming different, there cannot have been, or be about to be, or yet be, a different—the only different possible is one which is becoming.

That is inevitable.

But, surely, the elder is a difference relative to the younger, and to nothing else.

True.

Then that which becomes older than itself must also, at the same time, become younger than itself?

Yes.

But again, it is true that it cannot become for a longer or for a shorter time than itself, but it must become, and be, and have become, and be about to be, for the same time with itself?

That again is inevitable.

Then things which are in time, and partake of time, must in every case, I suppose, be of the same age with themselves; and must also become at once older and younger than themselves?

Yes.

But the one did not partake of those affections?

Not at all.

Then it does not partake of time, and is not in any time?

So the argument shows.

Well, but do not the expressions 'was,' and 'has become,' and 'was becoming,' signify a participation of past time?

Certainly.

And do not 'will be,' 'will become,' 'will have become,' signify a participation of future time?

Yes.

And 'is,' or 'becomes,' signifies a participation of present time?

Certainly.

And if the one is absolutely without participation in time, it never had become, or was becoming, or was at any time, or is now become or is becoming, or is, or will become, or will have become, or will be, hereafter.

Most true.

But are there any modes of partaking of being other than these?

There are none.

Then the one cannot possibly partake of being?

That is the inference.

Then the one is not at all?

Clearly not.

Then the one does not exist in such way as to be one; for if it were and partook of being, it would already be; but if the argument is to be trusted, the one neither is nor is one?

True.

But that which is not admits of no attribute or relation?

Of course not.

Then there is no name, nor expression, nor perception, nor opinion, nor knowledge of it?

Clearly not.

Then it is neither named, nor expressed, nor opined, nor known, nor does anything that is perceive it.

So we must infer.

But can all this be true about the one?

I think not.

1.b. Suppose, now, that we return once more to the original hypothesis; let us see whether, on a further review, any new aspect of the question appears.

I shall be very happy to do so.

We say that we have to work out together all the consequences, whatever they may be, which follow, if the one is?

Yes.

Then we will begin at the beginning:—If one is, can one be, and not partake of being?

Impossible.

Then the one will have being, but its being will not be the same with the one; for if the same, it would not be the being of the one; nor would the one have participated in being, for the proposition that one is would have been identical with the proposition that one is one; but our hypothesis is not if one is one, what will follow, but if one is:—am I not right?

Quite right.

We mean to say, that being has not the same significance as one?

Of course.

And when we put them together shortly, and say 'One is,' that is equivalent to saying, 'partakes of being'?

Quite true.

Once more then let us ask, if one is what will follow. Does not this hypothesis necessarily imply that one is of such a nature as to have parts?

How so?

In this way:—If being is predicated of the one, if the one is, and one of being, if being is one; and if being and one are not the same; and since the one, which we have assumed, is, must not the whole, if it is one, itself be, and have for its parts, one and being?

Certainly.

And is each of these parts—one and being—to be simply called a part, or must the word 'part' be relative to the word 'whole'?

The latter.

Then that which is one is both a whole and has a part?

Certainly.

Again, of the parts of the one, if it is—I mean being and one—does either fail to imply the other? is the one wanting to being, or being to the one?

Impossible.

Thus, each of the parts also has in turn both one and being, and is at the least made up of two parts; and the same principle goes on for ever, and every part whatever has always these two parts; for being always involves one, and one being; so that one is always disappearing, and becoming two.

Certainly.

And so the one, if it is, must be infinite in multiplicity?

Clearly.

Let us take another direction.

What direction?

We say that the one partakes of being and therefore it is?

Yes.

And in this way, the one, if it has being, has turned out to be many?

True.

But now, let us abstract the one which, as we say, partakes of being, and try to imagine it apart from that of which, as we say, it partakes—will this abstract one be one only or many?

One, I think.

Let us see:—Must not the being of one be other than one? for the one is not being, but, considered as one, only partook of being?

Certainly.

If being and the one be two different things, it is not because the one is one that it is other than being; nor because being is being that it is other than the one; but they differ from one another in virtue of otherness and difference.

Certainly.

So that the other is not the same—either with the one or with being?

Certainly not.

And therefore whether we take being and the other, or being and the one, or the one and the other, in every such case we take two things, which may be rightly called both.

How so.

In this way—you may speak of being?

Yes.

And also of one?

Yes.

Then now we have spoken of either of them?

Yes.

Well, and when I speak of being and one, I speak of them both?

Certainly.

And if I speak of being and the other, or of the one and the other,—in any such case do I not speak of both?

Yes.

And must not that which is correctly called both, be also two?

Undoubtedly.

And of two things how can either by any possibility not be one?

It cannot.

Then, if the individuals of the pair are together two, they must be severally one?

Clearly.

And if each of them is one, then by the addition of any one to any pair, the whole becomes three?

Yes.

And three are odd, and two are even?

Of course.

And if there are two there must also be twice, and if there are three there must be thrice; that is, if twice one makes two, and thrice one three?

Certainly.

There are two, and twice, and therefore there must be twice two; and there are three, and there is thrice, and therefore there must be thrice three?

Of course.

If there are three and twice, there is twice three; and if there are two and thrice, there is thrice two?

Undoubtedly.

Here, then, we have even taken even times, and odd taken odd times, and even taken odd times, and odd taken even times.

True.

And if this is so, does any number remain which has no necessity to be?

None whatever.

Then if one is, number must also be?

It must.

But if there is number, there must also be many, and infinite multiplicity of being; for number is infinite in multiplicity, and partakes also of being: am I not right?

Certainly.

And if all number participates in being, every part of number will also participate?

Yes.

Then being is distributed over the whole multitude of things, and nothing that is, however small or however great, is devoid of it? And, indeed, the very supposition of this is absurd, for how can that which is, be devoid of being?

In no way.

And it is divided into the greatest and into the smallest, and into being of all sizes, and is broken up more than all things; the divisions of it have no limit.

True.

Then it has the greatest number of parts?

Yes, the greatest number.

Is there any of these which is a part of being, and yet no part?

Impossible.

But if it is at all and so long as it is, it must be one, and cannot be none?

Certainly.

Then the one attaches to every single part of being, and does not fail in any part, whether great or small, or whatever may be the size of it?

True.

But reflect:—Can one, in its entirety, be in many places at the same time?

No; I see the impossibility of that.

And if not in its entirety, then it is divided; for it cannot be present with all the parts of being, unless divided.

True.

And that which has parts will be as many as the parts are?

Certainly.

Then we were wrong in saying just now, that being was distributed into the greatest number of parts. For it is not distributed into parts more than the one, into parts equal to the one; the one is never wanting to being, or being to the one, but being two they are co-equal and co-extensive.

Certainly that is true.

The one itself, then, having been broken up into parts by being, is many and infinite?

True.

Then not only the one which has being is many, but the one itself distributed by being, must also be many?

Certainly.

Further, inasmuch as the parts are parts of a whole, the one, as a whole, will be limited; for are not the parts contained by the whole?

Certainly.

And that which contains, is a limit?

Of course.

Then the one if it has being is one and many, whole and parts, having limits and yet unlimited in number?

Clearly.

And because having limits, also having extremes?

Certainly.

And if a whole, having beginning and middle and end. For can anything be a whole without these three? And if any one of them is wanting to anything, will that any longer be a whole?

No.

Then the one, as appears, will have beginning, middle, and end.

It will.

But, again, the middle will be equidistant from the extremes; or it would not be in the middle?

Yes.

Then the one will partake of figure, either rectilinear or round, or a union of the two?

True.

And if this is the case, it will be both in itself and in another too.

How?

Every part is in the whole, and none is outside the whole.

True.

And all the parts are contained by the whole?

Yes.

And the one is all its parts, and neither more nor less than all?

No.

And the one is the whole?

Of course.

But if all the parts are in the whole, and the one is all of them and the whole, and they are all contained by the whole, the one will be contained by the one; and thus the one will be in itself.

That is true.

But then, again, the whole is not in the parts—neither in all the parts, nor in some one of them. For if it is in all, it must be in one; for if there were any one in which it was not, it could not be in all the parts; for the part in which it is wanting is one of all, and if the whole is not in this, how can it be in them all?

It cannot.

Nor can the whole be in some of the parts; for if the whole were in some of the parts, the greater would be in the less, which is impossible.

Yes, impossible.

But if the whole is neither in one, nor in more than one, nor in all of the parts, it must be in something else, or cease to be anywhere at all?

Certainly.

If it were nowhere, it would be nothing; but being a whole, and not being in itself, it must be in another.

Very true.

The one then, regarded as a whole, is in another, but regarded as being all its parts, is in itself; and therefore the one must be itself in itself and also in another.

Certainly.

The one then, being of this nature, is of necessity both at rest and in motion?

How?

The one is at rest since it is in itself, for being in one, and not passing out of this, it is in the same, which is itself.

True.

And that which is ever in the same, must be ever at rest?

Certainly.

Well, and must not that, on the contrary, which is ever in other, never be in the same; and if never in the same, never at rest, and if not at rest, in motion?

True.

Then the one being always itself in itself and other, must always be both at rest and in motion?

Clearly.

And must be the same with itself, and other than itself; and also the same with the others, and other than the others; this follows from its previous affections.

How so?

Everything in relation to every other thing, is either the same or other; or if neither the same nor other, then in the relation of a part to a whole, or of a whole to a part.

Clearly.

And is the one a part of itself?

Certainly not.

Since it is not a part in relation to itself it cannot be related to itself as whole to part?

It cannot.

But is the one other than one?

No.

And therefore not other than itself?

Certainly not.

If then it be neither other, nor a whole, nor a part in relation to itself, must it not be the same with itself?

Certainly.

But then, again, a thing which is in another place from 'itself,' if this 'itself' remains in the same place with itself, must be other than 'itself,' for it will be in another place?

True.

Then the one has been shown to be at once in itself and in another?

Yes.

Thus, then, as appears, the one will be other than itself?

True.

Well, then, if anything be other than anything, will it not be other than that which is other?

Certainly.

And will not all things that are not one, be other than the one, and the one other than the not-one?

Of course.

Then the one will be other than the others?

True.

But, consider:—Are not the absolute same, and the absolute other, opposites to one another?

Of course.

Then will the same ever be in the other, or the other in the same?

They will not.

If then the other is never in the same, there is nothing in which the other is during any space of time; for during that space of time, however small, the other would be in the same. Is not that true?

Yes.

And since the other is never in the same, it can never be in anything that is.

True.

Then the other will never be either in the not-one, or in the one?

Certainly not.

Then not by reason of otherness is the one other than the not-one, or the not-one other than the one.

No.

Nor by reason of themselves will they be other than one another, if not partaking of the other.

How can they be?

But if they are not other, either by reason of themselves or of the other, will they not altogether escape being other than one another?

They will.

Again, the not-one cannot partake of the one; otherwise it would not have been not-one, but would have been in some way one.

True.

Nor can the not-one be number; for having number, it would not have been not-one at all.

It would not.

Again, is the not-one part of the one; or rather, would it not in that case partake of the one?

It would.

If then, in every point of view, the one and the not-one are distinct, then neither is the one part or whole of the not-one, nor is the not-one part or whole of the one?

No.

But we said that things which are neither parts nor wholes of one another, nor other than one another, will be the same with one another:—so we said?

Yes.

Then shall we say that the one, being in this relation to the not-one, is the same with it?

Let us say so.

Then it is the same with itself and the others, and also other than itself and the others.

That appears to be the inference.

And it will also be like and unlike itself and the others?

Perhaps.

Since the one was shown to be other than the others, the others will also be other than the one.

Yes.

And the one is other than the others in the same degree that the others are other than it, and neither more nor less?

True.

And if neither more nor less, then in a like degree?

Yes.

In virtue of the affection by which the one is other than others and others in like manner other than it, the one will be affected like the others and the others like the one.

How do you mean?

I may take as an illustration the case of names: You give a name to a thing?

Yes.

And you may say the name once or oftener?

Yes.

And when you say it once, you mention that of which it is the name? and when more than once, is it something else which you mention? or must it always be the same thing of which you speak, whether you utter the name once or more than once?

Of course it is the same.

And is not 'other' a name given to a thing?

Certainly.

Whenever, then, you use the word 'other,' whether once or oftener, you name that of which it is the name, and to no other do you give the name?

True.

Then when we say that the others are other than the one, and the one other than the others, in repeating the word 'other' we speak of that nature to which the name is applied, and of no other?

Quite true.

Then the one which is other than others, and the other which is other than the one, in that the word 'other' is applied to both, will be in the same condition; and that which is in the same condition is like?

Yes.

Then in virtue of the affection by which the one is other than the others, every thing will be like every thing, for every thing is other than every thing.

True.

Again, the like is opposed to the unlike?

Yes.

And the other to the same?

True again.

And the one was also shown to be the same with the others?

Yes.

And to be the same with the others is the opposite of being other than the others?

Certainly.

And in that it was other it was shown to be like?

Yes.

But in that it was the same it will be unlike by virtue of the opposite affection to that which made it like; and this was the affection of otherness.

Yes.

The same then will make it unlike; otherwise it will not be the opposite of the other.

True.

Then the one will be both like and unlike the others; like in so far as it is other, and unlike in so far as it is the same.

Yes, that argument may be used.

And there is another argument.

What?

In so far as it is affected in the same way it is not affected otherwise, and not being affected otherwise is not unlike, and not being unlike, is like; but in so far as it is affected by other it is otherwise, and being otherwise affected is unlike.

True.

Then because the one is the same with the others and other than the others, on either of these two grounds, or on both of them, it will be both like and unlike the others?

Certainly.

And in the same way as being other than itself and the same with itself, on either of these two grounds and on both of them, it will be like and unlike itself?

Of course.

Again, how far can the one touch or not touch itself and others?—consider.

I am considering.

The one was shown to be in itself which was a whole?

True.

And also in other things?

Yes.

In so far as it is in other things it would touch other things, but in so far as it is in itself it would be debarred from touching them, and would touch itself only.

Clearly.

Then the inference is that it would touch both?

It would.

But what do you say to a new point of view? Must not that which is to touch another be next to that which it is to touch, and occupy the place nearest to that in which what it touches is situated?

True.

Then the one, if it is to touch itself, ought to be situated next to itself, and occupy the place next to that in which itself is?

It ought.

And that would require that the one should be two, and be in two places at once, and this, while it is one, will never happen.

No.

Then the one cannot touch itself any more than it can be two?

It cannot.

Neither can it touch others.

Why not?

The reason is, that whatever is to touch another must be in separation from, and next to, that which it is to touch, and no third thing can be between them.

True.

Two things, then, at the least are necessary to make contact possible?

They are.

And if to the two a third be added in due order, the number of terms will be three, and the contacts two?

Yes.

And every additional term makes one additional contact, whence it follows that the contacts are one less in number than the terms; the first two terms exceeded the number of contacts by one, and the whole number of terms exceeds the whole number of contacts by one in like manner; and for every one which is afterwards added to the number of terms, one contact is added to the contacts.

True.

Whatever is the whole number of things, the contacts will be always one less.

True.

But if there be only one, and not two, there will be no contact?

How can there be?

And do we not say that the others being other than the one are not one and have no part in the one?

True.

Then they have no number, if they have no one in them?

Of course not.

Then the others are neither one nor two, nor are they called by the name of any number?

No.

One, then, alone is one, and two do not exist?

Clearly not.

And if there are not two, there is no contact?

There is not.

Then neither does the one touch the others, nor the others the one, if there is no contact?

Certainly not.

For all which reasons the one touches and does not touch itself and the others?

True.

Further—is the one equal and unequal to itself and others?

How do you mean?

If the one were greater or less than the others, or the others greater or less than the one, they would not be greater or less than each other in virtue of their being the one and the others; but, if in addition to their being what they are they had equality, they would be equal to one another, or if the one had smallness and the others greatness, or the one had greatness and the others smallness—whichever kind had greatness would be greater, and whichever had smallness would be smaller?

Certainly.

Then there are two such ideas as greatness and smallness; for if they were not they could not be opposed to each other and be present in that which is.

How could they?

If, then, smallness is present in the one it will be present either in the whole or in a part of the whole?

Certainly.

Suppose the first; it will be either co-equal and co-extensive with the whole one, or will contain the one?

Clearly.

If it be co-extensive with the one it will be co-equal with the one, or if containing the one it will be greater than the one?

Of course.

But can smallness be equal to anything or greater than anything, and have the functions of greatness and equality and not its own functions?

Impossible.

Then smallness cannot be in the whole of one, but, if at all, in a part only?

Yes.

And surely not in all of a part, for then the difficulty of the whole will recur; it will be equal to or greater than any part in which it is.

Certainly.

Then smallness will not be in anything, whether in a whole or in a part; nor will there be anything small but actual smallness.

True.

Neither will greatness be in the one, for if greatness be in anything there will be something greater other and besides greatness itself, namely, that in which greatness is; and this too when the small itself is not there, which the one, if it is great, must exceed; this, however, is impossible, seeing that smallness is wholly absent.

True.

But absolute greatness is only greater than absolute smallness, and smallness is only smaller than absolute greatness.

Very true.

Then other things not greater or less than the one, if they have neither greatness nor smallness; nor have greatness or smallness any power of exceeding or being exceeded in relation to the one, but only in relation to one another; nor will the one be greater or less than them or others, if it has neither greatness nor smallness.

Clearly not.

Then if the one is neither greater nor less than the others, it cannot either exceed or be exceeded by them?

Certainly not.

And that which neither exceeds nor is exceeded, must be on an equality; and being on an equality, must be equal.

Of course.

And this will be true also of the relation of the one to itself; having neither greatness nor smallness in itself, it will neither exceed nor be exceeded by itself, but will be on an equality with and equal to itself.

Certainly.

Then the one will be equal both to itself and the others?

Clearly so.

And yet the one, being itself in itself, will also surround and be without itself; and, as containing itself, will be greater than itself; and, as contained in itself, will be less; and will thus be greater and less than itself.

It will.

Now there cannot possibly be anything which is not included in the one and the others?

Of course not.

But, surely, that which is must always be somewhere?

Yes.

But that which is in anything will be less, and that in which it is will be greater; in no other way can one thing be in another.

True.

And since there is nothing other or besides the one and the others, and they must be in something, must they not be in one another, the one in the others and the others in the one, if they are to be anywhere?

That is clear.

But inasmuch as the one is in the others, the others will be greater than the one, because they contain the one, which will be less than the others, because it is contained in them; and inasmuch as the others are in the one, the one on the same principle will be greater than the others, and the others less than the one.

True.

The one, then, will be equal to and greater and less than itself and the others?

Clearly.

And if it be greater and less and equal, it will be of equal and more and less measures or divisions than itself and the others, and if of measures, also of parts?

Of course.

And if of equal and more and less measures or divisions, it will be in number more or less than itself and the others, and likewise equal in number to itself and to the others?

How is that?

It will be of more measures than those things which it exceeds, and of as many parts as measures; and so with that to which it is equal, and that than which it is less.

True.

And being greater and less than itself, and equal to itself, it will be of equal measures with itself and of more and fewer measures than itself; and if of measures then also of parts?

It will.

And being of equal parts with itself, it will be numerically equal to itself; and being of more parts, more, and being of less, less than itself?

Certainly.

And the same will hold of its relation to other things; inasmuch as it is greater than them, it will be more in number than them; and inasmuch as it is smaller, it will be less in number; and inasmuch as it is equal in size to other things, it will be equal to them in number.

Certainly.

Once more, then, as would appear, the one will be in number both equal to and more and less than both itself and all other things.

It will.

Does the one also partake of time? And is it and does it become older and younger than itself and others, and again, neither younger nor older than itself and others, by virtue of participation in time?

How do you mean?

If one is, being must be predicated of it?

Yes.

But to be (einai) is only participation of being in present time, and to have been is the participation of being at a past time, and to be about to be is the participation of being at a future time?

Very true.

Then the one, since it partakes of being, partakes of time?

Certainly.

And is not time always moving forward?

Yes.

Then the one is always becoming older than itself, since it moves forward in time?

Certainly.

And do you remember that the older becomes older than that which becomes younger?

I remember.

Then since the one becomes older than itself, it becomes younger at the same time?

Certainly.

Thus, then, the one becomes older as well as younger than itself?

Yes.

And it is older (is it not?) when in becoming, it gets to the point of time between 'was' and 'will be,' which is 'now': for surely in going from the past to the future, it cannot skip the present?

No.

And when it arrives at the present it stops from becoming older, and no longer becomes, but is older, for if it went on it would never be reached by the present, for it is the nature of that which goes on, to touch both the present and the future, letting go the present and seizing the future, while in process of becoming between them.

True.

But that which is becoming cannot skip the present; when it reaches the present it ceases to become, and is then whatever it may happen to be becoming.

Clearly.

And so the one, when in becoming older it reaches the present, ceases to become, and is then older.

Certainly.

And it is older than that than which it was becoming older, and it was becoming older than itself.

Yes.

And that which is older is older than that which is younger?

True.

Then the one is younger than itself, when in becoming older it reaches the present?

Certainly.

But the present is always present with the one during all its being; for whenever it is it is always now.

Certainly.

Then the one always both is and becomes older and younger than itself?

Truly.

And is it or does it become a longer time than itself or an equal time with itself?

An equal time.

But if it becomes or is for an equal time with itself, it is of the same age with itself?

Of course.

And that which is of the same age, is neither older nor younger?

No.

The one, then, becoming and being the same time with itself, neither is nor becomes older or younger than itself?

I should say not.

And what are its relations to other things? Is it or does it become older or younger than they?

I cannot tell you.

You can at least tell me that others than the one are more than the one—other would have been one, but the others have multitude, and are more than one?

They will have multitude.

And a multitude implies a number larger than one?

Of course.

And shall we say that the lesser or the greater is the first to come or to have come into existence?

The lesser.

Then the least is the first? And that is the one?

Yes.

Then the one of all things that have number is the first to come into being; but all other things have also number, being plural and not singular.

They have.

And since it came into being first it must be supposed to have come into being prior to the others, and the others later; and the things which came into being later, are younger than that which preceded them? And so the other things will be younger than the one, and the one older than other things?

True.

What would you say of another question? Can the one have come into being contrary to its own nature, or is that impossible?

Impossible.

And yet, surely, the one was shown to have parts; and if parts, then a beginning, middle and end?

Yes.

And a beginning, both of the one itself and of all other things, comes into being first of all; and after the beginning, the others follow, until you reach the end?

Certainly.

And all these others we shall affirm to be parts of the whole and of the one, which, as soon as the end is reached, has become whole and one?

Yes; that is what we shall say.

But the end comes last, and the one is of such a nature as to come into being with the last; and, since the one cannot come into being except in accordance with its own nature, its nature will require that it should come into being after the others, simultaneously with the end.

Clearly.

Then the one is younger than the others and the others older than the one.

That also is clear in my judgment.

Well, and must not a beginning or any other part of the one or of anything, if it be a part and not parts, being a part, be also of necessity one?

Certainly.

And will not the one come into being together with each part—together with the first part when that comes into being, and together with the second part and with all the rest, and will not be wanting to any part, which is added to any other part until it has reached the last and become one whole; it will

be wanting neither to the middle, nor to the first, nor to the last, nor to any of them, while the process of becoming is going on?

True.

Then the one is of the same age with all the others, so that if the one itself does not contradict its own nature, it will be neither prior nor posterior to the others, but simultaneous; and according to this argument the one will be neither older nor younger than the others, nor the others than the one, but according to the previous argument the one will be older and younger than the others and the others than the one.

Certainly.

After this manner then the one is and has become. But as to its becoming older and younger than the others, and the others than the one, and neither older nor younger, what shall we say? Shall we say as of being so also of becoming, or otherwise?

I cannot answer.

But I can venture to say, that even if one thing were older or younger than another, it could not become older or younger in a greater degree than it was at first; for equals added to unequals, whether to periods of time or to anything else, leave the difference between them the same as at first.

Of course.

Then that which is, cannot become older or younger than that which is, since the difference of age is always the same; the one is and has become older and the other younger; but they are no longer becoming so.

True.

And the one which is does not therefore become either older or younger than the others which are.

No.

But consider whether they may not become older and younger in another way.

In what way?

Just as the one was proven to be older than the others and the others than the one.

And what of that?

If the one is older than the others, has come into being a longer time than the others.

Yes.

But consider again; if we add equal time to a greater and a less time, will the greater differ from the less time by an equal or by a smaller portion than before?

By a smaller portion.

Then the difference between the age of the one and the age of the others will not be afterwards so great as at first, but if an equal time be added to both of them they will differ less and less in age?

Yes.

And that which differs in age from some other less than formerly, from being older will become younger in relation to that other than which it was older?

Yes, younger.

And if the one becomes younger the others aforesaid will become older than they were before, in relation to the one.

Certainly.

Then that which had become younger becomes older relatively to that which previously had become and was older; it never really is older, but is always becoming, for the one is always growing on the side of youth and the other on the side of age. And in like manner the older is always in process of becoming younger than the younger; for as they are always going in opposite directions they become in ways the opposite to one another, the younger older than the older, and the older younger than the younger. They cannot, however, have become; for if they had already become they would be and not merely become. But that is impossible; for they are always becoming both older and younger than one another: the one becomes younger than the others because it was seen to be older and prior, and the others become older than the one because they came into being later; and in the same way the others are in the same relation to the one, because they were seen to be older, and prior to the one.

That is clear.

Inasmuch then, one thing does not become older or younger than another, in that they always differ from each other by an equal number, the one cannot become older or younger than the others, nor the others than the one; but inasmuch as that which came into being earlier and that which came into being later must continually differ from each other by a different portion—in this point of view the others must become older and younger than the one, and the one than the others.

Certainly.

For all these reasons, then, the one is and becomes older and younger than itself and the others, and neither is nor becomes older or younger than itself or the others.

Certainly.

But since the one partakes of time, and partakes of becoming older and younger, must it not also partake of the past, the present, and the future?

Of course it must.

Then the one was and is and will be, and was becoming and is becoming and will become?

Certainly.

And there is and was and will be something which is in relation to it and belongs to it?

True.

And since we have at this moment opinion and knowledge and perception of the one, there is opinion and knowledge and perception of it?

Quite right.

Then there is name and expression for it, and it is named and expressed, and everything of this kind which appertains to other things appertains to the one.

Certainly, that is true.

Yet once more and for the third time, let us consider: If the one is both one and many, as we have described, and is neither one nor many, and participates in time, must it not, in as far as it is one, at times partake of being, and in as far as it is not one, at times not partake of being?

Certainly.

But can it partake of being when not partaking of being, or not partake of being when partaking of being?

Impossible.

Then the one partakes and does not partake of being at different times, for that is the only way in which it can partake and not partake of the same.

True.

And is there not also a time at which it assumes being and relinquishes being—for how can it have and not have the same thing unless it receives and also gives it up at some time?

Impossible.

And the assuming of being is what you would call becoming?

I should.

And the relinquishing of being you would call destruction?

I should.

The one then, as would appear, becomes and is destroyed by taking and giving up being.

Certainly.

And being one and many and in process of becoming and being destroyed, when it becomes one it ceases to be many, and when many, it ceases to be one?

Certainly.

And as it becomes one and many, must it not inevitably experience separation and aggregation?

Inevitably.

And whenever it becomes like and unlike it must be assimilated and dissimilated?

Yes.

And when it becomes greater or less or equal it must grow or diminish or be equalized?

True.

And when being in motion it rests, and when being at rest it changes to motion, it can surely be in no time at all?

How can it?

But that a thing which is previously at rest should be afterwards in motion, or previously in motion and afterwards at rest, without experiencing change, is impossible.

Impossible.

And surely there cannot be a time in which a thing can be at once neither in motion nor at rest?

There cannot.

But neither can it change without changing.

True.

When then does it change; for it cannot change either when at rest, or when in motion, or when in time?

It cannot.

And does this strange thing in which it is at the time of changing really exist?

What thing?

The moment. For the moment seems to imply a something out of which change takes place into either of two states; for the change is not from the state of rest as such, nor from the state of motion as such; but there is this curious nature which we call the moment lying between rest and motion, not being in any time; and into this and out of this what is in motion changes into rest, and what is at rest into motion.

So it appears.

And the one then, since it is at rest and also in motion, will change to either, for only in this way can it be in both. And in changing it changes in a moment, and when it is changing it will be in no time, and will not then be either in motion or at rest.

It will not.

And it will be in the same case in relation to the other changes, when it passes from being into cessation of being, or from not-being into becoming—then it passes between certain states of motion and rest, and neither is nor is not, nor becomes nor is destroyed.

Very true.

And on the same principle, in the passage from one to many and from many to one, the one is neither one nor many, neither separated nor aggregated; and in the passage from like to unlike, and from unlike to like, it is neither like nor unlike, neither in a state of assimilation nor of dissimilation; and in the passage from small to great and equal and back again, it will be neither small nor great, nor equal, nor in a state of increase, or diminution, or equalization.

True.

All these, then, are the affections of the one, if the one has being.

Of course.

1.aa. But if one is, what will happen to the others—is not that also to be considered?

Yes.

Let us show then, if one is, what will be the affections of the others than the one.

Let us do so.

Inasmuch as there are things other than the one, the others are not the one; for if they were they could not be other than the one.

Very true.

Nor are the others altogether without the one, but in a certain way they participate in the one.

In what way?

Because the others are other than the one inasmuch as they have parts; for if they had no parts they would be simply one.

Right.

And parts, as we affirm, have relation to a whole?

So we say.

And a whole must necessarily be one made up of many; and the parts will be parts of the one, for each of the parts is not a part of many, but of a whole.

How do you mean?

If anything were a part of many, being itself one of them, it will surely be a part of itself, which is impossible, and it will be a part of each one of the other parts, if of all; for if not a part of some one, it will be a part of all the others but this one, and thus will not be a part of each one; and if not a part of each, one it will not be a part of any one of the many; and not being a part of any one, it cannot be a part or anything else of all those things of none of which it is anything.

Clearly not.

Then the part is not a part of the many, nor of all, but is of a certain single form, which we call a whole, being one perfect unity framed out of all—of this the part will be a part.

Certainly.

If, then, the others have parts, they will participate in the whole and in the one.

True.

Then the others than the one must be one perfect whole, having parts.

Certainly.

And the same argument holds of each part, for the part must participate in the one; for if each of the parts is a part, this means, I suppose, that it is one separate from the rest and self-related; otherwise it is not each.

True.

But when we speak of the part participating in the one, it must clearly be other than one; for if not, it would not merely have participated, but would have been one; whereas only the itself can be one.

Very true.

Both the whole and the part must participate in the one; for the whole will be one whole, of which the parts will be parts; and each part will be one part of the whole which is the whole of the part.

True.

And will not the things which participate in the one, be other than it?

Of course.

And the things which are other than the one will be many; for if the things which are other than the one were neither one nor more than one, they would be nothing.

True.

But, seeing that the things which participate in the one as a part, and in the one as a whole, are more than one, must not those very things which participate in the one be infinite in number?

How so?

Let us look at the matter thus:—Is it not a fact that in partaking of the one they are not one, and do not partake of the one at the very time when they are partaking of it?

Clearly.

They do so then as multitudes in which the one is not present?

Very true.

And if we were to abstract from them in idea the very smallest fraction, must not that least fraction, if it does not partake of the one, be a multitude and not one?

It must.

And if we continue to look at the other side of their nature, regarded simply, and in itself, will not they, as far as we see them, be unlimited in number?

Certainly.

And yet, when each several part becomes a part, then the parts have a limit in relation to the whole and to each other, and the whole in relation to the parts.

Just so.

The result to the others than the one is that the union of themselves and the one appears to create a new element in them which gives to them limitation in relation to one another; whereas in their own nature they have no limit.

That is clear.

Then the others than the one, both as whole and parts, are infinite, and also partake of limit.

Certainly.

Then they are both like and unlike one another and themselves.

How is that?

Inasmuch as they are unlimited in their own nature, they are all affected in the same way.

True.

And inasmuch as they all partake of limit, they are all affected in the same way.

Of course.

But inasmuch as their state is both limited and unlimited, they are affected in opposite ways.

Yes.

And opposites are the most unlike of things.

Certainly.

Considered, then, in regard to either one of their affections, they will be like themselves and one another; considered in reference to both of them together, most opposed and most unlike.

That appears to be true.

Then the others are both like and unlike themselves and one another?

True.

And they are the same and also different from one another, and in motion and at rest, and experience every sort of opposite affection, as may be proved without difficulty of them, since they have been shown to have experienced the affections aforesaid?

True.

1.bb. Suppose, now, that we leave the further discussion of these matters as evident, and consider again upon the hypothesis that the one is, whether opposite of all this is or is not equally true of the others.

By all means.

Then let us begin again, and ask, If one is, what must be the affections of the others?

Let us ask that question.

Must not the one be distinct from the others, and the others from the one?

Why so?

Why, because there is nothing else beside them which is distinct from both of them; for the expression 'one and the others' includes all things.

Yes, all things.

Then we cannot suppose that there is anything different from them in which both the one and the others might exist?

There is nothing.

Then the one and the others are never in the same?

True.

Then they are separated from each other?

Yes.

And we surely cannot say that what is truly one has parts?

Impossible.

Then the one will not be in the others as a whole, nor as part, if it be separated from the others, and has no parts?

Impossible.

Then there is no way in which the others can partake of the one, if they do not partake either in whole or in part?

It would seem not.

Then there is no way in which the others are one, or have in themselves any unity?

There is not.

Nor are the others many; for if they were many, each part of them would be a part of the whole; but now the others, not partaking in any way of the one, are neither one nor many, nor whole, nor part.

True.

Then the others neither are nor contain two or three, if entirely deprived of the one?

True.

Then the others are neither like nor unlike the one, nor is likeness and unlikeness in them; for if they were like and unlike, or had in them likeness and unlikeness, they would have two natures in them opposite to one another.

That is clear.

But for that which partakes of nothing to partake of two things was held by us to be impossible?

Impossible.

Then the others are neither like nor unlike nor both, for if they were like or unlike they would partake of one of those two natures, which would be one thing, and if they were both they would partake of opposites which would be two things, and this has been shown to be impossible.

True.

Therefore they are neither the same, nor other, nor in motion, nor at rest, nor in a state of becoming, nor of being destroyed, nor greater, nor less, nor equal, nor have they experienced anything else of the sort; for, if they are capable of experiencing any such affection, they will participate in one and two and three, and odd and even, and in these, as has been proved, they do not participate, seeing that they are altogether and in every way devoid of the one.

Very true.

Therefore if one is, the one is all things, and also nothing, both in relation to itself and to other things.

Certainly.

2.a. Well, and ought we not to consider next what will be the consequence if the one is not?

Yes; we ought.

What is the meaning of the hypothesis—If the one is not; is there any difference between this and the hypothesis—If the not one is not?

There is a difference, certainly.

Is there a difference only, or rather are not the two expressions—if the one is not, and if the not one is not, entirely opposed?

They are entirely opposed.

And suppose a person to say:—If greatness is not, if smallness is not, or anything of that sort, does he not mean, whenever he uses such an expression, that 'what is not' is other than other things?

To be sure.

And so when he says 'If one is not' he clearly means, that what 'is not' is other than all others; we know what he means—do we not?

Yes, we do.

When he says 'one,' he says something which is known; and secondly something which is other than all other things; it makes no difference whether he predicate of one being or not-being, for that which is said 'not to be' is known to be something all the same, and is distinguished from other things.

Certainly.

Then I will begin again, and ask: If one is not, what are the consequences? In the first place, as would appear, there is a knowledge of it, or the very meaning of the words, 'if one is not,' would not be known.

True.

Secondly, the others differ from it, or it could not be described as different from the others?

Certainly.

Difference, then, belongs to it as well as knowledge; for in speaking of the one as different from the others, we do not speak of a difference in the others, but in the one.

Clearly so.

Moreover, the one that is not is something and partakes of relation to 'that,' and 'this,' and 'these,' and the like, and is an attribute of 'this'; for the one, or the others than the one, could not have been spoken of, nor could any attribute or relative of the one that is not have been or been spoken of, nor could it have been said to be anything, if it did not partake of 'some,' or of the other relations just now mentioned.

True.

Being, then, cannot be ascribed to the one, since it is not; but the one that is not may or rather must participate in many things, if it and nothing else is not; if, however, neither the one nor the one that is not is supposed not to be, and we are speaking of something of a different nature, we can predicate nothing of it. But supposing that the one that is not and nothing else is not, then it must participate in the predicate 'that,' and in many others.

Certainly.

And it will have unlikeness in relation to the others, for the others being different from the one will be of a different kind.

Certainly.

And are not things of a different kind also other in kind?

Of course.

And are not things other in kind unlike?

They are unlike.

And if they are unlike the one, that which they are unlike will clearly be unlike them?

Clearly so.

Then the one will have unlikeness in respect of which the others are unlike it?

That would seem to be true.

And if unlikeness to other things is attributed to it, it must have likeness to itself.

How so?

If the one have unlikeness to one, something else must be meant; nor will the hypothesis relate to one; but it will relate to something other than one?

Quite so.

But that cannot be.

No.

Then the one must have likeness to itself?

It must.

Again, it is not equal to the others; for if it were equal, then it would at once be and be like them in virtue of the equality; but if one has no being, then it can neither be nor be like?

It cannot.

But since it is not equal to the others, neither can the others be equal to it?

Certainly not.

And things that are not equal are unequal?

True.

And they are unequal to an unequal?

Of course.

Then the one partakes of inequality, and in respect of this the others are unequal to it?

Very true.

And inequality implies greatness and smallness?

Yes.

Then the one, if of such a nature, has greatness and smallness?

That appears to be true.

And greatness and smallness always stand apart?

True.

Then there is always something between them?

There is.

And can you think of anything else which is between them other than equality?

No, it is equality which lies between them.

Then that which has greatness and smallness also has equality, which lies between them?

That is clear.

Then the one, which is not, partakes, as would appear, of greatness and smallness and equality?

Clearly.

Further, it must surely in a sort partake of being?

How so?

It must be so, for if not, then we should not speak the truth in saying that the one is not. But if we speak the truth, clearly we must say what is. Am I not right?

Yes.

And since we affirm that we speak truly, we must also affirm that we say what is?

Certainly.

Then, as would appear, the one, when it is not, is; for if it were not to be when it is not, but (Or, 'to remit something of existence in relation to not-being.') were to relinquish something of being, so as to become not-being, it would at once be.

Quite true.

Then the one which is not, if it is to maintain itself, must have the being of not-being as the bond of not-being, just as being must have as a bond the not-being of not-being in order to perfect its own being; for the truest assertion of the being of being and of the not-being of not-being is when being partakes of the being of being, and not of the being of not-being—that is, the perfection of being; and when not-being does not partake of the not-being of not-being but of the being of not-being—that is the perfection of not-being.

Most true.

Since then what is partakes of not-being, and what is not of being, must not the one also partake of being in order not to be?

Certainly.

Then the one, if it is not, clearly has being?

Clearly.

And has not-being also, if it is not?

Of course.

But can anything which is in a certain state not be in that state without changing?

Impossible.

Then everything which is and is not in a certain state, implies change?

Certainly.

And change is motion—we may say that?

Yes, motion.

And the one has been proved both to be and not to be?

Yes.

And therefore is and is not in the same state?

Yes.

Thus the one that is not has been shown to have motion also, because it changes from being to not-being?

That appears to be true.

But surely if it is nowhere among what is, as is the fact, since it is not, it cannot change from one place to another?

Impossible.

Then it cannot move by changing place?

No.

Nor can it turn on the same spot, for it nowhere touches the same, for the same is, and that which is not cannot be reckoned among things that are?

It cannot.

Then the one, if it is not, cannot turn in that in which it is not?

No.

Neither can the one, whether it is or is not, be altered into other than itself, for if it altered and became different from itself, then we could not be still speaking of the one, but of something else?

True.

But if the one neither suffers alteration, nor turns round in the same place, nor changes place, can it still be capable of motion?

Impossible.

Now that which is unmoved must surely be at rest, and that which is at rest must stand still?

Certainly.

Then the one that is not, stands still, and is also in motion?

That seems to be true.

But if it be in motion it must necessarily undergo alteration, for anything which is moved, in so far as it is moved, is no longer in the same state, but in another?

Yes.

Then the one, being moved, is altered?

Yes.

And, further, if not moved in any way, it will not be altered in any way?

No.

Then, in so far as the one that is not is moved, it is altered, but in so far as it is not moved, it is not altered?

Right.

Then the one that is not is altered and is not altered?

That is clear.

And must not that which is altered become other than it previously was, and lose its former state and be destroyed; but that which is not altered can neither come into being nor be destroyed?

Very true.

And the one that is not, being altered, becomes and is destroyed; and not being altered, neither becomes nor is destroyed; and so the one that is not becomes and is destroyed, and neither becomes nor is destroyed?

True.

2.b. And now, let us go back once more to the beginning, and see whether these or some other consequences will follow.

Let us do as you say.

If one is not, we ask what will happen in respect of one? That is the question.

Yes.

Do not the words 'is not' signify absence of being in that to which we apply them?

Just so.

And when we say that a thing is not, do we mean that it is not in one way but is in another? or do we mean, absolutely, that what is not has in no sort or way or kind participation of being?

Quite absolutely.

Then, that which is not cannot be, or in any way participate in being?

It cannot.

And did we not mean by becoming, and being destroyed, the assumption of being and the loss of being?

Nothing else.

And can that which has no participation in being, either assume or lose being?

Impossible.

The one then, since it in no way is, cannot have or lose or assume being in any way?

True.

Then the one that is not, since it in no way partakes of being, neither perishes nor becomes?

No.

Then it is not altered at all; for if it were it would become and be destroyed?

True.

But if it be not altered it cannot be moved?

Certainly not.

Nor can we say that it stands, if it is nowhere; for that which stands must always be in one and the same spot?

Of course.

Then we must say that the one which is not never stands still and never moves?

Neither.

Nor is there any existing thing which can be attributed to it; for if there had been, it would partake of being?

That is clear.

And therefore neither smallness, nor greatness, nor equality, can be attributed to it?

No.

Nor yet likeness nor difference, either in relation to itself or to others?

Clearly not.

Well, and if nothing should be attributed to it, can other things be attributed to it?

Certainly not.

And therefore other things can neither be like or unlike, the same, or different in relation to it?

They cannot.

Nor can what is not, be anything, or be this thing, or be related to or the attribute of this or that or other, or be past, present, or future. Nor can knowledge, or opinion, or perception, or expression, or name, or any other thing that is, have any concern with it?

No.

Then the one that is not has no condition of any kind?

Such appears to be the conclusion.

2.aa. Yet once more; if one is not, what becomes of the others? Let us determine that.

Yes; let us determine that.

The others must surely be; for if they, like the one, were not, we could not be now speaking of them.

True.

But to speak of the others implies difference—the terms 'other' and 'different' are synonymous?

True.

Other means other than other, and different, different from the different?

Yes.

Then, if there are to be others, there is something than which they will be other?

Certainly.

And what can that be?—for if the one is not, they will not be other than the one.

They will not.

Then they will be other than each other; for the only remaining alternative is that they are other than nothing.

True.

And they are each other than one another, as being plural and not singular; for if one is not, they cannot be singular, but every particle of them is infinite in number; and even if a person takes that which appears to be the smallest fraction, this, which seemed one, in a moment evanesces into many, as in a dream, and from being the smallest becomes very great, in comparison with the fractions into which it is split up?

Very true.

And in such particles the others will be other than one another, if others are, and the one is not?

Exactly.

And will there not be many particles, each appearing to be one, but not being one, if one is not?

True.

And it would seem that number can be predicated of them if each of them appears to be one, though it is really many?

It can.

And there will seem to be odd and even among them, which will also have no reality, if one is not?

Yes.

And there will appear to be a least among them; and even this will seem large and manifold in comparison with the many small fractions which are contained in it?

Certainly.

And each particle will be imagined to be equal to the many and little; for it could not have appeared to pass from the greater to the less without having appeared to arrive at the middle; and thus would arise the appearance of equality.

Yes.

And having neither beginning, middle, nor end, each separate particle yet appears to have a limit in relation to itself and other.

How so?

Because, when a person conceives of any one of these as such, prior to the beginning another beginning appears, and there is another end, remaining after the end, and in the middle truer middles within but smaller, because no unity can be conceived of any of them, since the one is not.

Very true.

And so all being, whatever we think of, must be broken up into fractions, for a particle will have to be conceived of without unity?

Certainly.

And such being when seen indistinctly and at a distance, appears to be one; but when seen near and with keen intellect, every single thing appears to be infinite, since it is deprived of the one, which is not?

Nothing more certain.

Then each of the others must appear to be infinite and finite, and one and many, if others than the one exist and not the one.

They must.

Then will they not appear to be like and unlike?

In what way?

Just as in a picture things appear to be all one to a person standing at a distance, and to be in the same state and alike?

True.

But when you approach them, they appear to be many and different; and because of the appearance of the difference, different in kind from, and unlike, themselves?

True.

And so must the particles appear to be like and unlike themselves and each other.

Certainly.

And must they not be the same and yet different from one another, and in contact with themselves, although they are separated, and having every sort of motion, and every sort of rest, and becoming and being destroyed, and in neither state, and the like, all which things may be easily enumerated, if the one is not and the many are?

Most true.

2.bb. Once more, let us go back to the beginning, and ask if the one is not, and the others of the one are, what will follow.

Let us ask that question.

In the first place, the others will not be one?

Impossible.

Nor will they be many; for if they were many one would be contained in them. But if no one of them is one, all of them are nought, and therefore they will not be many.

True.

If there be no one in the others, the others are neither many nor one.

They are not.

Nor do they appear either as one or many.

Why not?

Because the others have no sort or manner or way of communion with any sort of not-being, nor can anything which is not, be connected with any of the others; for that which is not has no parts.

True.

Nor is there an opinion or any appearance of not-being in connexion with the others, nor is not-being ever in any way attributed to the others.

No.

Then if one is not, there is no conception of any of the others either as one or many; for you cannot conceive the many without the one.

You cannot.

Then if one is not, the others neither are, nor can be conceived to be either one or many?

It would seem not.

Nor as like or unlike?

No.

Nor as the same or different, nor in contact or separation, nor in any of those states which we enumerated as appearing to be;—the others neither are nor appear to be any of these, if one is not?

True.

Then may we not sum up the argument in a word and say truly: If one is not, then nothing is?

Certainly.

Let thus much be said; and further let us affirm what seems to be the truth, that, whether one is or is not, one and the others in relation to themselves and one another, all of them, in every way, are and are not, and appear to be and appear not to be.

Most true.

PHAEDO

By Plato

Translated by Benjamin Jowett

INTRODUCTION.

After an interval of some months or years, and at Phlius, a town of Peloponnesus, the tale of the last hours of Socrates is narrated to Echecrates and other Phliasians by Phaedo the 'beloved disciple.' The Dialogue necessarily takes the form of a narrative, because Socrates has to be described acting as well as speaking. The minutest particulars of the event are interesting to distant friends, and the narrator has an equal interest in them.

During the voyage of the sacred ship to and from Delos, which has occupied thirty days, the execution of Socrates has been deferred. (Compare Xen. Mem.) The time has been passed by him in conversation with a select company of disciples. But now the holy season is over, and the disciples meet earlier than usual in order that they may converse with Socrates for the last time. Those who were present, and those who might have been expected to be present, are mentioned by name. There are Simmias and Cebes (Crito), two disciples of Philolaus whom Socrates 'by his enchantments has attracted from Thebes' (Mem.), Crito the aged friend, the attendant of the prison, who is as good as a friend—these take part in the conversation. There are present also, Hermogenes, from whom Xenophon derived his information about the trial of Socrates (Mem.), the 'madman' Apollodorus (Symp.), Euclid and Terpsion from Megara (compare Theaet.), Ctesippus, Antisthenes, Menexenus, and some other less-known members of the Socratic circle, all of whom are silent auditors. Aristippus, Cleombrotus, and Plato are noted as absent. Almost as soon as the friends of Socrates enter the prison Xanthippe and her children are sent home in the care of one of Crito's servants. Socrates himself has just been released from chains, and is led by this circumstance to make the natural remark that 'pleasure follows pain.' (Observe that Plato is preparing the way for his doctrine of the alternation of opposites.) 'Aesop would have represented them in a fable as a two-headed creature of the gods.' The mention of Aesop reminds Cebes of a question which had been asked by Evenus the poet (compare Apol.): 'Why Socrates, who was not a poet, while in prison had been putting Aesop into verse?'—'Because several times in his life he had been warned in dreams that he should practise music; and as he was about to die and was not certain of what was meant, he wished to fulfil the admonition in the letter as well as in the spirit, by writing verses as well as by cultivating philosophy. Tell this to Evenus; and say that I would have him follow me in death.' 'He is not at all the sort of man to comply with your request, Socrates.' 'Why, is he not a philosopher?' 'Yes.' 'Then he will be willing to die, although he will not take his own life, for that is held to be unlawful.'

Cebes asks why suicide is thought not to be right, if death is to be accounted a good? Well, (1) according to one explanation, because man is a prisoner, who must not open the door of his prison and run away—this is the truth in a 'mystery.' Or (2) rather, because he is not his own property, but a possession of the gods, and has no right to make away with that which does not belong to him. But why, asks Cebes, if he is a possession of the gods, should he wish to die and leave them? For he is under their protection; and surely he cannot take better care of himself than they take of him. Simmias explains that Cebes is really referring to Socrates, whom they think too unmoved at the prospect of leaving the gods and his friends. Socrates answers that he is going to other gods who are

wise and good, and perhaps to better friends; and he professes that he is ready to defend himself against the charge of Cebes. The company shall be his judges, and he hopes that he will be more successful in convincing them than he had been in convincing the court.

The philosopher desires death—which the wicked world will insinuate that he also deserves: and perhaps he does, but not in any sense which they are capable of understanding. Enough of them: the real question is, What is the nature of that death which he desires? Death is the separation of soul and body—and the philosopher desires such a separation. He would like to be freed from the dominion of bodily pleasures and of the senses, which are always perturbing his mental vision. He wants to get rid of eyes and ears, and with the light of the mind only to behold the light of truth. All the evils and impurities and necessities of men come from the body. And death separates him from these corruptions, which in life he cannot wholly lay aside. Why then should he repine when the hour of separation arrives? Why, if he is dead while he lives, should he fear that other death, through which alone he can behold wisdom in her purity?

Besides, the philosopher has notions of good and evil unlike those of other men. For they are courageous because they are afraid of greater dangers, and temperate because they desire greater pleasures. But he disdains this balancing of pleasures and pains, which is the exchange of commerce and not of virtue. All the virtues, including wisdom, are regarded by him only as purifications of the soul. And this was the meaning of the founders of the mysteries when they said, 'Many are the wand-bearers but few are the mystics.' (Compare Matt. xxii.: 'Many are called but few are chosen.') And in the hope that he is one of these mystics, Socrates is now departing. This is his answer to any one who charges him with indifference at the prospect of leaving the gods and his friends.

Still, a fear is expressed that the soul upon leaving the body may vanish away like smoke or air. Socrates in answer appeals first of all to the old Orphic tradition that the souls of the dead are in the world below, and that the living come from them. This he attempts to found on a philosophical assumption that all opposites—e.g. less, greater; weaker, stronger; sleeping, waking; life, death—are generated out of each other. Nor can the process of generation be only a passage from living to dying, for then all would end in death. The perpetual sleeper (Endymion) would be no longer distinguished from the rest of mankind. The circle of nature is not complete unless the living come from the dead as well as pass to them.

The Platonic doctrine of reminiscence is then adduced as a confirmation of the pre-existence of the soul. Some proofs of this doctrine are demanded. One proof given is the same as that of the Meno, and is derived from the latent knowledge of mathematics, which may be elicited from an unlearned person when a diagram is presented to him. Again, there is a power of association, which from seeing Simmias may remember Cebes, or from seeing a picture of Simmias may remember Simmias. The lyre may recall the player of the lyre, and equal pieces of wood or stone may be associated with the higher notion of absolute equality. But here observe that material equalities fall short of the conception of absolute equality with which they are compared, and which is the measure of them. And the measure or standard must be prior to that which is measured, the idea of equality prior to the visible equals. And if prior to them, then prior also to the perceptions of the senses which recall them, and therefore either given before birth or at birth. But all men have not this knowledge, nor have any without a process of reminiscence; which is a proof that it is not innate or given at birth, unless indeed it was given and taken away at the same instant. But if not given to men in birth, it must have been

given before birth—this is the only alternative which remains. And if we had ideas in a former state, then our souls must have existed and must have had intelligence in a former state. The pre-existence of the soul stands or falls with the doctrine of ideas.

It is objected by Simmias and Cebes that these arguments only prove a former and not a future existence. Socrates answers this objection by recalling the previous argument, in which he had shown that the living come from the dead. But the fear that the soul at departing may vanish into air (especially if there is a wind blowing at the time) has not yet been charmed away. He proceeds: When we fear that the soul will vanish away, let us ask ourselves what is that which we suppose to be liable to dissolution? Is it the simple or the compound, the unchanging or the changing, the invisible idea or the visible object of sense? Clearly the latter and not the former; and therefore not the soul, which in her own pure thought is unchangeable, and only when using the senses descends into the region of change. Again, the soul commands, the body serves: in this respect too the soul is akin to the divine, and the body to the mortal. And in every point of view the soul is the image of divinity and immortality, and the body of the human and mortal. And whereas the body is liable to speedy dissolution, the soul is almost if not quite indissoluble. (Compare Tim.) Yet even the body may be preserved for ages by the embalmer's art: how unlikely, then, that the soul will perish and be dissipated into air while on her way to the good and wise God! She has been gathered into herself, holding aloof from the body, and practising death all her life long, and she is now finally released from the errors and follies and passions of men, and for ever dwells in the company of the gods.

But the soul which is polluted and engrossed by the corporeal, and has no eye except that of the senses, and is weighed down by the bodily appetites, cannot attain to this abstraction. In her fear of the world below she lingers about the sepulchre, loath to leave the body which she loved, a ghostly apparition, saturated with sense, and therefore visible. At length entering into some animal of a nature congenial to her former life of sensuality or violence, she takes the form of an ass, a wolf or a kite. And of these earthly souls the happiest are those who have practised virtue without philosophy; they are allowed to pass into gentle and social natures, such as bees and ants. (Compare Republic, Meno.) But only the philosopher who departs pure is permitted to enter the company of the gods. (Compare Phaedrus.) This is the reason why he abstains from fleshly lusts, and not because he fears loss or disgrace, which is the motive of other men. He too has been a captive, and the willing agent of his own captivity. But philosophy has spoken to him, and he has heard her voice; she has gently entreated him, and brought him out of the 'miry clay,' and purged away the mists of passion and the illusions of sense which envelope him; his soul has escaped from the influence of pleasures and pains, which are like nails fastening her to the body. To that prison-house she will not return; and therefore she abstains from bodily pleasures—not from a desire of having more or greater ones, but because she knows that only when calm and free from the dominion of the body can she behold the light of truth.

Simmias and Cebes remain in doubt; but they are unwilling to raise objections at such a time. Socrates wonders at their reluctance. Let them regard him rather as the swan, who, having sung the praises of Apollo all his life long, sings at his death more lustily than ever. Simmias acknowledges that there is cowardice in not probing truth to the bottom. 'And if truth divine and inspired is not to be had, then let a man take the best of human notions, and upon this frail bark let him sail through life.' He proceeds to state his difficulty: It has been argued that the soul is invisible and incorporeal, and therefore immortal, and prior to the body. But is not the soul acknowledged to be a harmony, and has

she not the same relation to the body, as the harmony—which like her is invisible—has to the lyre? And yet the harmony does not survive the lyre. Cebes has also an objection, which like Simmias he expresses in a figure. He is willing to admit that the soul is more lasting than the body. But the more lasting nature of the soul does not prove her immortality; for after having worn out many bodies in a single life, and many more in successive births and deaths, she may at last perish, or, as Socrates afterwards restates the objection, the very act of birth may be the beginning of her death, and her last body may survive her, just as the coat of an old weaver is left behind him after he is dead, although a man is more lasting than his coat. And he who would prove the immortality of the soul, must prove not only that the soul outlives one or many bodies, but that she outlives them all.

The audience, like the chorus in a play, for a moment interpret the feelings of the actors; there is a temporary depression, and then the enquiry is resumed. It is a melancholy reflection that arguments, like men, are apt to be deceivers; and those who have been often deceived become distrustful both of arguments and of friends. But this unfortunate experience should not make us either haters of men or haters of arguments. The want of health and truth is not in the argument, but in ourselves. Socrates, who is about to die, is sensible of his own weakness; he desires to be impartial, but he cannot help feeling that he has too great an interest in the truth of the argument. And therefore he would have his friends examine and refute him, if they think that he is in error.

At his request Simmias and Cebes repeat their objections. They do not go to the length of denying the pre-existence of ideas. Simmias is of opinion that the soul is a harmony of the body. But the admission of the pre-existence of ideas, and therefore of the soul, is at variance with this. (Compare a parallel difficulty in Theaet.) For a harmony is an effect, whereas the soul is not an effect, but a cause; a harmony follows, but the soul leads; a harmony admits of degrees, and the soul has no degrees. Again, upon the supposition that the soul is a harmony, why is one soul better than another? Are they more or less harmonized, or is there one harmony within another? But the soul does not admit of degrees, and cannot therefore be more or less harmonized. Further, the soul is often engaged in resisting the affections of the body, as Homer describes Odysseus 'rebuking his heart.' Could he have written this under the idea that the soul is a harmony of the body? Nay rather, are we not contradicting Homer and ourselves in affirming anything of the sort?

The goddess Harmonia, as Socrates playfully terms the argument of Simmias, has been happily disposed of; and now an answer has to be given to the Theban Cadmus. Socrates recapitulates the argument of Cebes, which, as he remarks, involves the whole question of natural growth or causation; about this he proposes to narrate his own mental experience. When he was young he had puzzled himself with physics: he had enquired into the growth and decay of animals, and the origin of thought, until at last he began to doubt the self-evident fact that growth is the result of eating and drinking; and so he arrived at the conclusion that he was not meant for such enquiries. Nor was he less perplexed with notions of comparison and number. At first he had imagined himself to understand differences of greater and less, and to know that ten is two more than eight, and the like. But now those very notions appeared to him to contain a contradiction. For how can one be divided into two? Or two be compounded into one? These are difficulties which Socrates cannot answer. Of generation and destruction he knows nothing. But he has a confused notion of another method in which matters of this sort are to be investigated. (Compare Republic; Charm.)

Then he heard some one reading out of a book of Anaxagoras, that mind is the cause of all things. And he said to himself: If mind is the cause of all things, surely mind must dispose them all for the best. The new teacher will show me this 'order of the best' in man and nature. How great had been his hopes and how great his disappointment! For he found that his new friend was anything but consistent in his use of mind as a cause, and that he soon introduced winds, waters, and other eccentric notions. (Compare Arist. Metaph.) It was as if a person had said that Socrates is sitting here because he is made up of bones and muscles, instead of telling the true reason—that he is here because the Athenians have thought good to sentence him to death, and he has thought good to await his sentence. Had his bones and muscles been left by him to their own ideas of right, they would long ago have taken themselves off. But surely there is a great confusion of the cause and condition in all this. And this confusion also leads people into all sorts of erroneous theories about the position and motions of the earth. None of them know how much stronger than any Atlas is the power of the best. But this 'best' is still undiscovered; and in enquiring after the cause, we can only hope to attain the second best.

Now there is a danger in the contemplation of the nature of things, as there is a danger in looking at the sun during an eclipse, unless the precaution is taken of looking only at the image reflected in the water, or in a glass. (Compare Laws; Republic.) 'I was afraid,' says Socrates, 'that I might injure the eye of the soul. I thought that I had better return to the old and safe method of ideas. Though I do not mean to say that he who contemplates existence through the medium of ideas sees only through a glass darkly, any more than he who contemplates actual effects.'

If the existence of ideas is granted to him, Socrates is of opinion that he will then have no difficulty in proving the immortality of the soul. He will only ask for a further admission:—that beauty is the cause of the beautiful, greatness the cause of the great, smallness of the small, and so on of other things. This is a safe and simple answer, which escapes the contradictions of greater and less (greater by reason of that which is smaller!), of addition and subtraction, and the other difficulties of relation. These subtleties he is for leaving to wiser heads than his own; he prefers to test ideas by the consistency of their consequences, and, if asked to give an account of them, goes back to some higher idea or hypothesis which appears to him to be the best, until at last he arrives at a resting-place. (Republic; Phil.)

The doctrine of ideas, which has long ago received the assent of the Socratic circle, is now affirmed by the Phliasian auditor to command the assent of any man of sense. The narrative is continued; Socrates is desirous of explaining how opposite ideas may appear to co-exist but do not really co-exist in the same thing or person. For example, Simmias may be said to have greatness and also smallness, because he is greater than Socrates and less than Phaedo. And yet Simmias is not really great and also small, but only when compared to Phaedo and Socrates. I use the illustration, says Socrates, because I want to show you not only that ideal opposites exclude one another, but also the opposites in us. I, for example, having the attribute of smallness remain small, and cannot become great: the smallness which is in me drives out greatness.

One of the company here remarked that this was inconsistent with the old assertion that opposites generated opposites. But that, replies Socrates, was affirmed, not of opposite ideas either in us or in nature, but of opposition in the concrete—not of life and death, but of individuals living and dying. When this objection has been removed, Socrates proceeds: This doctrine of the mutual exclusion of

opposites is not only true of the opposites themselves, but of things which are inseparable from them. For example, cold and heat are opposed; and fire, which is inseparable from heat, cannot co-exist with cold, or snow, which is inseparable from cold, with heat. Again, the number three excludes the number four, because three is an odd number and four is an even number, and the odd is opposed to the even. Thus we are able to proceed a step beyond 'the safe and simple answer.' We may say, not only that the odd excludes the even, but that the number three, which participates in oddness, excludes the even. And in like manner, not only does life exclude death, but the soul, of which life is the inseparable attribute, also excludes death. And that of which life is the inseparable attribute is by the force of the terms imperishable. If the odd principle were imperishable, then the number three would not perish but remove, on the approach of the even principle. But the immortal is imperishable; and therefore the soul on the approach of death does not perish but removes.

Thus all objections appear to be finally silenced. And now the application has to be made: If the soul is immortal, 'what manner of persons ought we to be?' having regard not only to time but to eternity. For death is not the end of all, and the wicked is not released from his evil by death; but every one carries with him into the world below that which he is or has become, and that only.

For after death the soul is carried away to judgment, and when she has received her punishment returns to earth in the course of ages. The wise soul is conscious of her situation, and follows the attendant angel who guides her through the windings of the world below; but the impure soul wanders hither and thither without companion or guide, and is carried at last to her own place, as the pure soul is also carried away to hers. 'In order that you may understand this, I must first describe to you the nature and conformation of the earth.'

Now the whole earth is a globe placed in the centre of the heavens, and is maintained there by the perfection of balance. That which we call the earth is only one of many small hollows, wherein collect the mists and waters and the thick lower air; but the true earth is above, and is in a finer and subtler element. And if, like birds, we could fly to the surface of the air, in the same manner that fishes come to the top of the sea, then we should behold the true earth and the true heaven and the true stars. Our earth is everywhere corrupted and corroded; and even the land which is fairer than the sea, for that is a mere chaos or waste of water and mud and sand, has nothing to show in comparison of the other world. But the heavenly earth is of divers colours, sparkling with jewels brighter than gold and whiter than any snow, having flowers and fruits innumerable. And the inhabitants dwell some on the shore of the sea of air, others in 'islets of the blest,' and they hold converse with the gods, and behold the sun, moon and stars as they truly are, and their other blessedness is of a piece with this.

The hollows on the surface of the globe vary in size and shape from that which we inhabit: but all are connected by passages and perforations in the interior of the earth. And there is one huge chasm or opening called Tartarus, into which streams of fire and water and liquid mud are ever flowing; of these small portions find their way to the surface and form seas and rivers and volcanoes. There is a perpetual inhalation and exhalation of the air rising and falling as the waters pass into the depths of the earth and return again, in their course forming lakes and rivers, but never descending below the centre of the earth; for on either side the rivers flowing either way are stopped by a precipice. These rivers are many and mighty, and there are four principal ones, Oceanus, Acheron, Pyriphlegethon, and Cocytus. Oceanus is the river which encircles the earth; Acheron takes an opposite direction, and after flowing under the earth through desert places, at last reaches the Acherusian lake,—this is the

river at which the souls of the dead await their return to earth. Pyriphlegethon is a stream of fire, which coils round the earth and flows into the depths of Tartarus. The fourth river, Cocytus, is that which is called by the poets the Stygian river, and passes into and forms the lake Styx, from the waters of which it gains new and strange powers. This river, too, falls into Tartarus.

The dead are first of all judged according to their deeds, and those who are incurable are thrust into Tartarus, from which they never come out. Those who have only committed venial sins are first purified of them, and then rewarded for the good which they have done. Those who have committed crimes, great indeed, but not unpardonable, are thrust into Tartarus, but are cast forth at the end of a year by way of Pyriphlegethon or Cocytus, and these carry them as far as the Acherusian lake, where they call upon their victims to let them come out of the rivers into the lake. And if they prevail, then they are let out and their sufferings cease: if not, they are borne unceasingly into Tartarus and back again, until they at last obtain mercy. The pure souls also receive their reward, and have their abode in the upper earth, and a select few in still fairer 'mansions.'

Socrates is not prepared to insist on the literal accuracy of this description, but he is confident that something of the kind is true. He who has sought after the pleasures of knowledge and rejected the pleasures of the body, has reason to be of good hope at the approach of death; whose voice is already speaking to him, and who will one day be heard calling all men.

The hour has come at which he must drink the poison, and not much remains to be done. How shall they bury him? That is a question which he refuses to entertain, for they are burying, not him, but his dead body. His friends had once been sureties that he would remain, and they shall now be sureties that he has run away. Yet he would not die without the customary ceremonies of washing and burial. Shall he make a libation of the poison? In the spirit he will, but not in the letter. One request he utters in the very act of death, which has been a puzzle to after ages. With a sort of irony he remembers that a trifling religious duty is still unfulfilled, just as above he desires before he departs to compose a few verses in order to satisfy a scruple about a dream—unless, indeed, we suppose him to mean, that he was now restored to health, and made the customary offering to Asclepius in token of his recovery.

---

1. The doctrine of the immortality of the soul has sunk deep into the heart of the human race; and men are apt to rebel against any examination of the nature or grounds of their belief. They do not like to acknowledge that this, as well as the other 'eternal ideas; of man, has a history in time, which may be traced in Greek poetry or philosophy, and also in the Hebrew Scriptures. They convert feeling into reasoning, and throw a network of dialectics over that which is really a deeply-rooted instinct. In the same temper which Socrates reproves in himself they are disposed to think that even fallacies will do no harm, for they will die with them, and while they live they will gain by the delusion. And when they consider the numberless bad arguments which have been pressed into the service of theology, they say, like the companions of Socrates, 'What argument can we ever trust again?' But there is a better and higher spirit to be gathered from the Phaedo, as well as from the other writings of Plato, which says that first principles should be most constantly reviewed (Phaedo and Crat.), and that the highest subjects demand of us the greatest accuracy (Republic); also that we must not become misologists because arguments are apt to be deceivers.

2. In former ages there was a customary rather than a reasoned belief in the immortality of the soul. It was based on the authority of the Church, on the necessity of such a belief to morality and the order of society, on the evidence of an historical fact, and also on analogies and figures of speech which filled up the void or gave an expression in words to a cherished instinct. The mass of mankind went on their way busy with the affairs of this life, hardly stopping to think about another. But in our own day the question has been reopened, and it is doubtful whether the belief which in the first ages of Christianity was the strongest motive of action can survive the conflict with a scientific age in which the rules of evidence are stricter and the mind has become more sensitive to criticism. It has faded into the distance by a natural process as it was removed further and further from the historical fact on which it has been supposed to rest. Arguments derived from material things such as the seed and the ear of corn or transitions in the life of animals from one state of being to another (the chrysalis and the butterfly) are not 'in pari materia' with arguments from the visible to the invisible, and are therefore felt to be no longer applicable. The evidence to the historical fact seems to be weaker than was once supposed: it is not consistent with itself, and is based upon documents which are of unknown origin. The immortality of man must be proved by other arguments than these if it is again to become a living belief. We must ask ourselves afresh why we still maintain it, and seek to discover a foundation for it in the nature of God and in the first principles of morality.

3. At the outset of the discussion we may clear away a confusion. We certainly do not mean by the immortality of the soul the immortality of fame, which whether worth having or not can only be ascribed to a very select class of the whole race of mankind, and even the interest in these few is comparatively short-lived. To have been a benefactor to the world, whether in a higher or a lower sphere of life and thought, is a great thing: to have the reputation of being one, when men have passed out of the sphere of earthly praise or blame, is hardly worthy of consideration. The memory of a great man, so far from being immortal, is really limited to his own generation:—so long as his friends or his disciples are alive, so long as his books continue to be read, so long as his political or military successes fill a page in the history of his country. The praises which are bestowed upon him at his death hardly last longer than the flowers which are strewed upon his coffin or the 'immortelles' which are laid upon his tomb. Literature makes the most of its heroes, but the true man is well aware that far from enjoying an immortality of fame, in a generation or two, or even in a much shorter time, he will be forgotten and the world will get on without him.

4. Modern philosophy is perplexed at this whole question, which is sometimes fairly given up and handed over to the realm of faith. The perplexity should not be forgotten by us when we attempt to submit the Phaedo of Plato to the requirements of logic. For what idea can we form of the soul when separated from the body? Or how can the soul be united with the body and still be independent? Is the soul related to the body as the ideal to the real, or as the whole to the parts, or as the subject to the object, or as the cause to the effect, or as the end to the means? Shall we say with Aristotle, that the soul is the entelechy or form of an organized living body? or with Plato, that she has a life of her own? Is the Pythagorean image of the harmony, or that of the monad, the truer expression? Is the soul related to the body as sight to the eye, or as the boatman to his boat? (Arist. de Anim.) And in another state of being is the soul to be conceived of as vanishing into infinity, hardly possessing an existence which she can call her own, as in the pantheistic system of Spinoza: or as an individual informing another body and entering into new relations, but retaining her own character? (Compare Gorgias.) Or is the opposition of soul and body a mere illusion, and the true self neither soul nor body, but the union of the two in the 'I' which is above them? And is death the assertion of this individuality

in the higher nature, and the falling away into nothingness of the lower? Or are we vainly attempting to pass the boundaries of human thought? The body and the soul seem to be inseparable, not only in fact, but in our conceptions of them; and any philosophy which too closely unites them, or too widely separates them, either in this life or in another, disturbs the balance of human nature. No thinker has perfectly adjusted them, or been entirely consistent with himself in describing their relation to one another. Nor can we wonder that Plato in the infancy of human thought should have confused mythology and philosophy, or have mistaken verbal arguments for real ones.

5. Again, believing in the immortality of the soul, we must still ask the question of Socrates, 'What is that which we suppose to be immortal?' Is it the personal and individual element in us, or the spiritual and universal? Is it the principle of knowledge or of goodness, or the union of the two? Is it the mere force of life which is determined to be, or the consciousness of self which cannot be got rid of, or the fire of genius which refuses to be extinguished? Or is there a hidden being which is allied to the Author of all existence, who is because he is perfect, and to whom our ideas of perfection give us a title to belong? Whatever answer is given by us to these questions, there still remains the necessity of allowing the permanence of evil, if not for ever, at any rate for a time, in order that the wicked 'may not have too good a bargain.' For the annihilation of evil at death, or the eternal duration of it, seem to involve equal difficulties in the moral government of the universe. Sometimes we are led by our feelings, rather than by our reason, to think of the good and wise only as existing in another life. Why should the mean, the weak, the idiot, the infant, the herd of men who have never in any proper sense the use of reason, reappear with blinking eyes in the light of another world? But our second thought is that the hope of humanity is a common one, and that all or none will be partakers of immortality. Reason does not allow us to suppose that we have any greater claims than others, and experience may often reveal to us unexpected flashes of the higher nature in those whom we had despised. Why should the wicked suffer any more than ourselves? had we been placed in their circumstances should we have been any better than they? The worst of men are objects of pity rather than of anger to the philanthropist; must they not be equally such to divine benevolence? Even more than the good they have need of another life; not that they may be punished, but that they may be educated. These are a few of the reflections which arise in our minds when we attempt to assign any form to our conceptions of a future state.

There are some other questions which are disturbing to us because we have no answer to them. What is to become of the animals in a future state? Have we not seen dogs more faithful and intelligent than men, and men who are more stupid and brutal than any animals? Does their life cease at death, or is there some 'better thing reserved' also for them? They may be said to have a shadow or imitation of morality, and imperfect moral claims upon the benevolence of man and upon the justice of God. We cannot think of the least or lowest of them, the insect, the bird, the inhabitants of the sea or the desert, as having any place in a future world, and if not all, why should those who are specially attached to man be deemed worthy of any exceptional privilege? When we reason about such a subject, almost at once we degenerate into nonsense. It is a passing thought which has no real hold on the mind. We may argue for the existence of animals in a future state from the attributes of God, or from texts of Scripture ('Are not two sparrows sold for one farthing?' etc.), but the truth is that we are only filling up the void of another world with our own fancies. Again, we often talk about the origin of evil, that great bugbear of theologians, by which they frighten us into believing any superstition. What answer can be made to the old commonplace, 'Is not God the author of evil, if he knowingly permitted, but could have prevented it?' Even if we assume that the inequalities of this life are

rectified by some transposition of human beings in another, still the existence of the very least evil if it could have been avoided, seems to be at variance with the love and justice of God. And so we arrive at the conclusion that we are carrying logic too far, and that the attempt to frame the world according to a rule of divine perfection is opposed to experience and had better be given up. The case of the animals is our own. We must admit that the Divine Being, although perfect himself, has placed us in a state of life in which we may work together with him for good, but we are very far from having attained to it.

6. Again, ideas must be given through something; and we are always prone to argue about the soul from analogies of outward things which may serve to embody our thoughts, but are also partly delusive. For we cannot reason from the natural to the spiritual, or from the outward to the inward. The progress of physiological science, without bringing us nearer to the great secret, has tended to remove some erroneous notions respecting the relations of body and mind, and in this we have the advantage of the ancients. But no one imagines that any seed of immortality is to be discerned in our mortal frames. Most people have been content to rest their belief in another life on the agreement of the more enlightened part of mankind, and on the inseparable connection of such a doctrine with the existence of a God—also in a less degree on the impossibility of doubting about the continued existence of those whom we love and reverence in this world. And after all has been said, the figure, the analogy, the argument, are felt to be only approximations in different forms to an expression of the common sentiment of the human heart. That we shall live again is far more certain than that we shall take any particular form of life.

7. When we speak of the immortality of the soul, we must ask further what we mean by the word immortality. For of the duration of a living being in countless ages we can form no conception; far less than a three years' old child of the whole of life. The naked eye might as well try to see the furthest star in the infinity of heaven. Whether time and space really exist when we take away the limits of them may be doubted; at any rate the thought of them when unlimited us so overwhelming to us as to lose all distinctness. Philosophers have spoken of them as forms of the human mind, but what is the mind without them? As then infinite time, or an existence out of time, which are the only possible explanations of eternal duration, are equally inconceivable to us, let us substitute for them a hundred or a thousand years after death, and ask not what will be our employment in eternity, but what will happen to us in that definite portion of time; or what is now happening to those who passed out of life a hundred or a thousand years ago. Do we imagine that the wicked are suffering torments, or that the good are singing the praises of God, during a period longer than that of a whole life, or of ten lives of men? Is the suffering physical or mental? And does the worship of God consist only of praise, or of many forms of service? Who are the wicked, and who are the good, whom we venture to divide by a hard and fast line; and in which of the two classes should we place ourselves and our friends? May we not suspect that we are making differences of kind, because we are unable to imagine differences of degree?—putting the whole human race into heaven or hell for the greater convenience of logical division? Are we not at the same time describing them both in superlatives, only that we may satisfy the demands of rhetoric? What is that pain which does not become deadened after a thousand years? or what is the nature of that pleasure or happiness which never wearies by monotony? Earthly pleasures and pains are short in proportion as they are keen; of any others which are both intense and lasting we have no experience, and can form no idea. The words or figures of speech which we use are not consistent with themselves. For are we not imagining Heaven under the similitude of a church, and Hell as a prison, or perhaps a madhouse or chamber of horrors? And yet to beings

constituted as we are, the monotony of singing psalms would be as great an infliction as the pains of hell, and might be even pleasantly interrupted by them. Where are the actions worthy of rewards greater than those which are conferred on the greatest benefactors of mankind? And where are the crimes which according to Plato's merciful reckoning,—more merciful, at any rate, than the eternal damnation of so-called Christian teachers,—for every ten years in this life deserve a hundred of punishment in the life to come? We should be ready to die of pity if we could see the least of the sufferings which the writers of Infernos and Purgatorios have attributed to the damned. Yet these joys and terrors seem hardly to exercise an appreciable influence over the lives of men. The wicked man when old, is not, as Plato supposes (Republic), more agitated by the terrors of another world when he is nearer to them, nor the good in an ecstasy at the joys of which he is soon to be the partaker. Age numbs the sense of both worlds; and the habit of life is strongest in death. Even the dying mother is dreaming of her lost children as they were forty or fifty years before, 'pattering over the boards,' not of reunion with them in another state of being. Most persons when the last hour comes are resigned to the order of nature and the will of God. They are not thinking of Dante's Inferno or Paradiso, or of the Pilgrim's Progress. Heaven and hell are not realities to them, but words or ideas; the outward symbols of some great mystery, they hardly know what. Many noble poems and pictures have been suggested by the traditional representations of them, which have been fixed in forms of art and can no longer be altered. Many sermons have been filled with descriptions of celestial or infernal mansions. But hardly even in childhood did the thought of heaven and hell supply the motives of our actions, or at any time seriously affect the substance of our belief.

8. Another life must be described, if at all, in forms of thought and not of sense. To draw pictures of heaven and hell, whether in the language of Scripture or any other, adds nothing to our real knowledge, but may perhaps disguise our ignorance. The truest conception which we can form of a future life is a state of progress or education—a progress from evil to good, from ignorance to knowledge. To this we are led by the analogy of the present life, in which we see different races and nations of men, and different men and women of the same nation, in various states or stages of cultivation; some more and some less developed, and all of them capable of improvement under favourable circumstances. There are punishments too of children when they are growing up inflicted by their parents, of elder offenders which are imposed by the law of the land, of all men at all times of life, which are attached by the laws of nature to the performance of certain actions. All these punishments are really educational; that is to say, they are not intended to retaliate on the offender, but to teach him a lesson. Also there is an element of chance in them, which is another name for our ignorance of the laws of nature. There is evil too inseparable from good (compare Lysis); not always punished here, as good is not always rewarded. It is capable of being indefinitely diminished; and as knowledge increases, the element of chance may more and more disappear.

For we do not argue merely from the analogy of the present state of this world to another, but from the analogy of a probable future to which we are tending. The greatest changes of which we have had experience as yet are due to our increasing knowledge of history and of nature. They have been produced by a few minds appearing in three or four favoured nations, in a comparatively short period of time. May we be allowed to imagine the minds of men everywhere working together during many ages for the completion of our knowledge? May not the science of physiology transform the world? Again, the majority of mankind have really experienced some moral improvement; almost every one feels that he has tendencies to good, and is capable of becoming better. And these germs of good are often found to be developed by new circumstances, like stunted trees when transplanted to a

better soil. The differences between the savage and the civilized man, or between the civilized man in old and new countries, may be indefinitely increased. The first difference is the effect of a few thousand, the second of a few hundred years. We congratulate ourselves that slavery has become industry; that law and constitutional government have superseded despotism and violence; that an ethical religion has taken the place of Fetichism. There may yet come a time when the many may be as well off as the few; when no one will be weighed down by excessive toil; when the necessity of providing for the body will not interfere with mental improvement; when the physical frame may be strengthened and developed; and the religion of all men may become a reasonable service.

Nothing therefore, either in the present state of man or in the tendencies of the future, as far as we can entertain conjecture of them, would lead us to suppose that God governs us vindictively in this world, and therefore we have no reason to infer that he will govern us vindictively in another. The true argument from analogy is not, 'This life is a mixed state of justice and injustice, of great waste, of sudden casualties, of disproportionate punishments, and therefore the like inconsistencies, irregularities, injustices are to be expected in another;' but 'This life is subject to law, and is in a state of progress, and therefore law and progress may be believed to be the governing principles of another.' All the analogies of this world would be against unmeaning punishments inflicted a hundred or a thousand years after an offence had been committed. Suffering there might be as a part of education, but not hopeless or protracted; as there might be a retrogression of individuals or of bodies of men, yet not such as to interfere with a plan for the improvement of the whole (compare Laws.)

9. But some one will say: That we cannot reason from the seen to the unseen, and that we are creating another world after the image of this, just as men in former ages have created gods in their own likeness. And we, like the companions of Socrates, may feel discouraged at hearing our favourite 'argument from analogy' thus summarily disposed of. Like himself, too, we may adduce other arguments in which he seems to have anticipated us, though he expresses them in different language. For we feel that the soul partakes of the ideal and invisible; and can never fall into the error of confusing the external circumstances of man with his higher self; or his origin with his nature. It is as repugnant to us as it was to him to imagine that our moral ideas are to be attributed only to cerebral forces. The value of a human soul, like the value of a man's life to himself, is inestimable, and cannot be reckoned in earthly or material things. The human being alone has the consciousness of truth and justice and love, which is the consciousness of God. And the soul becoming more conscious of these, becomes more conscious of her own immortality.

10. The last ground of our belief in immortality, and the strongest, is the perfection of the divine nature. The mere fact of the existence of God does not tend to show the continued existence of man. An evil God or an indifferent God might have had the power, but not the will, to preserve us. He might have regarded us as fitted to minister to his service by a succession of existences,—like the animals, without attributing to each soul an incomparable value. But if he is perfect, he must will that all rational beings should partake of that perfection which he himself is. In the words of the Timaeus, he is good, and therefore he desires that all other things should be as like himself as possible. And the manner in which he accomplishes this is by permitting evil, or rather degrees of good, which are otherwise called evil. For all progress is good relatively to the past, and yet may be comparatively evil when regarded in the light of the future. Good and evil are relative terms, and degrees of evil are merely the negative aspect of degrees of good. Of the absolute goodness of any finite nature we can form no conception; we are all of us in process of transition from one degree of good or evil to another. The

difficulties which are urged about the origin or existence of evil are mere dialectical puzzles, standing in the same relation to Christian philosophy as the puzzles of the Cynics and Megarians to the philosophy of Plato. They arise out of the tendency of the human mind to regard good and evil both as relative and absolute; just as the riddles about motion are to be explained by the double conception of space or matter, which the human mind has the power of regarding either as continuous or discrete.

In speaking of divine perfection, we mean to say that God is just and true and loving, the author of order and not of disorder, of good and not of evil. Or rather, that he is justice, that he is truth, that he is love, that he is order, that he is the very progress of which we were speaking; and that wherever these qualities are present, whether in the human soul or in the order of nature, there is God. We might still see him everywhere, if we had not been mistakenly seeking for him apart from us, instead of in us; away from the laws of nature, instead of in them. And we become united to him not by mystical absorption, but by partaking, whether consciously or unconsciously, of that truth and justice and love which he himself is.

Thus the belief in the immortality of the soul rests at last on the belief in God. If there is a good and wise God, then there is a progress of mankind towards perfection; and if there is no progress of men towards perfection, then there is no good and wise God. We cannot suppose that the moral government of God of which we see the beginnings in the world and in ourselves will cease when we pass out of life.

11. Considering the 'feebleness of the human faculties and the uncertainty of the subject,' we are inclined to believe that the fewer our words the better. At the approach of death there is not much said; good men are too honest to go out of the world professing more than they know. There is perhaps no important subject about which, at any time, even religious people speak so little to one another. In the fulness of life the thought of death is mostly awakened by the sight or recollection of the death of others rather than by the prospect of our own. We must also acknowledge that there are degrees of the belief in immortality, and many forms in which it presents itself to the mind. Some persons will say no more than that they trust in God, and that they leave all to Him. It is a great part of true religion not to pretend to know more than we do. Others when they quit this world are comforted with the hope 'That they will see and know their friends in heaven.' But it is better to leave them in the hands of God and to be assured that 'no evil shall touch them.' There are others again to whom the belief in a divine personality has ceased to have any longer a meaning; yet they are satisfied that the end of all is not here, but that something still remains to us, 'and some better thing for the good than for the evil.' They are persuaded, in spite of their theological nihilism, that the ideas of justice and truth and holiness and love are realities. They cherish an enthusiastic devotion to the first principles of morality. Through these they see, or seem to see, darkly, and in a figure, that the soul is immortal.

But besides differences of theological opinion which must ever prevail about things unseen, the hope of immortality is weaker or stronger in men at one time of life than at another; it even varies from day to day. It comes and goes; the mind, like the sky, is apt to be overclouded. Other generations of men may have sometimes lived under an 'eclipse of faith,' to us the total disappearance of it might be compared to the 'sun falling from heaven.' And we may sometimes have to begin again and acquire the belief for ourselves; or to win it back again when it is lost. It is really weakest in the hour of death. For Nature, like a kind mother or nurse, lays us to sleep without frightening us; physicians, who are

the witnesses of such scenes, say that under ordinary circumstances there is no fear of the future. Often, as Plato tells us, death is accompanied 'with pleasure.' (Tim.) When the end is still uncertain, the cry of many a one has been, 'Pray, that I may be taken.' The last thoughts even of the best men depend chiefly on the accidents of their bodily state. Pain soon overpowers the desire of life; old age, like the child, is laid to sleep almost in a moment. The long experience of life will often destroy the interest which mankind have in it. So various are the feelings with which different persons draw near to death; and still more various the forms in which imagination clothes it. For this alternation of feeling compare the Old Testament,—Psalm vi.; Isaiah; Eccles.

12. When we think of God and of man in his relation to God; of the imperfection of our present state and yet of the progress which is observable in the history of the world and of the human mind; of the depth and power of our moral ideas which seem to partake of the very nature of God Himself; when we consider the contrast between the physical laws to which we are subject and the higher law which raises us above them and is yet a part of them; when we reflect on our capacity of becoming the 'spectators of all time and all existence,' and of framing in our own minds the ideal of a perfect Being; when we see how the human mind in all the higher religions of the world, including Buddhism, notwithstanding some aberrations, has tended towards such a belief—we have reason to think that our destiny is different from that of animals; and though we cannot altogether shut out the childish fear that the soul upon leaving the body may 'vanish into thin air,' we have still, so far as the nature of the subject admits, a hope of immortality with which we comfort ourselves on sufficient grounds. The denial of the belief takes the heart out of human life; it lowers men to the level of the material. As Goethe also says, 'He is dead even in this world who has no belief in another.'

13. It is well also that we should sometimes think of the forms of thought under which the idea of immortality is most naturally presented to us. It is clear that to our minds the risen soul can no longer be described, as in a picture, by the symbol of a creature half-bird, half-human, nor in any other form of sense. The multitude of angels, as in Milton, singing the Almighty's praises, are a noble image, and may furnish a theme for the poet or the painter, but they are no longer an adequate expression of the kingdom of God which is within us. Neither is there any mansion, in this world or another, in which the departed can be imagined to dwell and carry on their occupations. When this earthly tabernacle is dissolved, no other habitation or building can take them in: it is in the language of ideas only that we speak of them.

First of all there is the thought of rest and freedom from pain; they have gone home, as the common saying is, and the cares of this world touch them no more. Secondly, we may imagine them as they were at their best and brightest, humbly fulfilling their daily round of duties—selfless, childlike, unaffected by the world; when the eye was single and the whole body seemed to be full of light; when the mind was clear and saw into the purposes of God. Thirdly, we may think of them as possessed by a great love of God and man, working out His will at a further stage in the heavenly pilgrimage. And yet we acknowledge that these are the things which eye hath not seen nor ear heard and therefore it hath not entered into the heart of man in any sensible manner to conceive them. Fourthly, there may have been some moments in our own lives when we have risen above ourselves, or been conscious of our truer selves, in which the will of God has superseded our wills, and we have entered into communion with Him, and been partakers for a brief season of the Divine truth and love, in which like Christ we have been inspired to utter the prayer, 'I in them, and thou in me, that we may be all made

perfect in one.' These precious moments, if we have ever known them, are the nearest approach which we can make to the idea of immortality.

14. Returning now to the earlier stage of human thought which is represented by the writings of Plato, we find that many of the same questions have already arisen: there is the same tendency to materialism; the same inconsistency in the application of the idea of mind; the same doubt whether the soul is to be regarded as a cause or as an effect; the same falling back on moral convictions. In the Phaedo the soul is conscious of her divine nature, and the separation from the body which has been commenced in this life is perfected in another. Beginning in mystery, Socrates, in the intermediate part of the Dialogue, attempts to bring the doctrine of a future life into connection with his theory of knowledge. In proportion as he succeeds in this, the individual seems to disappear in a more general notion of the soul; the contemplation of ideas 'under the form of eternity' takes the place of past and future states of existence. His language may be compared to that of some modern philosophers, who speak of eternity, not in the sense of perpetual duration of time, but as an ever-present quality of the soul. Yet at the conclusion of the Dialogue, having 'arrived at the end of the intellectual world' (Republic), he replaces the veil of mythology, and describes the soul and her attendant genius in the language of the mysteries or of a disciple of Zoroaster. Nor can we fairly demand of Plato a consistency which is wanting among ourselves, who acknowledge that another world is beyond the range of human thought, and yet are always seeking to represent the mansions of heaven or hell in the colours of the painter, or in the descriptions of the poet or rhetorician.

15. The doctrine of the immortality of the soul was not new to the Greeks in the age of Socrates, but, like the unity of God, had a foundation in the popular belief. The old Homeric notion of a gibbering ghost flitting away to Hades; or of a few illustrious heroes enjoying the isles of the blest; or of an existence divided between the two; or the Hesiodic, of righteous spirits, who become guardian angels,—had given place in the mysteries and the Orphic poets to representations, partly fanciful, of a future state of rewards and punishments. (Laws.) The reticence of the Greeks on public occasions and in some part of their literature respecting this 'underground' religion, is not to be taken as a measure of the diffusion of such beliefs. If Pericles in the funeral oration is silent on the consolations of immortality, the poet Pindar and the tragedians on the other hand constantly assume the continued existence of the dead in an upper or under world. Darius and Laius are still alive; Antigone will be dear to her brethren after death; the way to the palace of Cronos is found by those who 'have thrice departed from evil.' The tragedy of the Greeks is not 'rounded' by this life, but is deeply set in decrees of fate and mysterious workings of powers beneath the earth. In the caricature of Aristophanes there is also a witness to the common sentiment. The Ionian and Pythagorean philosophies arose, and some new elements were added to the popular belief. The individual must find an expression as well as the world. Either the soul was supposed to exist in the form of a magnet, or of a particle of fire, or of light, or air, or water; or of a number or of a harmony of number; or to be or have, like the stars, a principle of motion (Arist. de Anim.). At length Anaxagoras, hardly distinguishing between life and mind, or between mind human and divine, attained the pure abstraction; and this, like the other abstractions of Greek philosophy, sank deep into the human intelligence. The opposition of the intelligible and the sensible, and of God to the world, supplied an analogy which assisted in the separation of soul and body. If ideas were separable from phenomena, mind was also separable from matter; if the ideas were eternal, the mind that conceived them was eternal too. As the unity of God was more distinctly acknowledged, the conception of the human soul became more developed. The succession, or alternation of life and death, had occurred to Heracleitus. The Eleatic Parmenides had

stumbled upon the modern thesis, that 'thought and being are the same.' The Eastern belief in transmigration defined the sense of individuality; and some, like Empedocles, fancied that the blood which they had shed in another state of being was crying against them, and that for thirty thousand years they were to be 'fugitives and vagabonds upon the earth.' The desire of recognizing a lost mother or love or friend in the world below (Phaedo) was a natural feeling which, in that age as well as in every other, has given distinctness to the hope of immortality. Nor were ethical considerations wanting, partly derived from the necessity of punishing the greater sort of criminals, whom no avenging power of this world could reach. The voice of conscience, too, was heard reminding the good man that he was not altogether innocent. (Republic.) To these indistinct longings and fears an expression was given in the mysteries and Orphic poets: a 'heap of books' (Republic), passing under the names of Musaeus and Orpheus in Plato's time, were filled with notions of an under-world.

16. Yet after all the belief in the individuality of the soul after death had but a feeble hold on the Greek mind. Like the personality of God, the personality of man in a future state was not inseparably bound up with the reality of his existence. For the distinction between the personal and impersonal, and also between the divine and human, was far less marked to the Greek than to ourselves. And as Plato readily passes from the notion of the good to that of God, he also passes almost imperceptibly to himself and his reader from the future life of the individual soul to the eternal being of the absolute soul. There has been a clearer statement and a clearer denial of the belief in modern times than is found in early Greek philosophy, and hence the comparative silence on the whole subject which is often remarked in ancient writers, and particularly in Aristotle. For Plato and Aristotle are not further removed in their teaching about the immortality of the soul than they are in their theory of knowledge.

17. Living in an age when logic was beginning to mould human thought, Plato naturally cast his belief in immortality into a logical form. And when we consider how much the doctrine of ideas was also one of words, it is not surprising that he should have fallen into verbal fallacies: early logic is always mistaking the truth of the form for the truth of the matter. It is easy to see that the alternation of opposites is not the same as the generation of them out of each other; and that the generation of them out of each other, which is the first argument in the Phaedo, is at variance with their mutual exclusion of each other, whether in themselves or in us, which is the last. For even if we admit the distinction which he draws between the opposites and the things which have the opposites, still individuals fall under the latter class; and we have to pass out of the region of human hopes and fears to a conception of an abstract soul which is the impersonation of the ideas. Such a conception, which in Plato himself is but half expressed, is unmeaning to us, and relative only to a particular stage in the history of thought. The doctrine of reminiscence is also a fragment of a former world, which has no place in the philosophy of modern times. But Plato had the wonders of psychology just opening to him, and he had not the explanation of them which is supplied by the analysis of language and the history of the human mind. The question, 'Whence come our abstract ideas?' he could only answer by an imaginary hypothesis. Nor is it difficult to see that his crowning argument is purely verbal, and is but the expression of an instinctive confidence put into a logical form:—'The soul is immortal because it contains a principle of imperishableness.' Nor does he himself seem at all to be aware that nothing is added to human knowledge by his 'safe and simple answer,' that beauty is the cause of the beautiful; and that he is merely reasserting the Eleatic being 'divided by the Pythagorean numbers,' against the Heracleitean doctrine of perpetual generation. The answer to the 'very serious question' of generation and destruction is really the denial of them. For this he would substitute, as in the Republic, a system of ideas, tested, not by experience, but by their consequences, and not explained

by actual causes, but by a higher, that is, a more general notion. Consistency with themselves is the only test which is to be applied to them. (Republic, and Phaedo.)

18. To deal fairly with such arguments, they should be translated as far as possible into their modern equivalents. 'If the ideas of men are eternal, their souls are eternal, and if not the ideas, then not the souls.' Such an argument stands nearly in the same relation to Plato and his age, as the argument from the existence of God to immortality among ourselves. 'If God exists, then the soul exists after death; and if there is no God, there is no existence of the soul after death.' For the ideas are to his mind the reality, the truth, the principle of permanence, as well as of intelligence and order in the world. When Simmias and Cebes say that they are more strongly persuaded of the existence of ideas than they are of the immortality of the soul, they represent fairly enough the order of thought in Greek philosophy. And we might say in the same way that we are more certain of the existence of God than we are of the immortality of the soul, and are led by the belief in the one to a belief in the other. The parallel, as Socrates would say, is not perfect, but agrees in as far as the mind in either case is regarded as dependent on something above and beyond herself. The analogy may even be pressed a step further: 'We are more certain of our ideas of truth and right than we are of the existence of God, and are led on in the order of thought from one to the other.' Or more correctly: 'The existence of right and truth is the existence of God, and can never for a moment be separated from Him.'

19. The main argument of the Phaedo is derived from the existence of eternal ideas of which the soul is a partaker; the other argument of the alternation of opposites is replaced by this. And there have not been wanting philosophers of the idealist school who have imagined that the doctrine of the immortality of the soul is a theory of knowledge, and that in what has preceded Plato is accommodating himself to the popular belief. Such a view can only be elicited from the Phaedo by what may be termed the transcendental method of interpretation, and is obviously inconsistent with the Gorgias and the Republic. Those who maintain it are immediately compelled to renounce the shadow which they have grasped, as a play of words only. But the truth is, that Plato in his argument for the immortality of the soul has collected many elements of proof or persuasion, ethical and mythological as well as dialectical, which are not easily to be reconciled with one another; and he is as much in earnest about his doctrine of retribution, which is repeated in all his more ethical writings, as about his theory of knowledge. And while we may fairly translate the dialectical into the language of Hegel, and the religious and mythological into the language of Dante or Bunyan, the ethical speaks to us still in the same voice, and appeals to a common feeling.

20. Two arguments of this ethical character occur in the Phaedo. The first may be described as the aspiration of the soul after another state of being. Like the Oriental or Christian mystic, the philosopher is seeking to withdraw from impurities of sense, to leave the world and the things of the world, and to find his higher self. Plato recognizes in these aspirations the foretaste of immortality; as Butler and Addison in modern times have argued, the one from the moral tendencies of mankind, the other from the progress of the soul towards perfection. In using this argument Plato has certainly confused the soul which has left the body, with the soul of the good and wise. (Compare Republic.) Such a confusion was natural, and arose partly out of the antithesis of soul and body. The soul in her own essence, and the soul 'clothed upon' with virtues and graces, were easily interchanged with one another, because on a subject which passes expression the distinctions of language can hardly be maintained.

21. The ethical proof of the immortality of the soul is derived from the necessity of retribution. The wicked would be too well off if their evil deeds came to an end. It is not to be supposed that an Ardiaeus, an Archelaus, an Ismenias could ever have suffered the penalty of their crimes in this world. The manner in which this retribution is accomplished Plato represents under the figures of mythology. Doubtless he felt that it was easier to improve than to invent, and that in religion especially the traditional form was required in order to give verisimilitude to the myth. The myth too is far more probable to that age than to ours, and may fairly be regarded as 'one guess among many' about the nature of the earth, which he cleverly supports by the indications of geology. Not that he insists on the absolute truth of his own particular notions: 'no man of sense will be confident in such matters; but he will be confident that something of the kind is true.' As in other passages (Gorg., Tim., compare Crito), he wins belief for his fictions by the moderation of his statements; he does not, like Dante or Swedenborg, allow himself to be deceived by his own creations.

The Dialogue must be read in the light of the situation. And first of all we are struck by the calmness of the scene. Like the spectators at the time, we cannot pity Socrates; his mien and his language are so noble and fearless. He is the same that he ever was, but milder and gentler, and he has in no degree lost his interest in dialectics; he will not forego the delight of an argument in compliance with the jailer's intimation that he should not heat himself with talking. At such a time he naturally expresses the hope of his life, that he has been a true mystic and not a mere retainer or wand-bearer: and he refers to passages of his personal history. To his old enemies the Comic poets, and to the proceedings on the trial, he alludes playfully; but he vividly remembers the disappointment which he felt in reading the books of Anaxagoras. The return of Xanthippe and his children indicates that the philosopher is not 'made of oak or rock.' Some other traits of his character may be noted; for example, the courteous manner in which he inclines his head to the last objector, or the ironical touch, 'Me already, as the tragic poet would say, the voice of fate calls;' or the depreciation of the arguments with which 'he comforted himself and them;' or his fear of 'misology;' or his references to Homer; or the playful smile with which he 'talks like a book' about greater and less; or the allusion to the possibility of finding another teacher among barbarous races (compare Polit.); or the mysterious reference to another science (mathematics?) of generation and destruction for which he is vainly feeling. There is no change in him; only now he is invested with a sort of sacred character, as the prophet or priest of Apollo the God of the festival, in whose honour he first of all composes a hymn, and then like the swan pours forth his dying lay. Perhaps the extreme elevation of Socrates above his own situation, and the ordinary interests of life (compare his jeu d'esprit about his burial, in which for a moment he puts on the 'Silenus mask'), create in the mind of the reader an impression stronger than could be derived from arguments that such a one has in him 'a principle which does not admit of death.'

The other persons of the Dialogue may be considered under two heads: (1) private friends; (2) the respondents in the argument.

First there is Crito, who has been already introduced to us in the Euthydemus and the Crito; he is the equal in years of Socrates, and stands in quite a different relation to him from his younger disciples. He is a man of the world who is rich and prosperous (compare the jest in the Euthydemus), the best friend of Socrates, who wants to know his commands, in whose presence he talks to his family, and who performs the last duty of closing his eyes. It is observable too that, as in the Euthydemus, Crito shows no aptitude for philosophical discussions. Nor among the friends of Socrates must the jailer be

forgotten, who seems to have been introduced by Plato in order to show the impression made by the extraordinary man on the common. The gentle nature of the man is indicated by his weeping at the announcement of his errand and then turning away, and also by the words of Socrates to his disciples: 'How charming the man is! since I have been in prison he has been always coming to me, and is as good as could be to me.' We are reminded too that he has retained this gentle nature amid scenes of death and violence by the contrasts which he draws between the behaviour of Socrates and of others when about to die.

Another person who takes no part in the philosophical discussion is the excitable Apollodorus, the same who, in the Symposium, of which he is the narrator, is called 'the madman,' and who testifies his grief by the most violent emotions. Phaedo is also present, the 'beloved disciple' as he may be termed, who is described, if not 'leaning on his bosom,' as seated next to Socrates, who is playing with his hair. He too, like Apollodorus, takes no part in the discussion, but he loves above all things to hear and speak of Socrates after his death. The calmness of his behaviour, veiling his face when he can no longer restrain his tears, contrasts with the passionate outcries of the other. At a particular point the argument is described as falling before the attack of Simmias. A sort of despair is introduced in the minds of the company. The effect of this is heightened by the description of Phaedo, who has been the eye-witness of the scene, and by the sympathy of his Phliasian auditors who are beginning to think 'that they too can never trust an argument again.' And the intense interest of the company is communicated not only to the first auditors, but to us who in a distant country read the narrative of their emotions after more than two thousand years have passed away.

The two principal interlocutors are Simmias and Cebes, the disciples of Philolaus the Pythagorean philosopher of Thebes. Simmias is described in the Phaedrus as fonder of an argument than any man living; and Cebes, although finally persuaded by Socrates, is said to be the most incredulous of human beings. It is Cebes who at the commencement of the Dialogue asks why 'suicide is held to be unlawful,' and who first supplies the doctrine of recollection in confirmation of the pre-existence of the soul. It is Cebes who urges that the pre-existence does not necessarily involve the future existence of the soul, as is shown by the illustration of the weaver and his coat. Simmias, on the other hand, raises the question about harmony and the lyre, which is naturally put into the mouth of a Pythagorean disciple. It is Simmias, too, who first remarks on the uncertainty of human knowledge, and only at last concedes to the argument such a qualified approval as is consistent with the feebleness of the human faculties. Cebes is the deeper and more consecutive thinker, Simmias more superficial and rhetorical; they are distinguished in much the same manner as Adeimantus and Glaucon in the Republic.

Other persons, Menexenus, Ctesippus, Lysis, are old friends; Evenus has been already satirized in the Apology; Aeschines and Epigenes were present at the trial; Euclid and Terpsion will reappear in the Introduction to the Theaetetus, Hermogenes has already appeared in the Cratylus. No inference can fairly be drawn from the absence of Aristippus, nor from the omission of Xenophon, who at the time of Socrates' death was in Asia. The mention of Plato's own absence seems like an expression of sorrow, and may, perhaps, be an indication that the report of the conversation is not to be taken literally.

The place of the Dialogue in the series is doubtful. The doctrine of ideas is certainly carried beyond the Socratic point of view; in no other of the writings of Plato is the theory of them so completely

developed. Whether the belief in immortality can be attributed to Socrates or not is uncertain; the silence of the Memorabilia, and of the earlier Dialogues of Plato, is an argument to the contrary. Yet in the Cyropaedia Xenophon has put language into the mouth of the dying Cyrus which recalls the Phaedo, and may have been derived from the teaching of Socrates. It may be fairly urged that the greatest religious interest of mankind could not have been wholly ignored by one who passed his life in fulfilling the commands of an oracle, and who recognized a Divine plan in man and nature. (Xen. Mem.) And the language of the Apology and of the Crito confirms this view.

The Phaedo is not one of the Socratic Dialogues of Plato; nor, on the other hand, can it be assigned to that later stage of the Platonic writings at which the doctrine of ideas appears to be forgotten. It belongs rather to the intermediate period of the Platonic philosophy, which roughly corresponds to the Phaedrus, Gorgias, Republic, Theaetetus. Without pretending to determine the real time of their composition, the Symposium, Meno, Euthyphro, Apology, Phaedo may be conveniently read by us in this order as illustrative of the life of Socrates. Another chain may be formed of the Meno, Phaedrus, Phaedo, in which the immortality of the soul is connected with the doctrine of ideas. In the Meno the theory of ideas is based on the ancient belief in transmigration, which reappears again in the Phaedrus as well as in the Republic and Timaeus, and in all of them is connected with a doctrine of retribution. In the Phaedrus the immortality of the soul is supposed to rest on the conception of the soul as a principle of motion, whereas in the Republic the argument turns on the natural continuance of the soul, which, if not destroyed by her own proper evil, can hardly be destroyed by any other. The soul of man in the Timaeus is derived from the Supreme Creator, and either returns after death to her kindred star, or descends into the lower life of an animal. The Apology expresses the same view as the Phaedo, but with less confidence; there the probability of death being a long sleep is not excluded. The Theaetetus also describes, in a digression, the desire of the soul to fly away and be with God—'and to fly to him is to be like him.' The Symposium may be observed to resemble as well as to differ from the Phaedo. While the first notion of immortality is only in the way of natural procreation or of posthumous fame and glory, the higher revelation of beauty, like the good in the Republic, is the vision of the eternal idea. So deeply rooted in Plato's mind is the belief in immortality; so various are the forms of expression which he employs.

As in several other Dialogues, there is more of system in the Phaedo than appears at first sight. The succession of arguments is based on previous philosophies; beginning with the mysteries and the Heracleitean alternation of opposites, and proceeding to the Pythagorean harmony and transmigration; making a step by the aid of Platonic reminiscence, and a further step by the help of the nous of Anaxagoras; until at last we rest in the conviction that the soul is inseparable from the ideas, and belongs to the world of the invisible and unknown. Then, as in the Gorgias or Republic, the curtain falls, and the veil of mythology descends upon the argument. After the confession of Socrates that he is an interested party, and the acknowledgment that no man of sense will think the details of his narrative true, but that something of the kind is true, we return from speculation to practice. He is himself more confident of immortality than he is of his own arguments; and the confidence which he expresses is less strong than that which his cheerfulness and composure in death inspire in us.

Difficulties of two kinds occur in the Phaedo—one kind to be explained out of contemporary philosophy, the other not admitting of an entire solution. (1) The difficulty which Socrates says that he experienced in explaining generation and corruption; the assumption of hypotheses which proceed from the less general to the more general, and are tested by their consequences; the puzzle about

greater and less; the resort to the method of ideas, which to us appear only abstract terms,—these are to be explained out of the position of Socrates and Plato in the history of philosophy. They were living in a twilight between the sensible and the intellectual world, and saw no way of connecting them. They could neither explain the relation of ideas to phenomena, nor their correlation to one another. The very idea of relation or comparison was embarrassing to them. Yet in this intellectual uncertainty they had a conception of a proof from results, and of a moral truth, which remained unshaken amid the questionings of philosophy. (2) The other is a difficulty which is touched upon in the Republic as well as in the Phaedo, and is common to modern and ancient philosophy. Plato is not altogether satisfied with his safe and simple method of ideas. He wants to have proved to him by facts that all things are for the best, and that there is one mind or design which pervades them all. But this 'power of the best' he is unable to explain; and therefore takes refuge in universal ideas. And are not we at this day seeking to discover that which Socrates in a glass darkly foresaw?

Some resemblances to the Greek drama may be noted in all the Dialogues of Plato. The Phaedo is the tragedy of which Socrates is the protagonist and Simmias and Cebes the secondary performers, standing to them in the same relation as to Glaucon and Adeimantus in the Republic. No Dialogue has a greater unity of subject and feeling. Plato has certainly fulfilled the condition of Greek, or rather of all art, which requires that scenes of death and suffering should be clothed in beauty. The gathering of the friends at the commencement of the Dialogue, the dismissal of Xanthippe, whose presence would have been out of place at a philosophical discussion, but who returns again with her children to take a final farewell, the dejection of the audience at the temporary overthrow of the argument, the picture of Socrates playing with the hair of Phaedo, the final scene in which Socrates alone retains his composure—are masterpieces of art. And the chorus at the end might have interpreted the feeling of the play: 'There can no evil happen to a good man in life or death.'

'The art of concealing art' is nowhere more perfect than in those writings of Plato which describe the trial and death of Socrates. Their charm is their simplicity, which gives them verisimilitude; and yet they touch, as if incidentally, and because they were suitable to the occasion, on some of the deepest truths of philosophy. There is nothing in any tragedy, ancient or modern, nothing in poetry or history (with one exception), like the last hours of Socrates in Plato. The master could not be more fitly occupied at such a time than in discoursing of immortality; nor the disciples more divinely consoled. The arguments, taken in the spirit and not in the letter, are our arguments; and Socrates by anticipation may be even thought to refute some 'eccentric notions; current in our own age. For there are philosophers among ourselves who do not seem to understand how much stronger is the power of intelligence, or of the best, than of Atlas, or mechanical force. How far the words attributed to Socrates were actually uttered by him we forbear to ask; for no answer can be given to this question. And it is better to resign ourselves to the feeling of a great work, than to linger among critical uncertainties.

PHAEDO

PERSONS OF THE DIALOGUE:

Phaedo, who is the narrator of the dialogue to Echecrates of Phlius. Socrates, Apollodorus, Simmias, Cebes, Crito and an Attendant of the Prison.

SCENE: The Prison of Socrates.

PLACE OF THE NARRATION: Phlius.

ECHECRATES: Were you yourself, Phaedo, in the prison with Socrates on the day when he drank the poison?

PHAEDO: Yes, Echecrates, I was.

ECHECRATES: I should so like to hear about his death. What did he say in his last hours? We were informed that he died by taking poison, but no one knew anything more; for no Phliasian ever goes to Athens now, and it is a long time since any stranger from Athens has found his way hither; so that we had no clear account.

PHAEDO: Did you not hear of the proceedings at the trial?

ECHECRATES: Yes; some one told us about the trial, and we could not understand why, having been condemned, he should have been put to death, not at the time, but long afterwards. What was the reason of this?

PHAEDO: An accident, Echecrates: the stern of the ship which the Athenians send to Delos happened to have been crowned on the day before he was tried.

ECHECRATES: What is this ship?

PHAEDO: It is the ship in which, according to Athenian tradition, Theseus went to Crete when he took with him the fourteen youths, and was the saviour of them and of himself. And they were said to have vowed to Apollo at the time, that if they were saved they would send a yearly mission to Delos. Now this custom still continues, and the whole period of the voyage to and from Delos, beginning when the priest of Apollo crowns the stern of the ship, is a holy season, during which the city is not allowed to be polluted by public executions; and when the vessel is detained by contrary winds, the time spent in going and returning is very considerable. As I was saying, the ship was crowned on the day before the trial, and this was the reason why Socrates lay in prison and was not put to death until long after he was condemned.

ECHECRATES: What was the manner of his death, Phaedo? What was said or done? And which of his friends were with him? Or did the authorities forbid them to be present—so that he had no friends near him when he died?

PHAEDO: No; there were several of them with him.

ECHECRATES: If you have nothing to do, I wish that you would tell me what passed, as exactly as you can.

PHAEDO: I have nothing at all to do, and will try to gratify your wish. To be reminded of Socrates is always the greatest delight to me, whether I speak myself or hear another speak of him.

ECHECRATES: You will have listeners who are of the same mind with you, and I hope that you will be as exact as you can.

PHAEDO: I had a singular feeling at being in his company. For I could hardly believe that I was present at the death of a friend, and therefore I did not pity him, Echecrates; he died so fearlessly, and his words and bearing were so noble and gracious, that to me he appeared blessed. I thought that in going to the other world he could not be without a divine call, and that he would be happy, if any man ever was, when he arrived there, and therefore I did not pity him as might have seemed natural at such an hour. But I had not the pleasure which I usually feel in philosophical discourse (for philosophy was the theme of which we spoke). I was pleased, but in the pleasure there was also a strange admixture of pain; for I reflected that he was soon to die, and this double feeling was shared by us all; we were laughing and weeping by turns, especially the excitable Apollodorus—you know the sort of man?

ECHECRATES: Yes.

PHAEDO: He was quite beside himself; and I and all of us were greatly moved.

ECHECRATES: Who were present?

PHAEDO: Of native Athenians there were, besides Apollodorus, Critobulus and his father Crito, Hermogenes, Epigenes, Aeschines, Antisthenes; likewise Ctesippus of the deme of Paeania, Menexenus, and some others; Plato, if I am not mistaken, was ill.

ECHECRATES: Were there any strangers?

PHAEDO: Yes, there were; Simmias the Theban, and Cebes, and Phaedondes; Euclid and Terpison, who came from Megara.

ECHECRATES: And was Aristippus there, and Cleombrotus?

PHAEDO: No, they were said to be in Aegina.

ECHECRATES: Any one else?

PHAEDO: I think that these were nearly all.

ECHECRATES: Well, and what did you talk about?

PHAEDO: I will begin at the beginning, and endeavour to repeat the entire conversation. On the previous days we had been in the habit of assembling early in the morning at the court in which the trial took place, and which is not far from the prison. There we used to wait talking with one another until the opening of the doors (for they were not opened very early); then we went in and generally

passed the day with Socrates. On the last morning we assembled sooner than usual, having heard on the day before when we quitted the prison in the evening that the sacred ship had come from Delos, and so we arranged to meet very early at the accustomed place. On our arrival the jailer who answered the door, instead of admitting us, came out and told us to stay until he called us. 'For the Eleven,' he said, 'are now with Socrates; they are taking off his chains, and giving orders that he is to die to-day.' He soon returned and said that we might come in. On entering we found Socrates just released from chains, and Xanthippe, whom you know, sitting by him, and holding his child in her arms. When she saw us she uttered a cry and said, as women will: 'O Socrates, this is the last time that either you will converse with your friends, or they with you.' Socrates turned to Crito and said: 'Crito, let some one take her home.' Some of Crito's people accordingly led her away, crying out and beating herself. And when she was gone, Socrates, sitting up on the couch, bent and rubbed his leg, saying, as he was rubbing: How singular is the thing called pleasure, and how curiously related to pain, which might be thought to be the opposite of it; for they are never present to a man at the same instant, and yet he who pursues either is generally compelled to take the other; their bodies are two, but they are joined by a single head. And I cannot help thinking that if Aesop had remembered them, he would have made a fable about God trying to reconcile their strife, and how, when he could not, he fastened their heads together; and this is the reason why when one comes the other follows, as I know by my own experience now, when after the pain in my leg which was caused by the chain pleasure appears to succeed.

Upon this Cebes said: I am glad, Socrates, that you have mentioned the name of Aesop. For it reminds me of a question which has been asked by many, and was asked of me only the day before yesterday by Evenus the poet—he will be sure to ask it again, and therefore if you would like me to have an answer ready for him, you may as well tell me what I should say to him:—he wanted to know why you, who never before wrote a line of poetry, now that you are in prison are turning Aesop's fables into verse, and also composing that hymn in honour of Apollo.

Tell him, Cebes, he replied, what is the truth—that I had no idea of rivalling him or his poems; to do so, as I knew, would be no easy task. But I wanted to see whether I could purge away a scruple which I felt about the meaning of certain dreams. In the course of my life I have often had intimations in dreams 'that I should compose music.' The same dream came to me sometimes in one form, and sometimes in another, but always saying the same or nearly the same words: 'Cultivate and make music,' said the dream. And hitherto I had imagined that this was only intended to exhort and encourage me in the study of philosophy, which has been the pursuit of my life, and is the noblest and best of music. The dream was bidding me do what I was already doing, in the same way that the competitor in a race is bidden by the spectators to run when he is already running. But I was not certain of this, for the dream might have meant music in the popular sense of the word, and being under sentence of death, and the festival giving me a respite, I thought that it would be safer for me to satisfy the scruple, and, in obedience to the dream, to compose a few verses before I departed. And first I made a hymn in honour of the god of the festival, and then considering that a poet, if he is really to be a poet, should not only put together words, but should invent stories, and that I have no invention, I took some fables of Aesop, which I had ready at hand and which I knew—they were the first I came upon—and turned them into verse. Tell this to Evenus, Cebes, and bid him be of good cheer; say that I would have him come after me if he be a wise man, and not tarry; and that to-day I am likely to be going, for the Athenians say that I must.

Simmias said: What a message for such a man! having been a frequent companion of his I should say that, as far as I know him, he will never take your advice unless he is obliged.

Why, said Socrates,—is not Evenus a philosopher?

I think that he is, said Simmias.

Then he, or any man who has the spirit of philosophy, will be willing to die, but he will not take his own life, for that is held to be unlawful.

Here he changed his position, and put his legs off the couch on to the ground, and during the rest of the conversation he remained sitting.

Why do you say, enquired Cebes, that a man ought not to take his own life, but that the philosopher will be ready to follow the dying?

Socrates replied: And have you, Cebes and Simmias, who are the disciples of Philolaus, never heard him speak of this?

Yes, but his language was obscure, Socrates.

My words, too, are only an echo; but there is no reason why I should not repeat what I have heard: and indeed, as I am going to another place, it is very meet for me to be thinking and talking of the nature of the pilgrimage which I am about to make. What can I do better in the interval between this and the setting of the sun?

Then tell me, Socrates, why is suicide held to be unlawful? as I have certainly heard Philolaus, about whom you were just now asking, affirm when he was staying with us at Thebes: and there are others who say the same, although I have never understood what was meant by any of them.

Do not lose heart, replied Socrates, and the day may come when you will understand. I suppose that you wonder why, when other things which are evil may be good at certain times and to certain persons, death is to be the only exception, and why, when a man is better dead, he is not permitted to be his own benefactor, but must wait for the hand of another.

Very true, said Cebes, laughing gently and speaking in his native Boeotian.

I admit the appearance of inconsistency in what I am saying; but there may not be any real inconsistency after all. There is a doctrine whispered in secret that man is a prisoner who has no right to open the door and run away; this is a great mystery which I do not quite understand. Yet I too believe that the gods are our guardians, and that we are a possession of theirs. Do you not agree?

Yes, I quite agree, said Cebes.

And if one of your own possessions, an ox or an ass, for example, took the liberty of putting himself out of the way when you had given no intimation of your wish that he should die, would you not be angry with him, and would you not punish him if you could?

Certainly, replied Cebes.

Then, if we look at the matter thus, there may be reason in saying that a man should wait, and not take his own life until God summons him, as he is now summoning me.

Yes, Socrates, said Cebes, there seems to be truth in what you say. And yet how can you reconcile this seemingly true belief that God is our guardian and we his possessions, with the willingness to die which we were just now attributing to the philosopher? That the wisest of men should be willing to leave a service in which they are ruled by the gods who are the best of rulers, is not reasonable; for surely no wise man thinks that when set at liberty he can take better care of himself than the gods take of him. A fool may perhaps think so—he may argue that he had better run away from his master, not considering that his duty is to remain to the end, and not to run away from the good, and that there would be no sense in his running away. The wise man will want to be ever with him who is better than himself. Now this, Socrates, is the reverse of what was just now said; for upon this view the wise man should sorrow and the fool rejoice at passing out of life.

The earnestness of Cebes seemed to please Socrates. Here, said he, turning to us, is a man who is always inquiring, and is not so easily convinced by the first thing which he hears.

And certainly, added Simmias, the objection which he is now making does appear to me to have some force. For what can be the meaning of a truly wise man wanting to fly away and lightly leave a master who is better than himself? And I rather imagine that Cebes is referring to you; he thinks that you are too ready to leave us, and too ready to leave the gods whom you acknowledge to be our good masters.

Yes, replied Socrates; there is reason in what you say. And so you think that I ought to answer your indictment as if I were in a court?

We should like you to do so, said Simmias.

Then I must try to make a more successful defence before you than I did when before the judges. For I am quite ready to admit, Simmias and Cebes, that I ought to be grieved at death, if I were not persuaded in the first place that I am going to other gods who are wise and good (of which I am as certain as I can be of any such matters), and secondly (though I am not so sure of this last) to men departed, better than those whom I leave behind; and therefore I do not grieve as I might have done, for I have good hope that there is yet something remaining for the dead, and as has been said of old, some far better thing for the good than for the evil.

But do you mean to take away your thoughts with you, Socrates? said Simmias. Will you not impart them to us?—for they are a benefit in which we too are entitled to share. Moreover, if you succeed in convincing us, that will be an answer to the charge against yourself.

I will do my best, replied Socrates. But you must first let me hear what Crito wants; he has long been wishing to say something to me.

Only this, Socrates, replied Crito:—the attendant who is to give you the poison has been telling me, and he wants me to tell you, that you are not to talk much, talking, he says, increases heat, and this is apt to interfere with the action of the poison; persons who excite themselves are sometimes obliged to take a second or even a third dose.

Then, said Socrates, let him mind his business and be prepared to give the poison twice or even thrice if necessary; that is all.

I knew quite well what you would say, replied Crito; but I was obliged to satisfy him.

Never mind him, he said.

And now, O my judges, I desire to prove to you that the real philosopher has reason to be of good cheer when he is about to die, and that after death he may hope to obtain the greatest good in the other world. And how this may be, Simmias and Cebes, I will endeavour to explain. For I deem that the true votary of philosophy is likely to be misunderstood by other men; they do not perceive that he is always pursuing death and dying; and if this be so, and he has had the desire of death all his life long, why when his time comes should he repine at that which he has been always pursuing and desiring?

Simmias said laughingly: Though not in a laughing humour, you have made me laugh, Socrates; for I cannot help thinking that the many when they hear your words will say how truly you have described philosophers, and our people at home will likewise say that the life which philosophers desire is in reality death, and that they have found them out to be deserving of the death which they desire.

And they are right, Simmias, in thinking so, with the exception of the words 'they have found them out'; for they have not found out either what is the nature of that death which the true philosopher deserves, or how he deserves or desires death. But enough of them:—let us discuss the matter among ourselves: Do we believe that there is such a thing as death?

To be sure, replied Simmias.

Is it not the separation of soul and body? And to be dead is the completion of this; when the soul exists in herself, and is released from the body and the body is released from the soul, what is this but death?

Just so, he replied.

There is another question, which will probably throw light on our present inquiry if you and I can agree about it:—Ought the philosopher to care about the pleasures—if they are to be called pleasures—of eating and drinking?

Certainly not, answered Simmias.

And what about the pleasures of love—should he care for them?

By no means.

And will he think much of the other ways of indulging the body, for example, the acquisition of costly raiment, or sandals, or other adornments of the body? Instead of caring about them, does he not rather despise anything more than nature needs? What do you say?

I should say that the true philosopher would despise them.

Would you not say that he is entirely concerned with the soul and not with the body? He would like, as far as he can, to get away from the body and to turn to the soul.

Quite true.

In matters of this sort philosophers, above all other men, may be observed in every sort of way to dissever the soul from the communion of the body.

Very true.

Whereas, Simmias, the rest of the world are of opinion that to him who has no sense of pleasure and no part in bodily pleasure, life is not worth having; and that he who is indifferent about them is as good as dead.

That is also true.

What again shall we say of the actual acquirement of knowledge?—is the body, if invited to share in the enquiry, a hinderer or a helper? I mean to say, have sight and hearing any truth in them? Are they not, as the poets are always telling us, inaccurate witnesses? and yet, if even they are inaccurate and indistinct, what is to be said of the other senses?—for you will allow that they are the best of them?

Certainly, he replied.

Then when does the soul attain truth?—for in attempting to consider anything in company with the body she is obviously deceived.

True.

Then must not true existence be revealed to her in thought, if at all?

Yes.

And thought is best when the mind is gathered into herself and none of these things trouble her—neither sounds nor sights nor pain nor any pleasure,—when she takes leave of the body, and has as little as possible to do with it, when she has no bodily sense or desire, but is aspiring after true being?

Certainly.

And in this the philosopher dishonours the body; his soul runs away from his body and desires to be alone and by herself?

That is true.

Well, but there is another thing, Simmias: Is there or is there not an absolute justice?

Assuredly there is.

And an absolute beauty and absolute good?

Of course.

But did you ever behold any of them with your eyes?

Certainly not.

Or did you ever reach them with any other bodily sense?—and I speak not of these alone, but of absolute greatness, and health, and strength, and of the essence or true nature of everything. Has the reality of them ever been perceived by you through the bodily organs? or rather, is not the nearest approach to the knowledge of their several natures made by him who so orders his intellectual vision as to have the most exact conception of the essence of each thing which he considers?

Certainly.

And he attains to the purest knowledge of them who goes to each with the mind alone, not introducing or intruding in the act of thought sight or any other sense together with reason, but with the very light of the mind in her own clearness searches into the very truth of each; he who has got rid, as far as he can, of eyes and ears and, so to speak, of the whole body, these being in his opinion distracting elements which when they infect the soul hinder her from acquiring truth and knowledge—who, if not he, is likely to attain the knowledge of true being?

What you say has a wonderful truth in it, Socrates, replied Simmias.

And when real philosophers consider all these things, will they not be led to make a reflection which they will express in words something like the following? 'Have we not found,' they will say, 'a path of thought which seems to bring us and our argument to the conclusion, that while we are in the body, and while the soul is infected with the evils of the body, our desire will not be satisfied? and our desire is of the truth. For the body is a source of endless trouble to us by reason of the mere requirement of food; and is liable also to diseases which overtake and impede us in the search after true being: it fills us full of loves, and lusts, and fears, and fancies of all kinds, and endless foolery, and in fact, as men say, takes away from us the power of thinking at all. Whence come wars, and fightings, and factions? whence but from the body and the lusts of the body? wars are occasioned by the love of money, and money has to be acquired for the sake and in the service of the body; and by reason of all these

impediments we have no time to give to philosophy; and, last and worst of all, even if we are at leisure and betake ourselves to some speculation, the body is always breaking in upon us, causing turmoil and confusion in our enquiries, and so amazing us that we are prevented from seeing the truth. It has been proved to us by experience that if we would have pure knowledge of anything we must be quit of the body—the soul in herself must behold things in themselves: and then we shall attain the wisdom which we desire, and of which we say that we are lovers, not while we live, but after death; for if while in company with the body, the soul cannot have pure knowledge, one of two things follows—either knowledge is not to be attained at all, or, if at all, after death. For then, and not till then, the soul will be parted from the body and exist in herself alone. In this present life, I reckon that we make the nearest approach to knowledge when we have the least possible intercourse or communion with the body, and are not surfeited with the bodily nature, but keep ourselves pure until the hour when God himself is pleased to release us. And thus having got rid of the foolishness of the body we shall be pure and hold converse with the pure, and know of ourselves the clear light everywhere, which is no other than the light of truth.' For the impure are not permitted to approach the pure. These are the sort of words, Simmias, which the true lovers of knowledge cannot help saying to one another, and thinking. You would agree; would you not?

Undoubtedly, Socrates.

But, O my friend, if this is true, there is great reason to hope that, going whither I go, when I have come to the end of my journey, I shall attain that which has been the pursuit of my life. And therefore I go on my way rejoicing, and not I only, but every other man who believes that his mind has been made ready and that he is in a manner purified.

Certainly, replied Simmias.

And what is purification but the separation of the soul from the body, as I was saying before; the habit of the soul gathering and collecting herself into herself from all sides out of the body; the dwelling in her own place alone, as in another life, so also in this, as far as she can;—the release of the soul from the chains of the body?

Very true, he said.

And this separation and release of the soul from the body is termed death?

To be sure, he said.

And the true philosophers, and they only, are ever seeking to release the soul. Is not the separation and release of the soul from the body their especial study?

That is true.

And, as I was saying at first, there would be a ridiculous contradiction in men studying to live as nearly as they can in a state of death, and yet repining when it comes upon them.

Clearly.

And the true philosophers, Simmias, are always occupied in the practice of dying, wherefore also to them least of all men is death terrible. Look at the matter thus:—if they have been in every way the enemies of the body, and are wanting to be alone with the soul, when this desire of theirs is granted, how inconsistent would they be if they trembled and repined, instead of rejoicing at their departure to that place where, when they arrive, they hope to gain that which in life they desired—and this was wisdom—and at the same time to be rid of the company of their enemy. Many a man has been willing to go to the world below animated by the hope of seeing there an earthly love, or wife, or son, and conversing with them. And will he who is a true lover of wisdom, and is strongly persuaded in like manner that only in the world below he can worthily enjoy her, still repine at death? Will he not depart with joy? Surely he will, O my friend, if he be a true philosopher. For he will have a firm conviction that there and there only, he can find wisdom in her purity. And if this be true, he would be very absurd, as I was saying, if he were afraid of death.

He would, indeed, replied Simmias.

And when you see a man who is repining at the approach of death, is not his reluctance a sufficient proof that he is not a lover of wisdom, but a lover of the body, and probably at the same time a lover of either money or power, or both?

Quite so, he replied.

And is not courage, Simmias, a quality which is specially characteristic of the philosopher?

Certainly.

There is temperance again, which even by the vulgar is supposed to consist in the control and regulation of the passions, and in the sense of superiority to them—is not temperance a virtue belonging to those only who despise the body, and who pass their lives in philosophy?

Most assuredly.

For the courage and temperance of other men, if you will consider them, are really a contradiction.

How so?

Well, he said, you are aware that death is regarded by men in general as a great evil.

Very true, he said.

And do not courageous men face death because they are afraid of yet greater evils?

That is quite true.

Then all but the philosophers are courageous only from fear, and because they are afraid; and yet that a man should be courageous from fear, and because he is a coward, is surely a strange thing.

Very true.

And are not the temperate exactly in the same case? They are temperate because they are intemperate—which might seem to be a contradiction, but is nevertheless the sort of thing which happens with this foolish temperance. For there are pleasures which they are afraid of losing; and in their desire to keep them, they abstain from some pleasures, because they are overcome by others; and although to be conquered by pleasure is called by men intemperance, to them the conquest of pleasure consists in being conquered by pleasure. And that is what I mean by saying that, in a sense, they are made temperate through intemperance.

Such appears to be the case.

Yet the exchange of one fear or pleasure or pain for another fear or pleasure or pain, and of the greater for the less, as if they were coins, is not the exchange of virtue. O my blessed Simmias, is there not one true coin for which all things ought to be exchanged?—and that is wisdom; and only in exchange for this, and in company with this, is anything truly bought or sold, whether courage or temperance or justice. And is not all true virtue the companion of wisdom, no matter what fears or pleasures or other similar goods or evils may or may not attend her? But the virtue which is made up of these goods, when they are severed from wisdom and exchanged with one another, is a shadow of virtue only, nor is there any freedom or health or truth in her; but in the true exchange there is a purging away of all these things, and temperance, and justice, and courage, and wisdom herself are the purgation of them. The founders of the mysteries would appear to have had a real meaning, and were not talking nonsense when they intimated in a figure long ago that he who passes unsanctified and uninitiated into the world below will lie in a slough, but that he who arrives there after initiation and purification will dwell with the gods. For 'many,' as they say in the mysteries, 'are the thyrsus-bearers, but few are the mystics,'—meaning, as I interpret the words, 'the true philosophers.' In the number of whom, during my whole life, I have been seeking, according to my ability, to find a place;—whether I have sought in a right way or not, and whether I have succeeded or not, I shall truly know in a little while, if God will, when I myself arrive in the other world—such is my belief. And therefore I maintain that I am right, Simmias and Cebes, in not grieving or repining at parting from you and my masters in this world, for I believe that I shall equally find good masters and friends in another world. But most men do not believe this saying; if then I succeed in convincing you by my defence better than I did the Athenian judges, it will be well.

Cebes answered: I agree, Socrates, in the greater part of what you say. But in what concerns the soul, men are apt to be incredulous; they fear that when she has left the body her place may be nowhere, and that on the very day of death she may perish and come to an end—immediately on her release from the body, issuing forth dispersed like smoke or air and in her flight vanishing away into nothingness. If she could only be collected into herself after she has obtained release from the evils of which you are speaking, there would be good reason to hope, Socrates, that what you say is true. But surely it requires a great deal of argument and many proofs to show that when the man is dead his soul yet exists, and has any force or intelligence.

True, Cebes, said Socrates; and shall I suggest that we converse a little of the probabilities of these things?

I am sure, said Cebes, that I should greatly like to know your opinion about them.

I reckon, said Socrates, that no one who heard me now, not even if he were one of my old enemies, the Comic poets, could accuse me of idle talking about matters in which I have no concern:—If you please, then, we will proceed with the inquiry.

Suppose we consider the question whether the souls of men after death are or are not in the world below. There comes into my mind an ancient doctrine which affirms that they go from hence into the other world, and returning hither, are born again from the dead. Now if it be true that the living come from the dead, then our souls must exist in the other world, for if not, how could they have been born again? And this would be conclusive, if there were any real evidence that the living are only born from the dead; but if this is not so, then other arguments will have to be adduced.

Very true, replied Cebes.

Then let us consider the whole question, not in relation to man only, but in relation to animals generally, and to plants, and to everything of which there is generation, and the proof will be easier. Are not all things which have opposites generated out of their opposites? I mean such things as good and evil, just and unjust—and there are innumerable other opposites which are generated out of opposites. And I want to show that in all opposites there is of necessity a similar alternation; I mean to say, for example, that anything which becomes greater must become greater after being less.

True.

And that which becomes less must have been once greater and then have become less.

Yes.

And the weaker is generated from the stronger, and the swifter from the slower.

Very true.

And the worse is from the better, and the more just is from the more unjust.

Of course.

And is this true of all opposites? and are we convinced that all of them are generated out of opposites?

Yes.

And in this universal opposition of all things, are there not also two intermediate processes which are ever going on, from one to the other opposite, and back again; where there is a greater and a less there is also an intermediate process of increase and diminution, and that which grows is said to wax, and that which decays to wane?

Yes, he said.

And there are many other processes, such as division and composition, cooling and heating, which equally involve a passage into and out of one another. And this necessarily holds of all opposites, even though not always expressed in words—they are really generated out of one another, and there is a passing or process from one to the other of them?

Very true, he replied.

Well, and is there not an opposite of life, as sleep is the opposite of waking?

True, he said.

And what is it?

Death, he answered.

And these, if they are opposites, are generated the one from the other, and have there their two intermediate processes also?

Of course.

Now, said Socrates, I will analyze one of the two pairs of opposites which I have mentioned to you, and also its intermediate processes, and you shall analyze the other to me. One of them I term sleep, the other waking. The state of sleep is opposed to the state of waking, and out of sleeping waking is generated, and out of waking, sleeping; and the process of generation is in the one case falling asleep, and in the other waking up. Do you agree?

I entirely agree.

Then, suppose that you analyze life and death to me in the same manner. Is not death opposed to life?

Yes.

And they are generated one from the other?

Yes.

What is generated from the living?

The dead.

And what from the dead?

I can only say in answer—the living.

Then the living, whether things or persons, Cebes, are generated from the dead?

That is clear, he replied.

Then the inference is that our souls exist in the world below?

That is true.

And one of the two processes or generations is visible—for surely the act of dying is visible?

Surely, he said.

What then is to be the result? Shall we exclude the opposite process? And shall we suppose nature to walk on one leg only? Must we not rather assign to death some corresponding process of generation?

Certainly, he replied.

And what is that process?

Return to life.

And return to life, if there be such a thing, is the birth of the dead into the world of the living?

Quite true.

Then here is a new way by which we arrive at the conclusion that the living come from the dead, just as the dead come from the living; and this, if true, affords a most certain proof that the souls of the dead exist in some place out of which they come again.

Yes, Socrates, he said; the conclusion seems to flow necessarily out of our previous admissions.

And that these admissions were not unfair, Cebes, he said, may be shown, I think, as follows: If generation were in a straight line only, and there were no compensation or circle in nature, no turn or return of elements into their opposites, then you know that all things would at last have the same form and pass into the same state, and there would be no more generation of them.

What do you mean? he said.

A simple thing enough, which I will illustrate by the case of sleep, he replied. You know that if there were no alternation of sleeping and waking, the tale of the sleeping Endymion would in the end have no meaning, because all other things would be asleep, too, and he would not be distinguishable from the rest. Or if there were composition only, and no division of substances, then the chaos of Anaxagoras would come again. And in like manner, my dear Cebes, if all things which partook of life were to die, and after they were dead remained in the form of death, and did not come to life again, all would at last die, and nothing would be alive—what other result could there be? For if the living

spring from any other things, and they too die, must not all things at last be swallowed up in death? (But compare Republic.)

There is no escape, Socrates, said Cebes; and to me your argument seems to be absolutely true.

Yes, he said, Cebes, it is and must be so, in my opinion; and we have not been deluded in making these admissions; but I am confident that there truly is such a thing as living again, and that the living spring from the dead, and that the souls of the dead are in existence, and that the good souls have a better portion than the evil.

Cebes added: Your favorite doctrine, Socrates, that knowledge is simply recollection, if true, also necessarily implies a previous time in which we have learned that which we now recollect. But this would be impossible unless our soul had been in some place before existing in the form of man; here then is another proof of the soul's immortality.

But tell me, Cebes, said Simmias, interposing, what arguments are urged in favour of this doctrine of recollection. I am not very sure at the moment that I remember them.

One excellent proof, said Cebes, is afforded by questions. If you put a question to a person in a right way, he will give a true answer of himself, but how could he do this unless there were knowledge and right reason already in him? And this is most clearly shown when he is taken to a diagram or to anything of that sort. (Compare Meno.)

But if, said Socrates, you are still incredulous, Simmias, I would ask you whether you may not agree with me when you look at the matter in another way;—I mean, if you are still incredulous as to whether knowledge is recollection.

Incredulous, I am not, said Simmias; but I want to have this doctrine of recollection brought to my own recollection, and, from what Cebes has said, I am beginning to recollect and be convinced; but I should still like to hear what you were going to say.

This is what I would say, he replied:—We should agree, if I am not mistaken, that what a man recollects he must have known at some previous time.

Very true.

And what is the nature of this knowledge or recollection? I mean to ask, Whether a person who, having seen or heard or in any way perceived anything, knows not only that, but has a conception of something else which is the subject, not of the same but of some other kind of knowledge, may not be fairly said to recollect that of which he has the conception?

What do you mean?

I mean what I may illustrate by the following instance:—The knowledge of a lyre is not the same as the knowledge of a man?

True.

And yet what is the feeling of lovers when they recognize a lyre, or a garment, or anything else which the beloved has been in the habit of using? Do not they, from knowing the lyre, form in the mind's eye an image of the youth to whom the lyre belongs? And this is recollection. In like manner any one who sees Simmias may remember Cebes; and there are endless examples of the same thing.

Endless, indeed, replied Simmias.

And recollection is most commonly a process of recovering that which has been already forgotten through time and inattention.

Very true, he said.

Well; and may you not also from seeing the picture of a horse or a lyre remember a man? and from the picture of Simmias, you may be led to remember Cebes?

True.

Or you may also be led to the recollection of Simmias himself?

Quite so.

And in all these cases, the recollection may be derived from things either like or unlike?

It may be.

And when the recollection is derived from like things, then another consideration is sure to arise, which is—whether the likeness in any degree falls short or not of that which is recollected?

Very true, he said.

And shall we proceed a step further, and affirm that there is such a thing as equality, not of one piece of wood or stone with another, but that, over and above this, there is absolute equality? Shall we say so?

Say so, yes, replied Simmias, and swear to it, with all the confidence in life.

And do we know the nature of this absolute essence?

To be sure, he said.

And whence did we obtain our knowledge? Did we not see equalities of material things, such as pieces of wood and stones, and gather from them the idea of an equality which is different from them? For you will acknowledge that there is a difference. Or look at the matter in another way:—Do not the same pieces of wood or stone appear at one time equal, and at another time unequal?

That is certain.

But are real equals ever unequal? or is the idea of equality the same as of inequality?

Impossible, Socrates.

Then these (so-called) equals are not the same with the idea of equality?

I should say, clearly not, Socrates.

And yet from these equals, although differing from the idea of equality, you conceived and attained that idea?

Very true, he said.

Which might be like, or might be unlike them?

Yes.

But that makes no difference; whenever from seeing one thing you conceived another, whether like or unlike, there must surely have been an act of recollection?

Very true.

But what would you say of equal portions of wood and stone, or other material equals? and what is the impression produced by them? Are they equals in the same sense in which absolute equality is equal? or do they fall short of this perfect equality in a measure?

Yes, he said, in a very great measure too.

And must we not allow, that when I or any one, looking at any object, observes that the thing which he sees aims at being some other thing, but falls short of, and cannot be, that other thing, but is inferior, he who makes this observation must have had a previous knowledge of that to which the other, although similar, was inferior?

Certainly.

And has not this been our own case in the matter of equals and of absolute equality?

Precisely.

Then we must have known equality previously to the time when we first saw the material equals, and reflected that all these apparent equals strive to attain absolute equality, but fall short of it?

Very true.

And we recognize also that this absolute equality has only been known, and can only be known, through the medium of sight or touch, or of some other of the senses, which are all alike in this respect?

Yes, Socrates, as far as the argument is concerned, one of them is the same as the other.

From the senses then is derived the knowledge that all sensible things aim at an absolute equality of which they fall short?

Yes.

Then before we began to see or hear or perceive in any way, we must have had a knowledge of absolute equality, or we could not have referred to that standard the equals which are derived from the senses?—for to that they all aspire, and of that they fall short.

No other inference can be drawn from the previous statements.

And did we not see and hear and have the use of our other senses as soon as we were born?

Certainly.

Then we must have acquired the knowledge of equality at some previous time?

Yes.

That is to say, before we were born, I suppose?

True.

And if we acquired this knowledge before we were born, and were born having the use of it, then we also knew before we were born and at the instant of birth not only the equal or the greater or the less, but all other ideas; for we are not speaking only of equality, but of beauty, goodness, justice, holiness, and of all which we stamp with the name of essence in the dialectical process, both when we ask and when we answer questions. Of all this we may certainly affirm that we acquired the knowledge before birth?

We may.

But if, after having acquired, we have not forgotten what in each case we acquired, then we must always have come into life having knowledge, and shall always continue to know as long as life lasts—for knowing is the acquiring and retaining knowledge and not forgetting. Is not forgetting, Simmias, just the losing of knowledge?

Quite true, Socrates.

But if the knowledge which we acquired before birth was lost by us at birth, and if afterwards by the use of the senses we recovered what we previously knew, will not the process which we call learning be a recovering of the knowledge which is natural to us, and may not this be rightly termed recollection?

Very true.

So much is clear—that when we perceive something, either by the help of sight, or hearing, or some other sense, from that perception we are able to obtain a notion of some other thing like or unlike which is associated with it but has been forgotten. Whence, as I was saying, one of two alternatives follows:—either we had this knowledge at birth, and continued to know through life; or, after birth, those who are said to learn only remember, and learning is simply recollection.

Yes, that is quite true, Socrates.

And which alternative, Simmias, do you prefer? Had we the knowledge at our birth, or did we recollect the things which we knew previously to our birth?

I cannot decide at the moment.

At any rate you can decide whether he who has knowledge will or will not be able to render an account of his knowledge? What do you say?

Certainly, he will.

But do you think that every man is able to give an account of these very matters about which we are speaking?

Would that they could, Socrates, but I rather fear that to-morrow, at this time, there will no longer be any one alive who is able to give an account of them such as ought to be given.

Then you are not of opinion, Simmias, that all men know these things?

Certainly not.

They are in process of recollecting that which they learned before?

Certainly.

But when did our souls acquire this knowledge?—not since we were born as men?

Certainly not.

And therefore, previously?

Yes.

Then, Simmias, our souls must also have existed without bodies before they were in the form of man, and must have had intelligence.

Unless indeed you suppose, Socrates, that these notions are given us at the very moment of birth; for this is the only time which remains.

Yes, my friend, but if so, when do we lose them? for they are not in us when we are born—that is admitted. Do we lose them at the moment of receiving them, or if not at what other time?

No, Socrates, I perceive that I was unconsciously talking nonsense.

Then may we not say, Simmias, that if, as we are always repeating, there is an absolute beauty, and goodness, and an absolute essence of all things; and if to this, which is now discovered to have existed in our former state, we refer all our sensations, and with this compare them, finding these ideas to be pre-existent and our inborn possession—then our souls must have had a prior existence, but if not, there would be no force in the argument? There is the same proof that these ideas must have existed before we were born, as that our souls existed before we were born; and if not the ideas, then not the souls.

Yes, Socrates; I am convinced that there is precisely the same necessity for the one as for the other; and the argument retreats successfully to the position that the existence of the soul before birth cannot be separated from the existence of the essence of which you speak. For there is nothing which to my mind is so patent as that beauty, goodness, and the other notions of which you were just now speaking, have a most real and absolute existence; and I am satisfied with the proof.

Well, but is Cebes equally satisfied? for I must convince him too.

I think, said Simmias, that Cebes is satisfied: although he is the most incredulous of mortals, yet I believe that he is sufficiently convinced of the existence of the soul before birth. But that after death the soul will continue to exist is not yet proven even to my own satisfaction. I cannot get rid of the feeling of the many to which Cebes was referring—the feeling that when the man dies the soul will be dispersed, and that this may be the extinction of her. For admitting that she may have been born elsewhere, and framed out of other elements, and was in existence before entering the human body, why after having entered in and gone out again may she not herself be destroyed and come to an end?

Very true, Simmias, said Cebes; about half of what was required has been proven; to wit, that our souls existed before we were born:—that the soul will exist after death as well as before birth is the other half of which the proof is still wanting, and has to be supplied; when that is given the demonstration will be complete.

But that proof, Simmias and Cebes, has been already given, said Socrates, if you put the two arguments together—I mean this and the former one, in which we admitted that everything living is born of the dead. For if the soul exists before birth, and in coming to life and being born can be born only from death and dying, must she not after death continue to exist, since she has to be born again?—Surely the proof which you desire has been already furnished. Still I suspect that you and

Simmias would be glad to probe the argument further. Like children, you are haunted with a fear that when the soul leaves the body, the wind may really blow her away and scatter her; especially if a man should happen to die in a great storm and not when the sky is calm.

Cebes answered with a smile: Then, Socrates, you must argue us out of our fears—and yet, strictly speaking, they are not our fears, but there is a child within us to whom death is a sort of hobgoblin; him too we must persuade not to be afraid when he is alone in the dark.

Socrates said: Let the voice of the charmer be applied daily until you have charmed away the fear.

And where shall we find a good charmer of our fears, Socrates, when you are gone?

Hellas, he replied, is a large place, Cebes, and has many good men, and there are barbarous races not a few: seek for him among them all, far and wide, sparing neither pains nor money; for there is no better way of spending your money. And you must seek among yourselves too; for you will not find others better able to make the search.

The search, replied Cebes, shall certainly be made. And now, if you please, let us return to the point of the argument at which we digressed.

By all means, replied Socrates; what else should I please?

Very good.

Must we not, said Socrates, ask ourselves what that is which, as we imagine, is liable to be scattered, and about which we fear? and what again is that about which we have no fear? And then we may proceed further to enquire whether that which suffers dispersion is or is not of the nature of soul—our hopes and fears as to our own souls will turn upon the answers to these questions.

Very true, he said.

Now the compound or composite may be supposed to be naturally capable, as of being compounded, so also of being dissolved; but that which is uncompounded, and that only, must be, if anything is, indissoluble.

Yes; I should imagine so, said Cebes.

And the uncompounded may be assumed to be the same and unchanging, whereas the compound is always changing and never the same.

I agree, he said.

Then now let us return to the previous discussion. Is that idea or essence, which in the dialectical process we define as essence or true existence—whether essence of equality, beauty, or anything else—are these essences, I say, liable at times to some degree of change? or are they each of them

always what they are, having the same simple self-existent and unchanging forms, not admitting of variation at all, or in any way, or at any time?

They must be always the same, Socrates, replied Cebes.

And what would you say of the many beautiful—whether men or horses or garments or any other things which are named by the same names and may be called equal or beautiful,—are they all unchanging and the same always, or quite the reverse? May they not rather be described as almost always changing and hardly ever the same, either with themselves or with one another?

The latter, replied Cebes; they are always in a state of change.

And these you can touch and see and perceive with the senses, but the unchanging things you can only perceive with the mind—they are invisible and are not seen?

That is very true, he said.

Well, then, added Socrates, let us suppose that there are two sorts of existences—one seen, the other unseen.

Let us suppose them.

The seen is the changing, and the unseen is the unchanging?

That may be also supposed.

And, further, is not one part of us body, another part soul?

To be sure.

And to which class is the body more alike and akin?

Clearly to the seen—no one can doubt that.

And is the soul seen or not seen?

Not by man, Socrates.

And what we mean by 'seen' and 'not seen' is that which is or is not visible to the eye of man?

Yes, to the eye of man.

And is the soul seen or not seen?

Not seen.

Unseen then?

Yes.

Then the soul is more like to the unseen, and the body to the seen?

That follows necessarily, Socrates.

And were we not saying long ago that the soul when using the body as an instrument of perception, that is to say, when using the sense of sight or hearing or some other sense (for the meaning of perceiving through the body is perceiving through the senses)—were we not saying that the soul too is then dragged by the body into the region of the changeable, and wanders and is confused; the world spins round her, and she is like a drunkard, when she touches change?

Very true.

But when returning into herself she reflects, then she passes into the other world, the region of purity, and eternity, and immortality, and unchangeableness, which are her kindred, and with them she ever lives, when she is by herself and is not let or hindered; then she ceases from her erring ways, and being in communion with the unchanging is unchanging. And this state of the soul is called wisdom?

That is well and truly said, Socrates, he replied.

And to which class is the soul more nearly alike and akin, as far as may be inferred from this argument, as well as from the preceding one?

I think, Socrates, that, in the opinion of every one who follows the argument, the soul will be infinitely more like the unchangeable—even the most stupid person will not deny that.

And the body is more like the changing?

Yes.

Yet once more consider the matter in another light: When the soul and the body are united, then nature orders the soul to rule and govern, and the body to obey and serve. Now which of these two functions is akin to the divine? and which to the mortal? Does not the divine appear to you to be that which naturally orders and rules, and the mortal to be that which is subject and servant?

True.

And which does the soul resemble?

The soul resembles the divine, and the body the mortal—there can be no doubt of that, Socrates.

Then reflect, Cebes: of all which has been said is not this the conclusion?—that the soul is in the very likeness of the divine, and immortal, and intellectual, and uniform, and indissoluble, and

unchangeable; and that the body is in the very likeness of the human, and mortal, and unintellectual, and multiform, and dissoluble, and changeable. Can this, my dear Cebes, be denied?

It cannot.

But if it be true, then is not the body liable to speedy dissolution? and is not the soul almost or altogether indissoluble?

Certainly.

And do you further observe, that after a man is dead, the body, or visible part of him, which is lying in the visible world, and is called a corpse, and would naturally be dissolved and decomposed and dissipated, is not dissolved or decomposed at once, but may remain for a for some time, nay even for a long time, if the constitution be sound at the time of death, and the season of the year favourable? For the body when shrunk and embalmed, as the manner is in Egypt, may remain almost entire through infinite ages; and even in decay, there are still some portions, such as the bones and ligaments, which are practically indestructible:—Do you agree?

Yes.

And is it likely that the soul, which is invisible, in passing to the place of the true Hades, which like her is invisible, and pure, and noble, and on her way to the good and wise God, whither, if God will, my soul is also soon to go,—that the soul, I repeat, if this be her nature and origin, will be blown away and destroyed immediately on quitting the body, as the many say? That can never be, my dear Simmias and Cebes. The truth rather is, that the soul which is pure at departing and draws after her no bodily taint, having never voluntarily during life had connection with the body, which she is ever avoiding, herself gathered into herself;—and making such abstraction her perpetual study—which means that she has been a true disciple of philosophy; and therefore has in fact been always engaged in the practice of dying? For is not philosophy the practice of death?—

Certainly—

That soul, I say, herself invisible, departs to the invisible world—to the divine and immortal and rational: thither arriving, she is secure of bliss and is released from the error and folly of men, their fears and wild passions and all other human ills, and for ever dwells, as they say of the initiated, in company with the gods (compare Apol.). Is not this true, Cebes?

Yes, said Cebes, beyond a doubt.

But the soul which has been polluted, and is impure at the time of her departure, and is the companion and servant of the body always, and is in love with and fascinated by the body and by the desires and pleasures of the body, until she is led to believe that the truth only exists in a bodily form, which a man may touch and see and taste, and use for the purposes of his lusts,—the soul, I mean, accustomed to hate and fear and avoid the intellectual principle, which to the bodily eye is dark and invisible, and can be attained only by philosophy;—do you suppose that such a soul will depart pure and unalloyed?

Impossible, he replied.

She is held fast by the corporeal, which the continual association and constant care of the body have wrought into her nature.

Very true.

And this corporeal element, my friend, is heavy and weighty and earthy, and is that element of sight by which a soul is depressed and dragged down again into the visible world, because she is afraid of the invisible and of the world below—prowling about tombs and sepulchres, near which, as they tell us, are seen certain ghostly apparitions of souls which have not departed pure, but are cloyed with sight and therefore visible.

(Compare Milton, Comus:—

> 'But when lust,
> By unchaste looks, loose gestures, and foul talk,
> But most by lewd and lavish act of sin,
> Lets in defilement to the inward parts,
> The soul grows clotted by contagion,
> Imbodies, and imbrutes, till she quite lose,
> The divine property of her first being.
> Such are those thick and gloomy shadows damp
> Oft seen in charnel vaults and sepulchres,
> Lingering, and sitting by a new made grave,
> As loath to leave the body that it lov'd,
> And linked itself by carnal sensuality
> To a degenerate and degraded state.')

That is very likely, Socrates.

Yes, that is very likely, Cebes; and these must be the souls, not of the good, but of the evil, which are compelled to wander about such places in payment of the penalty of their former evil way of life; and they continue to wander until through the craving after the corporeal which never leaves them, they are imprisoned finally in another body. And they may be supposed to find their prisons in the same natures which they have had in their former lives.

What natures do you mean, Socrates?

What I mean is that men who have followed after gluttony, and wantonness, and drunkenness, and have had no thought of avoiding them, would pass into asses and animals of that sort. What do you think?

I think such an opinion to be exceedingly probable.

And those who have chosen the portion of injustice, and tyranny, and violence, will pass into wolves, or into hawks and kites;—whither else can we suppose them to go?

Yes, said Cebes; with such natures, beyond question.

And there is no difficulty, he said, in assigning to all of them places answering to their several natures and propensities?

There is not, he said.

Some are happier than others; and the happiest both in themselves and in the place to which they go are those who have practised the civil and social virtues which are called temperance and justice, and are acquired by habit and attention without philosophy and mind. (Compare Republic.)

Why are they the happiest?

Because they may be expected to pass into some gentle and social kind which is like their own, such as bees or wasps or ants, or back again into the form of man, and just and moderate men may be supposed to spring from them.

Very likely.

No one who has not studied philosophy and who is not entirely pure at the time of his departure is allowed to enter the company of the Gods, but the lover of knowledge only. And this is the reason, Simmias and Cebes, why the true votaries of philosophy abstain from all fleshly lusts, and hold out against them and refuse to give themselves up to them,—not because they fear poverty or the ruin of their families, like the lovers of money, and the world in general; nor like the lovers of power and honour, because they dread the dishonour or disgrace of evil deeds.

No, Socrates, that would not become them, said Cebes.

No indeed, he replied; and therefore they who have any care of their own souls, and do not merely live moulding and fashioning the body, say farewell to all this; they will not walk in the ways of the blind: and when philosophy offers them purification and release from evil, they feel that they ought not to resist her influence, and whither she leads they turn and follow.

What do you mean, Socrates?

I will tell you, he said. The lovers of knowledge are conscious that the soul was simply fastened and glued to the body—until philosophy received her, she could only view real existence through the bars of a prison, not in and through herself; she was wallowing in the mire of every sort of ignorance; and by reason of lust had become the principal accomplice in her own captivity. This was her original state; and then, as I was saying, and as the lovers of knowledge are well aware, philosophy, seeing how terrible was her confinement, of which she was to herself the cause, received and gently comforted her and sought to release her, pointing out that the eye and the ear and the other senses are full of deception, and persuading her to retire from them, and abstain from all but the necessary use of them, and be gathered up and collected into herself, bidding her trust in herself and her own pure apprehension of pure existence, and to mistrust whatever comes to her through other channels and is subject to variation; for such things are visible and tangible, but what she sees in her own

nature is intelligible and invisible. And the soul of the true philosopher thinks that she ought not to resist this deliverance, and therefore abstains from pleasures and desires and pains and fears, as far as she is able; reflecting that when a man has great joys or sorrows or fears or desires, he suffers from them, not merely the sort of evil which might be anticipated—as for example, the loss of his health or property which he has sacrificed to his lusts—but an evil greater far, which is the greatest and worst of all evils, and one of which he never thinks.

What is it, Socrates? said Cebes.

The evil is that when the feeling of pleasure or pain is most intense, every soul of man imagines the objects of this intense feeling to be then plainest and truest: but this is not so, they are really the things of sight.

Very true.

And is not this the state in which the soul is most enthralled by the body?

How so?

Why, because each pleasure and pain is a sort of nail which nails and rivets the soul to the body, until she becomes like the body, and believes that to be true which the body affirms to be true; and from agreeing with the body and having the same delights she is obliged to have the same habits and haunts, and is not likely ever to be pure at her departure to the world below, but is always infected by the body; and so she sinks into another body and there germinates and grows, and has therefore no part in the communion of the divine and pure and simple.

Most true, Socrates, answered Cebes.

And this, Cebes, is the reason why the true lovers of knowledge are temperate and brave; and not for the reason which the world gives.

Certainly not.

Certainly not! The soul of a philosopher will reason in quite another way; she will not ask philosophy to release her in order that when released she may deliver herself up again to the thraldom of pleasures and pains, doing a work only to be undone again, weaving instead of unweaving her Penelope's web. But she will calm passion, and follow reason, and dwell in the contemplation of her, beholding the true and divine (which is not matter of opinion), and thence deriving nourishment. Thus she seeks to live while she lives, and after death she hopes to go to her own kindred and to that which is like her, and to be freed from human ills. Never fear, Simmias and Cebes, that a soul which has been thus nurtured and has had these pursuits, will at her departure from the body be scattered and blown away by the winds and be nowhere and nothing.

When Socrates had done speaking, for a considerable time there was silence; he himself appeared to be meditating, as most of us were, on what had been said; only Cebes and Simmias spoke a few words to one another. And Socrates observing them asked what they thought of the argument, and

whether there was anything wanting? For, said he, there are many points still open to suspicion and attack, if any one were disposed to sift the matter thoroughly. Should you be considering some other matter I say no more, but if you are still in doubt do not hesitate to say exactly what you think, and let us have anything better which you can suggest; and if you think that I can be of any use, allow me to help you.

Simmias said: I must confess, Socrates, that doubts did arise in our minds, and each of us was urging and inciting the other to put the question which we wanted to have answered and which neither of us liked to ask, fearing that our importunity might be troublesome under present at such a time.

Socrates replied with a smile: O Simmias, what are you saying? I am not very likely to persuade other men that I do not regard my present situation as a misfortune, if I cannot even persuade you that I am no worse off now than at any other time in my life. Will you not allow that I have as much of the spirit of prophecy in me as the swans? For they, when they perceive that they must die, having sung all their life long, do then sing more lustily than ever, rejoicing in the thought that they are about to go away to the god whose ministers they are. But men, because they are themselves afraid of death, slanderously affirm of the swans that they sing a lament at the last, not considering that no bird sings when cold, or hungry, or in pain, not even the nightingale, nor the swallow, nor yet the hoopoe; which are said indeed to tune a lay of sorrow, although I do not believe this to be true of them any more than of the swans. But because they are sacred to Apollo, they have the gift of prophecy, and anticipate the good things of another world, wherefore they sing and rejoice in that day more than they ever did before. And I too, believing myself to be the consecrated servant of the same God, and the fellow-servant of the swans, and thinking that I have received from my master gifts of prophecy which are not inferior to theirs, would not go out of life less merrily than the swans. Never mind then, if this be your only objection, but speak and ask anything which you like, while the eleven magistrates of Athens allow.

Very good, Socrates, said Simmias; then I will tell you my difficulty, and Cebes will tell you his. I feel myself, (and I daresay that you have the same feeling), how hard or rather impossible is the attainment of any certainty about questions such as these in the present life. And yet I should deem him a coward who did not prove what is said about them to the uttermost, or whose heart failed him before he had examined them on every side. For he should persevere until he has achieved one of two things: either he should discover, or be taught the truth about them; or, if this be impossible, I would have him take the best and most irrefragable of human theories, and let this be the raft upon which he sails through life—not without risk, as I admit, if he cannot find some word of God which will more surely and safely carry him. And now, as you bid me, I will venture to question you, and then I shall not have to reproach myself hereafter with not having said at the time what I think. For when I consider the matter, either alone or with Cebes, the argument does certainly appear to me, Socrates, to be not sufficient.

Socrates answered: I dare say, my friend, that you may be right, but I should like to know in what respect the argument is insufficient.

In this respect, replied Simmias:—Suppose a person to use the same argument about harmony and the lyre—might he not say that harmony is a thing invisible, incorporeal, perfect, divine, existing in the lyre which is harmonized, but that the lyre and the strings are matter and material, composite, earthy,

and akin to mortality? And when some one breaks the lyre, or cuts and rends the strings, then he who takes this view would argue as you do, and on the same analogy, that the harmony survives and has not perished—you cannot imagine, he would say, that the lyre without the strings, and the broken strings themselves which are mortal remain, and yet that the harmony, which is of heavenly and immortal nature and kindred, has perished—perished before the mortal. The harmony must still be somewhere, and the wood and strings will decay before anything can happen to that. The thought, Socrates, must have occurred to your own mind that such is our conception of the soul; and that when the body is in a manner strung and held together by the elements of hot and cold, wet and dry, then the soul is the harmony or due proportionate admixture of them. But if so, whenever the strings of the body are unduly loosened or overstrained through disease or other injury, then the soul, though most divine, like other harmonies of music or of works of art, of course perishes at once, although the material remains of the body may last for a considerable time, until they are either decayed or burnt. And if any one maintains that the soul, being the harmony of the elements of the body, is first to perish in that which is called death, how shall we answer him?

Socrates looked fixedly at us as his manner was, and said with a smile: Simmias has reason on his side; and why does not some one of you who is better able than myself answer him? for there is force in his attack upon me. But perhaps, before we answer him, we had better also hear what Cebes has to say that we may gain time for reflection, and when they have both spoken, we may either assent to them, if there is truth in what they say, or if not, we will maintain our position. Please to tell me then, Cebes, he said, what was the difficulty which troubled you?

Cebes said: I will tell you. My feeling is that the argument is where it was, and open to the same objections which were urged before; for I am ready to admit that the existence of the soul before entering into the bodily form has been very ingeniously, and, if I may say so, quite sufficiently proven; but the existence of the soul after death is still, in my judgment, unproven. Now my objection is not the same as that of Simmias; for I am not disposed to deny that the soul is stronger and more lasting than the body, being of opinion that in all such respects the soul very far excels the body. Well, then, says the argument to me, why do you remain unconvinced?—When you see that the weaker continues in existence after the man is dead, will you not admit that the more lasting must also survive during the same period of time? Now I will ask you to consider whether the objection, which, like Simmias, I will express in a figure, is of any weight. The analogy which I will adduce is that of an old weaver, who dies, and after his death somebody says:—He is not dead, he must be alive;—see, there is the coat which he himself wove and wore, and which remains whole and undecayed. And then he proceeds to ask of some one who is incredulous, whether a man lasts longer, or the coat which is in use and wear; and when he is answered that a man lasts far longer, thinks that he has thus certainly demonstrated the survival of the man, who is the more lasting, because the less lasting remains. But that, Simmias, as I would beg you to remark, is a mistake; any one can see that he who talks thus is talking nonsense. For the truth is, that the weaver aforesaid, having woven and worn many such coats, outlived several of them, and was outlived by the last; but a man is not therefore proved to be slighter and weaker than a coat. Now the relation of the body to the soul may be expressed in a similar figure; and any one may very fairly say in like manner that the soul is lasting, and the body weak and shortlived in comparison. He may argue in like manner that every soul wears out many bodies, especially if a man live many years. While he is alive the body deliquesces and decays, and the soul always weaves another garment and repairs the waste. But of course, whenever the soul perishes, she must have on her last garment, and this will survive her; and then at length,

when the soul is dead, the body will show its native weakness, and quickly decompose and pass away. I would therefore rather not rely on the argument from superior strength to prove the continued existence of the soul after death. For granting even more than you affirm to be possible, and acknowledging not only that the soul existed before birth, but also that the souls of some exist, and will continue to exist after death, and will be born and die again and again, and that there is a natural strength in the soul which will hold out and be born many times—nevertheless, we may be still inclined to think that she will weary in the labours of successive births, and may at last succumb in one of her deaths and utterly perish; and this death and dissolution of the body which brings destruction to the soul may be unknown to any of us, for no one of us can have had any experience of it: and if so, then I maintain that he who is confident about death has but a foolish confidence, unless he is able to prove that the soul is altogether immortal and imperishable. But if he cannot prove the soul's immortality, he who is about to die will always have reason to fear that when the body is disunited, the soul also may utterly perish.

All of us, as we afterwards remarked to one another, had an unpleasant feeling at hearing what they said. When we had been so firmly convinced before, now to have our faith shaken seemed to introduce a confusion and uncertainty, not only into the previous argument, but into any future one; either we were incapable of forming a judgment, or there were no grounds of belief.

ECHECRATES: There I feel with you—by heaven I do, Phaedo, and when you were speaking, I was beginning to ask myself the same question: What argument can I ever trust again? For what could be more convincing than the argument of Socrates, which has now fallen into discredit? That the soul is a harmony is a doctrine which has always had a wonderful attraction for me, and, when mentioned, came back to me at once, as my own original conviction. And now I must begin again and find another argument which will assure me that when the man is dead the soul survives. Tell me, I implore you, how did Socrates proceed? Did he appear to share the unpleasant feeling which you mention? or did he calmly meet the attack? And did he answer forcibly or feebly? Narrate what passed as exactly as you can.

PHAEDO: Often, Echecrates, I have wondered at Socrates, but never more than on that occasion. That he should be able to answer was nothing, but what astonished me was, first, the gentle and pleasant and approving manner in which he received the words of the young men, and then his quick sense of the wound which had been inflicted by the argument, and the readiness with which he healed it. He might be compared to a general rallying his defeated and broken army, urging them to accompany him and return to the field of argument.

ECHECRATES: What followed?

PHAEDO: You shall hear, for I was close to him on his right hand, seated on a sort of stool, and he on a couch which was a good deal higher. He stroked my head, and pressed the hair upon my neck—he had a way of playing with my hair; and then he said: To-morrow, Phaedo, I suppose that these fair locks of yours will be severed.

Yes, Socrates, I suppose that they will, I replied.

Not so, if you will take my advice.

What shall I do with them? I said.

To-day, he replied, and not to-morrow, if this argument dies and we cannot bring it to life again, you and I will both shave our locks; and if I were you, and the argument got away from me, and I could not hold my ground against Simmias and Cebes, I would myself take an oath, like the Argives, not to wear hair any more until I had renewed the conflict and defeated them.

Yes, I said, but Heracles himself is said not to be a match for two.

Summon me then, he said, and I will be your Iolaus until the sun goes down.

I summon you rather, I rejoined, not as Heracles summoning Iolaus, but as Iolaus might summon Heracles.

That will do as well, he said. But first let us take care that we avoid a danger.

Of what nature? I said.

Lest we become misologists, he replied, no worse thing can happen to a man than this. For as there are misanthropists or haters of men, there are also misologists or haters of ideas, and both spring from the same cause, which is ignorance of the world. Misanthropy arises out of the too great confidence of inexperience;—you trust a man and think him altogether true and sound and faithful, and then in a little while he turns out to be false and knavish; and then another and another, and when this has happened several times to a man, especially when it happens among those whom he deems to be his own most trusted and familiar friends, and he has often quarreled with them, he at last hates all men, and believes that no one has any good in him at all. You must have observed this trait of character?

I have.

And is not the feeling discreditable? Is it not obvious that such an one having to deal with other men, was clearly without any experience of human nature; for experience would have taught him the true state of the case, that few are the good and few the evil, and that the great majority are in the interval between them.

What do you mean? I said.

I mean, he replied, as you might say of the very large and very small, that nothing is more uncommon than a very large or very small man; and this applies generally to all extremes, whether of great and small, or swift and slow, or fair and foul, or black and white: and whether the instances you select be men or dogs or anything else, few are the extremes, but many are in the mean between them. Did you never observe this?

Yes, I said, I have.

And do you not imagine, he said, that if there were a competition in evil, the worst would be found to be very few?

Yes, that is very likely, I said.

Yes, that is very likely, he replied; although in this respect arguments are unlike men—there I was led on by you to say more than I had intended; but the point of comparison was, that when a simple man who has no skill in dialectics believes an argument to be true which he afterwards imagines to be false, whether really false or not, and then another and another, he has no longer any faith left, and great disputers, as you know, come to think at last that they have grown to be the wisest of mankind; for they alone perceive the utter unsoundness and instability of all arguments, or indeed, of all things, which, like the currents in the Euripus, are going up and down in never-ceasing ebb and flow.

That is quite true, I said.

Yes, Phaedo, he replied, and how melancholy, if there be such a thing as truth or certainty or possibility of knowledge—that a man should have lighted upon some argument or other which at first seemed true and then turned out to be false, and instead of blaming himself and his own want of wit, because he is annoyed, should at last be too glad to transfer the blame from himself to arguments in general: and for ever afterwards should hate and revile them, and lose truth and the knowledge of realities.

Yes, indeed, I said; that is very melancholy.

Let us then, in the first place, he said, be careful of allowing or of admitting into our souls the notion that there is no health or soundness in any arguments at all. Rather say that we have not yet attained to soundness in ourselves, and that we must struggle manfully and do our best to gain health of mind—you and all other men having regard to the whole of your future life, and I myself in the prospect of death. For at this moment I am sensible that I have not the temper of a philosopher; like the vulgar, I am only a partisan. Now the partisan, when he is engaged in a dispute, cares nothing about the rights of the question, but is anxious only to convince his hearers of his own assertions. And the difference between him and me at the present moment is merely this—that whereas he seeks to convince his hearers that what he says is true, I am rather seeking to convince myself; to convince my hearers is a secondary matter with me. And do but see how much I gain by the argument. For if what I say is true, then I do well to be persuaded of the truth, but if there be nothing after death, still, during the short time that remains, I shall not distress my friends with lamentations, and my ignorance will not last, but will die with me, and therefore no harm will be done. This is the state of mind, Simmias and Cebes, in which I approach the argument. And I would ask you to be thinking of the truth and not of Socrates: agree with me, if I seem to you to be speaking the truth; or if not, withstand me might and main, that I may not deceive you as well as myself in my enthusiasm, and like the bee, leave my sting in you before I die.

And now let us proceed, he said. And first of all let me be sure that I have in my mind what you were saying. Simmias, if I remember rightly, has fears and misgivings whether the soul, although a fairer and diviner thing than the body, being as she is in the form of harmony, may not perish first. On the other hand, Cebes appeared to grant that the soul was more lasting than the body, but he said that

no one could know whether the soul, after having worn out many bodies, might not perish herself and leave her last body behind her; and that this is death, which is the destruction not of the body but of the soul, for in the body the work of destruction is ever going on. Are not these, Simmias and Cebes, the points which we have to consider?

They both agreed to this statement of them.

He proceeded: And did you deny the force of the whole preceding argument, or of a part only?

Of a part only, they replied.

And what did you think, he said, of that part of the argument in which we said that knowledge was recollection, and hence inferred that the soul must have previously existed somewhere else before she was enclosed in the body?

Cebes said that he had been wonderfully impressed by that part of the argument, and that his conviction remained absolutely unshaken. Simmias agreed, and added that he himself could hardly imagine the possibility of his ever thinking differently.

But, rejoined Socrates, you will have to think differently, my Theban friend, if you still maintain that harmony is a compound, and that the soul is a harmony which is made out of strings set in the frame of the body; for you will surely never allow yourself to say that a harmony is prior to the elements which compose it.

Never, Socrates.

But do you not see that this is what you imply when you say that the soul existed before she took the form and body of man, and was made up of elements which as yet had no existence? For harmony is not like the soul, as you suppose; but first the lyre, and the strings, and the sounds exist in a state of discord, and then harmony is made last of all, and perishes first. And how can such a notion of the soul as this agree with the other?

Not at all, replied Simmias.

And yet, he said, there surely ought to be harmony in a discourse of which harmony is the theme.

There ought, replied Simmias.

But there is no harmony, he said, in the two propositions that knowledge is recollection, and that the soul is a harmony. Which of them will you retain?

I think, he replied, that I have a much stronger faith, Socrates, in the first of the two, which has been fully demonstrated to me, than in the latter, which has not been demonstrated at all, but rests only on probable and plausible grounds; and is therefore believed by the many. I know too well that these arguments from probabilities are impostors, and unless great caution is observed in the use of them, they are apt to be deceptive—in geometry, and in other things too. But the doctrine of knowledge and

recollection has been proven to me on trustworthy grounds; and the proof was that the soul must have existed before she came into the body, because to her belongs the essence of which the very name implies existence. Having, as I am convinced, rightly accepted this conclusion, and on sufficient grounds, I must, as I suppose, cease to argue or allow others to argue that the soul is a harmony.

Let me put the matter, Simmias, he said, in another point of view: Do you imagine that a harmony or any other composition can be in a state other than that of the elements, out of which it is compounded?

Certainly not.

Or do or suffer anything other than they do or suffer?

He agreed.

Then a harmony does not, properly speaking, lead the parts or elements which make up the harmony, but only follows them.

He assented.

For harmony cannot possibly have any motion, or sound, or other quality which is opposed to its parts.

That would be impossible, he replied.

And does not the nature of every harmony depend upon the manner in which the elements are harmonized?

I do not understand you, he said.

I mean to say that a harmony admits of degrees, and is more of a harmony, and more completely a harmony, when more truly and fully harmonized, to any extent which is possible; and less of a harmony, and less completely a harmony, when less truly and fully harmonized.

True.

But does the soul admit of degrees? or is one soul in the very least degree more or less, or more or less completely, a soul than another?

Not in the least.

Yet surely of two souls, one is said to have intelligence and virtue, and to be good, and the other to have folly and vice, and to be an evil soul: and this is said truly?

Yes, truly.

But what will those who maintain the soul to be a harmony say of this presence of virtue and vice in the soul?—will they say that here is another harmony, and another discord, and that the virtuous soul is harmonized, and herself being a harmony has another harmony within her, and that the vicious soul is inharmonical and has no harmony within her?

I cannot tell, replied Simmias; but I suppose that something of the sort would be asserted by those who say that the soul is a harmony.

And we have already admitted that no soul is more a soul than another; which is equivalent to admitting that harmony is not more or less harmony, or more or less completely a harmony?

Quite true.

And that which is not more or less a harmony is not more or less harmonized?

True.

And that which is not more or less harmonized cannot have more or less of harmony, but only an equal harmony?

Yes, an equal harmony.

Then one soul not being more or less absolutely a soul than another, is not more or less harmonized?

Exactly.

And therefore has neither more nor less of discord, nor yet of harmony?

She has not.

And having neither more nor less of harmony or of discord, one soul has no more vice or virtue than another, if vice be discord and virtue harmony?

Not at all more.

Or speaking more correctly, Simmias, the soul, if she is a harmony, will never have any vice; because a harmony, being absolutely a harmony, has no part in the inharmonical.

No.

And therefore a soul which is absolutely a soul has no vice?

How can she have, if the previous argument holds?

Then, if all souls are equally by their nature souls, all souls of all living creatures will be equally good?

I agree with you, Socrates, he said.

And can all this be true, think you? he said; for these are the consequences which seem to follow from the assumption that the soul is a harmony?

It cannot be true.

Once more, he said, what ruler is there of the elements of human nature other than the soul, and especially the wise soul? Do you know of any?

Indeed, I do not.

And is the soul in agreement with the affections of the body? or is she at variance with them? For example, when the body is hot and thirsty, does not the soul incline us against drinking? and when the body is hungry, against eating? And this is only one instance out of ten thousand of the opposition of the soul to the things of the body.

Very true.

But we have already acknowledged that the soul, being a harmony, can never utter a note at variance with the tensions and relaxations and vibrations and other affections of the strings out of which she is composed; she can only follow, she cannot lead them?

It must be so, he replied.

And yet do we not now discover the soul to be doing the exact opposite—leading the elements of which she is believed to be composed; almost always opposing and coercing them in all sorts of ways throughout life, sometimes more violently with the pains of medicine and gymnastic; then again more gently; now threatening, now admonishing the desires, passions, fears, as if talking to a thing which is not herself, as Homer in the Odyssee represents Odysseus doing in the words—

'He beat his breast, and thus reproached his heart: Endure, my heart; far worse hast thou endured!'

Do you think that Homer wrote this under the idea that the soul is a harmony capable of being led by the affections of the body, and not rather of a nature which should lead and master them—herself a far diviner thing than any harmony?

Yes, Socrates, I quite think so.

Then, my friend, we can never be right in saying that the soul is a harmony, for we should contradict the divine Homer, and contradict ourselves.

True, he said.

Thus much, said Socrates, of Harmonia, your Theban goddess, who has graciously yielded to us; but what shall I say, Cebes, to her husband Cadmus, and how shall I make peace with him?

I think that you will discover a way of propitiating him, said Cebes; I am sure that you have put the argument with Harmonia in a manner that I could never have expected. For when Simmias was mentioning his difficulty, I quite imagined that no answer could be given to him, and therefore I was surprised at finding that his argument could not sustain the first onset of yours, and not impossibly the other, whom you call Cadmus, may share a similar fate.

Nay, my good friend, said Socrates, let us not boast, lest some evil eye should put to flight the word which I am about to speak. That, however, may be left in the hands of those above, while I draw near in Homeric fashion, and try the mettle of your words. Here lies the point:—You want to have it proven to you that the soul is imperishable and immortal, and the philosopher who is confident in death appears to you to have but a vain and foolish confidence, if he believes that he will fare better in the world below than one who has led another sort of life, unless he can prove this; and you say that the demonstration of the strength and divinity of the soul, and of her existence prior to our becoming men, does not necessarily imply her immortality. Admitting the soul to be longlived, and to have known and done much in a former state, still she is not on that account immortal; and her entrance into the human form may be a sort of disease which is the beginning of dissolution, and may at last, after the toils of life are over, end in that which is called death. And whether the soul enters into the body once only or many times, does not, as you say, make any difference in the fears of individuals. For any man, who is not devoid of sense, must fear, if he has no knowledge and can give no account of the soul's immortality. This, or something like this, I suspect to be your notion, Cebes; and I designedly recur to it in order that nothing may escape us, and that you may, if you wish, add or subtract anything.

But, said Cebes, as far as I see at present, I have nothing to add or subtract: I mean what you say that I mean.

Socrates paused awhile, and seemed to be absorbed in reflection. At length he said: You are raising a tremendous question, Cebes, involving the whole nature of generation and corruption, about which, if you like, I will give you my own experience; and if anything which I say is likely to avail towards the solution of your difficulty you may make use of it.

I should very much like, said Cebes, to hear what you have to say.

Then I will tell you, said Socrates. When I was young, Cebes, I had a prodigious desire to know that department of philosophy which is called the investigation of nature; to know the causes of things, and why a thing is and is created or destroyed appeared to me to be a lofty profession; and I was always agitating myself with the consideration of questions such as these:—Is the growth of animals the result of some decay which the hot and cold principle contracts, as some have said? Is the blood the element with which we think, or the air, or the fire? or perhaps nothing of the kind—but the brain may be the originating power of the perceptions of hearing and sight and smell, and memory and opinion may come from them, and science may be based on memory and opinion when they have attained fixity. And then I went on to examine the corruption of them, and then to the things of heaven and earth, and at last I concluded myself to be utterly and absolutely incapable of these enquiries, as I will satisfactorily prove to you. For I was fascinated by them to such a degree that my eyes grew blind to things which I had seemed to myself, and also to others, to know quite well; I forgot what I had before thought self-evident truths; e.g. such a fact as that the growth of man is the result of eating

and drinking; for when by the digestion of food flesh is added to flesh and bone to bone, and whenever there is an aggregation of congenial elements, the lesser bulk becomes larger and the small man great. Was not that a reasonable notion?

Yes, said Cebes, I think so.

Well; but let me tell you something more. There was a time when I thought that I understood the meaning of greater and less pretty well; and when I saw a great man standing by a little one, I fancied that one was taller than the other by a head; or one horse would appear to be greater than another horse: and still more clearly did I seem to perceive that ten is two more than eight, and that two cubits are more than one, because two is the double of one.

And what is now your notion of such matters? said Cebes.

I should be far enough from imagining, he replied, that I knew the cause of any of them, by heaven I should; for I cannot satisfy myself that, when one is added to one, the one to which the addition is made becomes two, or that the two units added together make two by reason of the addition. I cannot understand how, when separated from the other, each of them was one and not two, and now, when they are brought together, the mere juxtaposition or meeting of them should be the cause of their becoming two: neither can I understand how the division of one is the way to make two; for then a different cause would produce the same effect,—as in the former instance the addition and juxtaposition of one to one was the cause of two, in this the separation and subtraction of one from the other would be the cause. Nor am I any longer satisfied that I understand the reason why one or anything else is either generated or destroyed or is at all, but I have in my mind some confused notion of a new method, and can never admit the other.

Then I heard some one reading, as he said, from a book of Anaxagoras, that mind was the disposer and cause of all, and I was delighted at this notion, which appeared quite admirable, and I said to myself: If mind is the disposer, mind will dispose all for the best, and put each particular in the best place; and I argued that if any one desired to find out the cause of the generation or destruction or existence of anything, he must find out what state of being or doing or suffering was best for that thing, and therefore a man had only to consider the best for himself and others, and then he would also know the worse, since the same science comprehended both. And I rejoiced to think that I had found in Anaxagoras a teacher of the causes of existence such as I desired, and I imagined that he would tell me first whether the earth is flat or round; and whichever was true, he would proceed to explain the cause and the necessity of this being so, and then he would teach me the nature of the best and show that this was best; and if he said that the earth was in the centre, he would further explain that this position was the best, and I should be satisfied with the explanation given, and not want any other sort of cause. And I thought that I would then go on and ask him about the sun and moon and stars, and that he would explain to me their comparative swiftness, and their returnings and various states, active and passive, and how all of them were for the best. For I could not imagine that when he spoke of mind as the disposer of them, he would give any other account of their being as they are, except that this was best; and I thought that when he had explained to me in detail the cause of each and the cause of all, he would go on to explain to me what was best for each and what was good for all. These hopes I would not have sold for a large sum of money, and I seized the books and read them as fast as I could in my eagerness to know the better and the worse.

What expectations I had formed, and how grievously was I disappointed! As I proceeded, I found my philosopher altogether forsaking mind or any other principle of order, but having recourse to air, and ether, and water, and other eccentricities. I might compare him to a person who began by maintaining generally that mind is the cause of the actions of Socrates, but who, when he endeavoured to explain the causes of my several actions in detail, went on to show that I sit here because my body is made up of bones and muscles; and the bones, as he would say, are hard and have joints which divide them, and the muscles are elastic, and they cover the bones, which have also a covering or environment of flesh and skin which contains them; and as the bones are lifted at their joints by the contraction or relaxation of the muscles, I am able to bend my limbs, and this is why I am sitting here in a curved posture—that is what he would say, and he would have a similar explanation of my talking to you, which he would attribute to sound, and air, and hearing, and he would assign ten thousand other causes of the same sort, forgetting to mention the true cause, which is, that the Athenians have thought fit to condemn me, and accordingly I have thought it better and more right to remain here and undergo my sentence; for I am inclined to think that these muscles and bones of mine would have gone off long ago to Megara or Boeotia—by the dog they would, if they had been moved only by their own idea of what was best, and if I had not chosen the better and nobler part, instead of playing truant and running away, of enduring any punishment which the state inflicts. There is surely a strange confusion of causes and conditions in all this. It may be said, indeed, that without bones and muscles and the other parts of the body I cannot execute my purposes. But to say that I do as I do because of them, and that this is the way in which mind acts, and not from the choice of the best, is a very careless and idle mode of speaking. I wonder that they cannot distinguish the cause from the condition, which the many, feeling about in the dark, are always mistaking and misnaming. And thus one man makes a vortex all round and steadies the earth by the heaven; another gives the air as a support to the earth, which is a sort of broad trough. Any power which in arranging them as they are arranges them for the best never enters into their minds; and instead of finding any superior strength in it, they rather expect to discover another Atlas of the world who is stronger and more everlasting and more containing than the good;—of the obligatory and containing power of the good they think nothing; and yet this is the principle which I would fain learn if any one would teach me. But as I have failed either to discover myself, or to learn of any one else, the nature of the best, I will exhibit to you, if you like, what I have found to be the second best mode of enquiring into the cause.

I should very much like to hear, he replied.

Socrates proceeded:—I thought that as I had failed in the contemplation of true existence, I ought to be careful that I did not lose the eye of my soul; as people may injure their bodily eye by observing and gazing on the sun during an eclipse, unless they take the precaution of only looking at the image reflected in the water, or in some similar medium. So in my own case, I was afraid that my soul might be blinded altogether if I looked at things with my eyes or tried to apprehend them by the help of the senses. And I thought that I had better have recourse to the world of mind and seek there the truth of existence. I dare say that the simile is not perfect—for I am very far from admitting that he who contemplates existences through the medium of thought, sees them only 'through a glass darkly,' any more than he who considers them in action and operation. However, this was the method which I adopted: I first assumed some principle which I judged to be the strongest, and then I affirmed as true whatever seemed to agree with this, whether relating to the cause or to anything else; and that which disagreed I regarded as untrue. But I should like to explain my meaning more clearly, as I do not think that you as yet understand me.

No indeed, replied Cebes, not very well.

There is nothing new, he said, in what I am about to tell you; but only what I have been always and everywhere repeating in the previous discussion and on other occasions: I want to show you the nature of that cause which has occupied my thoughts. I shall have to go back to those familiar words which are in the mouth of every one, and first of all assume that there is an absolute beauty and goodness and greatness, and the like; grant me this, and I hope to be able to show you the nature of the cause, and to prove the immortality of the soul.

Cebes said: You may proceed at once with the proof, for I grant you this.

Well, he said, then I should like to know whether you agree with me in the next step; for I cannot help thinking, if there be anything beautiful other than absolute beauty should there be such, that it can be beautiful only in as far as it partakes of absolute beauty—and I should say the same of everything. Do you agree in this notion of the cause?

Yes, he said, I agree.

He proceeded: I know nothing and can understand nothing of any other of those wise causes which are alleged; and if a person says to me that the bloom of colour, or form, or any such thing is a source of beauty, I leave all that, which is only confusing to me, and simply and singly, and perhaps foolishly, hold and am assured in my own mind that nothing makes a thing beautiful but the presence and participation of beauty in whatever way or manner obtained; for as to the manner I am uncertain, but I stoutly contend that by beauty all beautiful things become beautiful. This appears to me to be the safest answer which I can give, either to myself or to another, and to this I cling, in the persuasion that this principle will never be overthrown, and that to myself or to any one who asks the question, I may safely reply, That by beauty beautiful things become beautiful. Do you not agree with me?

I do.

And that by greatness only great things become great and greater greater, and by smallness the less become less?

True.

Then if a person were to remark that A is taller by a head than B, and B less by a head than A, you would refuse to admit his statement, and would stoutly contend that what you mean is only that the greater is greater by, and by reason of, greatness, and the less is less only by, and by reason of, smallness; and thus you would avoid the danger of saying that the greater is greater and the less less by the measure of the head, which is the same in both, and would also avoid the monstrous absurdity of supposing that the greater man is greater by reason of the head, which is small. You would be afraid to draw such an inference, would you not?

Indeed, I should, said Cebes, laughing.

In like manner you would be afraid to say that ten exceeded eight by, and by reason of, two; but would say by, and by reason of, number; or you would say that two cubits exceed one cubit not by a half, but by magnitude?-for there is the same liability to error in all these cases.

Very true, he said.

Again, would you not be cautious of affirming that the addition of one to one, or the division of one, is the cause of two? And you would loudly asseverate that you know of no way in which anything comes into existence except by participation in its own proper essence, and consequently, as far as you know, the only cause of two is the participation in duality—this is the way to make two, and the participation in one is the way to make one. You would say: I will let alone puzzles of division and addition—wiser heads than mine may answer them; inexperienced as I am, and ready to start, as the proverb says, at my own shadow, I cannot afford to give up the sure ground of a principle. And if any one assails you there, you would not mind him, or answer him, until you had seen whether the consequences which follow agree with one another or not, and when you are further required to give an explanation of this principle, you would go on to assume a higher principle, and a higher, until you found a resting-place in the best of the higher; but you would not confuse the principle and the consequences in your reasoning, like the Eristics—at least if you wanted to discover real existence. Not that this confusion signifies to them, who never care or think about the matter at all, for they have the wit to be well pleased with themselves however great may be the turmoil of their ideas. But you, if you are a philosopher, will certainly do as I say.

What you say is most true, said Simmias and Cebes, both speaking at once.

ECHECRATES: Yes, Phaedo; and I do not wonder at their assenting. Any one who has the least sense will acknowledge the wonderful clearness of Socrates' reasoning.

PHAEDO: Certainly, Echecrates; and such was the feeling of the whole company at the time.

ECHECRATES: Yes, and equally of ourselves, who were not of the company, and are now listening to your recital. But what followed?

PHAEDO: After all this had been admitted, and they had that ideas exist, and that other things participate in them and derive their names from them, Socrates, if I remember rightly, said:—

This is your way of speaking; and yet when you say that Simmias is greater than Socrates and less than Phaedo, do you not predicate of Simmias both greatness and smallness?

Yes, I do.

But still you allow that Simmias does not really exceed Socrates, as the words may seem to imply, because he is Simmias, but by reason of the size which he has; just as Simmias does not exceed Socrates because he is Simmias, any more than because Socrates is Socrates, but because he has smallness when compared with the greatness of Simmias?

True.

And if Phaedo exceeds him in size, this is not because Phaedo is Phaedo, but because Phaedo has greatness relatively to Simmias, who is comparatively smaller?

That is true.

And therefore Simmias is said to be great, and is also said to be small, because he is in a mean between them, exceeding the smallness of the one by his greatness, and allowing the greatness of the other to exceed his smallness. He added, laughing, I am speaking like a book, but I believe that what I am saying is true.

Simmias assented.

I speak as I do because I want you to agree with me in thinking, not only that absolute greatness will never be great and also small, but that greatness in us or in the concrete will never admit the small or admit of being exceeded: instead of this, one of two things will happen, either the greater will fly or retire before the opposite, which is the less, or at the approach of the less has already ceased to exist; but will not, if allowing or admitting of smallness, be changed by that; even as I, having received and admitted smallness when compared with Simmias, remain just as I was, and am the same small person. And as the idea of greatness cannot condescend ever to be or become small, in like manner the smallness in us cannot be or become great; nor can any other opposite which remains the same ever be or become its own opposite, but either passes away or perishes in the change.

That, replied Cebes, is quite my notion.

Hereupon one of the company, though I do not exactly remember which of them, said: In heaven's name, is not this the direct contrary of what was admitted before—that out of the greater came the less and out of the less the greater, and that opposites were simply generated from opposites; but now this principle seems to be utterly denied.

Socrates inclined his head to the speaker and listened. I like your courage, he said, in reminding us of this. But you do not observe that there is a difference in the two cases. For then we were speaking of opposites in the concrete, and now of the essential opposite which, as is affirmed, neither in us nor in nature can ever be at variance with itself: then, my friend, we were speaking of things in which opposites are inherent and which are called after them, but now about the opposites which are inherent in them and which give their name to them; and these essential opposites will never, as we maintain, admit of generation into or out of one another. At the same time, turning to Cebes, he said: Are you at all disconcerted, Cebes, at our friend's objection?

No, I do not feel so, said Cebes; and yet I cannot deny that I am often disturbed by objections.

Then we are agreed after all, said Socrates, that the opposite will never in any case be opposed to itself?

To that we are quite agreed, he replied.

Yet once more let me ask you to consider the question from another point of view, and see whether you agree with me:—There is a thing which you term heat, and another thing which you term cold?

Certainly.

But are they the same as fire and snow?

Most assuredly not.

Heat is a thing different from fire, and cold is not the same with snow?

Yes.

And yet you will surely admit, that when snow, as was before said, is under the influence of heat, they will not remain snow and heat; but at the advance of the heat, the snow will either retire or perish?

Very true, he replied.

And the fire too at the advance of the cold will either retire or perish; and when the fire is under the influence of the cold, they will not remain as before, fire and cold.

That is true, he said.

And in some cases the name of the idea is not only attached to the idea in an eternal connection, but anything else which, not being the idea, exists only in the form of the idea, may also lay claim to it. I will try to make this clearer by an example:—The odd number is always called by the name of odd?

Very true.

But is this the only thing which is called odd? Are there not other things which have their own name, and yet are called odd, because, although not the same as oddness, they are never without oddness?—that is what I mean to ask—whether numbers such as the number three are not of the class of odd. And there are many other examples: would you not say, for example, that three may be called by its proper name, and also be called odd, which is not the same with three? and this may be said not only of three but also of five, and of every alternate number—each of them without being oddness is odd, and in the same way two and four, and the other series of alternate numbers, has every number even, without being evenness. Do you agree?

Of course.

Then now mark the point at which I am aiming:—not only do essential opposites exclude one another, but also concrete things, which, although not in themselves opposed, contain opposites; these, I say, likewise reject the idea which is opposed to that which is contained in them, and when it approaches them they either perish or withdraw. For example; Will not the number three endure annihilation or anything sooner than be converted into an even number, while remaining three?

Very true, said Cebes.

And yet, he said, the number two is certainly not opposed to the number three?

It is not.

Then not only do opposite ideas repel the advance of one another, but also there are other natures which repel the approach of opposites.

Very true, he said.

Suppose, he said, that we endeavour, if possible, to determine what these are.

By all means.

Are they not, Cebes, such as compel the things of which they have possession, not only to take their own form, but also the form of some opposite?

What do you mean?

I mean, as I was just now saying, and as I am sure that you know, that those things which are possessed by the number three must not only be three in number, but must also be odd.

Quite true.

And on this oddness, of which the number three has the impress, the opposite idea will never intrude?

No.

And this impress was given by the odd principle?

Yes.

And to the odd is opposed the even?

True.

Then the idea of the even number will never arrive at three?

No.

Then three has no part in the even?

None.

Then the triad or number three is uneven?

Very true.

To return then to my distinction of natures which are not opposed, and yet do not admit opposites—as, in the instance given, three, although not opposed to the even, does not any the more admit of the even, but always brings the opposite into play on the other side; or as two does not receive the odd, or fire the cold—from these examples (and there are many more of them) perhaps you may be able to arrive at the general conclusion, that not only opposites will not receive opposites, but also that nothing which brings the opposite will admit the opposite of that which it brings, in that to which it is brought. And here let me recapitulate—for there is no harm in repetition. The number five will not admit the nature of the even, any more than ten, which is the double of five, will admit the nature of the odd. The double has another opposite, and is not strictly opposed to the odd, but nevertheless rejects the odd altogether. Nor again will parts in the ratio 3:2, nor any fraction in which there is a half, nor again in which there is a third, admit the notion of the whole, although they are not opposed to the whole: You will agree?

Yes, he said, I entirely agree and go along with you in that.

And now, he said, let us begin again; and do not you answer my question in the words in which I ask it: let me have not the old safe answer of which I spoke at first, but another equally safe, of which the truth will be inferred by you from what has been just said. I mean that if any one asks you 'what that is, of which the inherence makes the body hot,' you will reply not heat (this is what I call the safe and stupid answer), but fire, a far superior answer, which we are now in a condition to give. Or if any one asks you 'why a body is diseased,' you will not say from disease, but from fever; and instead of saying that oddness is the cause of odd numbers, you will say that the monad is the cause of them: and so of things in general, as I dare say that you will understand sufficiently without my adducing any further examples.

Yes, he said, I quite understand you.

Tell me, then, what is that of which the inherence will render the body alive?

The soul, he replied.

And is this always the case?

Yes, he said, of course.

Then whatever the soul possesses, to that she comes bearing life?

Yes, certainly.

And is there any opposite to life?

There is, he said.

And what is that?

Death.

Then the soul, as has been acknowledged, will never receive the opposite of what she brings.

Impossible, replied Cebes.

And now, he said, what did we just now call that principle which repels the even?

The odd.

And that principle which repels the musical, or the just?

The unmusical, he said, and the unjust.

And what do we call the principle which does not admit of death?

The immortal, he said.

And does the soul admit of death?

No.

Then the soul is immortal?

Yes, he said.

And may we say that this has been proven?

Yes, abundantly proven, Socrates, he replied.

Supposing that the odd were imperishable, must not three be imperishable?

Of course.

And if that which is cold were imperishable, when the warm principle came attacking the snow, must not the snow have retired whole and unmelted—for it could never have perished, nor could it have remained and admitted the heat?

True, he said.

Again, if the uncooling or warm principle were imperishable, the fire when assailed by cold would not have perished or have been extinguished, but would have gone away unaffected?

Certainly, he said.

And the same may be said of the immortal: if the immortal is also imperishable, the soul when attacked by death cannot perish; for the preceding argument shows that the soul will not admit of death, or ever be dead, any more than three or the odd number will admit of the even, or fire or the heat in the fire, of the cold. Yet a person may say: 'But although the odd will not become even at the approach of the even, why may not the odd perish and the even take the place of the odd?' Now to him who makes this objection, we cannot answer that the odd principle is imperishable; for this has not been acknowledged, but if this had been acknowledged, there would have been no difficulty in contending that at the approach of the even the odd principle and the number three took their departure; and the same argument would have held good of fire and heat and any other thing.

Very true.

And the same may be said of the immortal: if the immortal is also imperishable, then the soul will be imperishable as well as immortal; but if not, some other proof of her imperishableness will have to be given.

No other proof is needed, he said; for if the immortal, being eternal, is liable to perish, then nothing is imperishable.

Yes, replied Socrates, and yet all men will agree that God, and the essential form of life, and the immortal in general, will never perish.

Yes, all men, he said—that is true; and what is more, gods, if I am not mistaken, as well as men.

Seeing then that the immortal is indestructible, must not the soul, if she is immortal, be also imperishable?

Most certainly.

Then when death attacks a man, the mortal portion of him may be supposed to die, but the immortal retires at the approach of death and is preserved safe and sound?

True.

Then, Cebes, beyond question, the soul is immortal and imperishable, and our souls will truly exist in another world!

I am convinced, Socrates, said Cebes, and have nothing more to object; but if my friend Simmias, or any one else, has any further objection to make, he had better speak out, and not keep silence, since I do not know to what other season he can defer the discussion, if there is anything which he wants to say or to have said.

But I have nothing more to say, replied Simmias; nor can I see any reason for doubt after what has been said. But I still feel and cannot help feeling uncertain in my own mind, when I think of the greatness of the subject and the feebleness of man.

Yes, Simmias, replied Socrates, that is well said: and I may add that first principles, even if they appear certain, should be carefully considered; and when they are satisfactorily ascertained, then, with a sort of hesitating confidence in human reason, you may, I think, follow the course of the argument; and if that be plain and clear, there will be no need for any further enquiry.

Very true.

But then, O my friends, he said, if the soul is really immortal, what care should be taken of her, not only in respect of the portion of time which is called life, but of eternity! And the danger of neglecting her from this point of view does indeed appear to be awful. If death had only been the end of all, the wicked would have had a good bargain in dying, for they would have been happily quit not only of their body, but of their own evil together with their souls. But now, inasmuch as the soul is manifestly immortal, there is no release or salvation from evil except the attainment of the highest virtue and wisdom. For the soul when on her progress to the world below takes nothing with her but nurture and education; and these are said greatly to benefit or greatly to injure the departed, at the very beginning of his journey thither.

For after death, as they say, the genius of each individual, to whom he belonged in life, leads him to a certain place in which the dead are gathered together, whence after judgment has been given they pass into the world below, following the guide, who is appointed to conduct them from this world to the other: and when they have there received their due and remained their time, another guide brings them back again after many revolutions of ages. Now this way to the other world is not, as Aeschylus says in the Telephus, a single and straight path—if that were so no guide would be needed, for no one could miss it; but there are many partings of the road, and windings, as I infer from the rites and sacrifices which are offered to the gods below in places where three ways meet on earth. The wise and orderly soul follows in the straight path and is conscious of her surroundings; but the soul which desires the body, and which, as I was relating before, has long been fluttering about the lifeless frame and the world of sight, is after many struggles and many sufferings hardly and with violence carried away by her attendant genius, and when she arrives at the place where the other souls are gathered, if she be impure and have done impure deeds, whether foul murders or other crimes which are the brothers of these, and the works of brothers in crime—from that soul every one flees and turns away; no one will be her companion, no one her guide, but alone she wanders in extremity of evil until certain times are fulfilled, and when they are fulfilled, she is borne irresistibly to her own fitting habitation; as every pure and just soul which has passed through life in the company and under the guidance of the gods has also her own proper home.

Now the earth has divers wonderful regions, and is indeed in nature and extent very unlike the notions of geographers, as I believe on the authority of one who shall be nameless.

What do you mean, Socrates? said Simmias. I have myself heard many descriptions of the earth, but I do not know, and I should very much like to know, in which of these you put faith.

And I, Simmias, replied Socrates, if I had the art of Glaucus would tell you; although I know not that the art of Glaucus could prove the truth of my tale, which I myself should never be able to prove, and even if I could, I fear, Simmias, that my life would come to an end before the argument was

completed. I may describe to you, however, the form and regions of the earth according to my conception of them.

That, said Simmias, will be enough.

Well, then, he said, my conviction is, that the earth is a round body in the centre of the heavens, and therefore has no need of air or any similar force to be a support, but is kept there and hindered from falling or inclining any way by the equability of the surrounding heaven and by her own equipoise. For that which, being in equipoise, is in the centre of that which is equably diffused, will not incline any way in any degree, but will always remain in the same state and not deviate. And this is my first notion.

Which is surely a correct one, said Simmias.

Also I believe that the earth is very vast, and that we who dwell in the region extending from the river Phasis to the Pillars of Heracles inhabit a small portion only about the sea, like ants or frogs about a marsh, and that there are other inhabitants of many other like places; for everywhere on the face of the earth there are hollows of various forms and sizes, into which the water and the mist and the lower air collect. But the true earth is pure and situated in the pure heaven—there are the stars also; and it is the heaven which is commonly spoken of by us as the ether, and of which our own earth is the sediment gathering in the hollows beneath. But we who live in these hollows are deceived into the notion that we are dwelling above on the surface of the earth; which is just as if a creature who was at the bottom of the sea were to fancy that he was on the surface of the water, and that the sea was the heaven through which he saw the sun and the other stars, he having never come to the surface by reason of his feebleness and sluggishness, and having never lifted up his head and seen, nor ever heard from one who had seen, how much purer and fairer the world above is than his own. And such is exactly our case: for we are dwelling in a hollow of the earth, and fancy that we are on the surface; and the air we call the heaven, in which we imagine that the stars move. But the fact is, that owing to our feebleness and sluggishness we are prevented from reaching the surface of the air: for if any man could arrive at the exterior limit, or take the wings of a bird and come to the top, then like a fish who puts his head out of the water and sees this world, he would see a world beyond; and, if the nature of man could sustain the sight, he would acknowledge that this other world was the place of the true heaven and the true light and the true earth. For our earth, and the stones, and the entire region which surrounds us, are spoilt and corroded, as in the sea all things are corroded by the brine, neither is there any noble or perfect growth, but caverns only, and sand, and an endless slough of mud: and even the shore is not to be compared to the fairer sights of this world. And still less is this our world to be compared with the other. Of that upper earth which is under the heaven, I can tell you a charming tale, Simmias, which is well worth hearing.

And we, Socrates, replied Simmias, shall be charmed to listen to you.

The tale, my friend, he said, is as follows:—In the first place, the earth, when looked at from above, is in appearance streaked like one of those balls which have leather coverings in twelve pieces, and is decked with various colours, of which the colours used by painters on earth are in a manner samples. But there the whole earth is made up of them, and they are brighter far and clearer than ours; there is a purple of wonderful lustre, also the radiance of gold, and the white which is in the earth is whiter

than any chalk or snow. Of these and other colours the earth is made up, and they are more in number and fairer than the eye of man has ever seen; the very hollows (of which I was speaking) filled with air and water have a colour of their own, and are seen like light gleaming amid the diversity of the other colours, so that the whole presents a single and continuous appearance of variety in unity. And in this fair region everything that grows—trees, and flowers, and fruits—are in a like degree fairer than any here; and there are hills, having stones in them in a like degree smoother, and more transparent, and fairer in colour than our highly-valued emeralds and sardonyxes and jaspers, and other gems, which are but minute fragments of them: for there all the stones are like our precious stones, and fairer still (compare Republic). The reason is, that they are pure, and not, like our precious stones, infected or corroded by the corrupt briny elements which coagulate among us, and which breed foulness and disease both in earth and stones, as well as in animals and plants. They are the jewels of the upper earth, which also shines with gold and silver and the like, and they are set in the light of day and are large and abundant and in all places, making the earth a sight to gladden the beholder's eye. And there are animals and men, some in a middle region, others dwelling about the air as we dwell about the sea; others in islands which the air flows round, near the continent: and in a word, the air is used by them as the water and the sea are by us, and the ether is to them what the air is to us. Moreover, the temperament of their seasons is such that they have no disease, and live much longer than we do, and have sight and hearing and smell, and all the other senses, in far greater perfection, in the same proportion that air is purer than water or the ether than air. Also they have temples and sacred places in which the gods really dwell, and they hear their voices and receive their answers, and are conscious of them and hold converse with them, and they see the sun, moon, and stars as they truly are, and their other blessedness is of a piece with this.

Such is the nature of the whole earth, and of the things which are around the earth; and there are divers regions in the hollows on the face of the globe everywhere, some of them deeper and more extended than that which we inhabit, others deeper but with a narrower opening than ours, and some are shallower and also wider. All have numerous perforations, and there are passages broad and narrow in the interior of the earth, connecting them with one another; and there flows out of and into them, as into basins, a vast tide of water, and huge subterranean streams of perennial rivers, and springs hot and cold, and a great fire, and great rivers of fire, and streams of liquid mud, thin or thick (like the rivers of mud in Sicily, and the lava streams which follow them), and the regions about which they happen to flow are filled up with them. And there is a swinging or see-saw in the interior of the earth which moves all this up and down, and is due to the following cause:—There is a chasm which is the vastest of them all, and pierces right through the whole earth; this is that chasm which Homer describes in the words,—

> 'Far off, where is the inmost depth beneath the earth;'

and which he in other places, and many other poets, have called Tartarus. And the see-saw is caused by the streams flowing into and out of this chasm, and they each have the nature of the soil through which they flow. And the reason why the streams are always flowing in and out, is that the watery element has no bed or bottom, but is swinging and surging up and down, and the surrounding wind and air do the same; they follow the water up and down, hither and thither, over the earth—just as in the act of respiration the air is always in process of inhalation and exhalation;—and the wind swinging with the water in and out produces fearful and irresistible blasts: when the waters retire with a rush into the lower parts of the earth, as they are called, they flow through the earth in those

regions, and fill them up like water raised by a pump, and then when they leave those regions and rush back hither, they again fill the hollows here, and when these are filled, flow through subterranean channels and find their way to their several places, forming seas, and lakes, and rivers, and springs. Thence they again enter the earth, some of them making a long circuit into many lands, others going to a few places and not so distant; and again fall into Tartarus, some at a point a good deal lower than that at which they rose, and others not much lower, but all in some degree lower than the point from which they came. And some burst forth again on the opposite side, and some on the same side, and some wind round the earth with one or many folds like the coils of a serpent, and descend as far as they can, but always return and fall into the chasm. The rivers flowing in either direction can descend only to the centre and no further, for opposite to the rivers is a precipice.

Now these rivers are many, and mighty, and diverse, and there are four principal ones, of which the greatest and outermost is that called Oceanus, which flows round the earth in a circle; and in the opposite direction flows Acheron, which passes under the earth through desert places into the Acherusian lake: this is the lake to the shores of which the souls of the many go when they are dead, and after waiting an appointed time, which is to some a longer and to some a shorter time, they are sent back to be born again as animals. The third river passes out between the two, and near the place of outlet pours into a vast region of fire, and forms a lake larger than the Mediterranean Sea, boiling with water and mud; and proceeding muddy and turbid, and winding about the earth, comes, among other places, to the extremities of the Acherusian Lake, but mingles not with the waters of the lake, and after making many coils about the earth plunges into Tartarus at a deeper level. This is that Pyriphlegethon, as the stream is called, which throws up jets of fire in different parts of the earth. The fourth river goes out on the opposite side, and falls first of all into a wild and savage region, which is all of a dark-blue colour, like lapis lazuli; and this is that river which is called the Stygian river, and falls into and forms the Lake Styx, and after falling into the lake and receiving strange powers in the waters, passes under the earth, winding round in the opposite direction, and comes near the Acherusian lake from the opposite side to Pyriphlegethon. And the water of this river too mingles with no other, but flows round in a circle and falls into Tartarus over against Pyriphlegethon; and the name of the river, as the poets say, is Cocytus.

Such is the nature of the other world; and when the dead arrive at the place to which the genius of each severally guides them, first of all, they have sentence passed upon them, as they have lived well and piously or not. And those who appear to have lived neither well nor ill, go to the river Acheron, and embarking in any vessels which they may find, are carried in them to the lake, and there they dwell and are purified of their evil deeds, and having suffered the penalty of the wrongs which they have done to others, they are absolved, and receive the rewards of their good deeds, each of them according to his deserts. But those who appear to be incurable by reason of the greatness of their crimes—who have committed many and terrible deeds of sacrilege, murders foul and violent, or the like—such are hurled into Tartarus which is their suitable destiny, and they never come out. Those again who have committed crimes, which, although great, are not irremediable—who in a moment of anger, for example, have done violence to a father or a mother, and have repented for the remainder of their lives, or, who have taken the life of another under the like extenuating circumstances—these are plunged into Tartarus, the pains of which they are compelled to undergo for a year, but at the end of the year the wave casts them forth—mere homicides by way of Cocytus, parricides and matricides by Pyriphlegethon—and they are borne to the Acherusian lake, and there they lift up their voices and call upon the victims whom they have slain or wronged, to have pity on them, and to be kind to them,

and let them come out into the lake. And if they prevail, then they come forth and cease from their troubles; but if not, they are carried back again into Tartarus and from thence into the rivers unceasingly, until they obtain mercy from those whom they have wronged: for that is the sentence inflicted upon them by their judges. Those too who have been pre-eminent for holiness of life are released from this earthly prison, and go to their pure home which is above, and dwell in the purer earth; and of these, such as have duly purified themselves with philosophy live henceforth altogether without the body, in mansions fairer still which may not be described, and of which the time would fail me to tell.

Wherefore, Simmias, seeing all these things, what ought not we to do that we may obtain virtue and wisdom in this life? Fair is the prize, and the hope great!

A man of sense ought not to say, nor will I be very confident, that the description which I have given of the soul and her mansions is exactly true. But I do say that, inasmuch as the soul is shown to be immortal, he may venture to think, not improperly or unworthily, that something of the kind is true. The venture is a glorious one, and he ought to comfort himself with words like these, which is the reason why I lengthen out the tale. Wherefore, I say, let a man be of good cheer about his soul, who having cast away the pleasures and ornaments of the body as alien to him and working harm rather than good, has sought after the pleasures of knowledge; and has arrayed the soul, not in some foreign attire, but in her own proper jewels, temperance, and justice, and courage, and nobility, and truth—in these adorned she is ready to go on her journey to the world below, when her hour comes. You, Simmias and Cebes, and all other men, will depart at some time or other. Me already, as the tragic poet would say, the voice of fate calls. Soon I must drink the poison; and I think that I had better repair to the bath first, in order that the women may not have the trouble of washing my body after I am dead.

When he had done speaking, Crito said: And have you any commands for us, Socrates—anything to say about your children, or any other matter in which we can serve you?

Nothing particular, Crito, he replied: only, as I have always told you, take care of yourselves; that is a service which you may be ever rendering to me and mine and to all of us, whether you promise to do so or not. But if you have no thought for yourselves, and care not to walk according to the rule which I have prescribed for you, not now for the first time, however much you may profess or promise at the moment, it will be of no avail.

We will do our best, said Crito: And in what way shall we bury you?

In any way that you like; but you must get hold of me, and take care that I do not run away from you. Then he turned to us, and added with a smile:—I cannot make Crito believe that I am the same Socrates who have been talking and conducting the argument; he fancies that I am the other Socrates whom he will soon see, a dead body—and he asks, How shall he bury me? And though I have spoken many words in the endeavour to show that when I have drunk the poison I shall leave you and go to the joys of the blessed,—these words of mine, with which I was comforting you and myself, have had, as I perceive, no effect upon Crito. And therefore I want you to be surety for me to him now, as at the trial he was surety to the judges for me: but let the promise be of another sort; for he was surety for me to the judges that I would remain, and you must be my surety to him that I shall

not remain, but go away and depart; and then he will suffer less at my death, and not be grieved when he sees my body being burned or buried. I would not have him sorrow at my hard lot, or say at the burial, Thus we lay out Socrates, or, Thus we follow him to the grave or bury him; for false words are not only evil in themselves, but they infect the soul with evil. Be of good cheer, then, my dear Crito, and say that you are burying my body only, and do with that whatever is usual, and what you think best.

When he had spoken these words, he arose and went into a chamber to bathe; Crito followed him and told us to wait. So we remained behind, talking and thinking of the subject of discourse, and also of the greatness of our sorrow; he was like a father of whom we were being bereaved, and we were about to pass the rest of our lives as orphans. When he had taken the bath his children were brought to him—(he had two young sons and an elder one); and the women of his family also came, and he talked to them and gave them a few directions in the presence of Crito; then he dismissed them and returned to us.

Now the hour of sunset was near, for a good deal of time had passed while he was within. When he came out, he sat down with us again after his bath, but not much was said. Soon the jailer, who was the servant of the Eleven, entered and stood by him, saying:—To you, Socrates, whom I know to be the noblest and gentlest and best of all who ever came to this place, I will not impute the angry feelings of other men, who rage and swear at me, when, in obedience to the authorities, I bid them drink the poison—indeed, I am sure that you will not be angry with me; for others, as you are aware, and not I, are to blame. And so fare you well, and try to bear lightly what must needs be—you know my errand. Then bursting into tears he turned away and went out.

Socrates looked at him and said: I return your good wishes, and will do as you bid. Then turning to us, he said, How charming the man is: since I have been in prison he has always been coming to see me, and at times he would talk to me, and was as good to me as could be, and now see how generously he sorrows on my account. We must do as he says, Crito; and therefore let the cup be brought, if the poison is prepared: if not, let the attendant prepare some.

Yet, said Crito, the sun is still upon the hill-tops, and I know that many a one has taken the draught late, and after the announcement has been made to him, he has eaten and drunk, and enjoyed the society of his beloved; do not hurry—there is time enough.

Socrates said: Yes, Crito, and they of whom you speak are right in so acting, for they think that they will be gainers by the delay; but I am right in not following their example, for I do not think that I should gain anything by drinking the poison a little later; I should only be ridiculous in my own eyes for sparing and saving a life which is already forfeit. Please then to do as I say, and not to refuse me.

Crito made a sign to the servant, who was standing by; and he went out, and having been absent for some time, returned with the jailer carrying the cup of poison. Socrates said: You, my good friend, who are experienced in these matters, shall give me directions how I am to proceed. The man answered: You have only to walk about until your legs are heavy, and then to lie down, and the poison will act. At the same time he handed the cup to Socrates, who in the easiest and gentlest manner, without the least fear or change of colour or feature, looking at the man with all his eyes, Echecrates, as his manner was, took the cup and said: What do you say about making a libation out

of this cup to any god? May I, or not? The man answered: We only prepare, Socrates, just so much as we deem enough. I understand, he said: but I may and must ask the gods to prosper my journey from this to the other world—even so—and so be it according to my prayer. Then raising the cup to his lips, quite readily and cheerfully he drank off the poison. And hitherto most of us had been able to control our sorrow; but now when we saw him drinking, and saw too that he had finished the draught, we could no longer forbear, and in spite of myself my own tears were flowing fast; so that I covered my face and wept, not for him, but at the thought of my own calamity in having to part from such a friend. Nor was I the first; for Crito, when he found himself unable to restrain his tears, had got up, and I followed; and at that moment, Apollodorus, who had been weeping all the time, broke out in a loud and passionate cry which made cowards of us all. Socrates alone retained his calmness: What is this strange outcry? he said. I sent away the women mainly in order that they might not misbehave in this way, for I have been told that a man should die in peace. Be quiet, then, and have patience. When we heard his words we were ashamed, and refrained our tears; and he walked about until, as he said, his legs began to fail, and then he lay on his back, according to the directions, and the man who gave him the poison now and then looked at his feet and legs; and after a while he pressed his foot hard, and asked him if he could feel; and he said, No; and then his leg, and so upwards and upwards, and showed us that he was cold and stiff. And he felt them himself, and said: When the poison reaches the heart, that will be the end. He was beginning to grow cold about the groin, when he uncovered his face, for he had covered himself up, and said—they were his last words—he said: Crito, I owe a cock to Asclepius; will you remember to pay the debt? The debt shall be paid, said Crito; is there anything else? There was no answer to this question; but in a minute or two a movement was heard, and the attendants uncovered him; his eyes were set, and Crito closed his eyes and mouth.

Such was the end, Echecrates, of our friend; concerning whom I may truly say, that of all the men of his time whom I have known, he was the wisest and justest and best.

PHAEDRUS

By Plato

Translated by Benjamin Jowett

INTRODUCTION.

The Phaedrus is closely connected with the Symposium, and may be regarded either as introducing or following it. The two Dialogues together contain the whole philosophy of Plato on the nature of love, which in the Republic and in the later writings of Plato is only introduced playfully or as a figure of speech. But in the Phaedrus and Symposium love and philosophy join hands, and one is an aspect of the other. The spiritual and emotional part is elevated into the ideal, to which in the Symposium mankind are described as looking forward, and which in the Phaedrus, as well as in the Phaedo, they are seeking to recover from a former state of existence. Whether the subject of the Dialogue is love or rhetoric, or the union of the two, or the relation of philosophy to love and to art in general, and to the human soul, will be hereafter considered. And perhaps we may arrive at some conclusion such as the following—that the dialogue is not strictly confined to a single subject, but passes from one to another with the natural freedom of conversation.

Phaedrus has been spending the morning with Lysias, the celebrated rhetorician, and is going to refresh himself by taking a walk outside the wall, when he is met by Socrates, who professes that he will not leave him until he has delivered up the speech with which Lysias has regaled him, and which he is carrying about in his mind, or more probably in a book hidden under his cloak, and is intending to study as he walks. The imputation is not denied, and the two agree to direct their steps out of the public way along the stream of the Ilissus towards a plane-tree which is seen in the distance. There, lying down amidst pleasant sounds and scents, they will read the speech of Lysias. The country is a novelty to Socrates, who never goes out of the town; and hence he is full of admiration for the beauties of nature, which he seems to be drinking in for the first time.

As they are on their way, Phaedrus asks the opinion of Socrates respecting the local tradition of Boreas and Oreithyia. Socrates, after a satirical allusion to the 'rationalizers' of his day, replies that he has no time for these 'nice' interpretations of mythology, and he pities anyone who has. When you once begin there is no end of them, and they spring from an uncritical philosophy after all. 'The proper study of mankind is man;' and he is a far more complex and wonderful being than the serpent Typho. Socrates as yet does not know himself; and why should he care to know about unearthly monsters? Engaged in such conversation, they arrive at the plane-tree; when they have found a convenient resting-place, Phaedrus pulls out the speech and reads:—

The speech consists of a foolish paradox which is to the effect that the non-lover ought to be accepted rather than the lover—because he is more rational, more agreeable, more enduring, less suspicious, less hurtful, less boastful, less engrossing, and because there are more of them, and for a great many other reasons which are equally unmeaning. Phaedrus is captivated with the beauty of the periods, and wants to make Socrates say that nothing was or ever could be written better. Socrates does not think much of the matter, but then he has only attended to the form, and in that he has detected several repetitions and other marks of haste. He cannot agree with Phaedrus in the extreme value which he sets upon this performance, because he is afraid of doing injustice to Anacreon and Sappho and other great writers, and is almost inclined to think that he himself, or rather some power residing within him, could make a speech better than that of Lysias on the same theme,

and also different from his, if he may be allowed the use of a few commonplaces which all speakers must equally employ.

Phaedrus is delighted at the prospect of having another speech, and promises that he will set up a golden statue of Socrates at Delphi, if he keeps his word. Some raillery ensues, and at length Socrates, conquered by the threat that he shall never again hear a speech of Lysias unless he fulfils his promise, veils his face and begins.

First, invoking the Muses and assuming ironically the person of the non-lover (who is a lover all the same), he will enquire into the nature and power of love. For this is a necessary preliminary to the other question—How is the non-lover to be distinguished from the lover? In all of us there are two principles—a better and a worse—reason and desire, which are generally at war with one another; and the victory of the rational is called temperance, and the victory of the irrational intemperance or excess. The latter takes many forms and has many bad names—gluttony, drunkenness, and the like. But of all the irrational desires or excesses the greatest is that which is led away by desires of a kindred nature to the enjoyment of personal beauty. And this is the master power of love.

Here Socrates fancies that he detects in himself an unusual flow of eloquence—this newly-found gift he can only attribute to the inspiration of the place, which appears to be dedicated to the nymphs. Starting again from the philosophical basis which has been laid down, he proceeds to show how many advantages the non-lover has over the lover. The one encourages softness and effeminacy and exclusiveness; he cannot endure any superiority in his beloved; he will train him in luxury, he will keep him out of society, he will deprive him of parents, friends, money, knowledge, and of every other good, that he may have him all to himself. Then again his ways are not ways of pleasantness; he is mighty disagreeable; 'crabbed age and youth cannot live together.' At every hour of the night and day he is intruding upon him; there is the same old withered face and the remainder to match—and he is always repeating, in season or out of season, the praises or dispraises of his beloved, which are bad enough when he is sober, and published all over the world when he is drunk. At length his love ceases; he is converted into an enemy, and the spectacle may be seen of the lover running away from the beloved, who pursues him with vain reproaches, and demands his reward which the other refuses to pay. Too late the beloved learns, after all his pains and disagreeables, that 'As wolves love lambs so lovers love their loves.' (Compare Char.) Here is the end; the 'other' or 'non-lover' part of the speech had better be understood, for if in the censure of the lover Socrates has broken out in verse, what will he not do in his praise of the non-lover? He has said his say and is preparing to go away.

Phaedrus begs him to remain, at any rate until the heat of noon has passed; he would like to have a little more conversation before they go. Socrates, who has risen, recognizes the oracular sign which forbids him to depart until he has done penance. His conscious has been awakened, and like Stesichorus when he had reviled the lovely Helen he will sing a palinode for having blasphemed the majesty of love. His palinode takes the form of a myth.

Socrates begins his tale with a glorification of madness, which he divides into four kinds: first, there is the art of divination or prophecy—this, in a vein similar to that pervading the Cratylus and Io, he connects with madness by an etymological explanation (mantike, manike—compare oionoistike, oionistike, "tis all one reckoning, save the phrase is a little variations'); secondly, there is the art of purification by mysteries; thirdly, poetry or the inspiration of the Muses (compare Ion), without which

no man can enter their temple. All this shows that madness is one of heaven's blessings, and may sometimes be a great deal better than sense. There is also a fourth kind of madness—that of love—which cannot be explained without enquiring into the nature of the soul.

All soul is immortal, for she is the source of all motion both in herself and in others. Her form may be described in a figure as a composite nature made up of a charioteer and a pair of winged steeds. The steeds of the gods are immortal, but ours are one mortal and the other immortal. The immortal soul soars upwards into the heavens, but the mortal drops her plumes and settles upon the earth.

Now the use of the wing is to rise and carry the downward element into the upper world—there to behold beauty, wisdom, goodness, and the other things of God by which the soul is nourished. On a certain day Zeus the lord of heaven goes forth in a winged chariot; and an array of gods and demi-gods and of human souls in their train, follows him. There are glorious and blessed sights in the interior of heaven, and he who will may freely behold them. The great vision of all is seen at the feast of the gods, when they ascend the heights of the empyrean—all but Hestia, who is left at home to keep house. The chariots of the gods glide readily upwards and stand upon the outside; the revolution of the spheres carries them round, and they have a vision of the world beyond. But the others labour in vain; for the mortal steed, if he has not been properly trained, keeps them down and sinks them towards the earth. Of the world which is beyond the heavens, who can tell? There is an essence formless, colourless, intangible, perceived by the mind only, dwelling in the region of true knowledge. The divine mind in her revolution enjoys this fair prospect, and beholds justice, temperance, and knowledge in their everlasting essence. When fulfilled with the sight of them she returns home, and the charioteer puts up the horses in their stable, and gives them ambrosia to eat and nectar to drink. This is the life of the gods; the human soul tries to reach the same heights, but hardly succeeds; and sometimes the head of the charioteer rises above, and sometimes sinks below, the fair vision, and he is at last obliged, after much contention, to turn away and leave the plain of truth. But if the soul has followed in the train of her god and once beheld truth she is preserved from harm, and is carried round in the next revolution of the spheres; and if always following, and always seeing the truth, is then for ever unharmed. If, however, she drops her wings and falls to the earth, then she takes the form of man, and the soul which has seen most of the truth passes into a philosopher or lover; that which has seen truth in the second degree, into a king or warrior; the third, into a householder or money-maker; the fourth, into a gymnast; the fifth, into a prophet or mystic; the sixth, into a poet or imitator; the seventh, into a husbandman or craftsman; the eighth, into a sophist or demagogue; the ninth, into a tyrant. All these are states of probation, wherein he who lives righteously is improved, and he who lives unrighteously deteriorates. After death comes the judgment; the bad depart to houses of correction under the earth, the good to places of joy in heaven. When a thousand years have elapsed the souls meet together and choose the lives which they will lead for another period of existence. The soul which three times in succession has chosen the life of a philosopher or of a lover who is not without philosophy receives her wings at the close of the third millennium; the remainder have to complete a cycle of ten thousand years before their wings are restored to them. Each time there is full liberty of choice. The soul of a man may descend into a beast, and return again into the form of man. But the form of man will only be taken by the soul which has once seen truth and acquired some conception of the universal:—this is the recollection of the knowledge which she attained when in the company of the Gods. And men in general recall only with difficulty the things of another world, but the mind of the philosopher has a better remembrance of them. For when he beholds the visible beauty of earth his enraptured soul passes in thought to those

glorious sights of justice and wisdom and temperance and truth which she once gazed upon in heaven. Then she celebrated holy mysteries and beheld blessed apparitions shining in pure light, herself pure, and not as yet entombed in the body. And still, like a bird eager to quit its cage, she flutters and looks upwards, and is therefore deemed mad. Such a recollection of past days she receives through sight, the keenest of our senses, because beauty, alone of the ideas, has any representation on earth: wisdom is invisible to mortal eyes. But the corrupted nature, blindly excited by this vision of beauty, rushes on to enjoy, and would fain wallow like a brute beast in sensual pleasures. Whereas the true mystic, who has seen the many sights of bliss, when he beholds a god-like form or face is amazed with delight, and if he were not afraid of being thought mad he would fall down and worship. Then the stiffened wing begins to relax and grow again; desire which has been imprisoned pours over the soul of the lover; the germ of the wing unfolds, and stings, and pangs of birth, like the cutting of teeth, are everywhere felt. (Compare Symp.) Father and mother, and goods and laws and proprieties are nothing to him; his beloved is his physician, who can alone cure his pain. An apocryphal sacred writer says that the power which thus works in him is by mortals called love, but the immortals call him dove, or the winged one, in order to represent the force of his wings—such at any rate is his nature. Now the characters of lovers depend upon the god whom they followed in the other world; and they choose their loves in this world accordingly. The followers of Ares are fierce and violent; those of Zeus seek out some philosophical and imperial nature; the attendants of Here find a royal love; and in like manner the followers of every god seek a love who is like their god; and to him they communicate the nature which they have received from their god. The manner in which they take their love is as follows:—

I told you about the charioteer and his two steeds, the one a noble animal who is guided by word and admonition only, the other an ill-looking villain who will hardly yield to blow or spur. Together all three, who are a figure of the soul, approach the vision of love. And now a fierce conflict begins. The ill-conditioned steed rushes on to enjoy, but the charioteer, who beholds the beloved with awe, falls back in adoration, and forces both the steeds on their haunches; again the evil steed rushes forwards and pulls shamelessly. The conflict grows more and more severe; and at last the charioteer, throwing himself backwards, forces the bit out of the clenched teeth of the brute, and pulling harder than ever at the reins, covers his tongue and jaws with blood, and forces him to rest his legs and haunches with pain upon the ground. When this has happened several times, the villain is tamed and humbled, and from that time forward the soul of the lover follows the beloved in modesty and holy fear. And now their bliss is consummated; the same image of love dwells in the breast of either, and if they have self-control, they pass their lives in the greatest happiness which is attainable by man—they continue masters of themselves, and conquer in one of the three heavenly victories. But if they choose the lower life of ambition they may still have a happy destiny, though inferior, because they have not the approval of the whole soul. At last they leave the body and proceed on their pilgrim's progress, and those who have once begun can never go back. When the time comes they receive their wings and fly away, and the lovers have the same wings.

Socrates concludes:—

These are the blessings of love, and thus have I made my recantation in finer language than before: I did so in order to please Phaedrus. If I said what was wrong at first, please to attribute my error to Lysias, who ought to study philosophy instead of rhetoric, and then he will not mislead his disciple Phaedrus.

Phaedrus is afraid that he will lose conceit of Lysias, and that Lysias will be out of conceit with himself, and leave off making speeches, for the politicians have been deriding him. Socrates is of opinion that there is small danger of this; the politicians are themselves the great rhetoricians of the age, who desire to attain immortality by the authorship of laws. And therefore there is nothing with which they can reproach Lysias in being a writer; but there may be disgrace in being a bad one.

And what is good or bad writing or speaking? While the sun is hot in the sky above us, let us ask that question: since by rational conversation man lives, and not by the indulgence of bodily pleasures. And the grasshoppers who are chirruping around may carry our words to the Muses, who are their patronesses; for the grasshoppers were human beings themselves in a world before the Muses, and when the Muses came they died of hunger for the love of song. And they carry to them in heaven the report of those who honour them on earth.

The first rule of good speaking is to know and speak the truth; as a Spartan proverb says, 'true art is truth'; whereas rhetoric is an art of enchantment, which makes things appear good and evil, like and unlike, as the speaker pleases. Its use is not confined, as people commonly suppose, to arguments in the law courts and speeches in the assembly; it is rather a part of the art of disputation, under which are included both the rules of Gorgias and the eristic of Zeno. But it is not wholly devoid of truth. Superior knowledge enables us to deceive another by the help of resemblances, and to escape from such a deception when employed against ourselves. We see therefore that even in rhetoric an element of truth is required. For if we do not know the truth, we can neither make the gradual departures from truth by which men are most easily deceived, nor guard ourselves against deception.

Socrates then proposes that they shall use the two speeches as illustrations of the art of rhetoric; first distinguishing between the debatable and undisputed class of subjects. In the debatable class there ought to be a definition of all disputed matters. But there was no such definition in the speech of Lysias; nor is there any order or connection in his words any more than in a nursery rhyme. With this he compares the regular divisions of the other speech, which was his own (and yet not his own, for the local deities must have inspired him). Although only a playful composition, it will be found to embody two principles: first, that of synthesis or the comprehension of parts in a whole; secondly, analysis, or the resolution of the whole into parts. These are the processes of division and generalization which are so dear to the dialectician, that king of men. They are effected by dialectic, and not by rhetoric, of which the remains are but scanty after order and arrangement have been subtracted. There is nothing left but a heap of 'ologies' and other technical terms invented by Polus, Theodorus, Evenus, Tisias, Gorgias, and others, who have rules for everything, and who teach how to be short or long at pleasure. Prodicus showed his good sense when he said that there was a better thing than either to be short or long, which was to be of convenient length.

Still, notwithstanding the absurdities of Polus and others, rhetoric has great power in public assemblies. This power, however, is not given by any technical rules, but is the gift of genius. The real art is always being confused by rhetoricians with the preliminaries of the art. The perfection of oratory is like the perfection of anything else; natural power must be aided by art. But the art is not that which is taught in the schools of rhetoric; it is nearer akin to philosophy. Pericles, for instance, who was the most accomplished of all speakers, derived his eloquence not from rhetoric but from the philosophy of nature which he learnt of Anaxagoras. True rhetoric is like medicine, and the rhetorician has to consider the natures of men's souls as the physician considers the natures of their bodies.

Such and such persons are to be affected in this way, such and such others in that; and he must know the times and the seasons for saying this or that. This is not an easy task, and this, if there be such an art, is the art of rhetoric.

I know that there are some professors of the art who maintain probability to be stronger than truth. But we maintain that probability is engendered by likeness of the truth which can only be attained by the knowledge of it, and that the aim of the good man should not be to please or persuade his fellow-servants, but to please his good masters who are the gods. Rhetoric has a fair beginning in this.

Enough of the art of speaking; let us now proceed to consider the true use of writing. There is an old Egyptian tale of Theuth, the inventor of writing, showing his invention to the god Thamus, who told him that he would only spoil men's memories and take away their understandings. From this tale, of which young Athens will probably make fun, may be gathered the lesson that writing is inferior to speech. For it is like a picture, which can give no answer to a question, and has only a deceitful likeness of a living creature. It has no power of adaptation, but uses the same words for all. It is not a legitimate son of knowledge, but a bastard, and when an attack is made upon this bastard neither parent nor anyone else is there to defend it. The husbandman will not seriously incline to sow his seed in such a hot-bed or garden of Adonis; he will rather sow in the natural soil of the human soul which has depth of earth; and he will anticipate the inner growth of the mind, by writing only, if at all, as a remedy against old age. The natural process will be far nobler, and will bring forth fruit in the minds of others as well as in his own.

The conclusion of the whole matter is just this,—that until a man knows the truth, and the manner of adapting the truth to the natures of other men, he cannot be a good orator; also, that the living is better than the written word, and that the principles of justice and truth when delivered by word of mouth are the legitimate offspring of a man's own bosom, and their lawful descendants take up their abode in others. Such an orator as he is who is possessed of them, you and I would fain become. And to all composers in the world, poets, orators, legislators, we hereby announce that if their compositions are based upon these principles, then they are not only poets, orators, legislators, but philosophers. All others are mere flatterers and putters together of words. This is the message which Phaedrus undertakes to carry to Lysias from the local deities, and Socrates himself will carry a similar message to his favourite Isocrates, whose future distinction as a great rhetorician he prophesies. The heat of the day has passed, and after offering up a prayer to Pan and the nymphs, Socrates and Phaedrus depart.

There are two principal controversies which have been raised about the Phaedrus; the first relates to the subject, the second to the date of the Dialogue.

There seems to be a notion that the work of a great artist like Plato cannot fail in unity, and that the unity of a dialogue requires a single subject. But the conception of unity really applies in very different degrees and ways to different kinds of art; to a statue, for example, far more than to any kind of literary composition, and to some species of literature far more than to others. Nor does the dialogue appear to be a style of composition in which the requirement of unity is most stringent; nor should the idea of unity derived from one sort of art be hastily transferred to another. The double titles of several of the Platonic Dialogues are a further proof that the severer rule was not observed by Plato. The Republic is divided between the search after justice and the construction of the ideal state; the

Parmenides between the criticism of the Platonic ideas and of the Eleatic one or being; the Gorgias between the art of speaking and the nature of the good; the Sophist between the detection of the Sophist and the correlation of ideas. The Theaetetus, the Politicus, and the Philebus have also digressions which are but remotely connected with the main subject.

Thus the comparison of Plato's other writings, as well as the reason of the thing, lead us to the conclusion that we must not expect to find one idea pervading a whole work, but one, two, or more, as the invention of the writer may suggest, or his fancy wander. If each dialogue were confined to the development of a single idea, this would appear on the face of the dialogue, nor could any controversy be raised as to whether the Phaedrus treated of love or rhetoric. But the truth is that Plato subjects himself to no rule of this sort. Like every great artist he gives unity of form to the different and apparently distracting topics which he brings together. He works freely and is not to be supposed to have arranged every part of the dialogue before he begins to write. He fastens or weaves together the frame of his discourse loosely and imperfectly, and which is the warp and which is the woof cannot always be determined.

The subjects of the Phaedrus (exclusive of the short introductory passage about mythology which is suggested by the local tradition) are first the false or conventional art of rhetoric; secondly, love or the inspiration of beauty and knowledge, which is described as madness; thirdly, dialectic or the art of composition and division; fourthly, the true rhetoric, which is based upon dialectic, and is neither the art of persuasion nor knowledge of the truth alone, but the art of persuasion founded on knowledge of truth and knowledge of character; fifthly, the superiority of the spoken over the written word. The continuous thread which appears and reappears throughout is rhetoric; this is the ground into which the rest of the Dialogue is worked, in parts embroidered with fine words which are not in Socrates' manner, as he says, 'in order to please Phaedrus.' The speech of Lysias which has thrown Phaedrus into an ecstacy is adduced as an example of the false rhetoric; the first speech of Socrates, though an improvement, partakes of the same character; his second speech, which is full of that higher element said to have been learned of Anaxagoras by Pericles, and which in the midst of poetry does not forget order, is an illustration of the higher or true rhetoric. This higher rhetoric is based upon dialectic, and dialectic is a sort of inspiration akin to love (compare Symp.); in these two aspects of philosophy the technicalities of rhetoric are absorbed. And so the example becomes also the deeper theme of discourse. The true knowledge of things in heaven and earth is based upon enthusiasm or love of the ideas going before us and ever present to us in this world and in another; and the true order of speech or writing proceeds accordingly. Love, again, has three degrees: first, of interested love corresponding to the conventionalities of rhetoric; secondly, of disinterested or mad love, fixed on objects of sense, and answering, perhaps, to poetry; thirdly, of disinterested love directed towards the unseen, answering to dialectic or the science of the ideas. Lastly, the art of rhetoric in the lower sense is found to rest on a knowledge of the natures and characters of men, which Socrates at the commencement of the Dialogue has described as his own peculiar study.

Thus amid discord a harmony begins to appear; there are many links of connection which are not visible at first sight. At the same time the Phaedrus, although one of the most beautiful of the Platonic Dialogues, is also more irregular than any other. For insight into the world, for sustained irony, for depth of thought, there is no Dialogue superior, or perhaps equal to it. Nevertheless the form of the work has tended to obscure some of Plato's higher aims.

The first speech is composed 'in that balanced style in which the wise love to talk' (Symp.). The characteristics of rhetoric are insipidity, mannerism, and monotonous parallelism of clauses. There is more rhythm than reason; the creative power of imagination is wanting.

"Tis Greece, but living Greece no more.'

Plato has seized by anticipation the spirit which hung over Greek literature for a thousand years afterwards. Yet doubtless there were some who, like Phaedrus, felt a delight in the harmonious cadence and the pedantic reasoning of the rhetoricians newly imported from Sicily, which had ceased to be awakened in them by really great works, such as the odes of Anacreon or Sappho or the orations of Pericles. That the first speech was really written by Lysias is improbable. Like the poem of Solon, or the story of Thamus and Theuth, or the funeral oration of Aspasia (if genuine), or the pretence of Socrates in the Cratylus that his knowledge of philology is derived from Euthyphro, the invention is really due to the imagination of Plato, and may be compared to the parodies of the Sophists in the Protagoras. Numerous fictions of this sort occur in the Dialogues, and the gravity of Plato has sometimes imposed upon his commentators. The introduction of a considerable writing of another would seem not to be in keeping with a great work of art, and has no parallel elsewhere.

In the second speech Socrates is exhibited as beating the rhetoricians at their own weapons; he 'an unpractised man and they masters of the art.' True to his character, he must, however, profess that the speech which he makes is not his own, for he knows nothing of himself. (Compare Symp.) Regarded as a rhetorical exercise, the superiority of his speech seems to consist chiefly in a better arrangement of the topics; he begins with a definition of love, and he gives weight to his words by going back to general maxims; a lesser merit is the greater liveliness of Socrates, which hurries him into verse and relieves the monotony of the style.

But Plato had doubtless a higher purpose than to exhibit Socrates as the rival or superior of the Athenian rhetoricians. Even in the speech of Lysias there is a germ of truth, and this is further developed in the parallel oration of Socrates. First, passionate love is overthrown by the sophistical or interested, and then both yield to that higher view of love which is afterwards revealed to us. The extreme of commonplace is contrasted with the most ideal and imaginative of speculations. Socrates, half in jest and to satisfy his own wild humour, takes the disguise of Lysias, but he is also in profound earnest and in a deeper vein of irony than usual. Having improvised his own speech, which is based upon the model of the preceding, he condemns them both. Yet the condemnation is not to be taken seriously, for he is evidently trying to express an aspect of the truth. To understand him, we must make abstraction of morality and of the Greek manner of regarding the relation of the sexes. In this, as in his other discussions about love, what Plato says of the loves of men must be transferred to the loves of women before we can attach any serious meaning to his words. Had he lived in our times he would have made the transposition himself. But seeing in his own age the impossibility of woman being the intellectual helpmate or friend of man (except in the rare instances of a Diotima or an Aspasia), seeing that, even as to personal beauty, her place was taken by young mankind instead of womankind, he tries to work out the problem of love without regard to the distinctions of nature. And full of the evils which he recognized as flowing from the spurious form of love, he proceeds with a deep meaning, though partly in joke, to show that the 'non-lover's' love is better than the 'lover's.'

We may raise the same question in another form: Is marriage preferable with or without love? 'Among ourselves,' as we may say, a little parodying the words of Pausanias in the Symposium, 'there would be one answer to this question: the practice and feeling of some foreign countries appears to be more doubtful.' Suppose a modern Socrates, in defiance of the received notions of society and the sentimental literature of the day, alone against all the writers and readers of novels, to suggest this enquiry, would not the younger 'part of the world be ready to take off its coat and run at him might and main?' (Republic.) Yet, if like Peisthetaerus in Aristophanes, he could persuade the 'birds' to hear him, retiring a little behind a rampart, not of pots and dishes, but of unreadable books, he might have something to say for himself. Might he not argue, 'that a rational being should not follow the dictates of passion in the most important act of his or her life'? Who would willingly enter into a contract at first sight, almost without thought, against the advice and opinion of his friends, at a time when he acknowledges that he is not in his right mind? And yet they are praised by the authors of romances, who reject the warnings of their friends or parents, rather than those who listen to them in such matters. Two inexperienced persons, ignorant of the world and of one another, how can they be said to choose?—they draw lots, whence also the saying, 'marriage is a lottery.' Then he would describe their way of life after marriage; how they monopolize one another's affections to the exclusion of friends and relations: how they pass their days in unmeaning fondness or trivial conversation; how the inferior of the two drags the other down to his or her level; how the cares of a family 'breed meanness in their souls.' In the fulfilment of military or public duties, they are not helpers but hinderers of one another: they cannot undertake any noble enterprise, such as makes the names of men and women famous, from domestic considerations. Too late their eyes are opened; they were taken unawares and desire to part company. Better, he would say, a 'little love at the beginning,' for heaven might have increased it; but now their foolish fondness has changed into mutual dislike. In the days of their honeymoon they never understood that they must provide against offences, that they must have interests, that they must learn the art of living as well as loving. Our misogamist will not appeal to Anacreon or Sappho for a confirmation of his view, but to the universal experience of mankind. How much nobler, in conclusion, he will say, is friendship, which does not receive unmeaning praises from novelists and poets, is not exacting or exclusive, is not impaired by familiarity, is much less expensive, is not so likely to take offence, seldom changes, and may be dissolved from time to time without the assistance of the courts. Besides, he will remark that there is a much greater choice of friends than of wives—you may have more of them and they will be far more improving to your mind. They will not keep you dawdling at home, or dancing attendance upon them; or withdraw you from the great world and stirring scenes of life and action which would make a man of you.

In such a manner, turning the seamy side outwards, a modern Socrates might describe the evils of married and domestic life. They are evils which mankind in general have agreed to conceal, partly because they are compensated by greater goods. Socrates or Archilochus would soon have to sing a palinode for the injustice done to lovely Helen, or some misfortune worse than blindness might be fall them. Then they would take up their parable again and say:—that there were two loves, a higher and a lower, holy and unholy, a love of the mind and a love of the body.

> 'Let me not to the marriage of true minds
> Admit impediments. Love is not love
> Which alters when it alteration finds.
>
> .....

> Love's not time's fool, though rosy lips and cheeks
> Within his bending sickle's compass come;
> Love alters not with his brief hours and weeks,
> But bears it out even to the edge of doom.'

But this true love of the mind cannot exist between two souls, until they are purified from the grossness of earthly passion: they must pass through a time of trial and conflict first; in the language of religion they must be converted or born again. Then they would see the world transformed into a scene of heavenly beauty; a divine idea would accompany them in all their thoughts and actions. Something too of the recollections of childhood might float about them still; they might regain that old simplicity which had been theirs in other days at their first entrance on life. And although their love of one another was ever present to them, they would acknowledge also a higher love of duty and of God, which united them. And their happiness would depend upon their preserving in them this principle—not losing the ideals of justice and holiness and truth, but renewing them at the fountain of light. When they have attained to this exalted state, let them marry (something too may be conceded to the animal nature of man): or live together in holy and innocent friendship. The poet might describe in eloquent words the nature of such a union; how after many struggles the true love was found: how the two passed their lives together in the service of God and man; how their characters were reflected upon one another, and seemed to grow more like year by year; how they read in one another's eyes the thoughts, wishes, actions of the other; how they saw each other in God; how in a figure they grew wings like doves, and were 'ready to fly away together and be at rest.' And lastly, he might tell how, after a time at no long intervals, first one and then the other fell asleep, and 'appeared to the unwise' to die, but were reunited in another state of being, in which they saw justice and holiness and truth, not according to the imperfect copies of them which are found in this world, but justice absolute in existence absolute, and so of the rest. And they would hold converse not only with each other, but with blessed souls everywhere; and would be employed in the service of God, every soul fulfilling his own nature and character, and would see into the wonders of earth and heaven, and trace the works of creation to their author.

So, partly in jest but also 'with a certain degree of seriousness,' we may appropriate to ourselves the words of Plato. The use of such a parody, though very imperfect, is to transfer his thoughts to our sphere of religion and feeling, to bring him nearer to us and us to him. Like the Scriptures, Plato admits of endless applications, if we allow for the difference of times and manners; and we lose the better half of him when we regard his Dialogues merely as literary compositions. Any ancient work which is worth reading has a practical and speculative as well as a literary interest. And in Plato, more than in any other Greek writer, the local and transitory is inextricably blended with what is spiritual and eternal. Socrates is necessarily ironical; for he has to withdraw from the received opinions and beliefs of mankind. We cannot separate the transitory from the permanent; nor can we translate the language of irony into that of plain reflection and common sense. But we can imagine the mind of Socrates in another age and country; and we can interpret him by analogy with reference to the errors and prejudices which prevail among ourselves. To return to the Phaedrus:—

Both speeches are strongly condemned by Socrates as sinful and blasphemous towards the god Love, and as worthy only of some haunt of sailors to which good manners were unknown. The meaning of this and other wild language to the same effect, which is introduced by way of contrast to the formality of the two speeches (Socrates has a sense of relief when he has escaped from the trammels of rhetoric), seems to be that the two speeches proceed upon the supposition that love is

and ought to be interested, and that no such thing as a real or disinterested passion, which would be at the same time lasting, could be conceived. 'But did I call this "love"? O God, forgive my blasphemy. This is not love. Rather it is the love of the world. But there is another kingdom of love, a kingdom not of this world, divine, eternal. And this other love I will now show you in a mystery.'

Then follows the famous myth, which is a sort of parable, and like other parables ought not to receive too minute an interpretation. In all such allegories there is a great deal which is merely ornamental, and the interpreter has to separate the important from the unimportant. Socrates himself has given the right clue when, in using his own discourse afterwards as the text for his examination of rhetoric, he characterizes it as a 'partly true and tolerably credible mythus,' in which amid poetical figures, order and arrangement were not forgotten.

The soul is described in magnificent language as the self-moved and the source of motion in all other things. This is the philosophical theme or proem of the whole. But ideas must be given through something, and under the pretext that to realize the true nature of the soul would be not only tedious but impossible, we at once pass on to describe the souls of gods as well as men under the figure of two winged steeds and a charioteer. No connection is traced between the soul as the great motive power and the triple soul which is thus imaged. There is no difficulty in seeing that the charioteer represents the reason, or that the black horse is the symbol of the sensual or concupiscent element of human nature. The white horse also represents rational impulse, but the description, 'a lover of honour and modesty and temperance, and a follower of true glory,' though similar, does not at once recall the 'spirit' (thumos) of the Republic. The two steeds really correspond in a figure more nearly to the appetitive and moral or semi-rational soul of Aristotle. And thus, for the first time perhaps in the history of philosophy, we have represented to us the threefold division of psychology. The image of the charioteer and the steeds has been compared with a similar image which occurs in the verses of Parmenides; but it is important to remark that the horses of Parmenides have no allegorical meaning, and that the poet is only describing his own approach in a chariot to the regions of light and the house of the goddess of truth.

The triple soul has had a previous existence, in which following in the train of some god, from whom she derived her character, she beheld partially and imperfectly the vision of absolute truth. All her after existence, passed in many forms of men and animals, is spent in regaining this. The stages of the conflict are many and various; and she is sorely let and hindered by the animal desires of the inferior or concupiscent steed. Again and again she beholds the flashing beauty of the beloved. But before that vision can be finally enjoyed the animal desires must be subjected.

The moral or spiritual element in man is represented by the immortal steed which, like thumos in the Republic, always sides with the reason. Both are dragged out of their course by the furious impulses of desire. In the end something is conceded to the desires, after they have been finally humbled and overpowered. And yet the way of philosophy, or perfect love of the unseen, is total abstinence from bodily delights. 'But all men cannot receive this saying': in the lower life of ambition they may be taken off their guard and stoop to folly unawares, and then, although they do not attain to the highest bliss, yet if they have once conquered they may be happy enough.

The language of the Meno and the Phaedo as well as of the Phaedrus seems to show that at one time of his life Plato was quite serious in maintaining a former state of existence. His mission was to

realize the abstract; in that, all good and truth, all the hopes of this and another life seemed to centre. To him abstractions, as we call them, were another kind of knowledge—an inner and unseen world, which seemed to exist far more truly than the fleeting objects of sense which were without him. When we are once able to imagine the intense power which abstract ideas exercised over the mind of Plato, we see that there was no more difficulty to him in realizing the eternal existence of them and of the human minds which were associated with them, in the past and future than in the present. The difficulty was not how they could exist, but how they could fail to exist. In the attempt to regain this 'saving' knowledge of the ideas, the sense was found to be as great an enemy as the desires; and hence two things which to us seem quite distinct are inextricably blended in the representation of Plato.

Thus far we may believe that Plato was serious in his conception of the soul as a motive power, in his reminiscence of a former state of being, in his elevation of the reason over sense and passion, and perhaps in his doctrine of transmigration. Was he equally serious in the rest? For example, are we to attribute his tripartite division of the soul to the gods? Or is this merely assigned to them by way of parallelism with men? The latter is the more probable; for the horses of the gods are both white, i.e. their every impulse is in harmony with reason; their dualism, on the other hand, only carries out the figure of the chariot. Is he serious, again, in regarding love as 'a madness'? That seems to arise out of the antithesis to the former conception of love. At the same time he appears to intimate here, as in the Ion, Apology, Meno, and elsewhere, that there is a faculty in man, whether to be termed in modern language genius, or inspiration, or imagination, or idealism, or communion with God, which cannot be reduced to rule and measure. Perhaps, too, he is ironically repeating the common language of mankind about philosophy, and is turning their jest into a sort of earnest. (Compare Phaedo, Symp.) Or is he serious in holding that each soul bears the character of a god? He may have had no other account to give of the differences of human characters to which he afterwards refers. Or, again, in his absurd derivation of mantike and oionistike and imeros (compare Cratylus)? It is characteristic of the irony of Socrates to mix up sense and nonsense in such a way that no exact line can be drawn between them. And allegory helps to increase this sort of confusion.

As is often the case in the parables and prophecies of Scripture, the meaning is allowed to break through the figure, and the details are not always consistent. When the charioteers and their steeds stand upon the dome of heaven they behold the intangible invisible essences which are not objects of sight. This is because the force of language can no further go. Nor can we dwell much on the circumstance, that at the completion of ten thousand years all are to return to the place from whence they came; because he represents their return as dependent on their own good conduct in the successive stages of existence. Nor again can we attribute anything to the accidental inference which would also follow, that even a tyrant may live righteously in the condition of life to which fate has called him ('he aiblins might, I dinna ken'). But to suppose this would be at variance with Plato himself and with Greek notions generally. He is much more serious in distinguishing men from animals by their recognition of the universal which they have known in a former state, and in denying that this gift of reason can ever be obliterated or lost. In the language of some modern theologians he might be said to maintain the 'final perseverance' of those who have entered on their pilgrim's progress. Other intimations of a 'metaphysic' or 'theology' of the future may also be discerned in him: (1) The moderate predestinarianism which here, as in the Republic, acknowledges the element of chance in human life, and yet asserts the freedom and responsibility of man; (2) The recognition of a moral as well as an intellectual principle in man under the image of an immortal steed; (3) The notion that the

divine nature exists by the contemplation of ideas of virtue and justice—or, in other words, the assertion of the essentially moral nature of God; (4) Again, there is the hint that human life is a life of aspiration only, and that the true ideal is not to be found in art; (5) There occurs the first trace of the distinction between necessary and contingent matter; (6) The conception of the soul itself as the motive power and reason of the universe.

The conception of the philosopher, or the philosopher and lover in one, as a sort of madman, may be compared with the Republic and Theaetetus, in both of which the philosopher is regarded as a stranger and monster upon the earth. The whole myth, like the other myths of Plato, describes in a figure things which are beyond the range of human faculties, or inaccessible to the knowledge of the age. That philosophy should be represented as the inspiration of love is a conception that has already become familiar to us in the Symposium, and is the expression partly of Plato's enthusiasm for the idea, and is also an indication of the real power exercised by the passion of friendship over the mind of the Greek. The master in the art of love knew that there was a mystery in these feelings and their associations, and especially in the contrast of the sensible and permanent which is afforded by them; and he sought to explain this, as he explained universal ideas, by a reference to a former state of existence. The capriciousness of love is also derived by him from an attachment to some god in a former world. The singular remark that the beloved is more affected than the lover at the final consummation of their love, seems likewise to hint at a psychological truth.

It is difficult to exhaust the meanings of a work like the Phaedrus, which indicates so much more than it expresses; and is full of inconsistencies and ambiguities which were not perceived by Plato himself. For example, when he is speaking of the soul does he mean the human or the divine soul? and are they both equally self-moving and constructed on the same threefold principle? We should certainly be disposed to reply that the self-motive is to be attributed to God only; and on the other hand that the appetitive and passionate elements have no place in His nature. So we should infer from the reason of the thing, but there is no indication in Plato's own writings that this was his meaning. Or, again, when he explains the different characters of men by referring them back to the nature of the God whom they served in a former state of existence, we are inclined to ask whether he is serious: Is he not rather using a mythological figure, here as elsewhere, to draw a veil over things which are beyond the limits of mortal knowledge? Once more, in speaking of beauty is he really thinking of some external form such as might have been expressed in the works of Phidias or Praxiteles; and not rather of an imaginary beauty, of a sort which extinguishes rather than stimulates vulgar love,—a heavenly beauty like that which flashed from time to time before the eyes of Dante or Bunyan? Surely the latter. But it would be idle to reconcile all the details of the passage: it is a picture, not a system, and a picture which is for the greater part an allegory, and an allegory which allows the meaning to come through. The image of the charioteer and his steeds is placed side by side with the absolute forms of justice, temperance, and the like, which are abstract ideas only, and which are seen with the eye of the soul in her heavenly journey. The first impression of such a passage, in which no attempt is made to separate the substance from the form, is far truer than an elaborate philosophical analysis.

It is too often forgotten that the whole of the second discourse of Socrates is only an allegory, or figure of speech. For this reason, it is unnecessary to enquire whether the love of which Plato speaks is the love of men or of women. It is really a general idea which includes both, and in which the sensual element, though not wholly eradicated, is reduced to order and measure. We must not attribute a meaning to every fanciful detail. Nor is there any need to call up revolting associations,

which as a matter of good taste should be banished, and which were far enough away from the mind of Plato. These and similar passages should be interpreted by the Laws. Nor is there anything in the Symposium, or in the Charmides, in reality inconsistent with the sterner rule which Plato lays down in the Laws. At the same time it is not to be denied that love and philosophy are described by Socrates in figures of speech which would not be used in Christian times; or that nameless vices were prevalent at Athens and in other Greek cities; or that friendships between men were a more sacred tie, and had a more important social and educational influence than among ourselves. (See note on Symposium.)

In the Phaedrus, as well as in the Symposium, there are two kinds of love, a lower and a higher, the one answering to the natural wants of the animal, the other rising above them and contemplating with religious awe the forms of justice, temperance, holiness, yet finding them also 'too dazzling bright for mortal eye,' and shrinking from them in amazement. The opposition between these two kinds of love may be compared to the opposition between the flesh and the spirit in the Epistles of St. Paul. It would be unmeaning to suppose that Plato, in describing the spiritual combat, in which the rational soul is finally victor and master of both the steeds, condescends to allow any indulgence of unnatural lusts.

Two other thoughts about love are suggested by this passage. First of all, love is represented here, as in the Symposium, as one of the great powers of nature, which takes many forms and two principal ones, having a predominant influence over the lives of men. And these two, though opposed, are not absolutely separated the one from the other. Plato, with his great knowledge of human nature, was well aware how easily one is transformed into the other, or how soon the noble but fleeting aspiration may return into the nature of the animal, while the lower instinct which is latent always remains. The intermediate sentimentalism, which has exercised so great an influence on the literature of modern Europe, had no place in the classical times of Hellas; the higher love, of which Plato speaks, is the subject, not of poetry or fiction, but of philosophy.

Secondly, there seems to be indicated a natural yearning of the human mind that the great ideas of justice, temperance, wisdom, should be expressed in some form of visible beauty, like the absolute purity and goodness which Christian art has sought to realize in the person of the Madonna. But although human nature has often attempted to represent outwardly what can be only 'spiritually discerned,' men feel that in pictures and images, whether painted or carved, or described in words only, we have not the substance but the shadow of the truth which is in heaven. There is no reason to suppose that in the fairest works of Greek art, Plato ever conceived himself to behold an image, however faint, of ideal truths. 'Not in that way was wisdom seen.'

We may now pass on to the second part of the Dialogue, which is a criticism on the first. Rhetoric is assailed on various grounds: first, as desiring to persuade, without a knowledge of the truth; and secondly, as ignoring the distinction between certain and probable matter. The three speeches are then passed in review: the first of them has no definition of the nature of love, and no order in the topics (being in these respects far inferior to the second); while the third of them is found (though a fancy of the hour) to be framed upon real dialectical principles. But dialectic is not rhetoric; nothing on that subject is to be found in the endless treatises of rhetoric, however prolific in hard names. When Plato has sufficiently put them to the test of ridicule he touches, as with the point of a needle, the real error, which is the confusion of preliminary knowledge with creative power. No attainments will

provide the speaker with genius; and the sort of attainments which can alone be of any value are the higher philosophy and the power of psychological analysis, which is given by dialectic, but not by the rules of the rhetoricians.

In this latter portion of the Dialogue there are many texts which may help us to speak and to think. The names dialectic and rhetoric are passing out of use; we hardly examine seriously into their nature and limits, and probably the arts both of speaking and of conversation have been unduly neglected by us. But the mind of Socrates pierces through the differences of times and countries into the essential nature of man; and his words apply equally to the modern world and to the Athenians of old. Would he not have asked of us, or rather is he not asking of us, Whether we have ceased to prefer appearances to reality? Let us take a survey of the professions to which he refers and try them by his standard. Is not all literature passing into criticism, just as Athenian literature in the age of Plato was degenerating into sophistry and rhetoric? We can discourse and write about poems and paintings, but we seem to have lost the gift of creating them. Can we wonder that few of them 'come sweetly from nature,' while ten thousand reviewers (mala murioi) are engaged in dissecting them? Young men, like Phaedrus, are enamoured of their own literary clique and have but a feeble sympathy with the master-minds of former ages. They recognize 'a POETICAL necessity in the writings of their favourite author, even when he boldly wrote off just what came in his head.' They are beginning to think that Art is enough, just at the time when Art is about to disappear from the world. And would not a great painter, such as Michael Angelo, or a great poet, such as Shakespeare, returning to earth, 'courteously rebuke' us—would he not say that we are putting 'in the place of Art the preliminaries of Art,' confusing Art the expression of mind and truth with Art the composition of colours and forms; and perhaps he might more severely chastise some of us for trying to invent 'a new shudder' instead of bringing to the birth living and healthy creations? These he would regard as the signs of an age wanting in original power.

Turning from literature and the arts to law and politics, again we fall under the lash of Socrates. For do we not often make 'the worse appear the better cause;' and do not 'both parties sometimes agree to tell lies'? Is not pleading 'an art of speaking unconnected with the truth'? There is another text of Socrates which must not be forgotten in relation to this subject. In the endless maze of English law is there any 'dividing the whole into parts or reuniting the parts into a whole'—any semblance of an organized being 'having hands and feet and other members'? Instead of a system there is the Chaos of Anaxagoras (omou panta chremata) and no Mind or Order. Then again in the noble art of politics, who thinks of first principles and of true ideas? We avowedly follow not the truth but the will of the many (compare Republic). Is not legislation too a sort of literary effort, and might not statesmanship be described as the 'art of enchanting' the house? While there are some politicians who have no knowledge of the truth, but only of what is likely to be approved by 'the many who sit in judgment,' there are others who can give no form to their ideal, neither having learned 'the art of persuasion,' nor having any insight into the 'characters of men.' Once more, has not medical science become a professional routine, which many 'practise without being able to say who were their instructors'—the application of a few drugs taken from a book instead of a life-long study of the natures and constitutions of human beings? Do we see as clearly as Hippocrates 'that the nature of the body can only be understood as a whole'? (Compare Charm.) And are not they held to be the wisest physicians who have the greatest distrust of their art? What would Socrates think of our newspapers, of our theology? Perhaps he would be afraid to speak of them;—the one vox populi, the other vox Dei, he might hesitate to attack them; or he might trace a fanciful connexion between them, and ask

doubtfully, whether they are not equally inspired? He would remark that we are always searching for a belief and deploring our unbelief, seeming to prefer popular opinions unverified and contradictory to unpopular truths which are assured to us by the most certain proofs: that our preachers are in the habit of praising God 'without regard to truth and falsehood, attributing to Him every species of greatness and glory, saying that He is all this and the cause of all that, in order that we may exhibit Him as the fairest and best of all' (Symp.) without any consideration of His real nature and character or of the laws by which He governs the world—seeking for a 'private judgment' and not for the truth or 'God's judgment.' What would he say of the Church, which we praise in like manner, 'meaning ourselves,' without regard to history or experience? Might he not ask, whether we 'care more for the truth of religion, or for the speaker and the country from which the truth comes'? or, whether the 'select wise' are not 'the many' after all? (Symp.) So we may fill up the sketch of Socrates, lest, as Phaedrus says, the argument should be too 'abstract and barren of illustrations.' (Compare Symp., Apol., Euthyphro.)

He next proceeds with enthusiasm to define the royal art of dialectic as the power of dividing a whole into parts, and of uniting the parts in a whole, and which may also be regarded (compare Soph.) as the process of the mind talking with herself. The latter view has probably led Plato to the paradox that speech is superior to writing, in which he may seem also to be doing an injustice to himself. For the two cannot be fairly compared in the manner which Plato suggests. The contrast of the living and dead word, and the example of Socrates, which he has represented in the form of the Dialogue, seem to have misled him. For speech and writing have really different functions; the one is more transitory, more diffuse, more elastic and capable of adaptation to moods and times; the other is more permanent, more concentrated, and is uttered not to this or that person or audience, but to all the world. In the Politicus the paradox is carried further; the mind or will of the king is preferred to the written law; he is supposed to be the Law personified, the ideal made Life.

Yet in both these statements there is also contained a truth; they may be compared with one another, and also with the other famous paradox, that 'knowledge cannot be taught.' Socrates means to say, that what is truly written is written in the soul, just as what is truly taught grows up in the soul from within and is not forced upon it from without. When planted in a congenial soil the little seed becomes a tree, and 'the birds of the air build their nests in the branches.' There is an echo of this in the prayer at the end of the Dialogue, 'Give me beauty in the inward soul, and may the inward and outward man be at one.' We may further compare the words of St. Paul, 'Written not on tables of stone, but on fleshly tables of the heart;' and again, 'Ye are my epistles known and read of all men.' There may be a use in writing as a preservative against the forgetfulness of old age, but to live is higher far, to be ourselves the book, or the epistle, the truth embodied in a person, the Word made flesh. Something like this we may believe to have passed before Plato's mind when he affirmed that speech was superior to writing. So in other ages, weary of literature and criticism, of making many books, of writing articles in reviews, some have desired to live more closely in communion with their fellow-men, to speak heart to heart, to speak and act only, and not to write, following the example of Socrates and of Christ...

Some other touches of inimitable grace and art and of the deepest wisdom may be also noted; such as the prayer or 'collect' which has just been cited, 'Give me beauty,' etc.; or 'the great name which belongs to God alone;' or 'the saying of wiser men than ourselves that a man of sense should try to

please not his fellow-servants, but his good and noble masters,' like St. Paul again; or the description of the 'heavenly originals'...

The chief criteria for determining the date of the Dialogue are (1) the ages of Lysias and Isocrates; (2) the character of the work.

Lysias was born in the year 458; Isocrates in the year 436, about seven years before the birth of Plato. The first of the two great rhetoricians is described as in the zenith of his fame; the second is still young and full of promise. Now it is argued that this must have been written in the youth of Isocrates, when the promise was not yet fulfilled. And thus we should have to assign the Dialogue to a year not later than 406, when Isocrates was thirty and Plato twenty-three years of age, and while Socrates himself was still alive.

Those who argue in this way seem not to reflect how easily Plato can 'invent Egyptians or anything else,' and how careless he is of historical truth or probability. Who would suspect that the wise Critias, the virtuous Charmides, had ended their lives among the thirty tyrants? Who would imagine that Lysias, who is here assailed by Socrates, is the son of his old friend Cephalus? Or that Isocrates himself is the enemy of Plato and his school? No arguments can be drawn from the appropriateness or inappropriateness of the characters of Plato. (Else, perhaps, it might be further argued that, judging from their extant remains, insipid rhetoric is far more characteristic of Isocrates than of Lysias.) But Plato makes use of names which have often hardly any connection with the historical characters to whom they belong. In this instance the comparative favour shown to Isocrates may possibly be accounted for by the circumstance of his belonging to the aristocratical, as Lysias to the democratical party.

Few persons will be inclined to suppose, in the superficial manner of some ancient critics, that a dialogue which treats of love must necessarily have been written in youth. As little weight can be attached to the argument that Plato must have visited Egypt before he wrote the story of Theuth and Thamus. For there is no real proof that he ever went to Egypt; and even if he did, he might have known or invented Egyptian traditions before he went there. The late date of the Phaedrus will have to be established by other arguments than these: the maturity of the thought, the perfection of the style, the insight, the relation to the other Platonic Dialogues, seem to contradict the notion that it could have been the work of a youth of twenty or twenty-three years of age. The cosmological notion of the mind as the primum mobile, and the admission of impulse into the immortal nature, also afford grounds for assigning a later date. (Compare Tim., Soph., Laws.) Add to this that the picture of Socrates, though in some lesser particulars,—e.g. his going without sandals, his habit of remaining within the walls, his emphatic declaration that his study is human nature,—an exact resemblance, is in the main the Platonic and not the real Socrates. Can we suppose 'the young man to have told such lies' about his master while he was still alive? Moreover, when two Dialogues are so closely connected as the Phaedrus and Symposium, there is great improbability in supposing that one of them was written at least twenty years after the other. The conclusion seems to be, that the Dialogue was written at some comparatively late but unknown period of Plato's life, after he had deserted the purely Socratic point of view, but before he had entered on the more abstract speculations of the Sophist or the Philebus. Taking into account the divisions of the soul, the doctrine of transmigration, the contemplative nature of the philosophic life, and the character of the style, we shall not be far wrong in placing the Phaedrus in the neighbourhood of the Republic; remarking only that allowance

must be made for the poetical element in the Phaedrus, which, while falling short of the Republic in definite philosophic results, seems to have glimpses of a truth beyond.

Two short passages, which are unconnected with the main subject of the Dialogue, may seem to merit a more particular notice: (1) the locus classicus about mythology; (2) the tale of the grasshoppers.

The first passage is remarkable as showing that Plato was entirely free from what may be termed the Euhemerism of his age. For there were Euhemerists in Hellas long before Euhemerus. Early philosophers, like Anaxagoras and Metrodorus, had found in Homer and mythology hidden meanings. Plato, with a truer instinct, rejects these attractive interpretations; he regards the inventor of them as 'unfortunate;' and they draw a man off from the knowledge of himself. There is a latent criticism, and also a poetical sense in Plato, which enable him to discard them, and yet in another way to make use of poetry and mythology as a vehicle of thought and feeling. What would he have said of the discovery of Christian doctrines in these old Greek legends? While acknowledging that such interpretations are 'very nice,' would he not have remarked that they are found in all sacred literatures? They cannot be tested by any criterion of truth, or used to establish any truth; they add nothing to the sum of human knowledge; they are—what we please, and if employed as 'peacemakers' between the new and old are liable to serious misconstruction, as he elsewhere remarks (Republic). And therefore he would have 'bid Farewell to them; the study of them would take up too much of his time; and he has not as yet learned the true nature of religion.' The 'sophistical' interest of Phaedrus, the little touch about the two versions of the story, the ironical manner in which these explanations are set aside—'the common opinion about them is enough for me'—the allusion to the serpent Typho may be noted in passing; also the general agreement between the tone of this speech and the remark of Socrates which follows afterwards, 'I am a diviner, but a poor one.'

The tale of the grasshoppers is naturally suggested by the surrounding scene. They are also the representatives of the Athenians as children of the soil. Under the image of the lively chirruping grasshoppers who inform the Muses in heaven about those who honour them on earth, Plato intends to represent an Athenian audience (tettigessin eoikotes). The story is introduced, apparently, to mark a change of subject, and also, like several other allusions which occur in the course of the Dialogue, in order to preserve the scene in the recollection of the reader.

No one can duly appreciate the dialogues of Plato, especially the Phaedrus, Symposium, and portions of the Republic, who has not a sympathy with mysticism. To the uninitiated, as he would himself have acknowledged, they will appear to be the dreams of a poet who is disguised as a philosopher. There is a twofold difficulty in apprehending this aspect of the Platonic writings. First, we do not immediately realize that under the marble exterior of Greek literature was concealed a soul thrilling with spiritual emotion. Secondly, the forms or figures which the Platonic philosophy assumes, are not like the images of the prophet Isaiah, or of the Apocalypse, familiar to us in the days of our youth. By mysticism we mean, not the extravagance of an erring fancy, but the concentration of reason in feeling, the enthusiastic love of the good, the true, the one, the sense of the infinity of knowledge and of the marvel of the human faculties. When feeding upon such thoughts the 'wing of the soul' is renewed and gains strength; she is raised above 'the manikins of earth' and their opinions,

waiting in wonder to know, and working with reverence to find out what God in this or in another life may reveal to her.

ON THE DECLINE OF GREEK LITERATURE.

One of the main purposes of Plato in the Phaedrus is to satirize Rhetoric, or rather the Professors of Rhetoric who swarmed at Athens in the fourth century before Christ. As in the opening of the Dialogue he ridicules the interpreters of mythology; as in the Protagoras he mocks at the Sophists; as in the Euthydemus he makes fun of the word-splitting Eristics; as in the Cratylus he ridicules the fancies of Etymologers; as in the Meno and Gorgias and some other dialogues he makes reflections and casts sly imputation upon the higher classes at Athens; so in the Phaedrus, chiefly in the latter part, he aims his shafts at the rhetoricians. The profession of rhetoric was the greatest and most popular in Athens, necessary 'to a man's salvation,' or at any rate to his attainment of wealth or power; but Plato finds nothing wholesome or genuine in the purpose of it. It is a veritable 'sham,' having no relation to fact, or to truth of any kind. It is antipathetic to him not only as a philosopher, but also as a great writer. He cannot abide the tricks of the rhetoricians, or the pedantries and mannerisms which they introduce into speech and writing. He sees clearly how far removed they are from the ways of simplicity and truth, and how ignorant of the very elements of the art which they are professing to teach. The thing which is most necessary of all, the knowledge of human nature, is hardly if at all considered by them. The true rules of composition, which are very few, are not to be found in their voluminous systems. Their pretentiousness, their omniscience, their large fortunes, their impatience of argument, their indifference to first principles, their stupidity, their progresses through Hellas accompanied by a troop of their disciples—these things were very distasteful to Plato, who esteemed genius far above art, and was quite sensible of the interval which separated them (Phaedrus). It is the interval which separates Sophists and rhetoricians from ancient famous men and women such as Homer and Hesiod, Anacreon and Sappho, Aeschylus and Sophocles; and the Platonic Socrates is afraid that, if he approves the former, he will be disowned by the latter. The spirit of rhetoric was soon to overspread all Hellas; and Plato with prophetic insight may have seen, from afar, the great literary waste or dead level, or interminable marsh, in which Greek literature was soon to disappear. A similar vision of the decline of the Greek drama and of the contrast of the old literature and the new was present to the mind of Aristophanes after the death of the three great tragedians (Frogs). After about a hundred, or at most two hundred years if we exclude Homer, the genius of Hellas had ceased to flower or blossom. The dreary waste which follows, beginning with the Alexandrian writers and even before them in the platitudes of Isocrates and his school, spreads over much more than a thousand years. And from this decline the Greek language and literature, unlike the Latin, which has come to life in new forms and been developed into the great European languages, never recovered.

This monotony of literature, without merit, without genius and without character, is a phenomenon which deserves more attention than it has hitherto received; it is a phenomenon unique in the literary history of the world. How could there have been so much cultivation, so much diligence in writing, and so little mind or real creative power? Why did a thousand years invent nothing better than Sibylline books, Orphic poems, Byzantine imitations of classical histories, Christian reproductions of Greek plays, novels like the silly and obscene romances of Longus and Heliodorus, innumerable forged epistles, a great many epigrams, biographies of the meanest and most meagre description, a sham philosophy which was the bastard progeny of the union between Hellas and the East? Only in

Plutarch, in Lucian, in Longinus, in the Roman emperors Marcus Aurelius and Julian, in some of the Christian fathers are there any traces of good sense or originality, or any power of arousing the interest of later ages. And when new books ceased to be written, why did hosts of grammarians and interpreters flock in, who never attain to any sound notion either of grammar or interpretation? Why did the physical sciences never arrive at any true knowledge or make any real progress? Why did poetry droop and languish? Why did history degenerate into fable? Why did words lose their power of expression? Why were ages of external greatness and magnificence attended by all the signs of decay in the human mind which are possible?

To these questions many answers may be given, which if not the true causes, are at least to be reckoned among the symptoms of the decline. There is the want of method in physical science, the want of criticism in history, the want of simplicity or delicacy in poetry, the want of political freedom, which is the true atmosphere of public speaking, in oratory. The ways of life were luxurious and commonplace. Philosophy had become extravagant, eclectic, abstract, devoid of any real content. At length it ceased to exist. It had spread words like plaster over the whole field of knowledge. It had grown ascetic on one side, mystical on the other. Neither of these tendencies was favourable to literature. There was no sense of beauty either in language or in art. The Greek world became vacant, barbaric, oriental. No one had anything new to say, or any conviction of truth. The age had no remembrance of the past, no power of understanding what other ages thought and felt. The Catholic faith had degenerated into dogma and controversy. For more than a thousand years not a single writer of first-rate, or even of second-rate, reputation has a place in the innumerable rolls of Greek literature.

If we seek to go deeper, we can still only describe the outward nature of the clouds or darkness which were spread over the heavens during so many ages without relief or light. We may say that this, like several other long periods in the history of the human race, was destitute, or deprived of the moral qualities which are the root of literary excellence. It had no life or aspiration, no national or political force, no desire for consistency, no love of knowledge for its own sake. It did not attempt to pierce the mists which surrounded it. It did not propose to itself to go forward and scale the heights of knowledge, but to go backwards and seek at the beginning what can only be found towards the end. It was lost in doubt and ignorance. It rested upon tradition and authority. It had none of the higher play of fancy which creates poetry; and where there is no true poetry, neither can there be any good prose. It had no great characters, and therefore it had no great writers. It was incapable of distinguishing between words and things. It was so hopelessly below the ancient standard of classical Greek art and literature that it had no power of understanding or of valuing them. It is doubtful whether any Greek author was justly appreciated in antiquity except by his own contemporaries; and this neglect of the great authors of the past led to the disappearance of the larger part of them, while the Greek fathers were mostly preserved. There is no reason to suppose that, in the century before the taking of Constantinople, much more was in existence than the scholars of the Renaissance carried away with them to Italy.

The character of Greek literature sank lower as time went on. It consisted more and more of compilations, of scholia, of extracts, of commentaries, forgeries, imitations. The commentator or interpreter had no conception of his author as a whole, and very little of the context of any passage which he was explaining. The least things were preferred by him to the greatest. The question of a reading, or a grammatical form, or an accent, or the uses of a word, took the place of the aim or

subject of the book. He had no sense of the beauties of an author, and very little light is thrown by him on real difficulties. He interprets past ages by his own. The greatest classical writers are the least appreciated by him. This seems to be the reason why so many of them have perished, why the lyric poets have almost wholly disappeared; why, out of the eighty or ninety tragedies of Aeschylus and Sophocles, only seven of each had been preserved.

Such an age of sciolism and scholasticism may possibly once more get the better of the literary world. There are those who prophesy that the signs of such a day are again appearing among us, and that at the end of the present century no writer of the first class will be still alive. They think that the Muse of Literature may transfer herself to other countries less dried up or worn out than our own. They seem to see the withering effect of criticism on original genius. No one can doubt that such a decay or decline of literature and of art seriously affects the manners and character of a nation. It takes away half the joys and refinements of life; it increases its dulness and grossness. Hence it becomes a matter of great interest to consider how, if at all, such a degeneracy may be averted. Is there any elixir which can restore life and youth to the literature of a nation, or at any rate which can prevent it becoming unmanned and enfeebled?

First there is the progress of education. It is possible, and even probable, that the extension of the means of knowledge over a wider area and to persons living under new conditions may lead to many new combinations of thought and language. But, as yet, experience does not favour the realization of such a hope or promise. It may be truly answered that at present the training of teachers and the methods of education are very imperfect, and therefore that we cannot judge of the future by the present. When more of our youth are trained in the best literatures, and in the best parts of them, their minds may be expected to have a larger growth. They will have more interests, more thoughts, more material for conversation; they will have a higher standard and begin to think for themselves. The number of persons who will have the opportunity of receiving the highest education through the cheap press, and by the help of high schools and colleges, may increase tenfold. It is likely that in every thousand persons there is at least one who is far above the average in natural capacity, but the seed which is in him dies for want of cultivation. It has never had any stimulus to grow, or any field in which to blossom and produce fruit. Here is a great reservoir or treasure-house of human intelligence out of which new waters may flow and cover the earth. If at any time the great men of the world should die out, and originality or genius appear to suffer a partial eclipse, there is a boundless hope in the multitude of intelligences for future generations. They may bring gifts to men such as the world has never received before. They may begin at a higher point and yet take with them all the results of the past. The co-operation of many may have effects not less striking, though different in character from those which the creative genius of a single man, such as Bacon or Newton, formerly produced. There is also great hope to be derived, not merely from the extension of education over a wider area, but from the continuance of it during many generations. Educated parents will have children fit to receive education; and these again will grow up under circumstances far more favourable to the growth of intelligence than any which have hitherto existed in our own or in former ages.

Even if we were to suppose no more men of genius to be produced, the great writers of ancient or of modern times will remain to furnish abundant materials of education to the coming generation. Now that every nation holds communication with every other, we may truly say in a fuller sense than formerly that 'the thoughts of men are widened with the process of the suns.' They will not be 'cribbed, cabined, and confined' within a province or an island. The East will provide elements of culture to the

West as well as the West to the East. The religions and literatures of the world will be open books, which he who wills may read. The human race may not be always ground down by bodily toil, but may have greater leisure for the improvement of the mind. The increasing sense of the greatness and infinity of nature will tend to awaken in men larger and more liberal thoughts. The love of mankind may be the source of a greater development of literature than nationality has ever been. There may be a greater freedom from prejudice and party; we may better understand the whereabouts of truth, and therefore there may be more success and fewer failures in the search for it. Lastly, in the coming ages we shall carry with us the recollection of the past, in which are necessarily contained many seeds of revival and renaissance in the future. So far is the world from becoming exhausted, so groundless is the fear that literature will ever die out.

PHAEDRUS

PERSONS OF THE DIALOGUE: Socrates, Phaedrus.

SCENE: Under a plane-tree, by the banks of the Ilissus.

SOCRATES: My dear Phaedrus, whence come you, and whither are you going?

PHAEDRUS: I come from Lysias the son of Cephalus, and I am going to take a walk outside the wall, for I have been sitting with him the whole morning; and our common friend Acumenus tells me that it is much more refreshing to walk in the open air than to be shut up in a cloister.

SOCRATES: There he is right. Lysias then, I suppose, was in the town?

PHAEDRUS: Yes, he was staying with Epicrates, here at the house of Morychus; that house which is near the temple of Olympian Zeus.

SOCRATES: And how did he entertain you? Can I be wrong in supposing that Lysias gave you a feast of discourse?

PHAEDRUS: You shall hear, if you can spare time to accompany me.

SOCRATES: And should I not deem the conversation of you and Lysias 'a thing of higher import,' as I may say in the words of Pindar, 'than any business'?

PHAEDRUS: Will you go on?

SOCRATES: And will you go on with the narration?

PHAEDRUS: My tale, Socrates, is one of your sort, for love was the theme which occupied us—love after a fashion: Lysias has been writing about a fair youth who was being tempted, but not by a lover; and this was the point: he ingeniously proved that the non-lover should be accepted rather than the lover.

SOCRATES: O that is noble of him! I wish that he would say the poor man rather than the rich, and the old man rather than the young one;—then he would meet the case of me and of many a man; his words would be quite refreshing, and he would be a public benefactor. For my part, I do so long to hear his speech, that if you walk all the way to Megara, and when you have reached the wall come back, as Herodicus recommends, without going in, I will keep you company.

PHAEDRUS: What do you mean, my good Socrates? How can you imagine that my unpractised memory can do justice to an elaborate work, which the greatest rhetorician of the age spent a long time in composing. Indeed, I cannot; I would give a great deal if I could.

SOCRATES: I believe that I know Phaedrus about as well as I know myself, and I am very sure that the speech of Lysias was repeated to him, not once only, but again and again;—he insisted on hearing it many times over and Lysias was very willing to gratify him; at last, when nothing else would do, he got hold of the book, and looked at what he most wanted to see,—this occupied him during the whole morning;—and then when he was tired with sitting, he went out to take a walk, not until, by the dog, as I believe, he had simply learned by heart the entire discourse, unless it was unusually long, and he went to a place outside the wall that he might practise his lesson. There he saw a certain lover of discourse who had a similar weakness;—he saw and rejoiced; now thought he, 'I shall have a partner in my revels.' And he invited him to come and walk with him. But when the lover of discourse begged that he would repeat the tale, he gave himself airs and said, 'No I cannot,' as if he were indisposed; although, if the hearer had refused, he would sooner or later have been compelled by him to listen whether he would or no. Therefore, Phaedrus, bid him do at once what he will soon do whether bidden or not.

PHAEDRUS: I see that you will not let me off until I speak in some fashion or other; verily therefore my best plan is to speak as I best can.

SOCRATES: A very true remark, that of yours.

PHAEDRUS: I will do as I say; but believe me, Socrates, I did not learn the very words—O no; nevertheless I have a general notion of what he said, and will give you a summary of the points in which the lover differed from the non-lover. Let me begin at the beginning.

SOCRATES: Yes, my sweet one; but you must first of all show what you have in your left hand under your cloak, for that roll, as I suspect, is the actual discourse. Now, much as I love you, I would not have you suppose that I am going to have your memory exercised at my expense, if you have Lysias himself here.

PHAEDRUS: Enough; I see that I have no hope of practising my art upon you. But if I am to read, where would you please to sit?

SOCRATES: Let us turn aside and go by the Ilissus; we will sit down at some quiet spot.

PHAEDRUS: I am fortunate in not having my sandals, and as you never have any, I think that we may go along the brook and cool our feet in the water; this will be the easiest way, and at midday and in the summer is far from being unpleasant.

SOCRATES: Lead on, and look out for a place in which we can sit down.

PHAEDRUS: Do you see the tallest plane-tree in the distance?

SOCRATES: Yes.

PHAEDRUS: There are shade and gentle breezes, and grass on which we may either sit or lie down.

SOCRATES: Move forward.

PHAEDRUS: I should like to know, Socrates, whether the place is not somewhere here at which Boreas is said to have carried off Orithyia from the banks of the Ilissus?

SOCRATES: Such is the tradition.

PHAEDRUS: And is this the exact spot? The little stream is delightfully clear and bright; I can fancy that there might be maidens playing near.

SOCRATES: I believe that the spot is not exactly here, but about a quarter of a mile lower down, where you cross to the temple of Artemis, and there is, I think, some sort of an altar of Boreas at the place.

PHAEDRUS: I have never noticed it; but I beseech you to tell me, Socrates, do you believe this tale?

SOCRATES: The wise are doubtful, and I should not be singular if, like them, I too doubted. I might have a rational explanation that Orithyia was playing with Pharmacia, when a northern gust carried her over the neighbouring rocks; and this being the manner of her death, she was said to have been carried away by Boreas. There is a discrepancy, however, about the locality; according to another version of the story she was taken from Areopagus, and not from this place. Now I quite acknowledge that these allegories are very nice, but he is not to be envied who has to invent them; much labour and ingenuity will be required of him; and when he has once begun, he must go on and rehabilitate Hippocentaurs and chimeras dire. Gorgons and winged steeds flow in apace, and numberless other inconceivable and portentous natures. And if he is sceptical about them, and would fain reduce them one after another to the rules of probability, this sort of crude philosophy will take up a great deal of time. Now I have no leisure for such enquiries; shall I tell you why? I must first know myself, as the Delphian inscription says; to be curious about that which is not my concern, while I am still in ignorance of my own self, would be ridiculous. And therefore I bid farewell to all this; the common opinion is enough for me. For, as I was saying, I want to know not about this, but about myself: am I a monster more complicated and swollen with passion than the serpent Typho, or a creature of a

gentler and simpler sort, to whom Nature has given a diviner and lowlier destiny? But let me ask you, friend: have we not reached the plane-tree to which you were conducting us?

PHAEDRUS: Yes, this is the tree.

SOCRATES: By Here, a fair resting-place, full of summer sounds and scents. Here is this lofty and spreading plane-tree, and the agnus castus high and clustering, in the fullest blossom and the greatest fragrance; and the stream which flows beneath the plane-tree is deliciously cold to the feet. Judging from the ornaments and images, this must be a spot sacred to Achelous and the Nymphs. How delightful is the breeze:—so very sweet; and there is a sound in the air shrill and summerlike which makes answer to the chorus of the cicadae. But the greatest charm of all is the grass, like a pillow gently sloping to the head. My dear Phaedrus, you have been an admirable guide.

PHAEDRUS: What an incomprehensible being you are, Socrates: when you are in the country, as you say, you really are like some stranger who is led about by a guide. Do you ever cross the border? I rather think that you never venture even outside the gates.

SOCRATES: Very true, my good friend; and I hope that you will excuse me when you hear the reason, which is, that I am a lover of knowledge, and the men who dwell in the city are my teachers, and not the trees or the country. Though I do indeed believe that you have found a spell with which to draw me out of the city into the country, like a hungry cow before whom a bough or a bunch of fruit is waved. For only hold up before me in like manner a book, and you may lead me all round Attica, and over the wide world. And now having arrived, I intend to lie down, and do you choose any posture in which you can read best. Begin.

PHAEDRUS: Listen. You know how matters stand with me; and how, as I conceive, this affair may be arranged for the advantage of both of us. And I maintain that I ought not to fail in my suit, because I am not your lover: for lovers repent of the kindnesses which they have shown when their passion ceases, but to the non-lovers who are free and not under any compulsion, no time of repentance ever comes; for they confer their benefits according to the measure of their ability, in the way which is most conducive to their own interest. Then again, lovers consider how by reason of their love they have neglected their own concerns and rendered service to others: and when to these benefits conferred they add on the troubles which they have endured, they think that they have long ago made to the beloved a very ample return. But the non-lover has no such tormenting recollections; he has never neglected his affairs or quarrelled with his relations; he has no troubles to add up or excuses to invent; and being well rid of all these evils, why should he not freely do what will gratify the beloved? If you say that the lover is more to be esteemed, because his love is thought to be greater; for he is willing to say and do what is hateful to other men, in order to please his beloved;—that, if true, is only a proof that he will prefer any future love to his present, and will injure his old love at the pleasure of the new. And how, in a matter of such infinite importance, can a man be right in trusting himself to one who is afflicted with a malady which no experienced person would attempt to cure, for the patient himself admits that he is not in his right mind, and acknowledges that he is wrong in his mind, but says that he is unable to control himself? And if he came to his right mind, would he ever imagine that the desires were good which he conceived when in his wrong mind? Once more, there are many more non-lovers than lovers; and if you choose the best of the lovers, you will not have many to choose from; but if from the non-lovers, the choice will be larger, and you will be far more likely to find

among them a person who is worthy of your friendship. If public opinion be your dread, and you would avoid reproach, in all probability the lover, who is always thinking that other men are as emulous of him as he is of them, will boast to some one of his successes, and make a show of them openly in the pride of his heart;—he wants others to know that his labour has not been lost; but the non-lover is more his own master, and is desirous of solid good, and not of the opinion of mankind. Again, the lover may be generally noted or seen following the beloved (this is his regular occupation), and whenever they are observed to exchange two words they are supposed to meet about some affair of love either past or in contemplation; but when non-lovers meet, no one asks the reason why, because people know that talking to another is natural, whether friendship or mere pleasure be the motive. Once more, if you fear the fickleness of friendship, consider that in any other case a quarrel might be a mutual calamity; but now, when you have given up what is most precious to you, you will be the greater loser, and therefore, you will have more reason in being afraid of the lover, for his vexations are many, and he is always fancying that every one is leagued against him. Wherefore also he debars his beloved from society; he will not have you intimate with the wealthy, lest they should exceed him in wealth, or with men of education, lest they should be his superiors in understanding; and he is equally afraid of anybody's influence who has any other advantage over himself. If he can persuade you to break with them, you are left without a friend in the world; or if, out of a regard to your own interest, you have more sense than to comply with his desire, you will have to quarrel with him. But those who are non-lovers, and whose success in love is the reward of their merit, will not be jealous of the companions of their beloved, and will rather hate those who refuse to be his associates, thinking that their favourite is slighted by the latter and benefited by the former; for more love than hatred may be expected to come to him out of his friendship with others. Many lovers too have loved the person of a youth before they knew his character or his belongings; so that when their passion has passed away, there is no knowing whether they will continue to be his friends; whereas, in the case of non-lovers who were always friends, the friendship is not lessened by the favours granted; but the recollection of these remains with them, and is an earnest of good things to come.

Further, I say that you are likely to be improved by me, whereas the lover will spoil you. For they praise your words and actions in a wrong way; partly, because they are afraid of offending you, and also, their judgment is weakened by passion. Such are the feats which love exhibits; he makes things painful to the disappointed which give no pain to others; he compels the successful lover to praise what ought not to give him pleasure, and therefore the beloved is to be pitied rather than envied. But if you listen to me, in the first place, I, in my intercourse with you, shall not merely regard present enjoyment, but also future advantage, being not mastered by love, but my own master; nor for small causes taking violent dislikes, but even when the cause is great, slowly laying up little wrath—unintentional offences I shall forgive, and intentional ones I shall try to prevent; and these are the marks of a friendship which will last.

Do you think that a lover only can be a firm friend? reflect:—if this were true, we should set small value on sons, or fathers, or mothers; nor should we ever have loyal friends, for our love of them arises not from passion, but from other associations. Further, if we ought to shower favours on those who are the most eager suitors,—on that principle, we ought always to do good, not to the most virtuous, but to the most needy; for they are the persons who will be most relieved, and will therefore be the most grateful; and when you make a feast you should invite not your friend, but the beggar and the empty soul; for they will love you, and attend you, and come about your doors, and will be the best pleased, and the most grateful, and will invoke many a blessing on your head. Yet surely you

ought not to be granting favours to those who besiege you with prayer, but to those who are best able to reward you; nor to the lover only, but to those who are worthy of love; nor to those who will enjoy the bloom of your youth, but to those who will share their possessions with you in age; nor to those who, having succeeded, will glory in their success to others, but to those who will be modest and tell no tales; nor to those who care about you for a moment only, but to those who will continue your friends through life; nor to those who, when their passion is over, will pick a quarrel with you, but rather to those who, when the charm of youth has left you, will show their own virtue. Remember what I have said; and consider yet this further point: friends admonish the lover under the idea that his way of life is bad, but no one of his kindred ever yet censured the non-lover, or thought that he was ill-advised about his own interests.

'Perhaps you will ask me whether I propose that you should indulge every non-lover. To which I reply that not even the lover would advise you to indulge all lovers, for the indiscriminate favour is less esteemed by the rational recipient, and less easily hidden by him who would escape the censure of the world. Now love ought to be for the advantage of both parties, and for the injury of neither.

'I believe that I have said enough; but if there is anything more which you desire or which in your opinion needs to be supplied, ask and I will answer.'

Now, Socrates, what do you think? Is not the discourse excellent, more especially in the matter of the language?

SOCRATES: Yes, quite admirable; the effect on me was ravishing. And this I owe to you, Phaedrus, for I observed you while reading to be in an ecstasy, and thinking that you are more experienced in these matters than I am, I followed your example, and, like you, my divine darling, I became inspired with a phrenzy.

PHAEDRUS: Indeed, you are pleased to be merry.

SOCRATES: Do you mean that I am not in earnest?

PHAEDRUS: Now don't talk in that way, Socrates, but let me have your real opinion; I adjure you, by Zeus, the god of friendship, to tell me whether you think that any Hellene could have said more or spoken better on the same subject.

SOCRATES: Well, but are you and I expected to praise the sentiments of the author, or only the clearness, and roundness, and finish, and tournure of the language? As to the first I willingly submit to your better judgment, for I am not worthy to form an opinion, having only attended to the rhetorical manner; and I was doubting whether this could have been defended even by Lysias himself; I thought, though I speak under correction, that he repeated himself two or three times, either from want of words or from want of pains; and also, he appeared to me ostentatiously to exult in showing how well he could say the same thing in two or three ways.

PHAEDRUS: Nonsense, Socrates; what you call repetition was the especial merit of the speech; for he omitted no topic of which the subject rightly allowed, and I do not think that any one could have spoken better or more exhaustively.

SOCRATES: There I cannot go along with you. Ancient sages, men and women, who have spoken and written of these things, would rise up in judgment against me, if out of complaisance I assented to you.

PHAEDRUS: Who are they, and where did you hear anything better than this?

SOCRATES: I am sure that I must have heard; but at this moment I do not remember from whom; perhaps from Sappho the fair, or Anacreon the wise; or, possibly, from a prose writer. Why do I say so? Why, because I perceive that my bosom is full, and that I could make another speech as good as that of Lysias, and different. Now I am certain that this is not an invention of my own, who am well aware that I know nothing, and therefore I can only infer that I have been filled through the ears, like a pitcher, from the waters of another, though I have actually forgotten in my stupidity who was my informant.

PHAEDRUS: That is grand:—but never mind where you heard the discourse or from whom; let that be a mystery not to be divulged even at my earnest desire. Only, as you say, promise to make another and better oration, equal in length and entirely new, on the same subject; and I, like the nine Archons, will promise to set up a golden image at Delphi, not only of myself, but of you, and as large as life.

SOCRATES: You are a dear golden ass if you suppose me to mean that Lysias has altogether missed the mark, and that I can make a speech from which all his arguments are to be excluded. The worst of authors will say something which is to the point. Who, for example, could speak on this thesis of yours without praising the discretion of the non-lover and blaming the indiscretion of the lover? These are the commonplaces of the subject which must come in (for what else is there to be said?) and must be allowed and excused; the only merit is in the arrangement of them, for there can be none in the invention; but when you leave the commonplaces, then there may be some originality.

PHAEDRUS: I admit that there is reason in what you say, and I too will be reasonable, and will allow you to start with the premiss that the lover is more disordered in his wits than the non-lover; if in what remains you make a longer and better speech than Lysias, and use other arguments, then I say again, that a statue you shall have of beaten gold, and take your place by the colossal offerings of the Cypselids at Olympia.

SOCRATES: How profoundly in earnest is the lover, because to tease him I lay a finger upon his love! And so, Phaedrus, you really imagine that I am going to improve upon the ingenuity of Lysias?

PHAEDRUS: There I have you as you had me, and you must just speak 'as you best can.' Do not let us exchange 'tu quoque' as in a farce, or compel me to say to you as you said to me, 'I know Socrates as well as I know myself, and he was wanting to speak, but he gave himself airs.' Rather I would have you consider that from this place we stir not until you have unbosomed yourself of the speech; for here are we all alone, and I am stronger, remember, and younger than you:—Wherefore perpend, and do not compel me to use violence.

SOCRATES: But, my sweet Phaedrus, how ridiculous it would be of me to compete with Lysias in an extempore speech! He is a master in his art and I am an untaught man.

PHAEDRUS: You see how matters stand; and therefore let there be no more pretences; for, indeed, I know the word that is irresistible.

SOCRATES: Then don't say it.

PHAEDRUS: Yes, but I will; and my word shall be an oath. 'I say, or rather swear'—but what god will be witness of my oath?—'By this plane-tree I swear, that unless you repeat the discourse here in the face of this very plane-tree, I will never tell you another; never let you have word of another!'

SOCRATES: Villain! I am conquered; the poor lover of discourse has no more to say.

PHAEDRUS: Then why are you still at your tricks?

SOCRATES: I am not going to play tricks now that you have taken the oath, for I cannot allow myself to be starved.

PHAEDRUS: Proceed.

SOCRATES: Shall I tell you what I will do?

PHAEDRUS: What?

SOCRATES: I will veil my face and gallop through the discourse as fast as I can, for if I see you I shall feel ashamed and not know what to say.

PHAEDRUS: Only go on and you may do anything else which you please.

SOCRATES: Come, O ye Muses, melodious, as ye are called, whether you have received this name from the character of your strains, or because the Melians are a musical race, help, O help me in the tale which my good friend here desires me to rehearse, in order that his friend whom he always deemed wise may seem to him to be wiser than ever.

Once upon a time there was a fair boy, or, more properly speaking, a youth; he was very fair and had a great many lovers; and there was one special cunning one, who had persuaded the youth that he did not love him, but he really loved him all the same; and one day when he was paying his addresses to him, he used this very argument—that he ought to accept the non-lover rather than the lover; his words were as follows:—

'All good counsel begins in the same way; a man should know what he is advising about, or his counsel will all come to nought. But people imagine that they know about the nature of things, when they don't know about them, and, not having come to an understanding at first because they think that they know, they end, as might be expected, in contradicting one another and themselves. Now you and I must not be guilty of this fundamental error which we condemn in others; but as our question is whether the lover or non-lover is to be preferred, let us first of all agree in defining the nature and power of love, and then, keeping our eyes upon the definition and to this appealing, let us further enquire whether love brings advantage or disadvantage.

'Every one sees that love is a desire, and we know also that non-lovers desire the beautiful and good. Now in what way is the lover to be distinguished from the non-lover? Let us note that in every one of us there are two guiding and ruling principles which lead us whither they will; one is the natural desire of pleasure, the other is an acquired opinion which aspires after the best; and these two are sometimes in harmony and then again at war, and sometimes the one, sometimes the other conquers. When opinion by the help of reason leads us to the best, the conquering principle is called temperance; but when desire, which is devoid of reason, rules in us and drags us to pleasure, that power of misrule is called excess. Now excess has many names, and many members, and many forms, and any of these forms when very marked gives a name, neither honourable nor creditable, to the bearer of the name. The desire of eating, for example, which gets the better of the higher reason and the other desires, is called gluttony, and he who is possessed by it is called a glutton; the tyrannical desire of drink, which inclines the possessor of the desire to drink, has a name which is only too obvious, and there can be as little doubt by what name any other appetite of the same family would be called;—it will be the name of that which happens to be dominant. And now I think that you will perceive the drift of my discourse; but as every spoken word is in a manner plainer than the unspoken, I had better say further that the irrational desire which overcomes the tendency of opinion towards right, and is led away to the enjoyment of beauty, and especially of personal beauty, by the desires which are her own kindred—that supreme desire, I say, which by leading conquers and by the force of passion is reinforced, from this very force, receiving a name, is called love (erromenos eros).'

And now, dear Phaedrus, I shall pause for an instant to ask whether you do not think me, as I appear to myself, inspired?

PHAEDRUS: Yes, Socrates, you seem to have a very unusual flow of words.

SOCRATES: Listen to me, then, in silence; for surely the place is holy; so that you must not wonder, if, as I proceed, I appear to be in a divine fury, for already I am getting into dithyrambics.

PHAEDRUS: Nothing can be truer.

SOCRATES: The responsibility rests with you. But hear what follows, and perhaps the fit may be averted; all is in their hands above. I will go on talking to my youth. Listen:—

Thus, my friend, we have declared and defined the nature of the subject. Keeping the definition in view, let us now enquire what advantage or disadvantage is likely to ensue from the lover or the non-lover to him who accepts their advances.

He who is the victim of his passions and the slave of pleasure will of course desire to make his beloved as agreeable to himself as possible. Now to him who has a mind diseased anything is agreeable which is not opposed to him, but that which is equal or superior is hateful to him, and therefore the lover will not brook any superiority or equality on the part of his beloved; he is always employed in reducing him to inferiority. And the ignorant is the inferior of the wise, the coward of the brave, the slow of speech of the speaker, the dull of the clever. These, and not these only, are the mental defects of the beloved;—defects which, when implanted by nature, are necessarily a delight to the lover, and when not implanted, he must contrive to implant them in him, if he would not be deprived of his fleeting joy. And therefore he cannot help being jealous, and will debar his beloved

from the advantages of society which would make a man of him, and especially from that society which would have given him wisdom, and thereby he cannot fail to do him great harm. That is to say, in his excessive fear lest he should come to be despised in his eyes he will be compelled to banish from him divine philosophy; and there is no greater injury which he can inflict upon him than this. He will contrive that his beloved shall be wholly ignorant, and in everything shall look to him; he is to be the delight of the lover's heart, and a curse to himself. Verily, a lover is a profitable guardian and associate for him in all that relates to his mind.

Let us next see how his master, whose law of life is pleasure and not good, will keep and train the body of his servant. Will he not choose a beloved who is delicate rather than sturdy and strong? One brought up in shady bowers and not in the bright sun, a stranger to manly exercises and the sweat of toil, accustomed only to a soft and luxurious diet, instead of the hues of health having the colours of paint and ornament, and the rest of a piece?—such a life as any one can imagine and which I need not detail at length. But I may sum up all that I have to say in a word, and pass on. Such a person in war, or in any of the great crises of life, will be the anxiety of his friends and also of his lover, and certainly not the terror of his enemies; which nobody can deny.

And now let us tell what advantage or disadvantage the beloved will receive from the guardianship and society of his lover in the matter of his property; this is the next point to be considered. The lover will be the first to see what, indeed, will be sufficiently evident to all men, that he desires above all things to deprive his beloved of his dearest and best and holiest possessions, father, mother, kindred, friends, of all whom he thinks may be hinderers or reprovers of their most sweet converse; he will even cast a jealous eye upon his gold and silver or other property, because these make him a less easy prey, and when caught less manageable; hence he is of necessity displeased at his possession of them and rejoices at their loss; and he would like him to be wifeless, childless, homeless, as well; and the longer the better, for the longer he is all this, the longer he will enjoy him.

There are some sort of animals, such as flatterers, who are dangerous and mischievous enough, and yet nature has mingled a temporary pleasure and grace in their composition. You may say that a courtesan is hurtful, and disapprove of such creatures and their practices, and yet for the time they are very pleasant. But the lover is not only hurtful to his love; he is also an extremely disagreeable companion. The old proverb says that 'birds of a feather flock together'; I suppose that equality of years inclines them to the same pleasures, and similarity begets friendship; yet you may have more than enough even of this; and verily constraint is always said to be grievous. Now the lover is not only unlike his beloved, but he forces himself upon him. For he is old and his love is young, and neither day nor night will he leave him if he can help; necessity and the sting of desire drive him on, and allure him with the pleasure which he receives from seeing, hearing, touching, perceiving him in every way. And therefore he is delighted to fasten upon him and to minister to him. But what pleasure or consolation can the beloved be receiving all this time? Must he not feel the extremity of disgust when he looks at an old shrivelled face and the remainder to match, which even in a description is disagreeable, and quite detestable when he is forced into daily contact with his lover; moreover he is jealously watched and guarded against everything and everybody, and has to hear misplaced and exaggerated praises of himself, and censures equally inappropriate, which are intolerable when the man is sober, and, besides being intolerable, are published all over the world in all their indelicacy and wearisomeness when he is drunk.

And not only while his love continues is he mischievous and unpleasant, but when his love ceases he becomes a perfidious enemy of him on whom he showered his oaths and prayers and promises, and yet could hardly prevail upon him to tolerate the tedium of his company even from motives of interest. The hour of payment arrives, and now he is the servant of another master; instead of love and infatuation, wisdom and temperance are his bosom's lords; but the beloved has not discovered the change which has taken place in him, when he asks for a return and recalls to his recollection former sayings and doings; he believes himself to be speaking to the same person, and the other, not having the courage to confess the truth, and not knowing how to fulfil the oaths and promises which he made when under the dominion of folly, and having now grown wise and temperate, does not want to do as he did or to be as he was before. And so he runs away and is constrained to be a defaulter; the oyster-shell (In allusion to a game in which two parties fled or pursued according as an oyster-shell which was thrown into the air fell with the dark or light side uppermost.) has fallen with the other side uppermost—he changes pursuit into flight, while the other is compelled to follow him with passion and imprecation, not knowing that he ought never from the first to have accepted a demented lover instead of a sensible non-lover; and that in making such a choice he was giving himself up to a faithless, morose, envious, disagreeable being, hurtful to his estate, hurtful to his bodily health, and still more hurtful to the cultivation of his mind, than which there neither is nor ever will be anything more honoured in the eyes both of gods and men. Consider this, fair youth, and know that in the friendship of the lover there is no real kindness; he has an appetite and wants to feed upon you:

'As wolves love lambs so lovers love their loves.'

But I told you so, I am speaking in verse, and therefore I had better make an end; enough.

PHAEDRUS: I thought that you were only half-way and were going to make a similar speech about all the advantages of accepting the non-lover. Why do you not proceed?

SOCRATES: Does not your simplicity observe that I have got out of dithyrambics into heroics, when only uttering a censure on the lover? And if I am to add the praises of the non-lover what will become of me? Do you not perceive that I am already overtaken by the Nymphs to whom you have mischievously exposed me? And therefore I will only add that the non-lover has all the advantages in which the lover is accused of being deficient. And now I will say no more; there has been enough of both of them. Leaving the tale to its fate, I will cross the river and make the best of my way home, lest a worse thing be inflicted upon me by you.

PHAEDRUS: Not yet, Socrates; not until the heat of the day has passed; do you not see that the hour is almost noon? there is the midday sun standing still, as people say, in the meridian. Let us rather stay and talk over what has been said, and then return in the cool.

SOCRATES: Your love of discourse, Phaedrus, is superhuman, simply marvellous, and I do not believe that there is any one of your contemporaries who has either made or in one way or another has compelled others to make an equal number of speeches. I would except Simmias the Theban, but all the rest are far behind you. And now I do verily believe that you have been the cause of another.

PHAEDRUS: That is good news. But what do you mean?

SOCRATES: I mean to say that as I was about to cross the stream the usual sign was given to me,—that sign which always forbids, but never bids, me to do anything which I am going to do; and I thought that I heard a voice saying in my ear that I had been guilty of impiety, and that I must not go away until I had made an atonement. Now I am a diviner, though not a very good one, but I have enough religion for my own use, as you might say of a bad writer—his writing is good enough for him; and I am beginning to see that I was in error. O my friend, how prophetic is the human soul! At the time I had a sort of misgiving, and, like Ibycus, 'I was troubled; I feared that I might be buying honour from men at the price of sinning against the gods.' Now I recognize my error.

PHAEDRUS: What error?

SOCRATES: That was a dreadful speech which you brought with you, and you made me utter one as bad.

PHAEDRUS: How so?

SOCRATES: It was foolish, I say,—to a certain extent, impious; can anything be more dreadful?

PHAEDRUS: Nothing, if the speech was really such as you describe.

SOCRATES: Well, and is not Eros the son of Aphrodite, and a god?

PHAEDRUS: So men say.

SOCRATES: But that was not acknowledged by Lysias in his speech, nor by you in that other speech which you by a charm drew from my lips. For if love be, as he surely is, a divinity, he cannot be evil. Yet this was the error of both the speeches. There was also a simplicity about them which was refreshing; having no truth or honesty in them, nevertheless they pretended to be something, hoping to succeed in deceiving the manikins of earth and gain celebrity among them. Wherefore I must have a purgation. And I bethink me of an ancient purgation of mythological error which was devised, not by Homer, for he never had the wit to discover why he was blind, but by Stesichorus, who was a philosopher and knew the reason why; and therefore, when he lost his eyes, for that was the penalty which was inflicted upon him for reviling the lovely Helen, he at once purged himself. And the purgation was a recantation, which began thus,—

'False is that word of mine—the truth is that thou didst not embark in
ships, nor ever go to the walls of Troy;'

and when he had completed his poem, which is called 'the recantation,' immediately his sight returned to him. Now I will be wiser than either Stesichorus or Homer, in that I am going to make my recantation for reviling love before I suffer; and this I will attempt, not as before, veiled and ashamed, but with forehead bold and bare.

PHAEDRUS: Nothing could be more agreeable to me than to hear you say so.

SOCRATES: Only think, my good Phaedrus, what an utter want of delicacy was shown in the two discourses; I mean, in my own and in that which you recited out of the book. Would not any one who was himself of a noble and gentle nature, and who loved or ever had loved a nature like his own, when we tell of the petty causes of lovers' jealousies, and of their exceeding animosities, and of the injuries which they do to their beloved, have imagined that our ideas of love were taken from some haunt of sailors to which good manners were unknown—he would certainly never have admitted the justice of our censure?

PHAEDRUS: I dare say not, Socrates.

SOCRATES: Therefore, because I blush at the thought of this person, and also because I am afraid of Love himself, I desire to wash the brine out of my ears with water from the spring; and I would counsel Lysias not to delay, but to write another discourse, which shall prove that 'ceteris paribus' the lover ought to be accepted rather than the non-lover.

PHAEDRUS: Be assured that he shall. You shall speak the praises of the lover, and Lysias shall be compelled by me to write another discourse on the same theme.

SOCRATES: You will be true to your nature in that, and therefore I believe you.

PHAEDRUS: Speak, and fear not.

SOCRATES: But where is the fair youth whom I was addressing before, and who ought to listen now; lest, if he hear me not, he should accept a non-lover before he knows what he is doing?

PHAEDRUS: He is close at hand, and always at your service.

SOCRATES: Know then, fair youth, that the former discourse was the word of Phaedrus, the son of Vain Man, who dwells in the city of Myrrhina (Myrrhinusius). And this which I am about to utter is the recantation of Stesichorus the son of Godly Man (Euphemus), who comes from the town of Desire (Himera), and is to the following effect: 'I told a lie when I said' that the beloved ought to accept the non-lover when he might have the lover, because the one is sane, and the other mad. It might be so if madness were simply an evil; but there is also a madness which is a divine gift, and the source of the chiefest blessings granted to men. For prophecy is a madness, and the prophetess at Delphi and the priestesses at Dodona when out of their senses have conferred great benefits on Hellas, both in public and private life, but when in their senses few or none. And I might also tell you how the Sibyl and other inspired persons have given to many an one many an intimation of the future which has saved them from falling. But it would be tedious to speak of what every one knows.

There will be more reason in appealing to the ancient inventors of names (compare Cratylus), who would never have connected prophecy (mantike) which foretells the future and is the noblest of arts, with madness (manike), or called them both by the same name, if they had deemed madness to be a disgrace or dishonour;—they must have thought that there was an inspired madness which was a noble thing; for the two words, mantike and manike, are really the same, and the letter tau is only a modern and tasteless insertion. And this is confirmed by the name which was given by them to the rational investigation of futurity, whether made by the help of birds or of other signs—this, for as much

as it is an art which supplies from the reasoning faculty mind (nous) and information (istoria) to human thought (oiesis) they originally termed oionoistike, but the word has been lately altered and made sonorous by the modern introduction of the letter Omega (oionoistike and oionistike), and in proportion as prophecy (mantike) is more perfect and august than augury, both in name and fact, in the same proportion, as the ancients testify, is madness superior to a sane mind (sophrosune) for the one is only of human, but the other of divine origin. Again, where plagues and mightiest woes have bred in certain families, owing to some ancient blood-guiltiness, there madness has entered with holy prayers and rites, and by inspired utterances found a way of deliverance for those who are in need; and he who has part in this gift, and is truly possessed and duly out of his mind, is by the use of purifications and mysteries made whole and exempt from evil, future as well as present, and has a release from the calamity which was afflicting him. The third kind is the madness of those who are possessed by the Muses; which taking hold of a delicate and virgin soul, and there inspiring frenzy, awakens lyrical and all other numbers; with these adorning the myriad actions of ancient heroes for the instruction of posterity. But he who, having no touch of the Muses' madness in his soul, comes to the door and thinks that he will get into the temple by the help of art—he, I say, and his poetry are not admitted; the sane man disappears and is nowhere when he enters into rivalry with the madman.

I might tell of many other noble deeds which have sprung from inspired madness. And therefore, let no one frighten or flutter us by saying that the temperate friend is to be chosen rather than the inspired, but let him further show that love is not sent by the gods for any good to lover or beloved; if he can do so we will allow him to carry off the palm. And we, on our part, will prove in answer to him that the madness of love is the greatest of heaven's blessings, and the proof shall be one which the wise will receive, and the witling disbelieve. But first of all, let us view the affections and actions of the soul divine and human, and try to ascertain the truth about them. The beginning of our proof is as follows:—

(Translated by Cic. Tus. Quaest.) The soul through all her being is immortal, for that which is ever in motion is immortal; but that which moves another and is moved by another, in ceasing to move ceases also to live. Only the self-moving, never leaving self, never ceases to move, and is the fountain and beginning of motion to all that moves besides. Now, the beginning is unbegotten, for that which is begotten has a beginning; but the beginning is begotten of nothing, for if it were begotten of something, then the begotten would not come from a beginning. But if unbegotten, it must also be indestructible; for if beginning were destroyed, there could be no beginning out of anything, nor anything out of a beginning; and all things must have a beginning. And therefore the self-moving is the beginning of motion; and this can neither be destroyed nor begotten, else the whole heavens and all creation would collapse and stand still, and never again have motion or birth. But if the self-moving is proved to be immortal, he who affirms that self-motion is the very idea and essence of the soul will not be put to confusion. For the body which is moved from without is soulless; but that which is moved from within has a soul, for such is the nature of the soul. But if this be true, must not the soul be the self-moving, and therefore of necessity unbegotten and immortal? Enough of the soul's immortality.

Of the nature of the soul, though her true form be ever a theme of large and more than mortal discourse, let me speak briefly, and in a figure. And let the figure be composite—a pair of winged horses and a charioteer. Now the winged horses and the charioteers of the gods are all of them noble and of noble descent, but those of other races are mixed; the human charioteer drives his in a pair;

and one of them is noble and of noble breed, and the other is ignoble and of ignoble breed; and the driving of them of necessity gives a great deal of trouble to him. I will endeavour to explain to you in what way the mortal differs from the immortal creature. The soul in her totality has the care of inanimate being everywhere, and traverses the whole heaven in divers forms appearing—when perfect and fully winged she soars upward, and orders the whole world; whereas the imperfect soul, losing her wings and drooping in her flight at last settles on the solid ground—there, finding a home, she receives an earthly frame which appears to be self-moved, but is really moved by her power; and this composition of soul and body is called a living and mortal creature. For immortal no such union can be reasonably believed to be; although fancy, not having seen nor surely known the nature of God, may imagine an immortal creature having both a body and also a soul which are united throughout all time. Let that, however, be as God wills, and be spoken of acceptably to him. And now let us ask the reason why the soul loses her wings!

The wing is the corporeal element which is most akin to the divine, and which by nature tends to soar aloft and carry that which gravitates downwards into the upper region, which is the habitation of the gods. The divine is beauty, wisdom, goodness, and the like; and by these the wing of the soul is nourished, and grows apace; but when fed upon evil and foulness and the opposite of good, wastes and falls away. Zeus, the mighty lord, holding the reins of a winged chariot, leads the way in heaven, ordering all and taking care of all; and there follows him the array of gods and demi-gods, marshalled in eleven bands; Hestia alone abides at home in the house of heaven; of the rest they who are reckoned among the princely twelve march in their appointed order. They see many blessed sights in the inner heaven, and there are many ways to and fro, along which the blessed gods are passing, every one doing his own work; he may follow who will and can, for jealousy has no place in the celestial choir. But when they go to banquet and festival, then they move up the steep to the top of the vault of heaven. The chariots of the gods in even poise, obeying the rein, glide rapidly; but the others labour, for the vicious steed goes heavily, weighing down the charioteer to the earth when his steed has not been thoroughly trained:—and this is the hour of agony and extremest conflict for the soul. For the immortals, when they are at the end of their course, go forth and stand upon the outside of heaven, and the revolution of the spheres carries them round, and they behold the things beyond. But of the heaven which is above the heavens, what earthly poet ever did or ever will sing worthily? It is such as I will describe; for I must dare to speak the truth, when truth is my theme. There abides the very being with which true knowledge is concerned; the colourless, formless, intangible essence, visible only to mind, the pilot of the soul. The divine intelligence, being nurtured upon mind and pure knowledge, and the intelligence of every soul which is capable of receiving the food proper to it, rejoices at beholding reality, and once more gazing upon truth, is replenished and made glad, until the revolution of the worlds brings her round again to the same place. In the revolution she beholds justice, and temperance, and knowledge absolute, not in the form of generation or of relation, which men call existence, but knowledge absolute in existence absolute; and beholding the other true existences in like manner, and feasting upon them, she passes down into the interior of the heavens and returns home; and there the charioteer putting up his horses at the stall, gives them ambrosia to eat and nectar to drink.

Such is the life of the gods; but of other souls, that which follows God best and is likest to him lifts the head of the charioteer into the outer world, and is carried round in the revolution, troubled indeed by the steeds, and with difficulty beholding true being; while another only rises and falls, and sees, and again fails to see by reason of the unruliness of the steeds. The rest of the souls are also longing

after the upper world and they all follow, but not being strong enough they are carried round below the surface, plunging, treading on one another, each striving to be first; and there is confusion and perspiration and the extremity of effort; and many of them are lamed or have their wings broken through the ill-driving of the charioteers; and all of them after a fruitless toil, not having attained to the mysteries of true being, go away, and feed upon opinion. The reason why the souls exhibit this exceeding eagerness to behold the plain of truth is that pasturage is found there, which is suited to the highest part of the soul; and the wing on which the soul soars is nourished with this. And there is a law of Destiny, that the soul which attains any vision of truth in company with a god is preserved from harm until the next period, and if attaining always is always unharmed. But when she is unable to follow, and fails to behold the truth, and through some ill-hap sinks beneath the double load of forgetfulness and vice, and her wings fall from her and she drops to the ground, then the law ordains that this soul shall at her first birth pass, not into any other animal, but only into man; and the soul which has seen most of truth shall come to the birth as a philosopher, or artist, or some musical and loving nature; that which has seen truth in the second degree shall be some righteous king or warrior chief; the soul which is of the third class shall be a politician, or economist, or trader; the fourth shall be a lover of gymnastic toils, or a physician; the fifth shall lead the life of a prophet or hierophant; to the sixth the character of poet or some other imitative artist will be assigned; to the seventh the life of an artisan or husbandman; to the eighth that of a sophist or demagogue; to the ninth that of a tyrant—all these are states of probation, in which he who does righteously improves, and he who does unrighteously, deteriorates his lot.

Ten thousand years must elapse before the soul of each one can return to the place from whence she came, for she cannot grow her wings in less; only the soul of a philosopher, guileless and true, or the soul of a lover, who is not devoid of philosophy, may acquire wings in the third of the recurring periods of a thousand years; he is distinguished from the ordinary good man who gains wings in three thousand years:—and they who choose this life three times in succession have wings given them, and go away at the end of three thousand years. But the others (The philosopher alone is not subject to judgment (krisis), for he has never lost the vision of truth.) receive judgment when they have completed their first life, and after the judgment they go, some of them to the houses of correction which are under the earth, and are punished; others to some place in heaven whither they are lightly borne by justice, and there they live in a manner worthy of the life which they led here when in the form of men. And at the end of the first thousand years the good souls and also the evil souls both come to draw lots and choose their second life, and they may take any which they please. The soul of a man may pass into the life of a beast, or from the beast return again into the man. But the soul which has never seen the truth will not pass into the human form. For a man must have intelligence of universals, and be able to proceed from the many particulars of sense to one conception of reason;—this is the recollection of those things which our soul once saw while following God—when regardless of that which we now call being she raised her head up towards the true being. And therefore the mind of the philosopher alone has wings; and this is just, for he is always, according to the measure of his abilities, clinging in recollection to those things in which God abides, and in beholding which He is what He is. And he who employs aright these memories is ever being initiated into perfect mysteries and alone becomes truly perfect. But, as he forgets earthly interests and is rapt in the divine, the vulgar deem him mad, and rebuke him; they do not see that he is inspired.

Thus far I have been speaking of the fourth and last kind of madness, which is imputed to him who, when he sees the beauty of earth, is transported with the recollection of the true beauty; he would like

to fly away, but he cannot; he is like a bird fluttering and looking upward and careless of the world below; and he is therefore thought to be mad. And I have shown this of all inspirations to be the noblest and highest and the offspring of the highest to him who has or shares in it, and that he who loves the beautiful is called a lover because he partakes of it. For, as has been already said, every soul of man has in the way of nature beheld true being; this was the condition of her passing into the form of man. But all souls do not easily recall the things of the other world; they may have seen them for a short time only, or they may have been unfortunate in their earthly lot, and, having had their hearts turned to unrighteousness through some corrupting influence, they may have lost the memory of the holy things which once they saw. Few only retain an adequate remembrance of them; and they, when they behold here any image of that other world, are rapt in amazement; but they are ignorant of what this rapture means, because they do not clearly perceive. For there is no light of justice or temperance or any of the higher ideas which are precious to souls in the earthly copies of them: they are seen through a glass dimly; and there are few who, going to the images, behold in them the realities, and these only with difficulty. There was a time when with the rest of the happy band they saw beauty shining in brightness,—we philosophers following in the train of Zeus, others in company with other gods; and then we beheld the beatific vision and were initiated into a mystery which may be truly called most blessed, celebrated by us in our state of innocence, before we had any experience of evils to come, when we were admitted to the sight of apparitions innocent and simple and calm and happy, which we beheld shining in pure light, pure ourselves and not yet enshrined in that living tomb which we carry about, now that we are imprisoned in the body, like an oyster in his shell. Let me linger over the memory of scenes which have passed away.

But of beauty, I repeat again that we saw her there shining in company with the celestial forms; and coming to earth we find her here too, shining in clearness through the clearest aperture of sense. For sight is the most piercing of our bodily senses; though not by that is wisdom seen; her loveliness would have been transporting if there had been a visible image of her, and the other ideas, if they had visible counterparts, would be equally lovely. But this is the privilege of beauty, that being the loveliest she is also the most palpable to sight. Now he who is not newly initiated or who has become corrupted, does not easily rise out of this world to the sight of true beauty in the other; he looks only at her earthly namesake, and instead of being awed at the sight of her, he is given over to pleasure, and like a brutish beast he rushes on to enjoy and beget; he consorts with wantonness, and is not afraid or ashamed of pursuing pleasure in violation of nature. But he whose initiation is recent, and who has been the spectator of many glories in the other world, is amazed when he sees any one having a godlike face or form, which is the expression of divine beauty; and at first a shudder runs through him, and again the old awe steals over him; then looking upon the face of his beloved as of a god he reverences him, and if he were not afraid of being thought a downright madman, he would sacrifice to his beloved as to the image of a god; then while he gazes on him there is a sort of reaction, and the shudder passes into an unusual heat and perspiration; for, as he receives the effluence of beauty through the eyes, the wing moistens and he warms. And as he warms, the parts out of which the wing grew, and which had been hitherto closed and rigid, and had prevented the wing from shooting forth, are melted, and as nourishment streams upon him, the lower end of the wing begins to swell and grow from the root upwards; and the growth extends under the whole soul—for once the whole was winged. During this process the whole soul is all in a state of ebullition and effervescence,—which may be compared to the irritation and uneasiness in the gums at the time of cutting teeth,—bubbles up, and has a feeling of uneasiness and tickling; but when in like manner the soul is beginning to grow wings, the beauty of the beloved meets her eye and she receives the sensible warm motion of

particles which flow towards her, therefore called emotion (imeros), and is refreshed and warmed by them, and then she ceases from her pain with joy. But when she is parted from her beloved and her moisture fails, then the orifices of the passage out of which the wing shoots dry up and close, and intercept the germ of the wing; which, being shut up with the emotion, throbbing as with the pulsations of an artery, pricks the aperture which is nearest, until at length the entire soul is pierced and maddened and pained, and at the recollection of beauty is again delighted. And from both of them together the soul is oppressed at the strangeness of her condition, and is in a great strait and excitement, and in her madness can neither sleep by night nor abide in her place by day. And wherever she thinks that she will behold the beautiful one, thither in her desire she runs. And when she has seen him, and bathed herself in the waters of beauty, her constraint is loosened, and she is refreshed, and has no more pangs and pains; and this is the sweetest of all pleasures at the time, and is the reason why the soul of the lover will never forsake his beautiful one, whom he esteems above all; he has forgotten mother and brethren and companions, and he thinks nothing of the neglect and loss of his property; the rules and proprieties of life, on which he formerly prided himself, he now despises, and is ready to sleep like a servant, wherever he is allowed, as near as he can to his desired one, who is the object of his worship, and the physician who can alone assuage the greatness of his pain. And this state, my dear imaginary youth to whom I am talking, is by men called love, and among the gods has a name at which you, in your simplicity, may be inclined to mock; there are two lines in the apocryphal writings of Homer in which the name occurs. One of them is rather outrageous, and not altogether metrical. They are as follows:

'Mortals call him fluttering love, But the immortals call him winged one, Because the growing of wings (Or, reading pterothoiton, 'the movement of wings.') is a necessity to him.'

You may believe this, but not unless you like. At any rate the loves of lovers and their causes are such as I have described.

Now the lover who is taken to be the attendant of Zeus is better able to bear the winged god, and can endure a heavier burden; but the attendants and companions of Ares, when under the influence of love, if they fancy that they have been at all wronged, are ready to kill and put an end to themselves and their beloved. And he who follows in the train of any other god, while he is unspoiled and the impression lasts, honours and imitates him, as far as he is able; and after the manner of his God he behaves in his intercourse with his beloved and with the rest of the world during the first period of his earthly existence. Every one chooses his love from the ranks of beauty according to his character, and this he makes his god, and fashions and adorns as a sort of image which he is to fall down and worship. The followers of Zeus desire that their beloved should have a soul like him; and therefore they seek out some one of a philosophical and imperial nature, and when they have found him and loved him, they do all they can to confirm such a nature in him, and if they have no experience of such a disposition hitherto, they learn of any one who can teach them, and themselves follow in the same way. And they have the less difficulty in finding the nature of their own god in themselves, because they have been compelled to gaze intensely on him; their recollection clings to him, and they become possessed of him, and receive from him their character and disposition, so far as man can participate in God. The qualities of their god they attribute to the beloved, wherefore they love him all the more, and if, like the Bacchic Nymphs, they draw inspiration from Zeus, they pour out their own fountain upon him, wanting to make him as like as possible to their own god. But those who are the followers of Here seek a royal love, and when they have found him they do just the same with him;

and in like manner the followers of Apollo, and of every other god walking in the ways of their god, seek a love who is to be made like him whom they serve, and when they have found him, they themselves imitate their god, and persuade their love to do the same, and educate him into the manner and nature of the god as far as they each can; for no feelings of envy or jealousy are entertained by them towards their beloved, but they do their utmost to create in him the greatest likeness of themselves and of the god whom they honour. Thus fair and blissful to the beloved is the desire of the inspired lover, and the initiation of which I speak into the mysteries of true love, if he be captured by the lover and their purpose is effected. Now the beloved is taken captive in the following manner:—

As I said at the beginning of this tale, I divided each soul into three—two horses and a charioteer; and one of the horses was good and the other bad: the division may remain, but I have not yet explained in what the goodness or badness of either consists, and to that I will now proceed. The right-hand horse is upright and cleanly made; he has a lofty neck and an aquiline nose; his colour is white, and his eyes dark; he is a lover of honour and modesty and temperance, and the follower of true glory; he needs no touch of the whip, but is guided by word and admonition only. The other is a crooked lumbering animal, put together anyhow; he has a short thick neck; he is flat-faced and of a dark colour, with grey eyes and blood-red complexion (Or with grey and blood-shot eyes.); the mate of insolence and pride, shag-eared and deaf, hardly yielding to whip and spur. Now when the charioteer beholds the vision of love, and has his whole soul warmed through sense, and is full of the prickings and ticklings of desire, the obedient steed, then as always under the government of shame, refrains from leaping on the beloved; but the other, heedless of the pricks and of the blows of the whip, plunges and runs away, giving all manner of trouble to his companion and the charioteer, whom he forces to approach the beloved and to remember the joys of love. They at first indignantly oppose him and will not be urged on to do terrible and unlawful deeds; but at last, when he persists in plaguing them, they yield and agree to do as he bids them. And now they are at the spot and behold the flashing beauty of the beloved; which when the charioteer sees, his memory is carried to the true beauty, whom he beholds in company with Modesty like an image placed upon a holy pedestal. He sees her, but he is afraid and falls backwards in adoration, and by his fall is compelled to pull back the reins with such violence as to bring both the steeds on their haunches, the one willing and unresisting, the unruly one very unwilling; and when they have gone back a little, the one is overcome with shame and wonder, and his whole soul is bathed in perspiration; the other, when the pain is over which the bridle and the fall had given him, having with difficulty taken breath, is full of wrath and reproaches, which he heaps upon the charioteer and his fellow-steed, for want of courage and manhood, declaring that they have been false to their agreement and guilty of desertion. Again they refuse, and again he urges them on, and will scarce yield to their prayer that he would wait until another time. When the appointed hour comes, they make as if they had forgotten, and he reminds them, fighting and neighing and dragging them on, until at length he on the same thoughts intent, forces them to draw near again. And when they are near he stoops his head and puts up his tail, and takes the bit in his teeth and pulls shamelessly. Then the charioteer is worse off than ever; he falls back like a racer at the barrier, and with a still more violent wrench drags the bit out of the teeth of the wild steed and covers his abusive tongue and jaws with blood, and forces his legs and haunches to the ground and punishes him sorely. And when this has happened several times and the villain has ceased from his wanton way, he is tamed and humbled, and follows the will of the charioteer, and when he sees the beautiful one he is ready to die of fear. And from that time forward the soul of the lover follows the beloved in modesty and holy fear.

And so the beloved who, like a god, has received every true and loyal service from his lover, not in pretence but in reality, being also himself of a nature friendly to his admirer, if in former days he has blushed to own his passion and turned away his lover, because his youthful companions or others slanderously told him that he would be disgraced, now as years advance, at the appointed age and time, is led to receive him into communion. For fate which has ordained that there shall be no friendship among the evil has also ordained that there shall ever be friendship among the good. And the beloved when he has received him into communion and intimacy, is quite amazed at the good-will of the lover; he recognises that the inspired friend is worth all other friends or kinsmen; they have nothing of friendship in them worthy to be compared with his. And when this feeling continues and he is nearer to him and embraces him, in gymnastic exercises and at other times of meeting, then the fountain of that stream, which Zeus when he was in love with Ganymede named Desire, overflows upon the lover, and some enters into his soul, and some when he is filled flows out again; and as a breeze or an echo rebounds from the smooth rocks and returns whence it came, so does the stream of beauty, passing through the eyes which are the windows of the soul, come back to the beautiful one; there arriving and quickening the passages of the wings, watering them and inclining them to grow, and filling the soul of the beloved also with love. And thus he loves, but he knows not what; he does not understand and cannot explain his own state; he appears to have caught the infection of blindness from another; the lover is his mirror in whom he is beholding himself, but he is not aware of this. When he is with the lover, both cease from their pain, but when he is away then he longs as he is longed for, and has love's image, love for love (Anteros) lodging in his breast, which he calls and believes to be not love but friendship only, and his desire is as the desire of the other, but weaker; he wants to see him, touch him, kiss him, embrace him, and probably not long afterwards his desire is accomplished. When they meet, the wanton steed of the lover has a word to say to the charioteer; he would like to have a little pleasure in return for many pains, but the wanton steed of the beloved says not a word, for he is bursting with passion which he understands not;—he throws his arms round the lover and embraces him as his dearest friend; and, when they are side by side, he is not in a state in which he can refuse the lover anything, if he ask him; although his fellow-steed and the charioteer oppose him with the arguments of shame and reason. After this their happiness depends upon their self-control; if the better elements of the mind which lead to order and philosophy prevail, then they pass their life here in happiness and harmony—masters of themselves and orderly—enslaving the vicious and emancipating the virtuous elements of the soul; and when the end comes, they are light and winged for flight, having conquered in one of the three heavenly or truly Olympian victories; nor can human discipline or divine inspiration confer any greater blessing on man than this. If, on the other hand, they leave philosophy and lead the lower life of ambition, then probably, after wine or in some other careless hour, the two wanton animals take the two souls when off their guard and bring them together, and they accomplish that desire of their hearts which to the many is bliss; and this having once enjoyed they continue to enjoy, yet rarely because they have not the approval of the whole soul. They too are dear, but not so dear to one another as the others, either at the time of their love or afterwards. They consider that they have given and taken from each other the most sacred pledges, and they may not break them and fall into enmity. At last they pass out of the body, unwinged, but eager to soar, and thus obtain no mean reward of love and madness. For those who have once begun the heavenward pilgrimage may not go down again to darkness and the journey beneath the earth, but they live in light always; happy companions in their pilgrimage, and when the time comes at which they receive their wings they have the same plumage because of their love.

Thus great are the heavenly blessings which the friendship of a lover will confer upon you, my youth. Whereas the attachment of the non-lover, which is alloyed with a worldly prudence and has worldly and niggardly ways of doling out benefits, will breed in your soul those vulgar qualities which the populace applaud, will send you bowling round the earth during a period of nine thousand years, and leave you a fool in the world below.

And thus, dear Eros, I have made and paid my recantation, as well and as fairly as I could; more especially in the matter of the poetical figures which I was compelled to use, because Phaedrus would have them. And now forgive the past and accept the present, and be gracious and merciful to me, and do not in thine anger deprive me of sight, or take from me the art of love which thou hast given me, but grant that I may be yet more esteemed in the eyes of the fair. And if Phaedrus or I myself said anything rude in our first speeches, blame Lysias, who is the father of the brat, and let us have no more of his progeny; bid him study philosophy, like his brother Polemarchus; and then his lover Phaedrus will no longer halt between two opinions, but will dedicate himself wholly to love and to philosophical discourses.

PHAEDRUS: I join in the prayer, Socrates, and say with you, if this be for my good, may your words come to pass. But why did you make your second oration so much finer than the first? I wonder why. And I begin to be afraid that I shall lose conceit of Lysias, and that he will appear tame in comparison, even if he be willing to put another as fine and as long as yours into the field, which I doubt. For quite lately one of your politicians was abusing him on this very account; and called him a 'speech writer' again and again. So that a feeling of pride may probably induce him to give up writing speeches.

SOCRATES: What a very amusing notion! But I think, my young man, that you are much mistaken in your friend if you imagine that he is frightened at a little noise; and, possibly, you think that his assailant was in earnest?

PHAEDRUS: I thought, Socrates, that he was. And you are aware that the greatest and most influential statesmen are ashamed of writing speeches and leaving them in a written form, lest they should be called Sophists by posterity.

SOCRATES: You seem to be unconscious, Phaedrus, that the 'sweet elbow' (A proverb, like 'the grapes are sour,' applied to pleasures which cannot be had, meaning sweet things which, like the elbow, are out of the reach of the mouth. The promised pleasure turns out to be a long and tedious affair.) of the proverb is really the long arm of the Nile. And you appear to be equally unaware of the fact that this sweet elbow of theirs is also a long arm. For there is nothing of which our great politicians are so fond as of writing speeches and bequeathing them to posterity. And they add their admirers' names at the top of the writing, out of gratitude to them.

PHAEDRUS: What do you mean? I do not understand.

SOCRATES: Why, do you not know that when a politician writes, he begins with the names of his approvers?

PHAEDRUS: How so?

SOCRATES: Why, he begins in this manner: 'Be it enacted by the senate, the people, or both, on the motion of a certain person,' who is our author; and so putting on a serious face, he proceeds to display his own wisdom to his admirers in what is often a long and tedious composition. Now what is that sort of thing but a regular piece of authorship?

PHAEDRUS: True.

SOCRATES: And if the law is finally approved, then the author leaves the theatre in high delight; but if the law is rejected and he is done out of his speech-making, and not thought good enough to write, then he and his party are in mourning.

PHAEDRUS: Very true.

SOCRATES: So far are they from despising, or rather so highly do they value the practice of writing.

PHAEDRUS: No doubt.

SOCRATES: And when the king or orator has the power, as Lycurgus or Solon or Darius had, of attaining an immortality or authorship in a state, is he not thought by posterity, when they see his compositions, and does he not think himself, while he is yet alive, to be a god?

PHAEDRUS: Very true.

SOCRATES: Then do you think that any one of this class, however ill-disposed, would reproach Lysias with being an author?

PHAEDRUS: Not upon your view; for according to you he would be casting a slur upon his own favourite pursuit.

SOCRATES: Any one may see that there is no disgrace in the mere fact of writing.

PHAEDRUS: Certainly not.

SOCRATES: The disgrace begins when a man writes not well, but badly.

PHAEDRUS: Clearly.

SOCRATES: And what is well and what is badly—need we ask Lysias, or any other poet or orator, who ever wrote or will write either a political or any other work, in metre or out of metre, poet or prose writer, to teach us this?

PHAEDRUS: Need we? For what should a man live if not for the pleasures of discourse? Surely not for the sake of bodily pleasures, which almost always have previous pain as a condition of them, and therefore are rightly called slavish.

SOCRATES: There is time enough. And I believe that the grasshoppers chirruping after their manner in the heat of the sun over our heads are talking to one another and looking down at us. What would they say if they saw that we, like the many, are not conversing, but slumbering at mid-day, lulled by their voices, too indolent to think? Would they not have a right to laugh at us? They might imagine that we were slaves, who, coming to rest at a place of resort of theirs, like sheep lie asleep at noon around the well. But if they see us discoursing, and like Odysseus sailing past them, deaf to their siren voices, they may perhaps, out of respect, give us of the gifts which they receive from the gods that they may impart them to men.

PHAEDRUS: What gifts do you mean? I never heard of any.

SOCRATES: A lover of music like yourself ought surely to have heard the story of the grasshoppers, who are said to have been human beings in an age before the Muses. And when the Muses came and song appeared they were ravished with delight; and singing always, never thought of eating and drinking, until at last in their forgetfulness they died. And now they live again in the grasshoppers; and this is the return which the Muses make to them—they neither hunger, nor thirst, but from the hour of their birth are always singing, and never eating or drinking; and when they die they go and inform the Muses in heaven who honours them on earth. They win the love of Terpsichore for the dancers by their report of them; of Erato for the lovers, and of the other Muses for those who do them honour, according to the several ways of honouring them;—of Calliope the eldest Muse and of Urania who is next to her, for the philosophers, of whose music the grasshoppers make report to them; for these are the Muses who are chiefly concerned with heaven and thought, divine as well as human, and they have the sweetest utterance. For many reasons, then, we ought always to talk and not to sleep at mid-day.

PHAEDRUS: Let us talk.

SOCRATES: Shall we discuss the rules of writing and speech as we were proposing?

PHAEDRUS: Very good.

SOCRATES: In good speaking should not the mind of the speaker know the truth of the matter about which he is going to speak?

PHAEDRUS: And yet, Socrates, I have heard that he who would be an orator has nothing to do with true justice, but only with that which is likely to be approved by the many who sit in judgment; nor with the truly good or honourable, but only with opinion about them, and that from opinion comes persuasion, and not from the truth.

SOCRATES: The words of the wise are not to be set aside; for there is probably something in them; and therefore the meaning of this saying is not hastily to be dismissed.

PHAEDRUS: Very true.

SOCRATES: Let us put the matter thus:—Suppose that I persuaded you to buy a horse and go to the wars. Neither of us knew what a horse was like, but I knew that you believed a horse to be of tame animals the one which has the longest ears.

PHAEDRUS: That would be ridiculous.

SOCRATES: There is something more ridiculous coming:—Suppose, further, that in sober earnest I, having persuaded you of this, went and composed a speech in honour of an ass, whom I entitled a horse beginning: 'A noble animal and a most useful possession, especially in war, and you may get on his back and fight, and he will carry baggage or anything.'

PHAEDRUS: How ridiculous!

SOCRATES: Ridiculous! Yes; but is not even a ridiculous friend better than a cunning enemy?

PHAEDRUS: Certainly.

SOCRATES: And when the orator instead of putting an ass in the place of a horse, puts good for evil, being himself as ignorant of their true nature as the city on which he imposes is ignorant; and having studied the notions of the multitude, falsely persuades them not about 'the shadow of an ass,' which he confounds with a horse, but about good which he confounds with evil,—what will be the harvest which rhetoric will be likely to gather after the sowing of that seed?

PHAEDRUS: The reverse of good.

SOCRATES: But perhaps rhetoric has been getting too roughly handled by us, and she might answer: What amazing nonsense you are talking! As if I forced any man to learn to speak in ignorance of the truth! Whatever my advice may be worth, I should have told him to arrive at the truth first, and then come to me. At the same time I boldly assert that mere knowledge of the truth will not give you the art of persuasion.

PHAEDRUS: There is reason in the lady's defence of herself.

SOCRATES: Quite true; if only the other arguments which remain to be brought up bear her witness that she is an art at all. But I seem to hear them arraying themselves on the opposite side, declaring that she speaks falsely, and that rhetoric is a mere routine and trick, not an art. Lo! a Spartan appears, and says that there never is nor ever will be a real art of speaking which is divorced from the truth.

PHAEDRUS: And what are these arguments, Socrates? Bring them out that we may examine them.

SOCRATES: Come out, fair children, and convince Phaedrus, who is the father of similar beauties, that he will never be able to speak about anything as he ought to speak unless he have a knowledge of philosophy. And let Phaedrus answer you.

PHAEDRUS: Put the question.

SOCRATES: Is not rhetoric, taken generally, a universal art of enchanting the mind by arguments; which is practised not only in courts and public assemblies, but in private houses also, having to do with all matters, great as well as small, good and bad alike, and is in all equally right, and equally to be esteemed—that is what you have heard?

PHAEDRUS: Nay, not exactly that; I should say rather that I have heard the art confined to speaking and writing in lawsuits, and to speaking in public assemblies—not extended farther.

SOCRATES: Then I suppose that you have only heard of the rhetoric of Nestor and Odysseus, which they composed in their leisure hours when at Troy, and never of the rhetoric of Palamedes?

PHAEDRUS: No more than of Nestor and Odysseus, unless Gorgias is your Nestor, and Thrasymachus or Theodorus your Odysseus.

SOCRATES: Perhaps that is my meaning. But let us leave them. And do you tell me, instead, what are plaintiff and defendant doing in a law court—are they not contending?

PHAEDRUS: Exactly so.

SOCRATES: About the just and unjust—that is the matter in dispute?

PHAEDRUS: Yes.

SOCRATES: And a professor of the art will make the same thing appear to the same persons to be at one time just, at another time, if he is so inclined, to be unjust?

PHAEDRUS: Exactly.

SOCRATES: And when he speaks in the assembly, he will make the same things seem good to the city at one time, and at another time the reverse of good?

PHAEDRUS: That is true.

SOCRATES: Have we not heard of the Eleatic Palamedes (Zeno), who has an art of speaking by which he makes the same things appear to his hearers like and unlike, one and many, at rest and in motion?

PHAEDRUS: Very true.

SOCRATES: The art of disputation, then, is not confined to the courts and the assembly, but is one and the same in every use of language; this is the art, if there be such an art, which is able to find a likeness of everything to which a likeness can be found, and draws into the light of day the likenesses and disguises which are used by others?

PHAEDRUS: How do you mean?

SOCRATES: Let me put the matter thus: When will there be more chance of deception—when the difference is large or small?

PHAEDRUS: When the difference is small.

SOCRATES: And you will be less likely to be discovered in passing by degrees into the other extreme than when you go all at once?

PHAEDRUS: Of course.

SOCRATES: He, then, who would deceive others, and not be deceived, must exactly know the real likenesses and differences of things?

PHAEDRUS: He must.

SOCRATES: And if he is ignorant of the true nature of any subject, how can he detect the greater or less degree of likeness in other things to that of which by the hypothesis he is ignorant?

PHAEDRUS: He cannot.

SOCRATES: And when men are deceived and their notions are at variance with realities, it is clear that the error slips in through resemblances?

PHAEDRUS: Yes, that is the way.

SOCRATES: Then he who would be a master of the art must understand the real nature of everything; or he will never know either how to make the gradual departure from truth into the opposite of truth which is effected by the help of resemblances, or how to avoid it?

PHAEDRUS: He will not.

SOCRATES: He then, who being ignorant of the truth aims at appearances, will only attain an art of rhetoric which is ridiculous and is not an art at all?

PHAEDRUS: That may be expected.

SOCRATES: Shall I propose that we look for examples of art and want of art, according to our notion of them, in the speech of Lysias which you have in your hand, and in my own speech?

PHAEDRUS: Nothing could be better; and indeed I think that our previous argument has been too abstract and wanting in illustrations.

SOCRATES: Yes; and the two speeches happen to afford a very good example of the way in which the speaker who knows the truth may, without any serious purpose, steal away the hearts of his hearers. This piece of good-fortune I attribute to the local deities; and, perhaps, the prophets of the

Muses who are singing over our heads may have imparted their inspiration to me. For I do not imagine that I have any rhetorical art of my own.

PHAEDRUS: Granted; if you will only please to get on.

SOCRATES: Suppose that you read me the first words of Lysias' speech.

PHAEDRUS: 'You know how matters stand with me, and how, as I conceive, they might be arranged for our common interest; and I maintain that I ought not to fail in my suit, because I am not your lover. For lovers repent—'

SOCRATES: Enough:—Now, shall I point out the rhetorical error of those words?

PHAEDRUS: Yes.

SOCRATES: Every one is aware that about some things we are agreed, whereas about other things we differ.

PHAEDRUS: I think that I understand you; but will you explain yourself?

SOCRATES: When any one speaks of iron and silver, is not the same thing present in the minds of all?

PHAEDRUS: Certainly.

SOCRATES: But when any one speaks of justice and goodness we part company and are at odds with one another and with ourselves?

PHAEDRUS: Precisely.

SOCRATES: Then in some things we agree, but not in others?

PHAEDRUS: That is true.

SOCRATES: In which are we more likely to be deceived, and in which has rhetoric the greater power?

PHAEDRUS: Clearly, in the uncertain class.

SOCRATES: Then the rhetorician ought to make a regular division, and acquire a distinct notion of both classes, as well of that in which the many err, as of that in which they do not err?

PHAEDRUS: He who made such a distinction would have an excellent principle.

SOCRATES: Yes; and in the next place he must have a keen eye for the observation of particulars in speaking, and not make a mistake about the class to which they are to be referred.

PHAEDRUS: Certainly.

SOCRATES: Now to which class does love belong—to the debatable or to the undisputed class?

PHAEDRUS: To the debatable, clearly; for if not, do you think that love would have allowed you to say as you did, that he is an evil both to the lover and the beloved, and also the greatest possible good?

SOCRATES: Capital. But will you tell me whether I defined love at the beginning of my speech? for, having been in an ecstasy, I cannot well remember.

PHAEDRUS: Yes, indeed; that you did, and no mistake.

SOCRATES: Then I perceive that the Nymphs of Achelous and Pan the son of Hermes, who inspired me, were far better rhetoricians than Lysias the son of Cephalus. Alas! how inferior to them he is! But perhaps I am mistaken; and Lysias at the commencement of his lover's speech did insist on our supposing love to be something or other which he fancied him to be, and according to this model he fashioned and framed the remainder of his discourse. Suppose we read his beginning over again:

PHAEDRUS: If you please; but you will not find what you want.

SOCRATES: Read, that I may have his exact words.

PHAEDRUS: 'You know how matters stand with me, and how, as I conceive, they might be arranged for our common interest; and I maintain I ought not to fail in my suit because I am not your lover, for lovers repent of the kindnesses which they have shown, when their love is over.'

SOCRATES: Here he appears to have done just the reverse of what he ought; for he has begun at the end, and is swimming on his back through the flood to the place of starting. His address to the fair youth begins where the lover would have ended. Am I not right, sweet Phaedrus?

PHAEDRUS: Yes, indeed, Socrates; he does begin at the end.

SOCRATES: Then as to the other topics—are they not thrown down anyhow? Is there any principle in them? Why should the next topic follow next in order, or any other topic? I cannot help fancying in my ignorance that he wrote off boldly just what came into his head, but I dare say that you would recognize a rhetorical necessity in the succession of the several parts of the composition?

PHAEDRUS: You have too good an opinion of me if you think that I have any such insight into his principles of composition.

SOCRATES: At any rate, you will allow that every discourse ought to be a living creature, having a body of its own and a head and feet; there should be a middle, beginning, and end, adapted to one another and to the whole?

PHAEDRUS: Certainly.

SOCRATES: Can this be said of the discourse of Lysias? See whether you can find any more connexion in his words than in the epitaph which is said by some to have been inscribed on the grave of Midas the Phrygian.

PHAEDRUS: What is there remarkable in the epitaph?

SOCRATES: It is as follows:—

'I am a maiden of bronze and lie on the tomb of Midas; So long as water flows and tall trees grow, So long here on this spot by his sad tomb abiding, I shall declare to passers-by that Midas sleeps below.'

Now in this rhyme whether a line comes first or comes last, as you will perceive, makes no difference.

PHAEDRUS: You are making fun of that oration of ours.

SOCRATES: Well, I will say no more about your friend's speech lest I should give offence to you; although I think that it might furnish many other examples of what a man ought rather to avoid. But I will proceed to the other speech, which, as I think, is also suggestive to students of rhetoric.

PHAEDRUS: In what way?

SOCRATES: The two speeches, as you may remember, were unlike; the one argued that the lover and the other that the non-lover ought to be accepted.

PHAEDRUS: And right manfully.

SOCRATES: You should rather say 'madly;' and madness was the argument of them, for, as I said, 'love is a madness.'

PHAEDRUS: Yes.

SOCRATES: And of madness there were two kinds; one produced by human infirmity, the other was a divine release of the soul from the yoke of custom and convention.

PHAEDRUS: True.

SOCRATES: The divine madness was subdivided into four kinds, prophetic, initiatory, poetic, erotic, having four gods presiding over them; the first was the inspiration of Apollo, the second that of Dionysus, the third that of the Muses, the fourth that of Aphrodite and Eros. In the description of the last kind of madness, which was also said to be the best, we spoke of the affection of love in a figure, into which we introduced a tolerably credible and possibly true though partly erring myth, which was also a hymn in honour of Love, who is your lord and also mine, Phaedrus, and the guardian of fair children, and to him we sung the hymn in measured and solemn strain.

PHAEDRUS: I know that I had great pleasure in listening to you.

SOCRATES: Let us take this instance and note how the transition was made from blame to praise.

PHAEDRUS: What do you mean?

SOCRATES: I mean to say that the composition was mostly playful. Yet in these chance fancies of the hour were involved two principles of which we should be too glad to have a clearer description if art could give us one.

PHAEDRUS: What are they?

SOCRATES: First, the comprehension of scattered particulars in one idea; as in our definition of love, which whether true or false certainly gave clearness and consistency to the discourse, the speaker should define his several notions and so make his meaning clear.

PHAEDRUS: What is the other principle, Socrates?

SOCRATES: The second principle is that of division into species according to the natural formation, where the joint is, not breaking any part as a bad carver might. Just as our two discourses, alike assumed, first of all, a single form of unreason; and then, as the body which from being one becomes double and may be divided into a left side and right side, each having parts right and left of the same name—after this manner the speaker proceeded to divide the parts of the left side and did not desist until he found in them an evil or left-handed love which he justly reviled; and the other discourse leading us to the madness which lay on the right side, found another love, also having the same name, but divine, which the speaker held up before us and applauded and affirmed to be the author of the greatest benefits.

PHAEDRUS: Most true.

SOCRATES: I am myself a great lover of these processes of division and generalization; they help me to speak and to think. And if I find any man who is able to see 'a One and Many' in nature, him I follow, and 'walk in his footsteps as if he were a god.' And those who have this art, I have hitherto been in the habit of calling dialecticians; but God knows whether the name is right or not. And I should like to know what name you would give to your or to Lysias' disciples, and whether this may not be that famous art of rhetoric which Thrasymachus and others teach and practise? Skilful speakers they are, and impart their skill to any who is willing to make kings of them and to bring gifts to them.

PHAEDRUS: Yes, they are royal men; but their art is not the same with the art of those whom you call, and rightly, in my opinion, dialecticians:—Still we are in the dark about rhetoric.

SOCRATES: What do you mean? The remains of it, if there be anything remaining which can be brought under rules of art, must be a fine thing; and, at any rate, is not to be despised by you and me. But how much is left?

PHAEDRUS: There is a great deal surely to be found in books of rhetoric?

SOCRATES: Yes; thank you for reminding me:—There is the exordium, showing how the speech should begin, if I remember rightly; that is what you mean—the niceties of the art?

PHAEDRUS: Yes.

SOCRATES: Then follows the statement of facts, and upon that witnesses; thirdly, proofs; fourthly, probabilities are to come; the great Byzantian word-maker also speaks, if I am not mistaken, of confirmation and further confirmation.

PHAEDRUS: You mean the excellent Theodorus.

SOCRATES: Yes; and he tells how refutation or further refutation is to be managed, whether in accusation or defence. I ought also to mention the illustrious Parian, Evenus, who first invented insinuations and indirect praises; and also indirect censures, which according to some he put into verse to help the memory. But shall I 'to dumb forgetfulness consign' Tisias and Gorgias, who are not ignorant that probability is superior to truth, and who by force of argument make the little appear great and the great little, disguise the new in old fashions and the old in new fashions, and have discovered forms for everything, either short or going on to infinity. I remember Prodicus laughing when I told him of this; he said that he had himself discovered the true rule of art, which was to be neither long nor short, but of a convenient length.

PHAEDRUS: Well done, Prodicus!

SOCRATES: Then there is Hippias the Elean stranger, who probably agrees with him.

PHAEDRUS: Yes.

SOCRATES: And there is also Polus, who has treasuries of diplasiology, and gnomology, and eikonology, and who teaches in them the names of which Licymnius made him a present; they were to give a polish.

PHAEDRUS: Had not Protagoras something of the same sort?

SOCRATES: Yes, rules of correct diction and many other fine precepts; for the 'sorrows of a poor old man,' or any other pathetic case, no one is better than the Chalcedonian giant; he can put a whole company of people into a passion and out of one again by his mighty magic, and is first-rate at inventing or disposing of any sort of calumny on any grounds or none. All of them agree in asserting that a speech should end in a recapitulation, though they do not all agree to use the same word.

PHAEDRUS: You mean that there should be a summing up of the arguments in order to remind the hearers of them.

SOCRATES: I have now said all that I have to say of the art of rhetoric: have you anything to add?

PHAEDRUS: Not much; nothing very important.

SOCRATES: Leave the unimportant and let us bring the really important question into the light of day, which is: What power has this art of rhetoric, and when?

PHAEDRUS: A very great power in public meetings.

SOCRATES: It has. But I should like to know whether you have the same feeling as I have about the rhetoricians? To me there seem to be a great many holes in their web.

PHAEDRUS: Give an example.

SOCRATES: I will. Suppose a person to come to your friend Eryximachus, or to his father Acumenus, and to say to him: 'I know how to apply drugs which shall have either a heating or a cooling effect, and I can give a vomit and also a purge, and all that sort of thing; and knowing all this, as I do, I claim to be a physician and to make physicians by imparting this knowledge to others,'—what do you suppose that they would say?

PHAEDRUS: They would be sure to ask him whether he knew 'to whom' he would give his medicines, and 'when,' and 'how much.'

SOCRATES: And suppose that he were to reply: 'No; I know nothing of all that; I expect the patient who consults me to be able to do these things for himself'?

PHAEDRUS: They would say in reply that he is a madman or a pedant who fancies that he is a physician because he has read something in a book, or has stumbled on a prescription or two, although he has no real understanding of the art of medicine.

SOCRATES: And suppose a person were to come to Sophocles or Euripides and say that he knows how to make a very long speech about a small matter, and a short speech about a great matter, and also a sorrowful speech, or a terrible, or threatening speech, or any other kind of speech, and in teaching this fancies that he is teaching the art of tragedy—?

PHAEDRUS: They too would surely laugh at him if he fancies that tragedy is anything but the arranging of these elements in a manner which will be suitable to one another and to the whole.

SOCRATES: But I do not suppose that they would be rude or abusive to him: Would they not treat him as a musician a man who thinks that he is a harmonist because he knows how to pitch the highest and lowest note; happening to meet such an one he would not say to him savagely, 'Fool, you are mad!' But like a musician, in a gentle and harmonious tone of voice, he would answer: 'My good friend, he who would be a harmonist must certainly know this, and yet he may understand nothing of harmony if he has not got beyond your stage of knowledge, for you only know the preliminaries of harmony and not harmony itself.'

PHAEDRUS: Very true.

SOCRATES: And will not Sophocles say to the display of the would-be tragedian, that this is not tragedy but the preliminaries of tragedy? and will not Acumenus say the same of medicine to the would-be physician?

PHAEDRUS: Quite true.

SOCRATES: And if Adrastus the mellifluous or Pericles heard of these wonderful arts, brachylogies and eikonologies and all the hard names which we have been endeavouring to draw into the light of day, what would they say? Instead of losing temper and applying uncomplimentary epithets, as you and I have been doing, to the authors of such an imaginary art, their superior wisdom would rather censure us, as well as them. 'Have a little patience, Phaedrus and Socrates, they would say; you should not be in such a passion with those who from some want of dialectical skill are unable to define the nature of rhetoric, and consequently suppose that they have found the art in the preliminary conditions of it, and when these have been taught by them to others, fancy that the whole art of rhetoric has been taught by them; but as to using the several instruments of the art effectively, or making the composition a whole,—an application of it such as this is they regard as an easy thing which their disciples may make for themselves.'

PHAEDRUS: I quite admit, Socrates, that the art of rhetoric which these men teach and of which they write is such as you describe—there I agree with you. But I still want to know where and how the true art of rhetoric and persuasion is to be acquired.

SOCRATES: The perfection which is required of the finished orator is, or rather must be, like the perfection of anything else; partly given by nature, but may also be assisted by art. If you have the natural power and add to it knowledge and practice, you will be a distinguished speaker; if you fall short in either of these, you will be to that extent defective. But the art, as far as there is an art, of rhetoric does not lie in the direction of Lysias or Thrasymachus.

PHAEDRUS: In what direction then?

SOCRATES: I conceive Pericles to have been the most accomplished of rhetoricians.

PHAEDRUS: What of that?

SOCRATES: All the great arts require discussion and high speculation about the truths of nature; hence come loftiness of thought and completeness of execution. And this, as I conceive, was the quality which, in addition to his natural gifts, Pericles acquired from his intercourse with Anaxagoras whom he happened to know. He was thus imbued with the higher philosophy, and attained the knowledge of Mind and the negative of Mind, which were favourite themes of Anaxagoras, and applied what suited his purpose to the art of speaking.

PHAEDRUS: Explain.

SOCRATES: Rhetoric is like medicine.

PHAEDRUS: How so?

SOCRATES: Why, because medicine has to define the nature of the body and rhetoric of the soul—if we would proceed, not empirically but scientifically, in the one case to impart health and strength by giving medicine and food, in the other to implant the conviction or virtue which you desire, by the right application of words and training.

PHAEDRUS: There, Socrates, I suspect that you are right.

SOCRATES: And do you think that you can know the nature of the soul intelligently without knowing the nature of the whole?

PHAEDRUS: Hippocrates the Asclepiad says that the nature even of the body can only be understood as a whole. (Compare Charmides.)

SOCRATES: Yes, friend, and he was right:—still, we ought not to be content with the name of Hippocrates, but to examine and see whether his argument agrees with his conception of nature.

PHAEDRUS: I agree.

SOCRATES: Then consider what truth as well as Hippocrates says about this or about any other nature. Ought we not to consider first whether that which we wish to learn and to teach is a simple or multiform thing, and if simple, then to enquire what power it has of acting or being acted upon in relation to other things, and if multiform, then to number the forms; and see first in the case of one of them, and then in the case of all of them, what is that power of acting or being acted upon which makes each and all of them to be what they are?

PHAEDRUS: You may very likely be right, Socrates.

SOCRATES: The method which proceeds without analysis is like the groping of a blind man. Yet, surely, he who is an artist ought not to admit of a comparison with the blind, or deaf. The rhetorician, who teaches his pupil to speak scientifically, will particularly set forth the nature of that being to which he addresses his speeches; and this, I conceive, to be the soul.

PHAEDRUS: Certainly.

SOCRATES: His whole effort is directed to the soul; for in that he seeks to produce conviction.

PHAEDRUS: Yes.

SOCRATES: Then clearly, Thrasymachus or any one else who teaches rhetoric in earnest will give an exact description of the nature of the soul; which will enable us to see whether she be single and same, or, like the body, multiform. That is what we should call showing the nature of the soul.

PHAEDRUS: Exactly.

SOCRATES: He will explain, secondly, the mode in which she acts or is acted upon.

PHAEDRUS: True.

SOCRATES: Thirdly, having classified men and speeches, and their kinds and affections, and adapted them to one another, he will tell the reasons of his arrangement, and show why one soul is persuaded by a particular form of argument, and another not.

PHAEDRUS: You have hit upon a very good way.

SOCRATES: Yes, that is the true and only way in which any subject can be set forth or treated by rules of art, whether in speaking or writing. But the writers of the present day, at whose feet you have sat, craftily conceal the nature of the soul which they know quite well. Nor, until they adopt our method of reading and writing, can we admit that they write by rules of art?

PHAEDRUS: What is our method?

SOCRATES: I cannot give you the exact details; but I should like to tell you generally, as far as is in my power, how a man ought to proceed according to rules of art.

PHAEDRUS: Let me hear.

SOCRATES: Oratory is the art of enchanting the soul, and therefore he who would be an orator has to learn the differences of human souls—they are so many and of such a nature, and from them come the differences between man and man. Having proceeded thus far in his analysis, he will next divide speeches into their different classes:—'Such and such persons,' he will say, are affected by this or that kind of speech in this or that way,' and he will tell you why. The pupil must have a good theoretical notion of them first, and then he must have experience of them in actual life, and be able to follow them with all his senses about him, or he will never get beyond the precepts of his masters. But when he understands what persons are persuaded by what arguments, and sees the person about whom he was speaking in the abstract actually before him, and knows that it is he, and can say to himself, 'This is the man or this is the character who ought to have a certain argument applied to him in order to convince him of a certain opinion;'—he who knows all this, and knows also when he should speak and when he should refrain, and when he should use pithy sayings, pathetic appeals, sensational effects, and all the other modes of speech which he has learned;—when, I say, he knows the times and seasons of all these things, then, and not till then, he is a perfect master of his art; but if he fail in any of these points, whether in speaking or teaching or writing them, and yet declares that he speaks by rules of art, he who says 'I don't believe you' has the better of him. Well, the teacher will say, is this, Phaedrus and Socrates, your account of the so-called art of rhetoric, or am I to look for another?

PHAEDRUS: He must take this, Socrates, for there is no possibility of another, and yet the creation of such an art is not easy.

SOCRATES: Very true; and therefore let us consider this matter in every light, and see whether we cannot find a shorter and easier road; there is no use in taking a long rough roundabout way if there be a shorter and easier one. And I wish that you would try and remember whether you have heard from Lysias or any one else anything which might be of service to us.

PHAEDRUS: If trying would avail, then I might; but at the moment I can think of nothing.

SOCRATES: Suppose I tell you something which somebody who knows told me.

PHAEDRUS: Certainly.

SOCRATES: May not 'the wolf,' as the proverb says, 'claim a hearing'?

PHAEDRUS: Do you say what can be said for him.

SOCRATES: He will argue that there is no use in putting a solemn face on these matters, or in going round and round, until you arrive at first principles; for, as I said at first, when the question is of justice and good, or is a question in which men are concerned who are just and good, either by nature or habit, he who would be a skilful rhetorician has no need of truth—for that in courts of law men literally care nothing about truth, but only about conviction: and this is based on probability, to which he who would be a skilful orator should therefore give his whole attention. And they say also that there are cases in which the actual facts, if they are improbable, ought to be withheld, and only the probabilities should be told either in accusation or defence, and that always in speaking, the orator should keep probability in view, and say good-bye to the truth. And the observance of this principle throughout a speech furnishes the whole art.

PHAEDRUS: That is what the professors of rhetoric do actually say, Socrates. I have not forgotten that we have quite briefly touched upon this matter already; with them the point is all-important.

SOCRATES: I dare say that you are familiar with Tisias. Does he not define probability to be that which the many think?

PHAEDRUS: Certainly, he does.

SOCRATES: I believe that he has a clever and ingenious case of this sort:—He supposes a feeble and valiant man to have assaulted a strong and cowardly one, and to have robbed him of his coat or of something or other; he is brought into court, and then Tisias says that both parties should tell lies: the coward should say that he was assaulted by more men than one; the other should prove that they were alone, and should argue thus: 'How could a weak man like me have assaulted a strong man like him?' The complainant will not like to confess his own cowardice, and will therefore invent some other lie which his adversary will thus gain an opportunity of refuting. And there are other devices of the same kind which have a place in the system. Am I not right, Phaedrus?

PHAEDRUS: Certainly.

SOCRATES: Bless me, what a wonderfully mysterious art is this which Tisias or some other gentleman, in whatever name or country he rejoices, has discovered. Shall we say a word to him or not?

PHAEDRUS: What shall we say to him?

SOCRATES: Let us tell him that, before he appeared, you and I were saying that the probability of which he speaks was engendered in the minds of the many by the likeness of the truth, and we had just been affirming that he who knew the truth would always know best how to discover the resemblances of the truth. If he has anything else to say about the art of speaking we should like to hear him; but if not, we are satisfied with our own view, that unless a man estimates the various characters of his hearers and is able to divide all things into classes and to comprehend them under single ideas, he will never be a skilful rhetorician even within the limits of human power. And this skill he will not attain without a great deal of trouble, which a good man ought to undergo, not for the sake of speaking and acting before men, but in order that he may be able to say what is acceptable to God and always to act acceptably to Him as far as in him lies; for there is a saying of wiser men than ourselves, that a man of sense should not try to please his fellow-servants (at least this should not be his first object) but his good and noble masters; and therefore if the way is long and circuitous, marvel not at this, for, where the end is great, there we may take the longer road, but not for lesser ends such as yours. Truly, the argument may say, Tisias, that if you do not mind going so far, rhetoric has a fair beginning here.

PHAEDRUS: I think, Socrates, that this is admirable, if only practicable.

SOCRATES: But even to fail in an honourable object is honourable.

PHAEDRUS: True.

SOCRATES: Enough appears to have been said by us of a true and false art of speaking.

PHAEDRUS: Certainly.

SOCRATES: But there is something yet to be said of propriety and impropriety of writing.

PHAEDRUS: Yes.

SOCRATES: Do you know how you can speak or act about rhetoric in a manner which will be acceptable to God?

PHAEDRUS: No, indeed. Do you?

SOCRATES: I have heard a tradition of the ancients, whether true or not they only know; although if we had found the truth ourselves, do you think that we should care much about the opinions of men?

PHAEDRUS: Your question needs no answer; but I wish that you would tell me what you say that you have heard.

SOCRATES: At the Egyptian city of Naucratis, there was a famous old god, whose name was Theuth; the bird which is called the Ibis is sacred to him, and he was the inventor of many arts, such as arithmetic and calculation and geometry and astronomy and draughts and dice, but his great discovery was the use of letters. Now in those days the god Thamus was the king of the whole country of Egypt; and he dwelt in that great city of Upper Egypt which the Hellenes call Egyptian

Thebes, and the god himself is called by them Ammon. To him came Theuth and showed his inventions, desiring that the other Egyptians might be allowed to have the benefit of them; he enumerated them, and Thamus enquired about their several uses, and praised some of them and censured others, as he approved or disapproved of them. It would take a long time to repeat all that Thamus said to Theuth in praise or blame of the various arts. But when they came to letters, This, said Theuth, will make the Egyptians wiser and give them better memories; it is a specific both for the memory and for the wit. Thamus replied: O most ingenious Theuth, the parent or inventor of an art is not always the best judge of the utility or inutility of his own inventions to the users of them. And in this instance, you who are the father of letters, from a paternal love of your own children have been led to attribute to them a quality which they cannot have; for this discovery of yours will create forgetfulness in the learners' souls, because they will not use their memories; they will trust to the external written characters and not remember of themselves. The specific which you have discovered is an aid not to memory, but to reminiscence, and you give your disciples not truth, but only the semblance of truth; they will be hearers of many things and will have learned nothing; they will appear to be omniscient and will generally know nothing; they will be tiresome company, having the show of wisdom without the reality.

PHAEDRUS: Yes, Socrates, you can easily invent tales of Egypt, or of any other country.

SOCRATES: There was a tradition in the temple of Dodona that oaks first gave prophetic utterances. The men of old, unlike in their simplicity to young philosophy, deemed that if they heard the truth even from 'oak or rock,' it was enough for them; whereas you seem to consider not whether a thing is or is not true, but who the speaker is and from what country the tale comes.

PHAEDRUS: I acknowledge the justice of your rebuke; and I think that the Theban is right in his view about letters.

SOCRATES: He would be a very simple person, and quite a stranger to the oracles of Thamus or Ammon, who should leave in writing or receive in writing any art under the idea that the written word would be intelligible or certain; or who deemed that writing was at all better than knowledge and recollection of the same matters?

PHAEDRUS: That is most true.

SOCRATES: I cannot help feeling, Phaedrus, that writing is unfortunately like painting; for the creations of the painter have the attitude of life, and yet if you ask them a question they preserve a solemn silence. And the same may be said of speeches. You would imagine that they had intelligence, but if you want to know anything and put a question to one of them, the speaker always gives one unvarying answer. And when they have been once written down they are tumbled about anywhere among those who may or may not understand them, and know not to whom they should reply, to whom not: and, if they are maltreated or abused, they have no parent to protect them; and they cannot protect or defend themselves.

PHAEDRUS: That again is most true.

SOCRATES: Is there not another kind of word or speech far better than this, and having far greater power—a son of the same family, but lawfully begotten?

PHAEDRUS: Whom do you mean, and what is his origin?

SOCRATES: I mean an intelligent word graven in the soul of the learner, which can defend itself, and knows when to speak and when to be silent.

PHAEDRUS: You mean the living word of knowledge which has a soul, and of which the written word is properly no more than an image?

SOCRATES: Yes, of course that is what I mean. And now may I be allowed to ask you a question: Would a husbandman, who is a man of sense, take the seeds, which he values and which he wishes to bear fruit, and in sober seriousness plant them during the heat of summer, in some garden of Adonis, that he may rejoice when he sees them in eight days appearing in beauty? at least he would do so, if at all, only for the sake of amusement and pastime. But when he is in earnest he sows in fitting soil, and practises husbandry, and is satisfied if in eight months the seeds which he has sown arrive at perfection?

PHAEDRUS: Yes, Socrates, that will be his way when he is in earnest; he will do the other, as you say, only in play.

SOCRATES: And can we suppose that he who knows the just and good and honourable has less understanding, than the husbandman, about his own seeds?

PHAEDRUS: Certainly not.

SOCRATES: Then he will not seriously incline to 'write' his thoughts 'in water' with pen and ink, sowing words which can neither speak for themselves nor teach the truth adequately to others?

PHAEDRUS: No, that is not likely.

SOCRATES: No, that is not likely—in the garden of letters he will sow and plant, but only for the sake of recreation and amusement; he will write them down as memorials to be treasured against the forgetfulness of old age, by himself, or by any other old man who is treading the same path. He will rejoice in beholding their tender growth; and while others are refreshing their souls with banqueting and the like, this will be the pastime in which his days are spent.

PHAEDRUS: A pastime, Socrates, as noble as the other is ignoble, the pastime of a man who can be amused by serious talk, and can discourse merrily about justice and the like.

SOCRATES: True, Phaedrus. But nobler far is the serious pursuit of the dialectician, who, finding a congenial soul, by the help of science sows and plants therein words which are able to help themselves and him who planted them, and are not unfruitful, but have in them a seed which others brought up in different soils render immortal, making the possessors of it happy to the utmost extent of human happiness.

PHAEDRUS: Far nobler, certainly.

SOCRATES: And now, Phaedrus, having agreed upon the premises we may decide about the conclusion.

PHAEDRUS: About what conclusion?

SOCRATES: About Lysias, whom we censured, and his art of writing, and his discourses, and the rhetorical skill or want of skill which was shown in them—these are the questions which we sought to determine, and they brought us to this point. And I think that we are now pretty well informed about the nature of art and its opposite.

PHAEDRUS: Yes, I think with you; but I wish that you would repeat what was said.

SOCRATES: Until a man knows the truth of the several particulars of which he is writing or speaking, and is able to define them as they are, and having defined them again to divide them until they can be no longer divided, and until in like manner he is able to discern the nature of the soul, and discover the different modes of discourse which are adapted to different natures, and to arrange and dispose them in such a way that the simple form of speech may be addressed to the simpler nature, and the complex and composite to the more complex nature—until he has accomplished all this, he will be unable to handle arguments according to rules of art, as far as their nature allows them to be subjected to art, either for the purpose of teaching or persuading;—such is the view which is implied in the whole preceding argument.

PHAEDRUS: Yes, that was our view, certainly.

SOCRATES: Secondly, as to the censure which was passed on the speaking or writing of discourses, and how they might be rightly or wrongly censured—did not our previous argument show—?

PHAEDRUS: Show what?

SOCRATES: That whether Lysias or any other writer that ever was or will be, whether private man or statesman, proposes laws and so becomes the author of a political treatise, fancying that there is any great certainty and clearness in his performance, the fact of his so writing is only a disgrace to him, whatever men may say. For not to know the nature of justice and injustice, and good and evil, and not to be able to distinguish the dream from the reality, cannot in truth be otherwise than disgraceful to him, even though he have the applause of the whole world.

PHAEDRUS: Certainly.

SOCRATES: But he who thinks that in the written word there is necessarily much which is not serious, and that neither poetry nor prose, spoken or written, is of any great value, if, like the compositions of the rhapsodes, they are only recited in order to be believed, and not with any view to criticism or instruction; and who thinks that even the best of writings are but a reminiscence of what we know, and that only in principles of justice and goodness and nobility taught and communicated orally for the sake of instruction and graven in the soul, which is the true way of writing, is there

clearness and perfection and seriousness, and that such principles are a man's own and his legitimate offspring;—being, in the first place, the word which he finds in his own bosom; secondly, the brethren and descendants and relations of his idea which have been duly implanted by him in the souls of others;—and who cares for them and no others—this is the right sort of man; and you and I, Phaedrus, would pray that we may become like him.

PHAEDRUS: That is most assuredly my desire and prayer.

SOCRATES: And now the play is played out; and of rhetoric enough. Go and tell Lysias that to the fountain and school of the Nymphs we went down, and were bidden by them to convey a message to him and to other composers of speeches—to Homer and other writers of poems, whether set to music or not; and to Solon and others who have composed writings in the form of political discourses which they would term laws—to all of them we are to say that if their compositions are based on knowledge of the truth, and they can defend or prove them, when they are put to the test, by spoken arguments, which leave their writings poor in comparison of them, then they are to be called, not only poets, orators, legislators, but are worthy of a higher name, befitting the serious pursuit of their life.

PHAEDRUS: What name would you assign to them?

SOCRATES: Wise, I may not call them; for that is a great name which belongs to God alone,—lovers of wisdom or philosophers is their modest and befitting title.

PHAEDRUS: Very suitable.

SOCRATES: And he who cannot rise above his own compilations and compositions, which he has been long patching and piecing, adding some and taking away some, may be justly called poet or speech-maker or law-maker.

PHAEDRUS: Certainly.

SOCRATES: Now go and tell this to your companion.

PHAEDRUS: But there is also a friend of yours who ought not to be forgotten.

SOCRATES: Who is he?

PHAEDRUS: Isocrates the fair:—What message will you send to him, and how shall we describe him?

SOCRATES: Isocrates is still young, Phaedrus; but I am willing to hazard a prophecy concerning him.

PHAEDRUS: What would you prophesy?

SOCRATES: I think that he has a genius which soars above the orations of Lysias, and that his character is cast in a finer mould. My impression of him is that he will marvellously improve as he grows older, and that all former rhetoricians will be as children in comparison of him. And I believe

that he will not be satisfied with rhetoric, but that there is in him a divine inspiration which will lead him to things higher still. For he has an element of philosophy in his nature. This is the message of the gods dwelling in this place, and which I will myself deliver to Isocrates, who is my delight; and do you give the other to Lysias, who is yours.

PHAEDRUS: I will; and now as the heat is abated let us depart.

SOCRATES: Should we not offer up a prayer first of all to the local deities?

PHAEDRUS: By all means.

SOCRATES: Beloved Pan, and all ye other gods who haunt this place, give me beauty in the inward soul; and may the outward and inward man be at one. May I reckon the wise to be the wealthy, and may I have such a quantity of gold as a temperate man and he only can bear and carry.—Anything more? The prayer, I think, is enough for me.

PHAEDRUS: Ask the same for me, for friends should have all things in common.

SOCRATES: Let us go.

PHILEBUS

By Plato

Translated by Benjamin Jowett

INTRODUCTION AND ANALYSIS.

The Philebus appears to be one of the later writings of Plato, in which the style has begun to alter, and the dramatic and poetical element has become subordinate to the speculative and philosophical. In the development of abstract thought great advances have been made on the Protagoras or the Phaedrus, and even on the Republic. But there is a corresponding diminution of artistic skill, a want of character in the persons, a laboured march in the dialogue, and a degree of confusion and incompleteness in the general design. As in the speeches of Thucydides, the multiplication of ideas seems to interfere with the power of expression. Instead of the equally diffused grace and ease of the earlier dialogues there occur two or three highly-wrought passages; instead of the ever-flowing play of humour, now appearing, now concealed, but always present, are inserted a good many bad jests, as we may venture to term them. We may observe an attempt at artificial ornament, and far-fetched modes of expression; also clamorous demands on the part of his companions, that Socrates shall answer his own questions, as well as other defects of style, which remind us of the Laws. The connection is often abrupt and inharmonious, and far from clear. Many points require further explanation; e.g. the reference of pleasure to the indefinite class, compared with the assertion which almost immediately follows, that pleasure and pain naturally have their seat in the third or mixed class: these two statements are unreconciled. In like manner, the table of goods does not distinguish between the two heads of measure and symmetry; and though a hint is given that the divine mind has the first place, nothing is said of this in the final summing up. The relation of the goods to the sciences does not appear; though dialectic may be thought to correspond to the highest good, the sciences and arts and true opinions are enumerated in the fourth class. We seem to have an intimation of a further discussion, in which some topics lightly passed over were to receive a fuller consideration. The various uses of the word 'mixed,' for the mixed life, the mixed class of elements, the mixture of pleasures, or of pleasure and pain, are a further source of perplexity. Our ignorance of the opinions which Plato is attacking is also an element of obscurity. Many things in a controversy might seem relevant, if we knew to what they were intended to refer. But no conjecture will enable us to supply what Plato has not told us; or to explain, from our fragmentary knowledge of them, the relation in which his doctrine stood to the Eleatic Being or the Megarian good, or to the theories of Aristippus or Antisthenes respecting pleasure. Nor are we able to say how far Plato in the Philebus conceives the finite and infinite (which occur both in the fragments of Philolaus and in the Pythagorean table of opposites) in the same manner as contemporary Pythagoreans.

There is little in the characters which is worthy of remark. The Socrates of the Philebus is devoid of any touch of Socratic irony, though here, as in the Phaedrus, he twice attributes the flow of his ideas to a sudden inspiration. The interlocutor Protarchus, the son of Callias, who has been a hearer of Gorgias, is supposed to begin as a disciple of the partisans of pleasure, but is drawn over to the opposite side by the arguments of Socrates. The instincts of ingenuous youth are easily induced to take the better part. Philebus, who has withdrawn from the argument, is several times brought back again, that he may support pleasure, of which he remains to the end the uncompromising advocate. On the other hand, the youthful group of listeners by whom he is surrounded, 'Philebus' boys' as they

are termed, whose presence is several times intimated, are described as all of them at last convinced by the arguments of Socrates. They bear a very faded resemblance to the interested audiences of the Charmides, Lysis, or Protagoras. Other signs of relation to external life in the dialogue, or references to contemporary things and persons, with the single exception of the allusions to the anonymous enemies of pleasure, and the teachers of the flux, there are none.

The omission of the doctrine of recollection, derived from a previous state of existence, is a note of progress in the philosophy of Plato. The transcendental theory of pre-existent ideas, which is chiefly discussed by him in the Meno, the Phaedo, and the Phaedrus, has given way to a psychological one. The omission is rendered more significant by his having occasion to speak of memory as the basis of desire. Of the ideas he treats in the same sceptical spirit which appears in his criticism of them in the Parmenides. He touches on the same difficulties and he gives no answer to them. His mode of speaking of the analytical and synthetical processes may be compared with his discussion of the same subject in the Phaedrus; here he dwells on the importance of dividing the genera into all the species, while in the Phaedrus he conveys the same truth in a figure, when he speaks of carving the whole, which is described under the image of a victim, into parts or members, 'according to their natural articulation, without breaking any of them.' There is also a difference, which may be noted, between the two dialogues. For whereas in the Phaedrus, and also in the Symposium, the dialectician is described as a sort of enthusiast or lover, in the Philebus, as in all the later writings of Plato, the element of love is wanting; the topic is only introduced, as in the Republic, by way of illustration. On other subjects of which they treat in common, such as the nature and kinds of pleasure, true and false opinion, the nature of the good, the order and relation of the sciences, the Republic is less advanced than the Philebus, which contains, perhaps, more metaphysical truth more obscurely expressed than any other Platonic dialogue. Here, as Plato expressly tells us, he is 'forging weapons of another make,' i.e. new categories and modes of conception, though 'some of the old ones might do again.'

But if superior in thought and dialectical power, the Philebus falls very far short of the Republic in fancy and feeling. The development of the reason undisturbed by the emotions seems to be the ideal at which Plato aims in his later dialogues. There is no mystic enthusiasm or rapturous contemplation of ideas. Whether we attribute this change to the greater feebleness of age, or to the development of the quarrel between philosophy and poetry in Plato's own mind, or perhaps, in some degree, to a carelessness about artistic effect, when he was absorbed in abstract ideas, we can hardly be wrong in assuming, amid such a variety of indications, derived from style as well as subject, that the Philebus belongs to the later period of his life and authorship. But in this, as in all the later writings of Plato, there are not wanting thoughts and expressions in which he rises to his highest level.

The plan is complicated, or rather, perhaps, the want of plan renders the progress of the dialogue difficult to follow. A few leading ideas seem to emerge: the relation of the one and many, the four original elements, the kinds of pleasure, the kinds of knowledge, the scale of goods. These are only partially connected with one another. The dialogue is not rightly entitled 'Concerning pleasure' or 'Concerning good,' but should rather be described as treating of the relations of pleasure and knowledge, after they have been duly analyzed, to the good. (1) The question is asked, whether pleasure or wisdom is the chief good, or some nature higher than either; and if the latter, how pleasure and wisdom are related to this higher good. (2) Before we can reply with exactness, we must know the kinds of pleasure and the kinds of knowledge. (3) But still we may affirm generally, that the combined life of pleasure and wisdom or knowledge has more of the character of the good

than either of them when isolated. (4) to determine which of them partakes most of the higher nature, we must know under which of the four unities or elements they respectively fall. These are, first, the infinite; secondly, the finite; thirdly, the union of the two; fourthly, the cause of the union. Pleasure is of the first, wisdom or knowledge of the third class, while reason or mind is akin to the fourth or highest.

(5) Pleasures are of two kinds, the mixed and unmixed. Of mixed pleasures there are three classes—(a) those in which both the pleasures and pains are corporeal, as in eating and hunger; (b) those in which there is a pain of the body and pleasure of the mind, as when you are hungry and are looking forward to a feast; (c) those in which the pleasure and pain are both mental. Of unmixed pleasures there are four kinds: those of sight, hearing, smell, knowledge.

(6) The sciences are likewise divided into two classes, theoretical and productive: of the latter, one part is pure, the other impure. The pure part consists of arithmetic, mensuration, and weighing. Arts like carpentering, which have an exact measure, are to be regarded as higher than music, which for the most part is mere guess-work. But there is also a higher arithmetic, and a higher mensuration, which is exclusively theoretical; and a dialectical science, which is higher still and the truest and purest knowledge.

(7) We are now able to determine the composition of the perfect life. First, we admit the pure pleasures and the pure sciences; secondly, the impure sciences, but not the impure pleasures. We have next to discover what element of goodness is contained in this mixture. There are three criteria of goodness—beauty, symmetry, truth. These are clearly more akin to reason than to pleasure, and will enable us to fix the places of both of them in the scale of good. First in the scale is measure; the second place is assigned to symmetry; the third, to reason and wisdom; the fourth, to knowledge and true opinion; the fifth, to pure pleasures; and here the Muse says 'Enough.'

'Bidding farewell to Philebus and Socrates,' we may now consider the metaphysical conceptions which are presented to us. These are (I) the paradox of unity and plurality; (II) the table of categories or elements; (III) the kinds of pleasure; (IV) the kinds of knowledge; (V) the conception of the good. We may then proceed to examine (VI) the relation of the Philebus to the Republic, and to other dialogues.

I. The paradox of the one and many originated in the restless dialectic of Zeno, who sought to prove the absolute existence of the one by showing the contradictions that are involved in admitting the existence of the many (compare Parm.). Zeno illustrated the contradiction by well-known examples taken from outward objects. But Socrates seems to intimate that the time had arrived for discarding these hackneyed illustrations; such difficulties had long been solved by common sense ('solvitur ambulando'); the fact of the co-existence of opposites was a sufficient answer to them. He will leave them to Cynics and Eristics; the youth of Athens may discourse of them to their parents. To no rational man could the circumstance that the body is one, but has many members, be any longer a stumbling-block.

Plato's difficulty seems to begin in the region of ideas. He cannot understand how an absolute unity, such as the Eleatic Being, can be broken up into a number of individuals, or be in and out of them at once. Philosophy had so deepened or intensified the nature of one or Being, by the thoughts of

successive generations, that the mind could no longer imagine 'Being' as in a state of change or division. To say that the verb of existence is the copula, or that unity is a mere unit, is to us easy; but to the Greek in a particular stage of thought such an analysis involved the same kind of difficulty as the conception of God existing both in and out of the world would to ourselves. Nor was he assisted by the analogy of sensible objects. The sphere of mind was dark and mysterious to him; but instead of being illustrated by sense, the greatest light appeared to be thrown on the nature of ideas when they were contrasted with sense.

Both here and in the Parmenides, where similar difficulties are raised, Plato seems prepared to desert his ancient ground. He cannot tell the relation in which abstract ideas stand to one another, and therefore he transfers the one and many out of his transcendental world, and proceeds to lay down practical rules for their application to different branches of knowledge. As in the Republic he supposes the philosopher to proceed by regular steps, until he arrives at the idea of good; as in the Sophist and Politicus he insists that in dividing the whole into its parts we should bisect in the middle in the hope of finding species; as in the Phaedrus (see above) he would have 'no limb broken' of the organism of knowledge;—so in the Philebus he urges the necessity of filling up all the intermediate links which occur (compare Bacon's 'media axiomata') in the passage from unity to infinity. With him the idea of science may be said to anticipate science; at a time when the sciences were not yet divided, he wants to impress upon us the importance of classification; neither neglecting the many individuals, nor attempting to count them all, but finding the genera and species under which they naturally fall. Here, then, and in the parallel passages of the Phaedrus and of the Sophist, is found the germ of the most fruitful notion of modern science.

Plato describes with ludicrous exaggeration the influence exerted by the one and many on the minds of young men in their first fervour of metaphysical enthusiasm (compare Republic). But they are none the less an everlasting quality of reason or reasoning which never grows old in us. At first we have but a confused conception of them, analogous to the eyes blinking at the light in the Republic. To this Plato opposes the revelation from Heaven of the real relations of them, which some Prometheus, who gave the true fire from heaven, is supposed to have imparted to us. Plato is speaking of two things—(1) the crude notion of the one and many, which powerfully affects the ordinary mind when first beginning to think; (2) the same notion when cleared up by the help of dialectic.

To us the problem of the one and many has lost its chief interest and perplexity. We readily acknowledge that a whole has many parts, that the continuous is also the divisible, that in all objects of sense there is a one and many, and that a like principle may be applied to analogy to purely intellectual conceptions. If we attend to the meaning of the words, we are compelled to admit that two contradictory statements are true. But the antinomy is so familiar as to be scarcely observed by us. Our sense of the contradiction, like Plato's, only begins in a higher sphere, when we speak of necessity and free-will, of mind and body, of Three Persons and One Substance, and the like. The world of knowledge is always dividing more and more; every truth is at first the enemy of every other truth. Yet without this division there can be no truth; nor any complete truth without the reunion of the parts into a whole. And hence the coexistence of opposites in the unity of the idea is regarded by Hegel as the supreme principle of philosophy; and the law of contradiction, which is affirmed by logicians to be an ultimate principle of the human mind, is displaced by another law, which asserts the coexistence of contradictories as imperfect and divided elements of the truth. Without entering further

into the depths of Hegelianism, we may remark that this and all similar attempts to reconcile antinomies have their origin in the old Platonic problem of the 'One and Many.'

II. 1. The first of Plato's categories or elements is the infinite. This is the negative of measure or limit; the unthinkable, the unknowable; of which nothing can be affirmed; the mixture or chaos which preceded distinct kinds in the creation of the world; the first vague impression of sense; the more or less which refuses to be reduced to rule, having certain affinities with evil, with pleasure, with ignorance, and which in the scale of being is farthest removed from the beautiful and good. To a Greek of the age of Plato, the idea of an infinite mind would have been an absurdity. He would have insisted that 'the good is of the nature of the finite,' and that the infinite is a mere negative, which is on the level of sensation, and not of thought. He was aware that there was a distinction between the infinitely great and the infinitely small, but he would have equally denied the claim of either to true existence. Of that positive infinity, or infinite reality, which we attribute to God, he had no conception.

The Greek conception of the infinite would be more truly described, in our way of speaking, as the indefinite. To us, the notion of infinity is subsequent rather than prior to the finite, expressing not absolute vacancy or negation, but only the removal of limit or restraint, which we suppose to exist not before but after we have already set bounds to thought and matter, and divided them after their kinds. From different points of view, either the finite or infinite may be looked upon respectively both as positive and negative (compare 'Omnis determinatio est negatio')' and the conception of the one determines that of the other. The Greeks and the moderns seem to be nearly at the opposite poles in their manner of regarding them. And both are surprised when they make the discovery, as Plato has done in the Sophist, how large an element negation forms in the framework of their thoughts.

2, 3. The finite element which mingles with and regulates the infinite is best expressed to us by the word 'law.' It is that which measures all things and assigns to them their limit; which preserves them in their natural state, and brings them within the sphere of human cognition. This is described by the terms harmony, health, order, perfection, and the like. All things, in as far as they are good, even pleasures, which are for the most part indefinite, partake of this element. We should be wrong in attributing to Plato the conception of laws of nature derived from observation and experiment. And yet he has as intense a conviction as any modern philosopher that nature does not proceed by chance. But observing that the wonderful construction of number and figure, which he had within himself, and which seemed to be prior to himself, explained a part of the phenomena of the external world, he extended their principles to the whole, finding in them the true type both of human life and of the order of nature.

Two other points may be noticed respecting the third class. First, that Plato seems to be unconscious of any interval or chasm which separates the finite from the infinite. The one is in various ways and degrees working in the other. Hence he has implicitly answered the difficulty with which he started, of how the one could remain one and yet be divided among many individuals, or 'how ideas could be in and out of themselves,' and the like. Secondly, that in this mixed class we find the idea of beauty. Good, when exhibited under the aspect of measure or symmetry, becomes beauty. And if we translate his language into corresponding modern terms, we shall not be far wrong in saying that here, as well as in the Republic, Plato conceives beauty under the idea of proportion.

4. Last and highest in the list of principles or elements is the cause of the union of the finite and infinite, to which Plato ascribes the order of the world. Reasoning from man to the universe, he argues that as there is a mind in the one, there must be a mind in the other, which he identifies with the royal mind of Zeus. This is the first cause of which 'our ancestors spoke,' as he says, appealing to tradition, in the Philebus as well as in the Timaeus. The 'one and many' is also supposed to have been revealed by tradition. For the mythical element has not altogether disappeared.

Some characteristic differences may here be noted, which distinguish the ancient from the modern mode of conceiving God.

a. To Plato, the idea of God or mind is both personal and impersonal. Nor in ascribing, as appears to us, both these attributes to him, and in speaking of God both in the masculine and neuter gender, did he seem to himself inconsistent. For the difference between the personal and impersonal was not marked to him as to ourselves. We make a fundamental distinction between a thing and a person, while to Plato, by the help of various intermediate abstractions, such as end, good, cause, they appear almost to meet in one, or to be two aspects of the same. Hence, without any reconciliation or even remark, in the Republic he speaks at one time of God or Gods, and at another time of the Good. So in the Phaedrus he seems to pass unconsciously from the concrete to the abstract conception of the Ideas in the same dialogue. Nor in the Philebus is he careful to show in what relation the idea of the divine mind stands to the supreme principle of measure.

b. Again, to us there is a strongly-marked distinction between a first cause and a final cause. And we should commonly identify a first cause with God, and the final cause with the world, which is His work. But Plato, though not a Pantheist, and very far from confounding God with the world, tends to identify the first with the final cause. The cause of the union of the finite and infinite might be described as a higher law; the final measure which is the highest expression of the good may also be described as the supreme law. Both these conceptions are realized chiefly by the help of the material world; and therefore when we pass into the sphere of ideas can hardly be distinguished.

The four principles are required for the determination of the relative places of pleasure and wisdom. Plato has been saying that we should proceed by regular steps from the one to the many. Accordingly, before assigning the precedence either to good or pleasure, he must first find out and arrange in order the general principles of things. Mind is ascertained to be akin to the nature of the cause, while pleasure is found in the infinite or indefinite class. We may now proceed to divide pleasure and knowledge after their kinds.

III. 1. Plato speaks of pleasure as indefinite, as relative, as a generation, and in all these points of view as in a category distinct from good. For again we must repeat, that to the Greek 'the good is of the nature of the finite,' and, like virtue, either is, or is nearly allied to, knowledge. The modern philosopher would remark that the indefinite is equally real with the definite. Health and mental qualities are in the concrete undefined; they are nevertheless real goods, and Plato rightly regards them as falling under the finite class. Again, we are able to define objects or ideas, not in so far as they are in the mind, but in so far as they are manifested externally, and can therefore be reduced to rule and measure. And if we adopt the test of definiteness, the pleasures of the body are more capable of being defined than any other pleasures. As in art and knowledge generally, we proceed

from without inwards, beginning with facts of sense, and passing to the more ideal conceptions of mental pleasure, happiness, and the like.

2. Pleasure is depreciated as relative, while good is exalted as absolute. But this distinction seems to arise from an unfair mode of regarding them; the abstract idea of the one is compared with the concrete experience of the other. For all pleasure and all knowledge may be viewed either abstracted from the mind, or in relation to the mind (compare Aristot. Nic. Ethics). The first is an idea only, which may be conceived as absolute and unchangeable, and then the abstract idea of pleasure will be equally unchangeable with that of knowledge. But when we come to view either as phenomena of consciousness, the same defects are for the most part incident to both of them. Our hold upon them is equally transient and uncertain; the mind cannot be always in a state of intellectual tension, any more than capable of feeling pleasure always. The knowledge which is at one time clear and distinct, at another seems to fade away, just as the pleasure of health after sickness, or of eating after hunger, soon passes into a neutral state of unconsciousness and indifference. Change and alternation are necessary for the mind as well as for the body; and in this is to be acknowledged, not an element of evil, but rather a law of nature. The chief difference between subjective pleasure and subjective knowledge in respect of permanence is that the latter, when our feeble faculties are able to grasp it, still conveys to us an idea of unchangeableness which cannot be got rid of.

3. In the language of ancient philosophy, the relative character of pleasure is described as becoming or generation. This is relative to Being or Essence, and from one point of view may be regarded as the Heraclitean flux in contrast with the Eleatic Being; from another, as the transient enjoyment of eating and drinking compared with the supposed permanence of intellectual pleasures. But to us the distinction is unmeaning, and belongs to a stage of philosophy which has passed away. Plato himself seems to have suspected that the continuance or life of things is quite as much to be attributed to a principle of rest as of motion (compare Charm. Cratyl.). A later view of pleasure is found in Aristotle, who agrees with Plato in many points, e.g. in his view of pleasure as a restoration to nature, in his distinction between bodily and mental, between necessary and non-necessary pleasures. But he is also in advance of Plato; for he affirms that pleasure is not in the body at all; and hence not even the bodily pleasures are to be spoken of as generations, but only as accompanied by generation (Nic. Eth.).

4. Plato attempts to identify vicious pleasures with some form of error, and insists that the term false may be applied to them: in this he appears to be carrying out in a confused manner the Socratic doctrine, that virtue is knowledge, vice ignorance. He will allow of no distinction between the pleasures and the erroneous opinions on which they are founded, whether arising out of the illusion of distance or not. But to this we naturally reply with Protarchus, that the pleasure is what it is, although the calculation may be false, or the after-effects painful. It is difficult to acquit Plato, to use his own language, of being a 'tyro in dialectics,' when he overlooks such a distinction. Yet, on the other hand, we are hardly fair judges of confusions of thought in those who view things differently from ourselves.

5. There appears also to be an incorrectness in the notion which occurs both here and in the Gorgias, of the simultaneousness of merely bodily pleasures and pains. We may, perhaps, admit, though even this is not free from doubt, that the feeling of pleasureable hope or recollection is, or rather may be, simultaneous with acute bodily suffering. But there is no such coexistence of the pain of thirst with the pleasures of drinking; they are not really simultaneous, for the one expels the other. Nor does Plato

seem to have considered that the bodily pleasures, except in certain extreme cases, are unattended with pain. Few philosophers will deny that a degree of pleasure attends eating and drinking; and yet surely we might as well speak of the pains of digestion which follow, as of the pains of hunger and thirst which precede them. Plato's conception is derived partly from the extreme case of a man suffering pain from hunger or thirst, partly from the image of a full and empty vessel. But the truth is rather, that while the gratification of our bodily desires constantly affords some degree of pleasure, the antecedent pains are scarcely perceived by us, being almost done away with by use and regularity.

6. The desire to classify pleasures as accompanied or not accompanied by antecedent pains, has led Plato to place under one head the pleasures of smell and sight, as well as those derived from sounds of music and from knowledge. He would have done better to make a separate class of the pleasures of smell, having no association of mind, or perhaps to have divided them into natural and artificial. The pleasures of sight and sound might then have been regarded as being the expression of ideas. But this higher and truer point of view never appears to have occurred to Plato. Nor has he any distinction between the fine arts and the mechanical; and, neither here nor anywhere, an adequate conception of the beautiful in external things.

7. Plato agrees partially with certain 'surly or fastidious' philosophers, as he terms them, who defined pleasure to be the absence of pain. They are also described as eminent in physics. There is unfortunately no school of Greek philosophy known to us which combined these two characteristics. Antisthenes, who was an enemy of pleasure, was not a physical philosopher; the atomists, who were physical philosophers, were not enemies of pleasure. Yet such a combination of opinions is far from being impossible. Plato's omission to mention them by name has created the same uncertainty respecting them which also occurs respecting the 'friends of the ideas' and the 'materialists' in the Sophist.

On the whole, this discussion is one of the least satisfactory in the dialogues of Plato. While the ethical nature of pleasure is scarcely considered, and the merely physical phenomenon imperfectly analysed, too much weight is given to ideas of measure and number, as the sole principle of good. The comparison of pleasure and knowledge is really a comparison of two elements, which have no common measure, and which cannot be excluded from each other. Feeling is not opposed to knowledge, and in all consciousness there is an element of both. The most abstract kinds of knowledge are inseparable from some pleasure or pain, which accompanies the acquisition or possession of them: the student is liable to grow weary of them, and soon discovers that continuous mental energy is not granted to men. The most sensual pleasure, on the other hand, is inseparable from the consciousness of pleasure; no man can be happy who, to borrow Plato's illustration, is leading the life of an oyster. Hence (by his own confession) the main thesis is not worth determining; the real interest lies in the incidental discussion. We can no more separate pleasure from knowledge in the Philebus than we can separate justice from happiness in the Republic.

IV. An interesting account is given in the Philebus of the rank and order of the sciences or arts, which agrees generally with the scheme of knowledge in the Sixth Book of the Republic. The chief difference is, that the position of the arts is more exactly defined. They are divided into an empirical part and a scientific part, of which the first is mere guess-work, the second is determined by rule and measure. Of the more empirical arts, music is given as an example; this, although affirmed to be

necessary to human life, is depreciated. Music is regarded from a point of view entirely opposite to that of the Republic, not as a sublime science, coordinate with astronomy, but as full of doubt and conjecture. According to the standard of accuracy which is here adopted, it is rightly placed lower in the scale than carpentering, because the latter is more capable of being reduced to measure.

The theoretical element of the arts may also become a purely abstract science, when separated from matter, and is then said to be pure and unmixed. The distinction which Plato here makes seems to be the same as that between pure and applied mathematics, and may be expressed in the modern formula—science is art theoretical, art is science practical. In the reason which he gives for the superiority of the pure science of number over the mixed or applied, we can only agree with him in part. He says that the numbers which the philosopher employs are always the same, whereas the numbers which are used in practice represent different sizes or quantities. He does not see that this power of expressing different quantities by the same symbol is the characteristic and not the defect of numbers, and is due to their abstract nature;—although we admit of course what Plato seems to feel in his distinctions between pure and impure knowledge, that the imperfection of matter enters into the applications of them.

Above the other sciences, as in the Republic, towers dialectic, which is the science of eternal Being, apprehended by the purest mind and reason. The lower sciences, including the mathematical, are akin to opinion rather than to reason, and are placed together in the fourth class of goods. The relation in which they stand to dialectic is obscure in the Republic, and is not cleared up in the Philebus.

V. Thus far we have only attained to the vestibule or ante-chamber of the good; for there is a good exceeding knowledge, exceeding essence, which, like Glaucon in the Republic, we find a difficulty in apprehending. This good is now to be exhibited to us under various aspects and gradations. The relative dignity of pleasure and knowledge has been determined; but they have not yet received their exact position in the scale of goods. Some difficulties occur to us in the enumeration: First, how are we to distinguish the first from the second class of goods, or the second from the third? Secondly, why is there no mention of the supreme mind? Thirdly, the nature of the fourth class. Fourthly, the meaning of the allusion to a sixth class, which is not further investigated.

(I) Plato seems to proceed in his table of goods, from the more abstract to the less abstract; from the subjective to the objective; until at the lower end of the scale we fairly descend into the region of human action and feeling. To him, the greater the abstraction the greater the truth, and he is always tending to see abstractions within abstractions; which, like the ideas in the Parmenides, are always appearing one behind another. Hence we find a difficulty in following him into the sphere of thought which he is seeking to attain. First in his scale of goods he places measure, in which he finds the eternal nature: this would be more naturally expressed in modern language as eternal law, and seems to be akin both to the finite and to the mind or cause, which were two of the elements in the former table. Like the supreme nature in the Timaeus, like the ideal beauty in the Symposium or the Phaedrus, or like the ideal good in the Republic, this is the absolute and unapproachable being. But this being is manifested in symmetry and beauty everywhere, in the order of nature and of mind, in the relations of men to one another. For the word 'measure' he now substitutes the word 'symmetry,' as if intending to express measure conceived as relation. He then proceeds to regard the good no longer in an objective form, but as the human reason seeking to attain truth by the aid of dialectic;

such at least we naturally infer to be his meaning, when we consider that both here and in the Republic the sphere of nous or mind is assigned to dialectic. (2) It is remarkable (see above) that this personal conception of mind is confined to the human mind, and not extended to the divine. (3) If we may be allowed to interpret one dialogue of Plato by another, the sciences of figure and number are probably classed with the arts and true opinions, because they proceed from hypotheses (compare Republic). (4) The sixth class, if a sixth class is to be added, is playfully set aside by a quotation from Orpheus: Plato means to say that a sixth class, if there be such a class, is not worth considering, because pleasure, having only gained the fifth place in the scale of goods, is already out of the running.

VI. We may now endeavour to ascertain the relation of the Philebus to the other dialogues. Here Plato shows the same indifference to his own doctrine of Ideas which he has already manifested in the Parmenides and the Sophist. The principle of the one and many of which he here speaks, is illustrated by examples in the Sophist and Statesman. Notwithstanding the differences of style, many resemblances may be noticed between the Philebus and Gorgias. The theory of the simultaneousness of pleasure and pain is common to both of them (Phil. Gorg.); there is also a common tendency in them to take up arms against pleasure, although the view of the Philebus, which is probably the later of the two dialogues, is the more moderate. There seems to be an allusion to the passage in the Gorgias, in which Socrates dilates on the pleasures of itching and scratching. Nor is there any real discrepancy in the manner in which Gorgias and his art are spoken of in the two dialogues. For Socrates is far from implying that the art of rhetoric has a real sphere of practical usefulness: he only means that the refutation of the claims of Gorgias is not necessary for his present purpose. He is saying in effect: 'Admit, if you please, that rhetoric is the greatest and usefullest of sciences:—this does not prove that dialectic is not the purest and most exact.' From the Sophist and Statesman we know that his hostility towards the sophists and rhetoricians was not mitigated in later life; although both in the Statesman and Laws he admits of a higher use of rhetoric.

Reasons have been already given for assigning a late date to the Philebus. That the date is probably later than that of the Republic, may be further argued on the following grounds:—1. The general resemblance to the later dialogues and to the Laws: 2. The more complete account of the nature of good and pleasure: 3. The distinction between perception, memory, recollection, and opinion which indicates a great progress in psychology; also between understanding and imagination, which is described under the figure of the scribe and the painter. A superficial notion may arise that Plato probably wrote shorter dialogues, such as the Philebus, the Sophist, and the Statesman, as studies or preparations for longer ones. This view may be natural; but on further reflection is seen to be fallacious, because these three dialogues are found to make an advance upon the metaphysical conceptions of the Republic. And we can more easily suppose that Plato composed shorter writings after longer ones, than suppose that he lost hold of further points of view which he had once attained.

It is more easy to find traces of the Pythagoreans, Eleatics, Megarians, Cynics, Cyrenaics and of the ideas of Anaxagoras, in the Philebus, than to say how much is due to each of them. Had we fuller records of those old philosophers, we should probably find Plato in the midst of the fray attempting to combine Eleatic and Pythagorean doctrines, and seeking to find a truth beyond either Being or number; setting up his own concrete conception of good against the abstract practical good of the Cynics, or the abstract intellectual good of the Megarians, and his own idea of classification against the denial of plurality in unity which is also attributed to them; warring against the Eristics as

destructive of truth, as he had formerly fought against the Sophists; taking up a middle position between the Cynics and Cyrenaics in his doctrine of pleasure; asserting with more consistency than Anaxagoras the existence of an intelligent mind and cause. Of the Heracliteans, whom he is said by Aristotle to have cultivated in his youth, he speaks in the Philebus, as in the Theaetetus and Cratylus, with irony and contempt. But we have not the knowledge which would enable us to pursue further the line of reflection here indicated; nor can we expect to find perfect clearness or order in the first efforts of mankind to understand the working of their own minds. The ideas which they are attempting to analyse, they are also in process of creating; the abstract universals of which they are seeking to adjust the relations have been already excluded by them from the category of relation.

...

The Philebus, like the Cratylus, is supposed to be the continuation of a previous discussion. An argument respecting the comparative claims of pleasure and wisdom to rank as the chief good has been already carried on between Philebus and Socrates. The argument is now transferred to Protarchus, the son of Callias, a noble Athenian youth, sprung from a family which had spent 'a world of money' on the Sophists (compare Apol.; Crat.; Protag.). Philebus, who appears to be the teacher, or elder friend, and perhaps the lover, of Protarchus, takes no further part in the discussion beyond asserting in the strongest manner his adherence, under all circumstances, to the cause of pleasure.

Socrates suggests that they shall have a first and second palm of victory. For there may be a good higher than either pleasure or wisdom, and then neither of them will gain the first prize, but whichever of the two is more akin to this higher good will have a right to the second. They agree, and Socrates opens the game by enlarging on the diversity and opposition which exists among pleasures. For there are pleasures of all kinds, good and bad, wise and foolish—pleasures of the temperate as well as of the intemperate. Protarchus replies that although pleasures may be opposed in so far as they spring from opposite sources, nevertheless as pleasures they are alike. Yes, retorts Socrates, pleasure is like pleasure, as figure is like figure and colour like colour; yet we all know that there is great variety among figures and colours. Protarchus does not see the drift of this remark; and Socrates proceeds to ask how he can have a right to attribute a new predicate (i.e. 'good') to pleasures in general, when he cannot deny that they are different? What common property in all of them does he mean to indicate by the term 'good'? If he continues to assert that there is some trivial sense in which pleasure is one, Socrates may retort by saying that knowledge is one, but the result will be that such merely verbal and trivial conceptions, whether of knowledge or pleasure, will spoil the discussion, and will prove the incapacity of the two disputants. In order to avoid this danger, he proposes that they shall beat a retreat, and, before they proceed, come to an understanding about the 'high argument' of the one and the many.

Protarchus agrees to the proposal, but he is under the impression that Socrates means to discuss the common question—how a sensible object can be one, and yet have opposite attributes, such as 'great' and 'small,' 'light' and 'heavy,' or how there can be many members in one body, and the like wonders. Socrates has long ceased to see any wonder in these phenomena; his difficulties begin with the application of number to abstract unities (e.g.'man,' 'good') and with the attempt to divide them. For have these unities of idea any real existence? How, if imperishable, can they enter into the world of generation? How, as units, can they be divided and dispersed among different objects? Or do they

exist in their entirety in each object? These difficulties are but imperfectly answered by Socrates in what follows.

We speak of a one and many, which is ever flowing in and out of all things, concerning which a young man often runs wild in his first metaphysical enthusiasm, talking about analysis and synthesis to his father and mother and the neighbours, hardly sparing even his dog. This 'one in many' is a revelation of the order of the world, which some Prometheus first made known to our ancestors; and they, who were better men and nearer the gods than we are, have handed it down to us. To know how to proceed by regular steps from one to many, and from many to one, is just what makes the difference between eristic and dialectic. And the right way of proceeding is to look for one idea or class in all things, and when you have found one to look for more than one, and for all that there are, and when you have found them all and regularly divided a particular field of knowledge into classes, you may leave the further consideration of individuals. But you must not pass at once either from unity to infinity, or from infinity to unity. In music, for example, you may begin with the most general notion, but this alone will not make you a musician: you must know also the number and nature of the intervals, and the systems which are framed out of them, and the rhythms of the dance which correspond to them. And when you have a similar knowledge of any other subject, you may be said to know that subject. In speech again there are infinite varieties of sound, and some one who was a wise man, or more than man, comprehended them all in the classes of mutes, vowels, and semivowels, and gave to each of them a name, and assigned them to the art of grammar.

'But whither, Socrates, are you going? And what has this to do with the comparative eligibility of pleasure and wisdom:' Socrates replies, that before we can adjust their respective claims, we want to know the number and kinds of both of them. What are they? He is requested to answer the question himself. That he will, if he may be allowed to make one or two preliminary remarks. In the first place he has a dreamy recollection of hearing that neither pleasure nor knowledge is the highest good, for the good should be perfect and sufficient. But is the life of pleasure perfect and sufficient, when deprived of memory, consciousness, anticipation? Is not this the life of an oyster? Or is the life of mind sufficient, if devoid of any particle of pleasure? Must not the union of the two be higher and more eligible than either separately? And is not the element which makes this mixed life eligible more akin to mind than to pleasure? Thus pleasure is rejected and mind is rejected. And yet there may be a life of mind, not human but divine, which conquers still.

But, if we are to pursue this argument further, we shall require some new weapons; and by this, I mean a new classification of existence. (1) There is a finite element of existence, and (2) an infinite, and (3) the union of the two, and (4) the cause of the union. More may be added if they are wanted, but at present we can do without them. And first of the infinite or indefinite:—That is the class which is denoted by the terms more or less, and is always in a state of comparison. All words or ideas to which the words 'gently,' 'extremely,' and other comparative expressions are applied, fall under this class. The infinite would be no longer infinite, if limited or reduced to measure by number and quantity. The opposite class is the limited or finite, and includes all things which have number and quantity. And there is a third class of generation into essence by the union of the finite and infinite, in which the finite gives law to the infinite;—under this are comprehended health, strength, temperate seasons, harmony, beauty, and the like. The goddess of beauty saw the universal wantonness of all things, and gave law and order to be the salvation of the soul. But no effect can be generated without

a cause, and therefore there must be a fourth class, which is the cause of generation; for the cause or agent is not the same as the patient or effect.

And now, having obtained our classes, we may determine in which our conqueror life is to be placed: Clearly in the third or mixed class, in which the finite gives law to the infinite. And in which is pleasure to find a place? As clearly in the infinite or indefinite, which alone, as Protarchus thinks (who seems to confuse the infinite with the superlative), gives to pleasure the character of the absolute good. Yes, retorts Socrates, and also to pain the character of absolute evil. And therefore the infinite cannot be that which imparts to pleasure the nature of the good. But where shall we place mind? That is a very serious and awful question, which may be prefaced by another. Is mind or chance the lord of the universe? All philosophers will say the first, and yet, perhaps, they may be only magnifying themselves. And for this reason I should like to consider the matter a little more deeply, even though some lovers of disorder in the world should ridicule my attempt.

Now the elements earth, air, fire, water, exist in us, and they exist in the cosmos; but they are purer and fairer in the cosmos than they are in us, and they come to us from thence. And as we have a soul as well as a body, in like manner the elements of the finite, the infinite, the union of the two, and the cause, are found to exist in us. And if they, like the elements, exist in us, and the three first exist in the world, must not the fourth or cause which is the noblest of them, exist in the world? And this cause is wisdom or mind, the royal mind of Zeus, who is the king of all, as there are other gods who have other noble attributes. Observe how well this agrees with the testimony of men of old, who affirmed mind to be the ruler of the universe. And remember that mind belongs to the class which we term the cause, and pleasure to the infinite or indefinite class. We will examine the place and origin of both.

What is the origin of pleasure? Her natural seat is the mixed class, in which health and harmony were placed. Pain is the violation, and pleasure the restoration of limit. There is a natural union of finite and infinite, which in hunger, thirst, heat, cold, is impaired—this is painful, but the return to nature, in which the elements are restored to their normal proportions, is pleasant. Here is our first class of pleasures. And another class of pleasures and pains are hopes and fears; these are in the mind only. And inasmuch as the pleasures are unalloyed by pains and the pains by pleasures, the examination of them may show us whether all pleasure is to be desired, or whether this entire desirableness is not rather the attribute of another class. But if pleasures and pains consist in the violation and restoration of limit, may there not be a neutral state, in which there is neither dissolution nor restoration? That is a further question, and admitting, as we must, the possibility of such a state, there seems to be no reason why the life of wisdom should not exist in this neutral state, which is, moreover, the state of the gods, who cannot, without indecency, be supposed to feel either joy or sorrow.

The second class of pleasures involves memory. There are affections which are extinguished before they reach the soul, and of these there is no consciousness, and therefore no memory. And there are affections which the body and soul feel together, and this feeling is termed consciousness. And memory is the preservation of consciousness, and reminiscence is the recovery of consciousness. Now the memory of pleasure, when a man is in pain, is the memory of the opposite of his actual bodily state, and is therefore not in the body, but in the mind. And there may be an intermediate state, in which a person is balanced between pleasure and pain; in his body there is want which is a cause of pain, but in his mind a sure hope of replenishment, which is pleasant. (But if the hope be converted

into despair, he has two pains and not a balance of pain and pleasure.) Another question is raised: May not pleasures, like opinions, be true and false? In the sense of being real, both must be admitted to be true: nor can we deny that to both of them qualities may be attributed; for pleasures as well as opinions may be described as good or bad. And though we do not all of us allow that there are true and false pleasures, we all acknowledge that there are some pleasures associated with right opinion, and others with falsehood and ignorance. Let us endeavour to analyze the nature of this association.

Opinion is based on perception, which may be correct or mistaken. You may see a figure at a distance, and say first of all, 'This is a man,' and then say, 'No, this is an image made by the shepherds.' And you may affirm this in a proposition to your companion, or make the remark mentally to yourself. Whether the words are actually spoken or not, on such occasions there is a scribe within who registers them, and a painter who paints the images of the things which the scribe has written down in the soul,—at least that is my own notion of the process; and the words and images which are inscribed by them may be either true or false; and they may represent either past, present, or future. And, representing the future, they must also represent the pleasures and pains of anticipation—the visions of gold and other fancies which are never wanting in the mind of man. Now these hopes, as they are termed, are propositions, which are sometimes true, and sometimes false; for the good, who are the friends of the gods, see true pictures of the future, and the bad false ones. And as there may be opinion about things which are not, were not, and will not be, which is opinion still, so there may be pleasure about things which are not, were not, and will not be, which is pleasure still,—that is to say, false pleasure; and only when false, can pleasure, like opinion, be vicious. Against this conclusion Protarchus reclaims.

Leaving his denial for the present, Socrates proceeds to show that some pleasures are false from another point of view. In desire, as we admitted, the body is divided from the soul, and hence pleasures and pains are often simultaneous. And we further admitted that both of them belonged to the infinite class. How, then, can we compare them? Are we not liable, or rather certain, as in the case of sight, to be deceived by distance and relation? In this case the pleasures and pains are not false because based upon false opinion, but are themselves false. And there is another illusion: pain has often been said by us to arise out of the derangement—pleasure out of the restoration—of our nature. But in passing from one to the other, do we not experience neutral states, which although they appear pleasureable or painful are really neither? For even if we admit, with the wise man whom Protarchus loves (and only a wise man could have ever entertained such a notion), that all things are in a perpetual flux, still these changes are often unconscious, and devoid either of pleasure or pain. We assume, then, that there are three states—pleasureable, painful, neutral; we may embellish a little by calling them gold, silver, and that which is neither.

But there are certain natural philosophers who will not admit a third state. Their instinctive dislike to pleasure leads them to affirm that pleasure is only the absence of pain. They are noble fellows, and, although we do not agree with them, we may use them as diviners who will indicate to us the right track. They will say, that the nature of anything is best known from the examination of extreme cases, e.g. the nature of hardness from the examination of the hardest things; and that the nature of pleasure will be best understood from an examination of the most intense pleasures. Now these are the pleasures of the body, not of the mind; the pleasures of disease and not of health, the pleasures of the intemperate and not of the temperate. I am speaking, not of the frequency or continuance, but only of the intensity of such pleasures, and this is given them by contrast with the pain or sickness of

body which precedes them. Their morbid nature is illustrated by the lesser instances of itching and scratching, respecting which I swear that I cannot tell whether they are a pleasure or a pain. (1) Some of these arise out of a transition from one state of the body to another, as from cold to hot; (2) others are caused by the contrast of an internal pain and an external pleasure in the body: sometimes the feeling of pain predominates, as in itching and tingling, when they are relieved by scratching; sometimes the feeling of pleasure: or the pleasure which they give may be quite overpowering, and is then accompanied by all sorts of unutterable feelings which have a death of delights in them. But there are also mixed pleasures which are in the mind only. For are not love and sorrow as well as anger 'sweeter than honey,' and also full of pain? Is there not a mixture of feelings in the spectator of tragedy? and of comedy also? 'I do not understand that last.' Well, then, with the view of lighting up the obscurity of these mixed feelings, let me ask whether envy is painful. 'Yes.' And yet the envious man finds something pleasing in the misfortunes of others? 'True.' And ignorance is a misfortune? 'Certainly.' And one form of ignorance is self-conceit—a man may fancy himself richer, fairer, better, wiser than he is? 'Yes.' And he who thus deceives himself may be strong or weak? 'He may.' And if he is strong we fear him, and if he is weak we laugh at him, which is a pleasure, and yet we envy him, which is a pain? These mixed feelings are the rationale of tragedy and comedy, and equally the rationale of the greater drama of human life. (There appears to be some confusion in this passage. There is no difficulty in seeing that in comedy, as in tragedy, the spectator may view the performance with mixed feelings of pain as well as of pleasure; nor is there any difficulty in understanding that envy is a mixed feeling, which rejoices not without pain at the misfortunes of others, and laughs at their ignorance of themselves. But Plato seems to think further that he has explained the feeling of the spectator in comedy sufficiently by a theory which only applies to comedy in so far as in comedy we laugh at the conceit or weakness of others. He has certainly given a very partial explanation of the ridiculous.) Having shown how sorrow, anger, envy are feelings of a mixed nature, I will reserve the consideration of the remainder for another occasion.

Next follow the unmixed pleasures; which, unlike the philosophers of whom I was speaking, I believe to be real. These unmixed pleasures are: (1) The pleasures derived from beauty of form, colour, sound, smell, which are absolutely pure; and in general those which are unalloyed with pain: (2) The pleasures derived from the acquisition of knowledge, which in themselves are pure, but may be attended by an accidental pain of forgetting; this, however, arises from a subsequent act of reflection, of which we need take no account. At the same time, we admit that the latter pleasures are the property of a very few. To these pure and unmixed pleasures we ascribe measure, whereas all others belong to the class of the infinite, and are liable to every species of excess. And here several questions arise for consideration:—What is the meaning of pure and impure, of moderate and immoderate? We may answer the question by an illustration: Purity of white paint consists in the clearness or quality of the white, and this is distinct from the quantity or amount of white paint; a little pure white is fairer than a great deal which is impure. But there is another question:—Pleasure is affirmed by ingenious philosophers to be a generation; they say that there are two natures—one self-existent, the other dependent; the one noble and majestic, the other failing in both these qualities. 'I do not understand.' There are lovers and there are loves. 'Yes, I know, but what is the application?' The argument is in play, and desires to intimate that there are relatives and there are absolutes, and that the relative is for the sake of the absolute; and generation is for the sake of essence. Under relatives I class all things done with a view to generation; and essence is of the class of good. But if essence is of the class of good, generation must be of some other class; and our friends, who affirm that pleasure is a generation, would laugh at the notion that pleasure is a good; and at that other

notion, that pleasure is produced by generation, which is only the alternative of destruction. Who would prefer such an alternation to the equable life of pure thought? Here is one absurdity, and not the only one, to which the friends of pleasure are reduced. For is there not also an absurdity in affirming that good is of the soul only; or in declaring that the best of men, if he be in pain, is bad?

And now, from the consideration of pleasure, we pass to that of knowledge. Let us reflect that there are two kinds of knowledge—the one creative or productive, and the other educational and philosophical. Of the creative arts, there is one part purer or more akin to knowledge than the other. There is an element of guess-work and an element of number and measure in them. In music, for example, especially in flute-playing, the conjectural element prevails; while in carpentering there is more application of rule and measure. Of the creative arts, then, we may make two classes—the less exact and the more exact. And the exacter part of all of them is really arithmetic and mensuration. But arithmetic and mensuration again may be subdivided with reference either to their use in the concrete, or to their nature in the abstract—as they are regarded popularly in building and binding, or theoretically by philosophers. And, borrowing the analogy of pleasure, we may say that the philosophical use of them is purer than the other. Thus we have two arts of arithmetic, and two of mensuration. And truest of all in the estimation of every rational man is dialectic, or the science of being, which will forget and disown us, if we forget and disown her.

'But, Socrates, I have heard Gorgias say that rhetoric is the greatest and usefullest of arts; and I should not like to quarrel either with him or you.' Neither is there any inconsistency, Protarchus, with his statement in what I am now saying; for I am not maintaining that dialectic is the greatest or usefullest, but only that she is the truest of arts; my remark is not quantitative but qualitative, and refers not to the advantage or repetition of either, but to the degree of truth which they attain—here Gorgias will not care to compete; this is what we affirm to be possessed in the highest degree by dialectic. And do not let us appeal to Gorgias or Philebus or Socrates, but ask, on behalf of the argument, what are the highest truths which the soul has the power of attaining. And is not this the science which has a firmer grasp of them than any other? For the arts generally are only occupied with matters of opinion, and with the production and action and passion of this sensible world. But the highest truth is that which is eternal and unchangeable. And reason and wisdom are concerned with the eternal; and these are the very claimants, if not for the first, at least for the second place, whom I propose as rivals to pleasure.

And now, having the materials, we may proceed to mix them—first recapitulating the question at issue.

Philebus affirmed pleasure to be the good, and assumed them to be one nature; I affirmed that they were two natures, and declared that knowledge was more akin to the good than pleasure. I said that the two together were more eligible than either taken singly; and to this we adhere. Reason intimates, as at first, that we should seek the good not in the unmixed life, but in the mixed.

The cup is ready, waiting to be mingled, and here are two fountains, one of honey, the other of pure water, out of which to make the fairest possible mixture. There are pure and impure pleasures—pure and impure sciences. Let us consider the sections of each which have the most of purity and truth; to admit them all indiscriminately would be dangerous. First we will take the pure sciences; but shall we mingle the impure—the art which uses the false rule and the false measure? That we must, if we are

any of us to find our way home; man cannot live upon pure mathematics alone. And must I include music, which is admitted to be guess-work? 'Yes, you must, if human life is to have any humanity.' Well, then, I will open the door and let them all in; they shall mingle in an Homeric 'meeting of the waters.' And now we turn to the pleasures; shall I admit them? 'Admit first of all the pure pleasures; secondly, the necessary.' And what shall we say about the rest? First, ask the pleasures—they will be too happy to dwell with wisdom. Secondly, ask the arts and sciences—they reply that the excesses of intemperance are the ruin of them; and that they would rather only have the pleasures of health and temperance, which are the handmaidens of virtue. But still we want truth? That is now added; and so the argument is complete, and may be compared to an incorporeal law, which is to hold fair rule over a living body. And now we are at the vestibule of the good, in which there are three chief elements—truth, symmetry, and beauty. These will be the criterion of the comparative claims of pleasure and wisdom.

Which has the greater share of truth? Surely wisdom; for pleasure is the veriest impostor in the world, and the perjuries of lovers have passed into a proverb.

Which of symmetry? Wisdom again; for nothing is more immoderate than pleasure.

Which of beauty? Once more, wisdom; for pleasure is often unseemly, and the greatest pleasures are put out of sight.

Not pleasure, then, ranks first in the scale of good, but measure, and eternal harmony.

Second comes the symmetrical and beautiful and perfect.

Third, mind and wisdom.

Fourth, sciences and arts and true opinions.

Fifth, painless pleasures.

Of a sixth class, I have no more to say. Thus, pleasure and mind may both renounce the claim to the first place. But mind is ten thousand times nearer to the chief good than pleasure. Pleasure ranks fifth and not first, even though all the animals in the world assert the contrary.

...

From the days of Aristippus and Epicurus to our own times the nature of pleasure has occupied the attention of philosophers. 'Is pleasure an evil? a good? the only good?' are the simple forms which the enquiry assumed among the Socratic schools. But at an early stage of the controversy another question was asked: 'Do pleasures differ in kind? and are some bad, some good, and some neither bad nor good?' There are bodily and there are mental pleasures, which were at first confused but afterwards distinguished. A distinction was also made between necessary and unnecessary pleasures; and again between pleasures which had or had not corresponding pains. The ancient philosophers were fond of asking, in the language of their age, 'Is pleasure a "becoming" only, and therefore transient and relative, or do some pleasures partake of truth and Being?' To these ancient

speculations the moderns have added a further question:—'Whose pleasure? The pleasure of yourself, or of your neighbour,—of the individual, or of the world?' This little addition has changed the whole aspect of the discussion: the same word is now supposed to include two principles as widely different as benevolence and self-love. Some modern writers have also distinguished between pleasure the test, and pleasure the motive of actions. For the universal test of right actions (how I know them) may not always be the highest or best motive of them (why I do them).

Socrates, as we learn from the Memorabilia of Xenophon, first drew attention to the consequences of actions. Mankind were said by him to act rightly when they knew what they were doing, or, in the language of the Gorgias, 'did what they would.' He seems to have been the first who maintained that the good was the useful (Mem.). In his eagerness for generalization, seeking, as Aristotle says, for the universal in Ethics (Metaph.), he took the most obvious intellectual aspect of human action which occurred to him. He meant to emphasize, not pleasure, but the calculation of pleasure; neither is he arguing that pleasure is the chief good, but that we should have a principle of choice. He did not intend to oppose 'the useful' to some higher conception, such as the Platonic ideal, but to chance and caprice. The Platonic Socrates pursues the same vein of thought in the Protagoras, where he argues against the so-called sophist that pleasure and pain are the final standards and motives of good and evil, and that the salvation of human life depends upon a right estimate of pleasures greater or less when seen near and at a distance. The testimony of Xenophon is thus confirmed by that of Plato, and we are therefore justified in calling Socrates the first utilitarian; as indeed there is no side or aspect of philosophy which may not with reason be ascribed to him—he is Cynic and Cyrenaic, Platonist and Aristotelian in one. But in the Phaedo the Socratic has already passed into a more ideal point of view; and he, or rather Plato speaking in his person, expressly repudiates the notion that the exchange of a less pleasure for a greater can be an exchange of virtue. Such virtue is the virtue of ordinary men who live in the world of appearance; they are temperate only that they may enjoy the pleasures of intemperance, and courageous from fear of danger. Whereas the philosopher is seeking after wisdom and not after pleasure, whether near or distant: he is the mystic, the initiated, who has learnt to despise the body and is yearning all his life long for a truth which will hereafter be revealed to him. In the Republic the pleasures of knowledge are affirmed to be superior to other pleasures, because the philosopher so estimates them; and he alone has had experience of both kinds. (Compare a similar argument urged by one of the latest defenders of Utilitarianism, Mill's Utilitarianism). In the Philebus, Plato, although he regards the enemies of pleasure with complacency, still further modifies the transcendentalism of the Phaedo. For he is compelled to confess, rather reluctantly, perhaps, that some pleasures, i.e. those which have no antecedent pains, claim a place in the scale of goods.

There have been many reasons why not only Plato but mankind in general have been unwilling to acknowledge that 'pleasure is the chief good.' Either they have heard a voice calling to them out of another world; or the life and example of some great teacher has cast their thoughts of right and wrong in another mould; or the word 'pleasure' has been associated in their mind with merely animal enjoyment. They could not believe that what they were always striving to overcome, and the power or principle in them which overcame, were of the same nature. The pleasure of doing good to others and of bodily self-indulgence, the pleasures of intellect and the pleasures of sense, are so different:—Why then should they be called by a common name? Or, if the equivocal or metaphorical use of the word is justified by custom (like the use of other words which at first referred only to the body, and then by a figure have been transferred to the mind), still, why should we make an ambiguous word the corner-stone of moral philosophy? To the higher thinker the Utilitarian or hedonist mode of speaking has

been at variance with religion and with any higher conception both of politics and of morals. It has not satisfied their imagination; it has offended their taste. To elevate pleasure, 'the most fleeting of all things,' into a general idea seems to such men a contradiction. They do not desire to bring down their theory to the level of their practice. The simplicity of the 'greatest happiness' principle has been acceptable to philosophers, but the better part of the world has been slow to receive it.

Before proceeding, we may make a few admissions which will narrow the field of dispute; and we may as well leave behind a few prejudices, which intelligent opponents of Utilitarianism have by this time 'agreed to discard'. We admit that Utility is coextensive with right, and that no action can be right which does not tend to the happiness of mankind; we acknowledge that a large class of actions are made right or wrong by their consequences only; we say further that mankind are not too mindful, but that they are far too regardless of consequences, and that they need to have the doctrine of utility habitually inculcated on them. We recognize the value of a principle which can supply a connecting link between Ethics and Politics, and under which all human actions are or may be included. The desire to promote happiness is no mean preference of expediency to right, but one of the highest and noblest motives by which human nature can be animated. Neither in referring actions to the test of utility have we to make a laborious calculation, any more than in trying them by other standards of morals. For long ago they have been classified sufficiently for all practical purposes by the thinker, by the legislator, by the opinion of the world. Whatever may be the hypothesis on which they are explained, or which in doubtful cases may be applied to the regulation of them, we are very rarely, if ever, called upon at the moment of performing them to determine their effect upon the happiness of mankind.

There is a theory which has been contrasted with Utility by Paley and others—the theory of a moral sense: Are our ideas of right and wrong innate or derived from experience? This, perhaps, is another of those speculations which intelligent men might 'agree to discard.' For it has been worn threadbare; and either alternative is equally consistent with a transcendental or with an eudaemonistic system of ethics, with a greatest happiness principle or with Kant's law of duty. Yet to avoid misconception, what appears to be the truth about the origin of our moral ideas may be shortly summed up as follows:—To each of us individually our moral ideas come first of all in childhood through the medium of education, from parents and teachers, assisted by the unconscious influence of language; they are impressed upon a mind which at first is like a waxen tablet, adapted to receive them; but they soon become fixed or set, and in after life are strengthened, or perhaps weakened by the force of public opinion. They may be corrected and enlarged by experience, they may be reasoned about, they may be brought home to us by the circumstances of our lives, they may be intensified by imagination, by reflection, by a course of action likely to confirm them. Under the influence of religious feeling or by an effort of thought, any one beginning with the ordinary rules of morality may create out of them for himself ideals of holiness and virtue. They slumber in the minds of most men, yet in all of us there remains some tincture of affection, some desire of good, some sense of truth, some fear of the law. Of some such state or process each individual is conscious in himself, and if he compares his own experience with that of others he will find the witness of their consciences to coincide with that of his own. All of us have entered into an inheritance which we have the power of appropriating and making use of. No great effort of mind is required on our part; we learn morals, as we learn to talk, instinctively, from conversing with others, in an enlightened age, in a civilized country, in a good home. A well-educated child of ten years old already knows the essentials of morals: 'Thou shalt not steal,' 'thou shalt speak the truth,' 'thou shalt love thy parents,' 'thou shalt fear God.' What more does he want?

But whence comes this common inheritance or stock of moral ideas? Their beginning, like all other beginnings of human things, is obscure, and is the least important part of them. Imagine, if you will, that Society originated in the herding of brutes, in their parental instincts, in their rude attempts at self-preservation:—Man is not man in that he resembles, but in that he differs from them. We must pass into another cycle of existence, before we can discover in him by any evidence accessible to us even the germs of our moral ideas. In the history of the world, which viewed from within is the history of the human mind, they have been slowly created by religion, by poetry, by law, having their foundation in the natural affections and in the necessity of some degree of truth and justice in a social state; they have been deepened and enlarged by the efforts of great thinkers who have idealized and connected them—by the lives of saints and prophets who have taught and exemplified them. The schools of ancient philosophy which seem so far from us—Socrates, Plato, Aristotle, the Stoics, the Epicureans, and a few modern teachers, such as Kant and Bentham, have each of them supplied 'moments' of thought to the world. The life of Christ has embodied a divine love, wisdom, patience, reasonableness. For his image, however imperfectly handed down to us, the modern world has received a standard more perfect in idea than the societies of ancient times, but also further removed from practice. For there is certainly a greater interval between the theory and practice of Christians than between the theory and practice of the Greeks and Romans; the ideal is more above us, and the aspiration after good has often lent a strange power to evil. And sometimes, as at the Reformation, or French Revolution, when the upper classes of a so-called Christian country have become corrupted by priestcraft, by casuistry, by licentiousness, by despotism, the lower have risen up and re-asserted the natural sense of religion and right.

We may further remark that our moral ideas, as the world grows older, perhaps as we grow older ourselves, unless they have been undermined in us by false philosophy or the practice of mental analysis, or infected by the corruption of society or by some moral disorder in the individual, are constantly assuming a more natural and necessary character. The habit of the mind, the opinion of the world, familiarizes them to us; and they take more and more the form of immediate intuition. The moral sense comes last and not first in the order of their development, and is the instinct which we have inherited or acquired, not the nobler effort of reflection which created them and which keeps them alive. We do not stop to reason about common honesty. Whenever we are not blinded by self-deceit, as for example in judging the actions of others, we have no hesitation in determining what is right and wrong. The principles of morality, when not at variance with some desire or worldly interest of our own, or with the opinion of the public, are hardly perceived by us; but in the conflict of reason and passion they assert their authority and are not overcome without remorse.

Such is a brief outline of the history of our moral ideas. We have to distinguish, first of all, the manner in which they have grown up in the world from the manner in which they have been communicated to each of us. We may represent them to ourselves as flowing out of the boundless ocean of language and thought in little rills, which convey them to the heart and brain of each individual. But neither must we confound the theories or aspects of morality with the origin of our moral ideas. These are not the roots or 'origines' of morals, but the latest efforts of reflection, the lights in which the whole moral world has been regarded by different thinkers and successive generations of men. If we ask: Which of these many theories is the true one? we may answer: All of them—moral sense, innate ideas, a priori, a posteriori notions, the philosophy of experience, the philosophy of intuition—all of them have added something to our conception of Ethics; no one of them is the whole truth. But to decide how far our ideas of morality are derived from one source or another; to determine what history, what philosophy

has contributed to them; to distinguish the original, simple elements from the manifold and complex applications of them, would be a long enquiry too far removed from the question which we are now pursuing.

Bearing in mind the distinction which we have been seeking to establish between our earliest and our most mature ideas of morality, we may now proceed to state the theory of Utility, not exactly in the words, but in the spirit of one of its ablest and most moderate supporters (Mill's Utilitarianism):—'That which alone makes actions either right or desirable is their utility, or tendency to promote the happiness of mankind, or, in other words, to increase the sum of pleasure in the world. But all pleasures are not the same: they differ in quality as well as in quantity, and the pleasure which is superior in quality is incommensurable with the inferior. Neither is the pleasure or happiness, which we seek, our own pleasure, but that of others,—of our family, of our country, of mankind. The desire of this, and even the sacrifice of our own interest to that of other men, may become a passion to a rightly educated nature. The Utilitarian finds a place in his system for this virtue and for every other.'

Good or happiness or pleasure is thus regarded as the true and only end of human life. To this all our desires will be found to tend, and in accordance with this all the virtues, including justice, may be explained. Admitting that men rest for a time in inferior ends, and do not cast their eyes beyond them, these ends are really dependent on the greater end of happiness, and would not be pursued, unless in general they had been found to lead to it. The existence of such an end is proved, as in Aristotle's time, so in our own, by the universal fact that men desire it. The obligation to promote it is based upon the social nature of man; this sense of duty is shared by all of us in some degree, and is capable of being greatly fostered and strengthened. So far from being inconsistent with religion, the greatest happiness principle is in the highest degree agreeable to it. For what can be more reasonable than that God should will the happiness of all his creatures? and in working out their happiness we may be said to be 'working together with him.' Nor is it inconceivable that a new enthusiasm of the future, far stronger than any old religion, may be based upon such a conception.

But then for the familiar phrase of the 'greatest happiness principle,' it seems as if we ought now to read 'the noblest happiness principle,' 'the happiness of others principle'—the principle not of the greatest, but of the highest pleasure, pursued with no more regard to our own immediate interest than is required by the law of self-preservation. Transfer the thought of happiness to another life, dropping the external circumstances which form so large a part of our idea of happiness in this, and the meaning of the word becomes indistinguishable from holiness, harmony, wisdom, love. By the slight addition 'of others,' all the associations of the word are altered; we seem to have passed over from one theory of morals to the opposite. For allowing that the happiness of others is reflected on ourselves, and also that every man must live before he can do good to others, still the last limitation is a very trifling exception, and the happiness of another is very far from compensating for the loss of our own. According to Mr. Mill, he would best carry out the principle of utility who sacrificed his own pleasure most to that of his fellow-men. But if so, Hobbes and Butler, Shaftesbury and Hume, are not so far apart as they and their followers imagine. The thought of self and the thought of others are alike superseded in the more general notion of the happiness of mankind at large. But in this composite good, until society becomes perfected, the friend of man himself has generally the least share, and may be a great sufferer.

And now what objection have we to urge against a system of moral philosophy so beneficent, so enlightened, so ideal, and at the same time so practical,—so Christian, as we may say without exaggeration,—and which has the further advantage of resting morality on a principle intelligible to all capacities? Have we not found that which Socrates and Plato 'grew old in seeking'? Are we not desirous of happiness, at any rate for ourselves and our friends, if not for all mankind? If, as is natural, we begin by thinking of ourselves first, we are easily led on to think of others; for we cannot help acknowledging that what is right for us is the right and inheritance of others. We feel the advantage of an abstract principle wide enough and strong enough to override all the particularisms of mankind; which acknowledges a universal good, truth, right; which is capable of inspiring men like a passion, and is the symbol of a cause for which they are ready to contend to their life's end.

And if we test this principle by the lives of its professors, it would certainly appear inferior to none as a rule of action. From the days of Eudoxus (Arist. Ethics) and Epicurus to our own, the votaries of pleasure have gained belief for their principles by their practice. Two of the noblest and most disinterested men who have lived in this century, Bentham and J. S. Mill, whose lives were a long devotion to the service of their fellows, have been among the most enthusiastic supporters of utility; while among their contemporaries, some who were of a more mystical turn of mind, have ended rather in aspiration than in action, and have been found unequal to the duties of life. Looking back on them now that they are removed from the scene, we feel that mankind has been the better for them. The world was against them while they lived; but this is rather a reason for admiring than for depreciating them. Nor can any one doubt that the influence of their philosophy on politics—especially on foreign politics, on law, on social life, has been upon the whole beneficial. Nevertheless, they will never have justice done to them, for they do not agree either with the better feeling of the multitude or with the idealism of more refined thinkers. Without Bentham, a great word in the history of philosophy would have remained unspoken. Yet to this day it is rare to hear his name received with any mark of respect such as would be freely granted to the ambiguous memory of some father of the Church. The odium which attached to him when alive has not been removed by his death. For he shocked his contemporaries by egotism and want of taste; and this generation which has reaped the benefit of his labours has inherited the feeling of the last. He was before his own age, and is hardly remembered in this.

While acknowledging the benefits which the greatest happiness principle has conferred upon mankind, the time appears to have arrived, not for denying its claims, but for criticizing them and comparing them with other principles which equally claim to lie at the foundation of ethics. Any one who adds a general principle to knowledge has been a benefactor to the world. But there is a danger that, in his first enthusiasm, he may not recognize the proportions or limitations to which his truth is subjected; he does not see how far he has given birth to a truism, or how that which is a truth to him is a truism to the rest of the world; or may degenerate in the next generation. He believes that to be the whole which is only a part,—to be the necessary foundation which is really only a valuable aspect of the truth. The systems of all philosophers require the criticism of 'the morrow,' when the heat of imagination which forged them has cooled, and they are seen in the temperate light of day. All of them have contributed to enrich the mind of the civilized world; none of them occupy that supreme or exclusive place which their authors would have assigned to them.

We may preface the criticism with a few preliminary remarks:—

Mr. Mill, Mr. Austin, and others, in their eagerness to maintain the doctrine of utility, are fond of repeating that we are in a lamentable state of uncertainty about morals. While other branches of knowledge have made extraordinary progress, in moral philosophy we are supposed by them to be no better than children, and with few exceptions—that is to say, Bentham and his followers—to be no further advanced than men were in the age of Socrates and Plato, who, in their turn, are deemed to be as backward in ethics as they necessarily were in physics. But this, though often asserted, is recanted almost in a breath by the same writers who speak thus depreciatingly of our modern ethical philosophy. For they are the first to acknowledge that we have not now to begin classifying actions under the head of utility; they would not deny that about the general conceptions of morals there is a practical agreement. There is no more doubt that falsehood is wrong than that a stone falls to the ground, although the first does not admit of the same ocular proof as the second. There is no greater uncertainty about the duty of obedience to parents and to the law of the land than about the properties of triangles. Unless we are looking for a new moral world which has no marrying and giving in marriage, there is no greater disagreement in theory about the right relations of the sexes than about the composition of water. These and a few other simple principles, as they have endless applications in practice, so also may be developed in theory into counsels of perfection.

To what then is to be attributed this opinion which has been often entertained about the uncertainty of morals? Chiefly to this,—that philosophers have not always distinguished the theoretical and the casuistical uncertainty of morals from the practical certainty. There is an uncertainty about details,—whether, for example, under given circumstances such and such a moral principle is to be enforced, or whether in some cases there may not be a conflict of duties: these are the exceptions to the ordinary rules of morality, important, indeed, but not extending to the one thousandth or one ten-thousandth part of human actions. This is the domain of casuistry. Secondly, the aspects under which the most general principles of morals may be presented to us are many and various. The mind of man has been more than usually active in thinking about man. The conceptions of harmony, happiness, right, freedom, benevolence, self-love, have all of them seemed to some philosopher or other the truest and most comprehensive expression of morality. There is no difference, or at any rate no great difference, of opinion about the right and wrong of actions, but only about the general notion which furnishes the best explanation or gives the most comprehensive view of them. This, in the language of Kant, is the sphere of the metaphysic of ethics. But these two uncertainties at either end, en tois malista katholou and en tois kath ekasta, leave space enough for an intermediate principle which is practically certain.

The rule of human life is not dependent on the theories of philosophers: we know what our duties are for the most part before we speculate about them. And the use of speculation is not to teach us what we already know, but to inspire in our minds an interest about morals in general, to strengthen our conception of the virtues by showing that they confirm one another, to prove to us, as Socrates would have said, that they are not many, but one. There is the same kind of pleasure and use in reducing morals, as in reducing physics, to a few very simple truths. And not unfrequently the more general principle may correct prejudices and misconceptions, and enable us to regard our fellow-men in a larger and more generous spirit.

The two qualities which seem to be most required in first principles of ethics are, (1) that they should afford a real explanation of the facts, (2) that they should inspire the mind,—should harmonize, strengthen, settle us. We can hardly estimate the influence which a simple principle such as 'Act so

as to promote the happiness of mankind,' or 'Act so that the rule on which thou actest may be adopted as a law by all rational beings,' may exercise on the mind of an individual. They will often seem to open a new world to him, like the religious conceptions of faith or the spirit of God. The difficulties of ethics disappear when we do not suffer ourselves to be distracted between different points of view. But to maintain their hold on us, the general principles must also be psychologically true—they must agree with our experience, they must accord with the habits of our minds.

When we are told that actions are right or wrong only in so far as they tend towards happiness, we naturally ask what is meant by 'happiness.' For the term in the common use of language is only to a certain extent commensurate with moral good and evil. We should hardly say that a good man could be utterly miserable (Arist. Ethics), or place a bad man in the first rank of happiness. But yet, from various circumstances, the measure of a man's happiness may be out of all proportion to his desert. And if we insist on calling the good man alone happy, we shall be using the term in some new and transcendental sense, as synonymous with well-being. We have already seen that happiness includes the happiness of others as well as our own; we must now comprehend unconscious as well as conscious happiness under the same word. There is no harm in this extension of the meaning, but a word which admits of such an extension can hardly be made the basis of a philosophical system. The exactness which is required in philosophy will not allow us to comprehend under the same term two ideas so different as the subjective feeling of pleasure or happiness and the objective reality of a state which receives our moral approval.

Like Protarchus in the Philebus, we can give no answer to the question, 'What is that common quality which in all states of human life we call happiness? which includes the lower and the higher kind of happiness, and is the aim of the noblest, as well as of the meanest of mankind?' If we say 'Not pleasure, not virtue, not wisdom, nor yet any quality which we can abstract from these'—what then? After seeming to hover for a time on the verge of a great truth, we have gained only a truism.

Let us ask the question in another form. What is that which constitutes happiness, over and above the several ingredients of health, wealth, pleasure, virtue, knowledge, which are included under it? Perhaps we answer, 'The subjective feeling of them.' But this is very far from being coextensive with right. Or we may reply that happiness is the whole of which the above-mentioned are the parts. Still the question recurs, 'In what does the whole differ from all the parts?' And if we are unable to distinguish them, happiness will be the mere aggregate of the goods of life.

Again, while admitting that in all right action there is an element of happiness, we cannot help seeing that the utilitarian theory supplies a much easier explanation of some virtues than of others. Of many patriotic or benevolent actions we can give a straightforward account by their tendency to promote happiness. For the explanation of justice, on the other hand, we have to go a long way round. No man is indignant with a thief because he has not promoted the greatest happiness of the greatest number, but because he has done him a wrong. There is an immeasurable interval between a crime against property or life, and the omission of an act of charity or benevolence. Yet of this interval the utilitarian theory takes no cognizance. The greatest happiness principle strengthens our sense of positive duties towards others, but weakens our recognition of their rights. To promote in every way possible the happiness of others may be a counsel of perfection, but hardly seems to offer any ground for a theory of obligation. For admitting that our ideas of obligation are partly derived from religion and custom, yet they seem also to contain other essential elements which cannot be

explained by the tendency of actions to promote happiness. Whence comes the necessity of them? Why are some actions rather than others which equally tend to the happiness of mankind imposed upon us with the authority of law? 'You ought' and 'you had better' are fundamental distinctions in human thought; and having such distinctions, why should we seek to efface and unsettle them?

Bentham and Mr. Mill are earnest in maintaining that happiness includes the happiness of others as well as of ourselves. But what two notions can be more opposed in many cases than these? Granting that in a perfect state of the world my own happiness and that of all other men would coincide, in the imperfect state they often diverge, and I cannot truly bridge over the difficulty by saying that men will always find pleasure in sacrificing themselves or in suffering for others. Upon the greatest happiness principle it is admitted that I am to have a share, and in consistency I should pursue my own happiness as impartially as that of my neighbour. But who can decide what proportion should be mine and what his, except on the principle that I am most likely to be deceived in my own favour, and had therefore better give the larger share, if not all, to him?

Further, it is admitted that utility and right coincide, not in particular instances, but in classes of actions. But is it not distracting to the conscience of a man to be told that in the particular case they are opposed? Happiness is said to be the ground of moral obligation, yet he must not do what clearly conduces to his own happiness if it is at variance with the good of the whole. Nay, further, he will be taught that when utility and right are in apparent conflict any amount of utility does not alter by a hair's-breadth the morality of actions, which cannot be allowed to deviate from established law or usage; and that the non-detection of an immoral act, say of telling a lie, which may often make the greatest difference in the consequences, not only to himself, but to all the world, makes none whatever in the act itself.

Again, if we are concerned not with particular actions but with classes of actions, is the tendency of actions to happiness a principle upon which we can classify them? There is a universal law which imperatively declares certain acts to be right or wrong:—can there be any universality in the law which measures actions by their tendencies towards happiness? For an act which is the cause of happiness to one person may be the cause of unhappiness to another; or an act which if performed by one person may increase the happiness of mankind may have the opposite effect if performed by another. Right can never be wrong, or wrong right, that there are no actions which tend to the happiness of mankind which may not under other circumstances tend to their unhappiness. Unless we say not only that all right actions tend to happiness, but that they tend to happiness in the same degree in which they are right (and in that case the word 'right' is plainer), we weaken the absoluteness of our moral standard; we reduce differences in kind to differences in degree; we obliterate the stamp which the authority of ages has set upon vice and crime.

Once more: turning from theory to practice we feel the importance of retaining the received distinctions of morality. Words such as truth, justice, honesty, virtue, love, have a simple meaning; they have become sacred to us,—'the word of God' written on the human heart: to no other words can the same associations be attached. We cannot explain them adequately on principles of utility; in attempting to do so we rob them of their true character. We give them a meaning often paradoxical and distorted, and generally weaker than their signification in common language. And as words influence men's thoughts, we fear that the hold of morality may also be weakened, and the sense of duty impaired, if virtue and vice are explained only as the qualities which do or do not contribute to

the pleasure of the world. In that very expression we seem to detect a false ring, for pleasure is individual not universal; we speak of eternal and immutable justice, but not of eternal and immutable pleasure; nor by any refinement can we avoid some taint of bodily sense adhering to the meaning of the word.

Again: the higher the view which men take of life, the more they lose sight of their own pleasure or interest. True religion is not working for a reward only, but is ready to work equally without a reward. It is not 'doing the will of God for the sake of eternal happiness,' but doing the will of God because it is best, whether rewarded or unrewarded. And this applies to others as well as to ourselves. For he who sacrifices himself for the good of others, does not sacrifice himself that they may be saved from the persecution which he endures for their sakes, but rather that they in their turn may be able to undergo similar sufferings, and like him stand fast in the truth. To promote their happiness is not his first object, but to elevate their moral nature. Both in his own case and that of others there may be happiness in the distance, but if there were no happiness he would equally act as he does. We are speaking of the highest and noblest natures; and a passing thought naturally arises in our minds, 'Whether that can be the first principle of morals which is hardly regarded in their own case by the greatest benefactors of mankind?'

The admissions that pleasures differ in kind, and that actions are already classified; the acknowledgment that happiness includes the happiness of others, as well as of ourselves; the confusion (not made by Aristotle) between conscious and unconscious happiness, or between happiness the energy and happiness the result of the energy, introduce uncertainty and inconsistency into the whole enquiry. We reason readily and cheerfully from a greatest happiness principle. But we find that utilitarians do not agree among themselves about the meaning of the word. Still less can they impart to others a common conception or conviction of the nature of happiness. The meaning of the word is always insensibly slipping away from us, into pleasure, out of pleasure, now appearing as the motive, now as the test of actions, and sometimes varying in successive sentences. And as in a mathematical demonstration an error in the original number disturbs the whole calculation which follows, this fundamental uncertainty about the word vitiates all the applications of it. Must we not admit that a notion so uncertain in meaning, so void of content, so at variance with common language and opinion, does not comply adequately with either of our two requirements? It can neither strike the imaginative faculty, nor give an explanation of phenomena which is in accordance with our individual experience. It is indefinite; it supplies only a partial account of human actions: it is one among many theories of philosophers. It may be compared with other notions, such as the chief good of Plato, which may be best expressed to us under the form of a harmony, or with Kant's obedience to law, which may be summed up under the word 'duty,' or with the Stoical 'Follow nature,' and seems to have no advantage over them. All of these present a certain aspect of moral truth. None of them are, or indeed profess to be, the only principle of morals.

And this brings us to speak of the most serious objection to the utilitarian system—its exclusiveness. There is no place for Kant or Hegel, for Plato and Aristotle alongside of it. They do not reject the greatest happiness principle, but it rejects them. Now the phenomena of moral action differ, and some are best explained upon one principle and some upon another: the virtue of justice seems to be naturally connected with one theory of morals, the virtues of temperance and benevolence with another. The characters of men also differ; and some are more attracted by one aspect of the truth, some by another. The firm stoical nature will conceive virtue under the conception of law, the

philanthropist under that of doing good, the quietist under that of resignation, the enthusiast under that of faith or love. The upright man of the world will desire above all things that morality should be plain and fixed, and should use language in its ordinary sense. Persons of an imaginative temperament will generally be dissatisfied with the words 'utility' or 'pleasure': their principle of right is of a far higher character—what or where to be found they cannot always distinctly tell;—deduced from the laws of human nature, says one; resting on the will of God, says another; based upon some transcendental idea which animates more worlds than one, says a third:

> on nomoi prokeintai upsipodes, ouranian
> di aithera teknothentes.

To satisfy an imaginative nature in any degree, the doctrine of utility must be so transfigured that it becomes altogether different and loses all simplicity.

But why, since there are different characters among men, should we not allow them to envisage morality accordingly, and be thankful to the great men who have provided for all of us modes and instruments of thought? Would the world have been better if there had been no Stoics or Kantists, no Platonists or Cartesians? No more than if the other pole of moral philosophy had been excluded. All men have principles which are above their practice; they admit premises which, if carried to their conclusions, are a sufficient basis of morals. In asserting liberty of speculation we are not encouraging individuals to make right or wrong for themselves, but only conceding that they may choose the form under which they prefer to contemplate them. Nor do we say that one of these aspects is as true and good as another; but that they all of them, if they are not mere sophisms and illusions, define and bring into relief some part of the truth which would have been obscure without their light. Why should we endeavour to bind all men within the limits of a single metaphysical conception? The necessary imperfection of language seems to require that we should view the same truth under more than one aspect.

We are living in the second age of utilitarianism, when the charm of novelty and the fervour of the first disciples has passed away. The doctrine is no longer stated in the forcible paradoxical manner of Bentham, but has to be adapted to meet objections; its corners are rubbed off, and the meaning of its most characteristic expressions is softened. The array of the enemy melts away when we approach him. The greatest happiness of the greatest number was a great original idea when enunciated by Bentham, which leavened a generation and has left its mark on thought and civilization in all succeeding times. His grasp of it had the intensity of genius. In the spirit of an ancient philosopher he would have denied that pleasures differed in kind, or that by happiness he meant anything but pleasure. He would perhaps have revolted us by his thoroughness. The 'guardianship of his doctrine' has passed into other hands; and now we seem to see its weak points, its ambiguities, its want of exactness while assuming the highest exactness, its one-sidedness, its paradoxical explanation of several of the virtues. No philosophy has ever stood this criticism of the next generation, though the founders of all of them have imagined that they were built upon a rock. And the utilitarian system, like others, has yielded to the inevitable analysis. Even in the opinion of 'her admirers she has been terribly damaged' (Phil.), and is no longer the only moral philosophy, but one among many which have contributed in various degrees to the intellectual progress of mankind.

But because the utilitarian philosophy can no longer claim 'the prize,' we must not refuse to acknowledge the great benefits conferred by it on the world. All philosophies are refuted in their turn, says the sceptic, and he looks forward to all future systems sharing the fate of the past. All philosophies remain, says the thinker; they have done a great work in their own day, and they supply posterity with aspects of the truth and with instruments of thought. Though they may be shorn of their glory, they retain their place in the organism of knowledge.

And still there remain many rules of morals which are better explained and more forcibly inculcated on the principle of utility than on any other. The question Will such and such an action promote the happiness of myself, my family, my country, the world? may check the rising feeling of pride or honour which would cause a quarrel, an estrangement, a war. 'How can I contribute to the greatest happiness of others?' is another form of the question which will be more attractive to the minds of many than a deduction of the duty of benevolence from a priori principles. In politics especially hardly any other argument can be allowed to have weight except the happiness of a people. All parties alike profess to aim at this, which though often used only as the disguise of self-interest has a great and real influence on the minds of statesmen. In religion, again, nothing can more tend to mitigate superstition than the belief that the good of man is also the will of God. This is an easy test to which the prejudices and superstitions of men may be brought:—whatever does not tend to the good of men is not of God. And the ideal of the greatest happiness of mankind, especially if believed to be the will of God, when compared with the actual fact, will be one of the strongest motives to do good to others.

On the other hand, when the temptation is to speak falsely, to be dishonest or unjust, or in any way to interfere with the rights of others, the argument that these actions regarded as a class will not conduce to the happiness of mankind, though true enough, seems to have less force than the feeling which is already implanted in the mind by conscience and authority. To resolve this feeling into the greatest happiness principle takes away from its sacred and authoritative character. The martyr will not go to the stake in order that he may promote the happiness of mankind, but for the sake of the truth: neither will the soldier advance to the cannon's mouth merely because he believes military discipline to be for the good of mankind. It is better for him to know that he will be shot, that he will be disgraced, if he runs away—he has no need to look beyond military honour, patriotism, 'England expects every man to do his duty.' These are stronger motives than the greatest happiness of the greatest number, which is the thesis of a philosopher, not the watchword of an army. For in human actions men do not always require broad principles; duties often come home to us more when they are limited and defined, and sanctioned by custom and public opinion.

Lastly, if we turn to the history of ethics, we shall find that our moral ideas have originated not in utility but in religion, in law, in conceptions of nature, of an ideal good, and the like. And many may be inclined to think that this conclusively disproves the claim of utility to be the basis of morals. But the utilitarian will fairly reply (see above) that we must distinguish the origin of ethics from the principles of them—the historical germ from the later growth of reflection. And he may also truly add that for two thousand years and more, utility, if not the originating, has been the great corrective principle in law, in politics, in religion, leading men to ask how evil may be diminished and good increased—by what course of policy the public interest may be promoted, and to understand that God wills the happiness, not of some of his creatures and in this world only, but of all of them and in every stage of their existence.

'What is the place of happiness or utility in a system of moral philosophy?' is analogous to the question asked in the Philebus, 'What rank does pleasure hold in the scale of goods?' Admitting the greatest happiness principle to be true and valuable, and the necessary foundation of that part of morals which relates to the consequences of actions, we still have to consider whether this or some other general notion is the highest principle of human life. We may try them in this comparison by three tests—definiteness, comprehensiveness, and motive power.

There are three subjective principles of morals,—sympathy, benevolence, self-love. But sympathy seems to rest morality on feelings which differ widely even in good men; benevolence and self-love torture one half of our virtuous actions into the likeness of the other. The greatest happiness principle, which includes both, has the advantage over all these in comprehensiveness, but the advantage is purchased at the expense of definiteness.

Again, there are the legal and political principles of morals—freedom, equality, rights of persons; 'Every man to count for one and no man for more than one,' 'Every man equal in the eye of the law and of the legislator.' There is also the other sort of political morality, which if not beginning with 'Might is right,' at any rate seeks to deduce our ideas of justice from the necessities of the state and of society. According to this view the greatest good of men is obedience to law: the best human government is a rational despotism, and the best idea which we can form of a divine being is that of a despot acting not wholly without regard to law and order. To such a view the present mixed state of the world, not wholly evil or wholly good, is supposed to be a witness. More we might desire to have, but are not permitted. Though a human tyrant would be intolerable, a divine tyrant is a very tolerable governor of the universe. This is the doctrine of Thrasymachus adapted to the public opinion of modern times.

There is yet a third view which combines the two:—freedom is obedience to the law, and the greatest order is also the greatest freedom; 'Act so that thy action may be the law of every intelligent being.' This view is noble and elevating; but it seems to err, like other transcendental principles of ethics, in being too abstract. For there is the same difficulty in connecting the idea of duty with particular duties as in bridging the gulf between phainomena and onta; and when, as in the system of Kant, this universal idea or law is held to be independent of space and time, such a mataion eidos becomes almost unmeaning.

Once more there are the religious principles of morals:—the will of God revealed in Scripture and in nature. No philosophy has supplied a sanction equal in authority to this, or a motive equal in strength to the belief in another life. Yet about these too we must ask What will of God? how revealed to us, and by what proofs? Religion, like happiness, is a word which has great influence apart from any consideration of its content: it may be for great good or for great evil. But true religion is the synthesis of religion and morality, beginning with divine perfection in which all human perfection is embodied. It moves among ideas of holiness, justice, love, wisdom, truth; these are to God, in whom they are personified, what the Platonic ideas are to the idea of good. It is the consciousness of the will of God that all men should be as he is. It lives in this world and is known to us only through the phenomena of this world, but it extends to worlds beyond. Ordinary religion which is alloyed with motives of this world may easily be in excess, may be fanatical, may be interested, may be the mask of ambition, may be perverted in a thousand ways. But of that religion which combines the will of God with our

highest ideas of truth and right there can never be too much. This impossibility of excess is the note of divine moderation.

So then, having briefly passed in review the various principles of moral philosophy, we may now arrange our goods in order, though, like the reader of the Philebus, we have a difficulty in distinguishing the different aspects of them from one another, or defining the point at which the human passes into the divine.

First, the eternal will of God in this world and in another,—justice, holiness, wisdom, love, without succession of acts (ouch e genesis prosestin), which is known to us in part only, and reverenced by us as divine perfection.

Secondly, human perfection, or the fulfilment of the will of God in this world, and co-operation with his laws revealed to us by reason and experience, in nature, history, and in our own minds.

Thirdly, the elements of human perfection,—virtue, knowledge, and right opinion.

Fourthly, the external conditions of perfection,—health and the goods of life.

Fifthly, beauty and happiness,—the inward enjoyment of that which is best and fairest in this world and in the human soul.

...

The Philebus is probably the latest in time of the writings of Plato with the exception of the Laws. We have in it therefore the last development of his philosophy. The extreme and one-sided doctrines of the Cynics and Cyrenaics are included in a larger whole; the relations of pleasure and knowledge to each other and to the good are authoritatively determined; the Eleatic Being and the Heraclitean Flux no longer divide the empire of thought; the Mind of Anaxagoras has become the Mind of God and of the World. The great distinction between pure and applied science for the first time has a place in philosophy; the natural claim of dialectic to be the Queen of the Sciences is once more affirmed. This latter is the bond of union which pervades the whole or nearly the whole of the Platonic writings. And here as in several other dialogues (Phaedrus, Republic, etc.) it is presented to us in a manner playful yet also serious, and sometimes as if the thought of it were too great for human utterance and came down from heaven direct. It is the organization of knowledge wonderful to think of at a time when knowledge itself could hardly be said to exist. It is this more than any other element which distinguishes Plato, not only from the presocratic philosophers, but from Socrates himself.

We have not yet reached the confines of Aristotle, but we make a somewhat nearer approach to him in the Philebus than in the earlier Platonic writings. The germs of logic are beginning to appear, but they are not collected into a whole, or made a separate science or system. Many thinkers of many different schools have to be interposed between the Parmenides or Philebus of Plato, and the Physics or Metaphysics of Aristotle. It is this interval upon which we have to fix our minds if we would rightly understand the character of the transition from one to the other. Plato and Aristotle do not dovetail into one another; nor does the one begin where the other ends; there is a gulf between them not to be measured by time, which in the fragmentary state of our knowledge it is impossible to bridge

over. It follows that the one cannot be interpreted by the other. At any rate, it is not Plato who is to be interpreted by Aristotle, but Aristotle by Plato. Of all philosophy and of all art the true understanding is to be sought not in the afterthoughts of posterity, but in the elements out of which they have arisen. For the previous stage is a tendency towards the ideal at which they are aiming; the later is a declination or deviation from them, or even a perversion of them. No man's thoughts were ever so well expressed by his disciples as by himself.

But although Plato in the Philebus does not come into any close connexion with Aristotle, he is now a long way from himself and from the beginnings of his own philosophy. At the time of his death he left his system still incomplete; or he may be more truly said to have had no system, but to have lived in the successive stages or moments of metaphysical thought which presented themselves from time to time. The earlier discussions about universal ideas and definitions seem to have died away; the correlation of ideas has taken their place. The flowers of rhetoric and poetry have lost their freshness and charm; and a technical language has begun to supersede and overgrow them. But the power of thinking tends to increase with age, and the experience of life to widen and deepen. The good is summed up under categories which are not summa genera, but heads or gradations of thought. The question of pleasure and the relation of bodily pleasures to mental, which is hardly treated of elsewhere in Plato, is here analysed with great subtlety. The mean or measure is now made the first principle of good. Some of these questions reappear in Aristotle, as does also the distinction between metaphysics and mathematics. But there are many things in Plato which have been lost in Aristotle; and many things in Aristotle not to be found in Plato. The most remarkable deficiency in Aristotle is the disappearance of the Platonic dialectic, which in the Aristotelian school is only used in a comparatively unimportant and trivial sense. The most remarkable additions are the invention of the Syllogism, the conception of happiness as the foundation of morals, the reference of human actions to the standard of the better mind of the world, or of the one 'sensible man' or 'superior person.' His conception of ousia, or essence, is not an advance upon Plato, but a return to the poor and meagre abstractions of the Eleatic philosophy. The dry attempt to reduce the presocratic philosophy by his own rather arbitrary standard of the four causes, contrasts unfavourably with Plato's general discussion of the same subject (Sophist). To attempt further to sum up the differences between the two great philosophers would be out of place here. Any real discussion of their relation to one another must be preceded by an examination into the nature and character of the Aristotelian writings and the form in which they have come down to us. This enquiry is not really separable from an investigation of Theophrastus as well as Aristotle and of the remains of other schools of philosophy as well as of the Peripatetics. But, without entering on this wide field, even a superficial consideration of the logical and metaphysical works which pass under the name of Aristotle, whether we suppose them to have come directly from his hand or to be the tradition of his school, is sufficient to show how great was the mental activity which prevailed in the latter half of the fourth century B.C.; what eddies and whirlpools of controversies were surging in the chaos of thought, what transformations of the old philosophies were taking place everywhere, what eclecticisms and syncretisms and realisms and nominalisms were affecting the mind of Hellas. The decline of philosophy during this period is no less remarkable than the loss of freedom; and the two are not unconnected with each other. But of the multitudinous sea of opinions which were current in the age of Aristotle we have no exact account. We know of them from allusions only. And we cannot with advantage fill up the void of our knowledge by conjecture: we can only make allowance for our ignorance.

There are several passages in the Philebus which are very characteristic of Plato, and which we shall do well to consider not only in their connexion, but apart from their connexion as inspired sayings or oracles which receive their full interpretation only from the history of philosophy in later ages. The more serious attacks on traditional beliefs which are often veiled under an unusual simplicity or irony are of this kind. Such, for example, is the excessive and more than human awe which Socrates expresses about the names of the gods, which may be not unaptly compared with the importance attached by mankind to theological terms in other ages; for this also may be comprehended under the satire of Socrates. Let us observe the religious and intellectual enthusiasm which shines forth in the following, 'The power and faculty of loving the truth, and of doing all things for the sake of the truth': or, again, the singular acknowledgment which may be regarded as the anticipation of a new logic, that 'In going to war for mind I must have weapons of a different make from those which I used before, although some of the old ones may do again.' Let us pause awhile to reflect on a sentence which is full of meaning to reformers of religion or to the original thinker of all ages: 'Shall we then agree with them of old time, and merely reassert the notions of others without risk to ourselves; or shall we venture also to share in the risk and bear the reproach which will await us': i.e. if we assert mind to be the author of nature. Let us note the remarkable words, 'That in the divine nature of Zeus there is the soul and mind of a King, because there is in him the power of the cause,' a saying in which theology and philosophy are blended and reconciled; not omitting to observe the deep insight into human nature which is shown by the repetition of the same thought 'All philosophers are agreed that mind is the king of heaven and earth' with the ironical addition, 'in this way truly they magnify themselves.' Nor let us pass unheeded the indignation felt by the generous youth at the 'blasphemy' of those who say that Chaos and Chance Medley created the world; or the significance of the words 'those who said of old time that mind rules the universe'; or the pregnant observation that 'we are not always conscious of what we are doing or of what happens to us,' a chance expression to which if philosophers had attended they would have escaped many errors in psychology. We may contrast the contempt which is poured upon the verbal difficulty of the one and many, and the seriousness with the unity of opposites is regarded from the higher point of view of abstract ideas: or compare the simple manner in which the question of cause and effect and their mutual dependence is regarded by Plato (to which modern science has returned in Mill and Bacon), and the cumbrous fourfold division of causes in the Physics and Metaphysics of Aristotle, for which it has puzzled the world to find a use in so many centuries. When we consider the backwardness of knowledge in the age of Plato, the boldness with which he looks forward into the distance, the many questions of modern philosophy which are anticipated in his writings, may we not truly describe him in his own words as a 'spectator of all time and of all existence'?

PHILEBUS

PERSONS OF THE DIALOGUE: Socrates, Protarchus, Philebus.

SOCRATES: Observe, Protarchus, the nature of the position which you are now going to take from Philebus, and what the other position is which I maintain, and which, if you do not approve of it, is to be controverted by you. Shall you and I sum up the two sides?

PROTARCHUS: By all means.

SOCRATES: Philebus was saying that enjoyment and pleasure and delight, and the class of feelings akin to them, are a good to every living being, whereas I contend, that not these, but wisdom and intelligence and memory, and their kindred, right opinion and true reasoning, are better and more desirable than pleasure for all who are able to partake of them, and that to all such who are or ever will be they are the most advantageous of all things. Have I not given, Philebus, a fair statement of the two sides of the argument?

PHILEBUS: Nothing could be fairer, Socrates.

SOCRATES: And do you, Protarchus, accept the position which is assigned to you?

PROTARCHUS: I cannot do otherwise, since our excellent Philebus has left the field.

SOCRATES: Surely the truth about these matters ought, by all means, to be ascertained.

PROTARCHUS: Certainly.

SOCRATES: Shall we further agree—

PROTARCHUS: To what?

SOCRATES: That you and I must now try to indicate some state and disposition of the soul, which has the property of making all men happy.

PROTARCHUS: Yes, by all means.

SOCRATES: And you say that pleasure, and I say that wisdom, is such a state?

PROTARCHUS: True.

SOCRATES: And what if there be a third state, which is better than either? Then both of us are vanquished—are we not? But if this life, which really has the power of making men happy, turn out to be more akin to pleasure than to wisdom, the life of pleasure may still have the advantage over the life of wisdom.

PROTARCHUS: True.

SOCRATES: Or suppose that the better life is more nearly allied to wisdom, then wisdom conquers, and pleasure is defeated;—do you agree?

PROTARCHUS: Certainly.

SOCRATES: And what do you say, Philebus?

PHILEBUS: I say, and shall always say, that pleasure is easily the conqueror; but you must decide for yourself, Protarchus.

PROTARCHUS: You, Philebus, have handed over the argument to me, and have no longer a voice in the matter?

PHILEBUS: True enough. Nevertheless I would clear myself and deliver my soul of you; and I call the goddess herself to witness that I now do so.

PROTARCHUS: You may appeal to us; we too will be the witnesses of your words. And now, Socrates, whether Philebus is pleased or displeased, we will proceed with the argument.

SOCRATES: Then let us begin with the goddess herself, of whom Philebus says that she is called Aphrodite, but that her real name is Pleasure.

PROTARCHUS: Very good.

SOCRATES: The awe which I always feel, Protarchus, about the names of the gods is more than human—it exceeds all other fears. And now I would not sin against Aphrodite by naming her amiss; let her be called what she pleases. But Pleasure I know to be manifold, and with her, as I was just now saying, we must begin, and consider what her nature is. She has one name, and therefore you would imagine that she is one; and yet surely she takes the most varied and even unlike forms. For do we not say that the intemperate has pleasure, and that the temperate has pleasure in his very temperance,—that the fool is pleased when he is full of foolish fancies and hopes, and that the wise man has pleasure in his wisdom? and how foolish would any one be who affirmed that all these opposite pleasures are severally alike!

PROTARCHUS: Why, Socrates, they are opposed in so far as they spring from opposite sources, but they are not in themselves opposite. For must not pleasure be of all things most absolutely like pleasure,—that is, like itself?

SOCRATES: Yes, my good friend, just as colour is like colour;—in so far as colours are colours, there is no difference between them; and yet we all know that black is not only unlike, but even absolutely opposed to white: or again, as figure is like figure, for all figures are comprehended under one class; and yet particular figures may be absolutely opposed to one another, and there is an infinite diversity of them. And we might find similar examples in many other things; therefore do not rely upon this argument, which would go to prove the unity of the most extreme opposites. And I suspect that we shall find a similar opposition among pleasures.

PROTARCHUS: Very likely; but how will this invalidate the argument?

SOCRATES: Why, I shall reply, that dissimilar as they are, you apply to them a new predicate, for you say that all pleasant things are good; now although no one can argue that pleasure is not pleasure, he may argue, as we are doing, that pleasures are oftener bad than good; but you call them all good, and at the same time are compelled, if you are pressed, to acknowledge that they are unlike. And so

you must tell us what is the identical quality existing alike in good and bad pleasures, which makes you designate all of them as good.

PROTARCHUS: What do you mean, Socrates? Do you think that any one who asserts pleasure to be the good, will tolerate the notion that some pleasures are good and others bad?

SOCRATES: And yet you will acknowledge that they are different from one another, and sometimes opposed?

PROTARCHUS: Not in so far as they are pleasures.

SOCRATES: That is a return to the old position, Protarchus, and so we are to say (are we?) that there is no difference in pleasures, but that they are all alike; and the examples which have just been cited do not pierce our dull minds, but we go on arguing all the same, like the weakest and most inexperienced reasoners? (Probably corrupt.)

PROTARCHUS: What do you mean?

SOCRATES: Why, I mean to say, that in self-defence I may, if I like, follow your example, and assert boldly that the two things most unlike are most absolutely alike; and the result will be that you and I will prove ourselves to be very tyros in the art of disputing; and the argument will be blown away and lost. Suppose that we put back, and return to the old position; then perhaps we may come to an understanding with one another.

PROTARCHUS: How do you mean?

SOCRATES: Shall I, Protarchus, have my own question asked of me by you?

PROTARCHUS: What question?

SOCRATES: Ask me whether wisdom and science and mind, and those other qualities which I, when asked by you at first what is the nature of the good, affirmed to be good, are not in the same case with the pleasures of which you spoke.

PROTARCHUS: What do you mean?

SOCRATES: The sciences are a numerous class, and will be found to present great differences. But even admitting that, like the pleasures, they are opposite as well as different, should I be worthy of the name of dialectician if, in order to avoid this difficulty, I were to say (as you are saying of pleasure) that there is no difference between one science and another;—would not the argument founder and disappear like an idle tale, although we might ourselves escape drowning by clinging to a fallacy?

PROTARCHUS: May none of this befal us, except the deliverance! Yet I like the even-handed justice which is applied to both our arguments. Let us assume, then, that there are many and diverse pleasures, and many and different sciences.

SOCRATES: And let us have no concealment, Protarchus, of the differences between my good and yours; but let us bring them to the light in the hope that, in the process of testing them, they may show whether pleasure is to be called the good, or wisdom, or some third quality; for surely we are not now simply contending in order that my view or that yours may prevail, but I presume that we ought both of us to be fighting for the truth.

PROTARCHUS: Certainly we ought.

SOCRATES: Then let us have a more definite understanding and establish the principle on which the argument rests.

PROTARCHUS: What principle?

SOCRATES: A principle about which all men are always in a difficulty, and some men sometimes against their will.

PROTARCHUS: Speak plainer.

SOCRATES: The principle which has just turned up, which is a marvel of nature; for that one should be many or many one, are wonderful propositions; and he who affirms either is very open to attack.

PROTARCHUS: Do you mean, when a person says that I, Protarchus, am by nature one and also many, dividing the single 'me' into many 'me's,' and even opposing them as great and small, light and heavy, and in ten thousand other ways?

SOCRATES: Those, Protarchus, are the common and acknowledged paradoxes about the one and many, which I may say that everybody has by this time agreed to dismiss as childish and obvious and detrimental to the true course of thought; and no more favour is shown to that other puzzle, in which a person proves the members and parts of anything to be divided, and then confessing that they are all one, says laughingly in disproof of his own words: Why, here is a miracle, the one is many and infinite, and the many are only one.

PROTARCHUS: But what, Socrates, are those other marvels connected with this subject which, as you imply, have not yet become common and acknowledged?

SOCRATES: When, my boy, the one does not belong to the class of things that are born and perish, as in the instances which we were giving, for in those cases, and when unity is of this concrete nature, there is, as I was saying, a universal consent that no refutation is needed; but when the assertion is made that man is one, or ox is one, or beauty one, or the good one, then the interest which attaches to these and similar unities and the attempt which is made to divide them gives birth to a controversy.

PROTARCHUS: Of what nature?

SOCRATES: In the first place, as to whether these unities have a real existence; and then how each individual unity, being always the same, and incapable either of generation or of destruction, but

retaining a permanent individuality, can be conceived either as dispersed and multiplied in the infinity of the world of generation, or as still entire and yet divided from itself, which latter would seem to be the greatest impossibility of all, for how can one and the same thing be at the same time in one and in many things? These, Protarchus, are the real difficulties, and this is the one and many to which they relate; they are the source of great perplexity if ill decided, and the right determination of them is very helpful.

PROTARCHUS: Then, Socrates, let us begin by clearing up these questions.

SOCRATES: That is what I should wish.

PROTARCHUS: And I am sure that all my other friends will be glad to hear them discussed; Philebus, fortunately for us, is not disposed to move, and we had better not stir him up with questions.

SOCRATES: Good; and where shall we begin this great and multifarious battle, in which such various points are at issue? Shall we begin thus?

PROTARCHUS: How?

SOCRATES: We say that the one and many become identified by thought, and that now, as in time past, they run about together, in and out of every word which is uttered, and that this union of them will never cease, and is not now beginning, but is, as I believe, an everlasting quality of thought itself, which never grows old. Any young man, when he first tastes these subtleties, is delighted, and fancies that he has found a treasure of wisdom; in the first enthusiasm of his joy he leaves no stone, or rather no thought unturned, now rolling up the many into the one, and kneading them together, now unfolding and dividing them; he puzzles himself first and above all, and then he proceeds to puzzle his neighbours, whether they are older or younger, or of his own age—that makes no difference; neither father nor mother does he spare; no human being who has ears is safe from him, hardly even his dog, and a barbarian would have no chance of escaping him, if an interpreter could only be found.

PROTARCHUS: Considering, Socrates, how many we are, and that all of us are young men, is there not a danger that we and Philebus may all set upon you, if you abuse us? We understand what you mean; but is there no charm by which we may dispel all this confusion, no more excellent way of arriving at the truth? If there is, we hope that you will guide us into that way, and we will do our best to follow, for the enquiry in which we are engaged, Socrates, is not unimportant.

SOCRATES: The reverse of unimportant, my boys, as Philebus calls you, and there neither is nor ever will be a better than my own favourite way, which has nevertheless already often deserted me and left me helpless in the hour of need.

PROTARCHUS: Tell us what that is.

SOCRATES: One which may be easily pointed out, but is by no means easy of application; it is the parent of all the discoveries in the arts.

PROTARCHUS: Tell us what it is.

SOCRATES: A gift of heaven, which, as I conceive, the gods tossed among men by the hands of a new Prometheus, and therewith a blaze of light; and the ancients, who were our betters and nearer the gods than we are, handed down the tradition, that whatever things are said to be are composed of one and many, and have the finite and infinite implanted in them: seeing, then, that such is the order of the world, we too ought in every enquiry to begin by laying down one idea of that which is the subject of enquiry; this unity we shall find in everything. Having found it, we may next proceed to look for two, if there be two, or, if not, then for three or some other number, subdividing each of these units, until at last the unity with which we began is seen not only to be one and many and infinite, but also a definite number; the infinite must not be suffered to approach the many until the entire number of the species intermediate between unity and infinity has been discovered,—then, and not till then, we may rest from division, and without further troubling ourselves about the endless individuals may allow them to drop into infinity. This, as I was saying, is the way of considering and learning and teaching one another, which the gods have handed down to us. But the wise men of our time are either too quick or too slow in conceiving plurality in unity. Having no method, they make their one and many anyhow, and from unity pass at once to infinity; the intermediate steps never occur to them. And this, I repeat, is what makes the difference between the mere art of disputation and true dialectic.

PROTARCHUS: I think that I partly understand you Socrates, but I should like to have a clearer notion of what you are saying.

SOCRATES: I may illustrate my meaning by the letters of the alphabet, Protarchus, which you were made to learn as a child.

PROTARCHUS: How do they afford an illustration?

SOCRATES: The sound which passes through the lips whether of an individual or of all men is one and yet infinite.

PROTARCHUS: Very true.

SOCRATES: And yet not by knowing either that sound is one or that sound is infinite are we perfect in the art of speech, but the knowledge of the number and nature of sounds is what makes a man a grammarian.

PROTARCHUS: Very true.

SOCRATES: And the knowledge which makes a man a musician is of the same kind.

PROTARCHUS: How so?

SOCRATES: Sound is one in music as well as in grammar?

PROTARCHUS: Certainly.

SOCRATES: And there is a higher note and a lower note, and a note of equal pitch:—may we affirm so much?

PROTARCHUS: Yes.

SOCRATES: But you would not be a real musician if this was all that you knew; though if you did not know this you would know almost nothing of music.

PROTARCHUS: Nothing.

SOCRATES: But when you have learned what sounds are high and what low, and the number and nature of the intervals and their limits or proportions, and the systems compounded out of them, which our fathers discovered, and have handed down to us who are their descendants under the name of harmonies; and the affections corresponding to them in the movements of the human body, which when measured by numbers ought, as they say, to be called rhythms and measures; and they tell us that the same principle should be applied to every one and many;—when, I say, you have learned all this, then, my dear friend, you are perfect; and you may be said to understand any other subject, when you have a similar grasp of it. But the infinity of kinds and the infinity of individuals which there is in each of them, when not classified, creates in every one of us a state of infinite ignorance; and he who never looks for number in anything, will not himself be looked for in the number of famous men.

PROTARCHUS: I think that what Socrates is now saying is excellent, Philebus.

PHILEBUS: I think so too, but how do his words bear upon us and upon the argument?

SOCRATES: Philebus is right in asking that question of us, Protarchus.

PROTARCHUS: Indeed he is, and you must answer him.

SOCRATES: I will; but you must let me make one little remark first about these matters; I was saying, that he who begins with any individual unity, should proceed from that, not to infinity, but to a definite number, and now I say conversely, that he who has to begin with infinity should not jump to unity, but he should look about for some number representing a certain quantity, and thus out of all end in one. And now let us return for an illustration of our principle to the case of letters.

PROTARCHUS: What do you mean?

SOCRATES: Some god or divine man, who in the Egyptian legend is said to have been Theuth, observing that the human voice was infinite, first distinguished in this infinity a certain number of vowels, and then other letters which had sound, but were not pure vowels (i.e., the semivowels); these too exist in a definite number; and lastly, he distinguished a third class of letters which we now call mutes, without voice and without sound, and divided these, and likewise the two other classes of vowels and semivowels, into the individual sounds, and told the number of them, and gave to each and all of them the name of letters; and observing that none of us could learn any one of them and

not learn them all, and in consideration of this common bond which in a manner united them, he assigned to them all a single art, and this he called the art of grammar or letters.

PHILEBUS: The illustration, Protarchus, has assisted me in understanding the original statement, but I still feel the defect of which I just now complained.

SOCRATES: Are you going to ask, Philebus, what this has to do with the argument?

PHILEBUS: Yes, that is a question which Protarchus and I have been long asking.

SOCRATES: Assuredly you have already arrived at the answer to the question which, as you say, you have been so long asking?

PHILEBUS: How so?

SOCRATES: Did we not begin by enquiring into the comparative eligibility of pleasure and wisdom?

PHILEBUS: Certainly.

SOCRATES: And we maintain that they are each of them one?

PHILEBUS: True.

SOCRATES: And the precise question to which the previous discussion desires an answer is, how they are one and also many (i.e., how they have one genus and many species), and are not at once infinite, and what number of species is to be assigned to either of them before they pass into infinity (i.e. into the infinite number of individuals).

PROTARCHUS: That is a very serious question, Philebus, to which Socrates has ingeniously brought us round, and please to consider which of us shall answer him; there may be something ridiculous in my being unable to answer, and therefore imposing the task upon you, when I have undertaken the whole charge of the argument, but if neither of us were able to answer, the result methinks would be still more ridiculous. Let us consider, then, what we are to do:—Socrates, if I understood him rightly, is asking whether there are not kinds of pleasure, and what is the number and nature of them, and the same of wisdom.

SOCRATES: Most true, O son of Callias; and the previous argument showed that if we are not able to tell the kinds of everything that has unity, likeness, sameness, or their opposites, none of us will be of the smallest use in any enquiry.

PROTARCHUS: That seems to be very near the truth, Socrates. Happy would the wise man be if he knew all things, and the next best thing for him is that he should know himself. Why do I say so at this moment? I will tell you. You, Socrates, have granted us this opportunity of conversing with you, and are ready to assist us in determining what is the best of human goods. For when Philebus said that pleasure and delight and enjoyment and the like were the chief good, you answered—No, not those, but another class of goods; and we are constantly reminding ourselves of what you said, and very

properly, in order that we may not forget to examine and compare the two. And these goods, which in your opinion are to be designated as superior to pleasure, and are the true objects of pursuit, are mind and knowledge and understanding and art, and the like. There was a dispute about which were the best, and we playfully threatened that you should not be allowed to go home until the question was settled; and you agreed, and placed yourself at our disposal. And now, as children say, what has been fairly given cannot be taken back; cease then to fight against us in this way.

SOCRATES: In what way?

PHILEBUS: Do not perplex us, and keep asking questions of us to which we have not as yet any sufficient answer to give; let us not imagine that a general puzzling of us all is to be the end of our discussion, but if we are unable to answer, do you answer, as you have promised. Consider, then, whether you will divide pleasure and knowledge according to their kinds; or you may let the matter drop, if you are able and willing to find some other mode of clearing up our controversy.

SOCRATES: If you say that, I have nothing to apprehend, for the words 'if you are willing' dispel all my fear; and, moreover, a god seems to have recalled something to my mind.

PHILEBUS: What is that?

SOCRATES: I remember to have heard long ago certain discussions about pleasure and wisdom, whether awake or in a dream I cannot tell; they were to the effect that neither the one nor the other of them was the good, but some third thing, which was different from them, and better than either. If this be clearly established, then pleasure will lose the victory, for the good will cease to be identified with her:—Am I not right?

PROTARCHUS: Yes.

SOCRATES: And there will cease to be any need of distinguishing the kinds of pleasures, as I am inclined to think, but this will appear more clearly as we proceed.

PROTARCHUS: Capital, Socrates; pray go on as you propose.

SOCRATES: But, let us first agree on some little points.

PROTARCHUS: What are they?

SOCRATES: Is the good perfect or imperfect?

PROTARCHUS: The most perfect, Socrates, of all things.

SOCRATES: And is the good sufficient?

PROTARCHUS: Yes, certainly, and in a degree surpassing all other things.

SOCRATES: And no one can deny that all percipient beings desire and hunt after good, and are eager to catch and have the good about them, and care not for the attainment of anything which is not accompanied by good.

PROTARCHUS: That is undeniable.

SOCRATES: Now let us part off the life of pleasure from the life of wisdom, and pass them in review.

PROTARCHUS: How do you mean?

SOCRATES: Let there be no wisdom in the life of pleasure, nor any pleasure in the life of wisdom, for if either of them is the chief good, it cannot be supposed to want anything, but if either is shown to want anything, then it cannot really be the chief good.

PROTARCHUS: Impossible.

SOCRATES: And will you help us to test these two lives?

PROTARCHUS: Certainly.

SOCRATES: Then answer.

PROTARCHUS: Ask.

SOCRATES: Would you choose, Protarchus, to live all your life long in the enjoyment of the greatest pleasures?

PROTARCHUS: Certainly I should.

SOCRATES: Would you consider that there was still anything wanting to you if you had perfect pleasure?

PROTARCHUS: Certainly not.

SOCRATES: Reflect; would you not want wisdom and intelligence and forethought, and similar qualities? would you not at any rate want sight?

PROTARCHUS: Why should I? Having pleasure I should have all things.

SOCRATES: Living thus, you would always throughout your life enjoy the greatest pleasures?

PROTARCHUS: I should.

SOCRATES: But if you had neither mind, nor memory, nor knowledge, nor true opinion, you would in the first place be utterly ignorant of whether you were pleased or not, because you would be entirely devoid of intelligence.

PROTARCHUS: Certainly.

SOCRATES: And similarly, if you had no memory you would not recollect that you had ever been pleased, nor would the slightest recollection of the pleasure which you feel at any moment remain with you; and if you had no true opinion you would not think that you were pleased when you were; and if you had no power of calculation you would not be able to calculate on future pleasure, and your life would be the life, not of a man, but of an oyster or 'pulmo marinus.' Could this be otherwise?

PROTARCHUS: No.

SOCRATES: But is such a life eligible?

PROTARCHUS: I cannot answer you, Socrates; the argument has taken away from me the power of speech.

SOCRATES: We must keep up our spirits;—let us now take the life of mind and examine it in turn.

PROTARCHUS: And what is this life of mind?

SOCRATES: I want to know whether any one of us would consent to live, having wisdom and mind and knowledge and memory of all things, but having no sense of pleasure or pain, and wholly unaffected by these and the like feelings?

PROTARCHUS: Neither life, Socrates, appears eligible to me, nor is likely, as I should imagine, to be chosen by any one else.

SOCRATES: What would you say, Protarchus, to both of these in one, or to one that was made out of the union of the two?

PROTARCHUS: Out of the union, that is, of pleasure with mind and wisdom?

SOCRATES: Yes, that is the life which I mean.

PROTARCHUS: There can be no difference of opinion; not some but all would surely choose this third rather than either of the other two, and in addition to them.

SOCRATES: But do you see the consequence?

PROTARCHUS: To be sure I do. The consequence is, that two out of the three lives which have been proposed are neither sufficient nor eligible for man or for animal.

SOCRATES: Then now there can be no doubt that neither of them has the good, for the one which had would certainly have been sufficient and perfect and eligible for every living creature or thing that was able to live such a life; and if any of us had chosen any other, he would have chosen contrary to the nature of the truly eligible, and not of his own free will, but either through ignorance or from some unhappy necessity.

PROTARCHUS: Certainly that seems to be true.

SOCRATES: And now have I not sufficiently shown that Philebus' goddess is not to be regarded as identical with the good?

PHILEBUS: Neither is your 'mind' the good, Socrates, for that will be open to the same objections.

SOCRATES: Perhaps, Philebus, you may be right in saying so of my 'mind'; but of the true, which is also the divine mind, far otherwise. However, I will not at present claim the first place for mind as against the mixed life; but we must come to some understanding about the second place. For you might affirm pleasure and I mind to be the cause of the mixed life; and in that case although neither of them would be the good, one of them might be imagined to be the cause of the good. And I might proceed further to argue in opposition to Philebus, that the element which makes this mixed life eligible and good, is more akin and more similar to mind than to pleasure. And if this is true, pleasure cannot be truly said to share either in the first or second place, and does not, if I may trust my own mind, attain even to the third.

PROTARCHUS: Truly, Socrates, pleasure appears to me to have had a fall; in fighting for the palm, she has been smitten by the argument, and is laid low. I must say that mind would have fallen too, and may therefore be thought to show discretion in not putting forward a similar claim. And if pleasure were deprived not only of the first but of the second place, she would be terribly damaged in the eyes of her admirers, for not even to them would she still appear as fair as before.

SOCRATES: Well, but had we not better leave her now, and not pain her by applying the crucial test, and finally detecting her?

PROTARCHUS: Nonsense, Socrates.

SOCRATES: Why? because I said that we had better not pain pleasure, which is an impossibility?

PROTARCHUS: Yes, and more than that, because you do not seem to be aware that none of us will let you go home until you have finished the argument.

SOCRATES: Heavens! Protarchus, that will be a tedious business, and just at present not at all an easy one. For in going to war in the cause of mind, who is aspiring to the second prize, I ought to have weapons of another make from those which I used before; some, however, of the old ones may do again. And must I then finish the argument?

PROTARCHUS: Of course you must.

SOCRATES: Let us be very careful in laying the foundation.

PROTARCHUS: What do you mean?

SOCRATES: Let us divide all existing things into two, or rather, if you do not object, into three classes.

PROTARCHUS: Upon what principle would you make the division?

SOCRATES: Let us take some of our newly-found notions.

PROTARCHUS: Which of them?

SOCRATES: Were we not saying that God revealed a finite element of existence, and also an infinite?

PROTARCHUS: Certainly.

SOCRATES: Let us assume these two principles, and also a third, which is compounded out of them; but I fear that I am ridiculously clumsy at these processes of division and enumeration.

PROTARCHUS: What do you mean, my good friend?

SOCRATES: I say that a fourth class is still wanted.

PROTARCHUS: What will that be?

SOCRATES: Find the cause of the third or compound, and add this as a fourth class to the three others.

PROTARCHUS: And would you like to have a fifth class or cause of resolution as well as a cause of composition?

SOCRATES: Not, I think, at present; but if I want a fifth at some future time you shall allow me to have it.

PROTARCHUS: Certainly.

SOCRATES: Let us begin with the first three; and as we find two out of the three greatly divided and dispersed, let us endeavour to reunite them, and see how in each of them there is a one and many.

PROTARCHUS: If you would explain to me a little more about them, perhaps I might be able to follow you.

SOCRATES: Well, the two classes are the same which I mentioned before, one the finite, and the other the infinite; I will first show that the infinite is in a certain sense many, and the finite may be hereafter discussed.

PROTARCHUS: I agree.

SOCRATES: And now consider well; for the question to which I invite your attention is difficult and controverted. When you speak of hotter and colder, can you conceive any limit in those qualities?

Does not the more and less, which dwells in their very nature, prevent their having any end? for if they had an end, the more and less would themselves have an end.

PROTARCHUS: That is most true.

SOCRATES: Ever, as we say, into the hotter and the colder there enters a more and a less.

PROTARCHUS: Yes.

SOCRATES: Then, says the argument, there is never any end of them, and being endless they must also be infinite.

PROTARCHUS: Yes, Socrates, that is exceedingly true.

SOCRATES: Yes, my dear Protarchus, and your answer reminds me that such an expression as 'exceedingly,' which you have just uttered, and also the term 'gently,' have the same significance as more or less; for whenever they occur they do not allow of the existence of quantity—they are always introducing degrees into actions, instituting a comparison of a more or a less excessive or a more or a less gentle, and at each creation of more or less, quantity disappears. For, as I was just now saying, if quantity and measure did not disappear, but were allowed to intrude in the sphere of more and less and the other comparatives, these last would be driven out of their own domain. When definite quantity is once admitted, there can be no longer a 'hotter' or a 'colder' (for these are always progressing, and are never in one stay); but definite quantity is at rest, and has ceased to progress. Which proves that comparatives, such as the hotter and the colder, are to be ranked in the class of the infinite.

PROTARCHUS: Your remark certainly has the look of truth, Socrates; but these subjects, as you were saying, are difficult to follow at first. I think however, that if I could hear the argument repeated by you once or twice, there would be a substantial agreement between us.

SOCRATES: Yes, and I will try to meet your wish; but, as I would rather not waste time in the enumeration of endless particulars, let me know whether I may not assume as a note of the infinite—

PROTARCHUS: What?

SOCRATES: I want to know whether such things as appear to us to admit of more or less, or are denoted by the words 'exceedingly,' 'gently,' 'extremely,' and the like, may not be referred to the class of the infinite, which is their unity, for, as was asserted in the previous argument, all things that were divided and dispersed should be brought together, and have the mark or seal of some one nature, if possible, set upon them—do you remember?

PROTARCHUS: Yes.

SOCRATES: And all things which do not admit of more or less, but admit their opposites, that is to say, first of all, equality, and the equal, or again, the double, or any other ratio of number and

measure—all these may, I think, be rightly reckoned by us in the class of the limited or finite; what do you say?

PROTARCHUS: Excellent, Socrates.

SOCRATES: And now what nature shall we ascribe to the third or compound kind?

PROTARCHUS: You, I think, will have to tell me that.

SOCRATES: Rather God will tell you, if there be any God who will listen to my prayers.

PROTARCHUS: Offer up a prayer, then, and think.

SOCRATES: I am thinking, Protarchus, and I believe that some God has befriended us.

PROTARCHUS: What do you mean, and what proof have you to offer of what you are saying?

SOCRATES: I will tell you, and do you listen to my words.

PROTARCHUS: Proceed.

SOCRATES: Were we not speaking just now of hotter and colder?

PROTARCHUS: True.

SOCRATES: Add to them drier, wetter, more, less, swifter, slower, greater, smaller, and all that in the preceding argument we placed under the unity of more and less.

PROTARCHUS: In the class of the infinite, you mean?

SOCRATES: Yes; and now mingle this with the other.

PROTARCHUS: What is the other.

SOCRATES: The class of the finite which we ought to have brought together as we did the infinite; but, perhaps, it will come to the same thing if we do so now;—when the two are combined, a third will appear.

PROTARCHUS: What do you mean by the class of the finite?

SOCRATES: The class of the equal and the double, and any class which puts an end to difference and opposition, and by introducing number creates harmony and proportion among the different elements.

PROTARCHUS: I understand; you seem to me to mean that the various opposites, when you mingle with them the class of the finite, takes certain forms.

SOCRATES: Yes, that is my meaning.

PROTARCHUS: Proceed.

SOCRATES: Does not the right participation in the finite give health—in disease, for instance?

PROTARCHUS: Certainly.

SOCRATES: And whereas the high and low, the swift and the slow are infinite or unlimited, does not the addition of the principles aforesaid introduce a limit, and perfect the whole frame of music?

PROTARCHUS: Yes, certainly.

SOCRATES: Or, again, when cold and heat prevail, does not the introduction of them take away excess and indefiniteness, and infuse moderation and harmony?

PROTARCHUS: Certainly.

SOCRATES: And from a like admixture of the finite and infinite come the seasons, and all the delights of life?

PROTARCHUS: Most true.

SOCRATES: I omit ten thousand other things, such as beauty and health and strength, and the many beauties and high perfections of the soul: O my beautiful Philebus, the goddess, methinks, seeing the universal wantonness and wickedness of all things, and that there was in them no limit to pleasures and self-indulgence, devised the limit of law and order, whereby, as you say, Philebus, she torments, or as I maintain, delivers the soul.—What think you, Protarchus?

PROTARCHUS: Her ways are much to my mind, Socrates.

SOCRATES: You will observe that I have spoken of three classes?

PROTARCHUS: Yes, I think that I understand you: you mean to say that the infinite is one class, and that the finite is a second class of existences; but what you would make the third I am not so certain.

SOCRATES: That is because the amazing variety of the third class is too much for you, my dear friend; but there was not this difficulty with the infinite, which also comprehended many classes, for all of them were sealed with the note of more and less, and therefore appeared one.

PROTARCHUS: True.

SOCRATES: And the finite or limit had not many divisions, and we readily acknowledged it to be by nature one?

PROTARCHUS: Yes.

SOCRATES: Yes, indeed; and when I speak of the third class, understand me to mean any offspring of these, being a birth into true being, effected by the measure which the limit introduces.

PROTARCHUS: I understand.

SOCRATES: Still there was, as we said, a fourth class to be investigated, and you must assist in the investigation; for does not everything which comes into being, of necessity come into being through a cause?

PROTARCHUS: Yes, certainly; for how can there be anything which has no cause?

SOCRATES: And is not the agent the same as the cause in all except name; the agent and the cause may be rightly called one?

PROTARCHUS: Very true.

SOCRATES: And the same may be said of the patient, or effect; we shall find that they too differ, as I was saying, only in name—shall we not?

PROTARCHUS: We shall.

SOCRATES: The agent or cause always naturally leads, and the patient or effect naturally follows it?

PROTARCHUS: Certainly.

SOCRATES: Then the cause and what is subordinate to it in generation are not the same, but different?

PROTARCHUS: True.

SOCRATES: Did not the things which were generated, and the things out of which they were generated, furnish all the three classes?

PROTARCHUS: Yes.

SOCRATES: And the creator or cause of them has been satisfactorily proven to be distinct from them,—and may therefore be called a fourth principle?

PROTARCHUS: So let us call it.

SOCRATES: Quite right; but now, having distinguished the four, I think that we had better refresh our memories by recapitulating each of them in order.

PROTARCHUS: By all means.

SOCRATES: Then the first I will call the infinite or unlimited, and the second the finite or limited; then follows the third, an essence compound and generated; and I do not think that I shall be far wrong in speaking of the cause of mixture and generation as the fourth.

PROTARCHUS: Certainly not.

SOCRATES: And now what is the next question, and how came we hither? Were we not enquiring whether the second place belonged to pleasure or wisdom?

PROTARCHUS: We were.

SOCRATES: And now, having determined these points, shall we not be better able to decide about the first and second place, which was the original subject of dispute?

PROTARCHUS: I dare say.

SOCRATES: We said, if you remember, that the mixed life of pleasure and wisdom was the conqueror—did we not?

PROTARCHUS: True.

SOCRATES: And we see what is the place and nature of this life and to what class it is to be assigned?

PROTARCHUS: Beyond a doubt.

SOCRATES: This is evidently comprehended in the third or mixed class; which is not composed of any two particular ingredients, but of all the elements of infinity, bound down by the finite, and may therefore be truly said to comprehend the conqueror life.

PROTARCHUS: Most true.

SOCRATES: And what shall we say, Philebus, of your life which is all sweetness; and in which of the aforesaid classes is that to be placed? Perhaps you will allow me to ask you a question before you answer?

PHILEBUS: Let me hear.

SOCRATES: Have pleasure and pain a limit, or do they belong to the class which admits of more and less?

PHILEBUS: They belong to the class which admits of more, Socrates; for pleasure would not be perfectly good if she were not infinite in quantity and degree.

SOCRATES: Nor would pain, Philebus, be perfectly evil. And therefore the infinite cannot be that element which imparts to pleasure some degree of good. But now—admitting, if you like, that

pleasure is of the nature of the infinite—in which of the aforesaid classes, O Protarchus and Philebus, can we without irreverence place wisdom and knowledge and mind? And let us be careful, for I think that the danger will be very serious if we err on this point.

PHILEBUS: You magnify, Socrates, the importance of your favourite god.

SOCRATES: And you, my friend, are also magnifying your favourite goddess; but still I must beg you to answer the question.

PROTARCHUS: Socrates is quite right, Philebus, and we must submit to him.

PHILEBUS: And did not you, Protarchus, propose to answer in my place?

PROTARCHUS: Certainly I did; but I am now in a great strait, and I must entreat you, Socrates, to be our spokesman, and then we shall not say anything wrong or disrespectful of your favourite.

SOCRATES: I must obey you, Protarchus; nor is the task which you impose a difficult one; but did I really, as Philebus implies, disconcert you with my playful solemnity, when I asked the question to what class mind and knowledge belong?

PROTARCHUS: You did, indeed, Socrates.

SOCRATES: Yet the answer is easy, since all philosophers assert with one voice that mind is the king of heaven and earth—in reality they are magnifying themselves. And perhaps they are right. But still I should like to consider the class of mind, if you do not object, a little more fully.

PHILEBUS: Take your own course, Socrates, and never mind length; we shall not tire of you.

SOCRATES: Very good; let us begin then, Protarchus, by asking a question.

PROTARCHUS: What question?

SOCRATES: Whether all this which they call the universe is left to the guidance of unreason and chance medley, or, on the contrary, as our fathers have declared, ordered and governed by a marvellous intelligence and wisdom.

PROTARCHUS: Wide asunder are the two assertions, illustrious Socrates, for that which you were just now saying to me appears to be blasphemy; but the other assertion, that mind orders all things, is worthy of the aspect of the world, and of the sun, and of the moon, and of the stars and of the whole circle of the heavens; and never will I say or think otherwise.

SOCRATES: Shall we then agree with them of old time in maintaining this doctrine,—not merely reasserting the notions of others, without risk to ourselves,—but shall we share in the danger, and take our part of the reproach which will await us, when an ingenious individual declares that all is disorder?

PROTARCHUS: That would certainly be my wish.

SOCRATES: Then now please to consider the next stage of the argument.

PROTARCHUS: Let me hear.

SOCRATES: We see that the elements which enter into the nature of the bodies of all animals, fire, water, air, and, as the storm-tossed sailor cries, 'land' (i.e., earth), reappear in the constitution of the world.

PROTARCHUS: The proverb may be applied to us; for truly the storm gathers over us, and we are at our wit's end.

SOCRATES: There is something to be remarked about each of these elements.

PROTARCHUS: What is it?

SOCRATES: Only a small fraction of any one of them exists in us, and that of a mean sort, and not in any way pure, or having any power worthy of its nature. One instance will prove this of all of them; there is fire within us, and in the universe.

PROTARCHUS: True.

SOCRATES: And is not our fire small and weak and mean? But the fire in the universe is wonderful in quantity and beauty, and in every power that fire has.

PROTARCHUS: Most true.

SOCRATES: And is the fire in the universe nourished and generated and ruled by the fire in us, or is the fire in you and me, and in other animals, dependent on the universal fire?

PROTARCHUS: That is a question which does not deserve an answer.

SOCRATES: Right; and you would say the same, if I am not mistaken, of the earth which is in animals and the earth which is in the universe, and you would give a similar reply about all the other elements?

PROTARCHUS: Why, how could any man who gave any other be deemed in his senses?

SOCRATES: I do not think that he could—but now go on to the next step. When we saw those elements of which we have been speaking gathered up in one, did we not call them a body?

PROTARCHUS: We did.

SOCRATES: And the same may be said of the cosmos, which for the same reason may be considered to be a body, because made up of the same elements.

PROTARCHUS: Very true.

SOCRATES: But is our body nourished wholly by this body, or is this body nourished by our body, thence deriving and having the qualities of which we were just now speaking?

PROTARCHUS: That again, Socrates, is a question which does not deserve to be asked.

SOCRATES: Well, tell me, is this question worth asking?

PROTARCHUS: What question?

SOCRATES: May our body be said to have a soul?

PROTARCHUS: Clearly.

SOCRATES: And whence comes that soul, my dear Protarchus, unless the body of the universe, which contains elements like those in our bodies but in every way fairer, had also a soul? Can there be another source?

PROTARCHUS: Clearly, Socrates, that is the only source.

SOCRATES: Why, yes, Protarchus; for surely we cannot imagine that of the four classes, the finite, the infinite, the composition of the two, and the cause, the fourth, which enters into all things, giving to our bodies souls, and the art of self-management, and of healing disease, and operating in other ways to heal and organize, having too all the attributes of wisdom;—we cannot, I say, imagine that whereas the self-same elements exist, both in the entire heaven and in great provinces of the heaven, only fairer and purer, this last should not also in that higher sphere have designed the noblest and fairest things?

PROTARCHUS: Such a supposition is quite unreasonable.

SOCRATES: Then if this be denied, should we not be wise in adopting the other view and maintaining that there is in the universe a mighty infinite and an adequate limit, of which we have often spoken, as well as a presiding cause of no mean power, which orders and arranges years and seasons and months, and may be justly called wisdom and mind?

PROTARCHUS: Most justly.

SOCRATES: And wisdom and mind cannot exist without soul?

PROTARCHUS: Certainly not.

SOCRATES: And in the divine nature of Zeus would you not say that there is the soul and mind of a king, because there is in him the power of the cause? And other gods have other attributes, by which they are pleased to be called.

PROTARCHUS: Very true.

SOCRATES: Do not then suppose that these words are rashly spoken by us, O Protarchus, for they are in harmony with the testimony of those who said of old time that mind rules the universe.

PROTARCHUS: True.

SOCRATES: And they furnish an answer to my enquiry; for they imply that mind is the parent of that class of the four which we called the cause of all; and I think that you now have my answer.

PROTARCHUS: I have indeed, and yet I did not observe that you had answered.

SOCRATES: A jest is sometimes refreshing, Protarchus, when it interrupts earnest.

PROTARCHUS: Very true.

SOCRATES: I think, friend, that we have now pretty clearly set forth the class to which mind belongs and what is the power of mind.

PROTARCHUS: True.

SOCRATES: And the class to which pleasure belongs has also been long ago discovered?

PROTARCHUS: Yes.

SOCRATES: And let us remember, too, of both of them, (1) that mind was akin to the cause and of this family; and (2) that pleasure is infinite and belongs to the class which neither has, nor ever will have in itself, a beginning, middle, or end of its own.

PROTARCHUS: I shall be sure to remember.

SOCRATES: We must next examine what is their place and under what conditions they are generated. And we will begin with pleasure, since her class was first examined; and yet pleasure cannot be rightly tested apart from pain.

PROTARCHUS: If this is the road, let us take it.

SOCRATES: I wonder whether you would agree with me about the origin of pleasure and pain.

PROTARCHUS: What do you mean?

SOCRATES: I mean to say that their natural seat is in the mixed class.

PROTARCHUS: And would you tell me again, sweet Socrates, which of the aforesaid classes is the mixed one?

SOCRATES: I will, my fine fellow, to the best of my ability.

PROTARCHUS: Very good.

SOCRATES: Let us then understand the mixed class to be that which we placed third in the list of four.

PROTARCHUS: That which followed the infinite and the finite; and in which you ranked health, and, if I am not mistaken, harmony.

SOCRATES: Capital; and now will you please to give me your best attention?

PROTARCHUS: Proceed; I am attending.

SOCRATES: I say that when the harmony in animals is dissolved, there is also a dissolution of nature and a generation of pain.

PROTARCHUS: That is very probable.

SOCRATES: And the restoration of harmony and return to nature is the source of pleasure, if I may be allowed to speak in the fewest and shortest words about matters of the greatest moment.

PROTARCHUS: I believe that you are right, Socrates; but will you try to be a little plainer?

SOCRATES: Do not obvious and every-day phenomena furnish the simplest illustration?

PROTARCHUS: What phenomena do you mean?

SOCRATES: Hunger, for example, is a dissolution and a pain.

PROTARCHUS: True.

SOCRATES: Whereas eating is a replenishment and a pleasure?

PROTARCHUS: Yes.

SOCRATES: Thirst again is a destruction and a pain, but the effect of moisture replenishing the dry place is a pleasure: once more, the unnatural separation and dissolution caused by heat is painful, and the natural restoration and refrigeration is pleasant.

PROTARCHUS: Very true.

SOCRATES: And the unnatural freezing of the moisture in an animal is pain, and the natural process of resolution and return of the elements to their original state is pleasure. And would not the general proposition seem to you to hold, that the destroying of the natural union of the finite and infinite,

which, as I was observing before, make up the class of living beings, is pain, and that the process of return of all things to their own nature is pleasure?

PROTARCHUS: Granted; what you say has a general truth.

SOCRATES: Here then is one kind of pleasures and pains originating severally in the two processes which we have described?

PROTARCHUS: Good.

SOCRATES: Let us next assume that in the soul herself there is an antecedent hope of pleasure which is sweet and refreshing, and an expectation of pain, fearful and anxious.

PROTARCHUS: Yes; this is another class of pleasures and pains, which is of the soul only, apart from the body, and is produced by expectation.

SOCRATES: Right; for in the analysis of these, pure, as I suppose them to be, the pleasures being unalloyed with pain and the pains with pleasure, methinks that we shall see clearly whether the whole class of pleasure is to be desired, or whether this quality of entire desirableness is not rather to be attributed to another of the classes which have been mentioned; and whether pleasure and pain, like heat and cold, and other things of the same kind, are not sometimes to be desired and sometimes not to be desired, as being not in themselves good, but only sometimes and in some instances admitting of the nature of good.

PROTARCHUS: You say most truly that this is the track which the investigation should pursue.

SOCRATES: Well, then, assuming that pain ensues on the dissolution, and pleasure on the restoration of the harmony, let us now ask what will be the condition of animated beings who are neither in process of restoration nor of dissolution. And mind what you say: I ask whether any animal who is in that condition can possibly have any feeling of pleasure or pain, great or small?

PROTARCHUS: Certainly not.

SOCRATES: Then here we have a third state, over and above that of pleasure and of pain?

PROTARCHUS: Very true.

SOCRATES: And do not forget that there is such a state; it will make a great difference in our judgment of pleasure, whether we remember this or not. And I should like to say a few words about it.

PROTARCHUS: What have you to say?

SOCRATES: Why, you know that if a man chooses the life of wisdom, there is no reason why he should not live in this neutral state.

PROTARCHUS: You mean that he may live neither rejoicing nor sorrowing?

SOCRATES: Yes; and if I remember rightly, when the lives were compared, no degree of pleasure, whether great or small, was thought to be necessary to him who chose the life of thought and wisdom.

PROTARCHUS: Yes, certainly, we said so.

SOCRATES: Then he will live without pleasure; and who knows whether this may not be the most divine of all lives?

PROTARCHUS: If so, the gods, at any rate, cannot be supposed to have either joy or sorrow.

SOCRATES: Certainly not—there would be a great impropriety in the assumption of either alternative. But whether the gods are or are not indifferent to pleasure is a point which may be considered hereafter if in any way relevant to the argument, and whatever is the conclusion we will place it to the account of mind in her contest for the second place, should she have to resign the first.

PROTARCHUS: Just so.

SOCRATES: The other class of pleasures, which as we were saying is purely mental, is entirely derived from memory.

PROTARCHUS: What do you mean?

SOCRATES: I must first of all analyze memory, or rather perception which is prior to memory, if the subject of our discussion is ever to be properly cleared up.

PROTARCHUS: How will you proceed?

SOCRATES: Let us imagine affections of the body which are extinguished before they reach the soul, and leave her unaffected; and again, other affections which vibrate through both soul and body, and impart a shock to both and to each of them.

PROTARCHUS: Granted.

SOCRATES: And the soul may be truly said to be oblivious of the first but not of the second?

PROTARCHUS: Quite true.

SOCRATES: When I say oblivious, do not suppose that I mean forgetfulness in a literal sense; for forgetfulness is the exit of memory, which in this case has not yet entered; and to speak of the loss of that which is not yet in existence, and never has been, is a contradiction; do you see?

PROTARCHUS: Yes.

SOCRATES: Then just be so good as to change the terms.

PROTARCHUS: How shall I change them?

SOCRATES: Instead of the oblivion of the soul, when you are describing the state in which she is unaffected by the shocks of the body, say unconsciousness.

PROTARCHUS: I see.

SOCRATES: And the union or communion of soul and body in one feeling and motion would be properly called consciousness?

PROTARCHUS: Most true.

SOCRATES: Then now we know the meaning of the word?

PROTARCHUS: Yes.

SOCRATES: And memory may, I think, be rightly described as the preservation of consciousness?

PROTARCHUS: Right.

SOCRATES: But do we not distinguish memory from recollection?

PROTARCHUS: I think so.

SOCRATES: And do we not mean by recollection the power which the soul has of recovering, when by herself, some feeling which she experienced when in company with the body?

PROTARCHUS: Certainly.

SOCRATES: And when she recovers of herself the lost recollection of some consciousness or knowledge, the recovery is termed recollection and reminiscence?

PROTARCHUS: Very true.

SOCRATES: There is a reason why I say all this.

PROTARCHUS: What is it?

SOCRATES: I want to attain the plainest possible notion of pleasure and desire, as they exist in the mind only, apart from the body; and the previous analysis helps to show the nature of both.

PROTARCHUS: Then now, Socrates, let us proceed to the next point.

SOCRATES: There are certainly many things to be considered in discussing the generation and whole complexion of pleasure. At the outset we must determine the nature and seat of desire.

PROTARCHUS: Ay; let us enquire into that, for we shall lose nothing.

SOCRATES: Nay, Protarchus, we shall surely lose the puzzle if we find the answer.

PROTARCHUS: A fair retort; but let us proceed.

SOCRATES: Did we not place hunger, thirst, and the like, in the class of desires?

PROTARCHUS: Certainly.

SOCRATES: And yet they are very different; what common nature have we in view when we call them by a single name?

PROTARCHUS: By heavens, Socrates, that is a question which is not easily answered; but it must be answered.

SOCRATES: Then let us go back to our examples.

PROTARCHUS: Where shall we begin?

SOCRATES: Do we mean anything when we say 'a man thirsts'?

PROTARCHUS: Yes.

SOCRATES: We mean to say that he 'is empty'?

PROTARCHUS: Of course.

SOCRATES: And is not thirst desire?

PROTARCHUS: Yes, of drink.

SOCRATES: Would you say of drink, or of replenishment with drink?

PROTARCHUS: I should say, of replenishment with drink.

SOCRATES: Then he who is empty desires, as would appear, the opposite of what he experiences; for he is empty and desires to be full?

PROTARCHUS: Clearly so.

SOCRATES: But how can a man who is empty for the first time, attain either by perception or memory to any apprehension of replenishment, of which he has no present or past experience?

PROTARCHUS: Impossible.

SOCRATES: And yet he who desires, surely desires something?

PROTARCHUS: Of course.

SOCRATES: He does not desire that which he experiences, for he experiences thirst, and thirst is emptiness; but he desires replenishment?

PROTARCHUS: True.

SOCRATES: Then there must be something in the thirsty man which in some way apprehends replenishment?

PROTARCHUS: There must.

SOCRATES: And that cannot be the body, for the body is supposed to be emptied?

PROTARCHUS: Yes.

SOCRATES: The only remaining alternative is that the soul apprehends the replenishment by the help of memory; as is obvious, for what other way can there be?

PROTARCHUS: I cannot imagine any other.

SOCRATES: But do you see the consequence?

PROTARCHUS: What is it?

SOCRATES: That there is no such thing as desire of the body.

PROTARCHUS: Why so?

SOCRATES: Why, because the argument shows that the endeavour of every animal is to the reverse of his bodily state.

PROTARCHUS: Yes.

SOCRATES: And the impulse which leads him to the opposite of what he is experiencing proves that he has a memory of the opposite state.

PROTARCHUS: True.

SOCRATES: And the argument, having proved that memory attracts us towards the objects of desire, proves also that the impulses and the desires and the moving principle in every living being have their origin in the soul.

PROTARCHUS: Most true.

SOCRATES: The argument will not allow that our body either hungers or thirsts or has any similar experience.

PROTARCHUS: Quite right.

SOCRATES: Let me make a further observation; the argument appears to me to imply that there is a kind of life which consists in these affections.

PROTARCHUS: Of what affections, and of what kind of life, are you speaking?

SOCRATES: I am speaking of being emptied and replenished, and of all that relates to the preservation and destruction of living beings, as well as of the pain which is felt in one of these states and of the pleasure which succeeds to it.

PROTARCHUS: True.

SOCRATES: And what would you say of the intermediate state?

PROTARCHUS: What do you mean by 'intermediate'?

SOCRATES: I mean when a person is in actual suffering and yet remembers past pleasures which, if they would only return, would relieve him; but as yet he has them not. May we not say of him, that he is in an intermediate state?

PROTARCHUS: Certainly.

SOCRATES: Would you say that he was wholly pained or wholly pleased?

PROTARCHUS: Nay, I should say that he has two pains; in his body there is the actual experience of pain, and in his soul longing and expectation.

SOCRATES: What do you mean, Protarchus, by the two pains? May not a man who is empty have at one time a sure hope of being filled, and at other times be quite in despair?

PROTARCHUS: Very true.

SOCRATES: And has he not the pleasure of memory when he is hoping to be filled, and yet in that he is empty is he not at the same time in pain?

PROTARCHUS: Certainly.

SOCRATES: Then man and the other animals have at the same time both pleasure and pain?

PROTARCHUS: I suppose so.

SOCRATES: But when a man is empty and has no hope of being filled, there will be the double experience of pain. You observed this and inferred that the double experience was the single case possible.

PROTARCHUS: Quite true, Socrates.

SOCRATES: Shall the enquiry into these states of feeling be made the occasion of raising a question?

PROTARCHUS: What question?

SOCRATES: Whether we ought to say that the pleasures and pains of which we are speaking are true or false? or some true and some false?

PROTARCHUS: But how, Socrates, can there be false pleasures and pains?

SOCRATES: And how, Protarchus, can there be true and false fears, or true and false expectations, or true and false opinions?

PROTARCHUS: I grant that opinions may be true or false, but not pleasures.

SOCRATES: What do you mean? I am afraid that we are raising a very serious enquiry.

PROTARCHUS: There I agree.

SOCRATES: And yet, my boy, for you are one of Philebus' boys, the point to be considered, is, whether the enquiry is relevant to the argument.

PROTARCHUS: Surely.

SOCRATES: No tedious and irrelevant discussion can be allowed; what is said should be pertinent.

PROTARCHUS: Right.

SOCRATES: I am always wondering at the question which has now been raised.

PROTARCHUS: How so?

SOCRATES: Do you deny that some pleasures are false, and others true?

PROTARCHUS: To be sure I do.

SOCRATES: Would you say that no one ever seemed to rejoice and yet did not rejoice, or seemed to feel pain and yet did not feel pain, sleeping or waking, mad or lunatic?

PROTARCHUS: So we have always held, Socrates.

SOCRATES: But were you right? Shall we enquire into the truth of your opinion?

PROTARCHUS: I think that we should.

SOCRATES: Let us then put into more precise terms the question which has arisen about pleasure and opinion. Is there such a thing as opinion?

PROTARCHUS: Yes.

SOCRATES: And such a thing as pleasure?

PROTARCHUS: Yes.

SOCRATES: And an opinion must be of something?

PROTARCHUS: True.

SOCRATES: And a man must be pleased by something?

PROTARCHUS: Quite correct.

SOCRATES: And whether the opinion be right or wrong, makes no difference; it will still be an opinion?

PROTARCHUS: Certainly.

SOCRATES: And he who is pleased, whether he is rightly pleased or not, will always have a real feeling of pleasure?

PROTARCHUS: Yes; that is also quite true.

SOCRATES: Then, how can opinion be both true and false, and pleasure true only, although pleasure and opinion are both equally real?

PROTARCHUS: Yes; that is the question.

SOCRATES: You mean that opinion admits of truth and falsehood, and hence becomes not merely opinion, but opinion of a certain quality; and this is what you think should be examined?

PROTARCHUS: Yes.

SOCRATES: And further, even if we admit the existence of qualities in other objects, may not pleasure and pain be simple and devoid of quality?

PROTARCHUS: Clearly.

SOCRATES: But there is no difficulty in seeing that pleasure and pain as well as opinion have qualities, for they are great or small, and have various degrees of intensity; as was indeed said long ago by us.

PROTARCHUS: Quite true.

SOCRATES: And if badness attaches to any of them, Protarchus, then we should speak of a bad opinion or of a bad pleasure?

PROTARCHUS: Quite true, Socrates.

SOCRATES: And if rightness attaches to any of them, should we not speak of a right opinion or right pleasure; and in like manner of the reverse of rightness?

PROTARCHUS: Certainly.

SOCRATES: And if the thing opined be erroneous, might we not say that the opinion, being erroneous, is not right or rightly opined?

PROTARCHUS: Certainly.

SOCRATES: And if we see a pleasure or pain which errs in respect of its object, shall we call that right or good, or by any honourable name?

PROTARCHUS: Not if the pleasure is mistaken; how could we?

SOCRATES: And surely pleasure often appears to accompany an opinion which is not true, but false?

PROTARCHUS: Certainly it does; and in that case, Socrates, as we were saying, the opinion is false, but no one could call the actual pleasure false.

SOCRATES: How eagerly, Protarchus, do you rush to the defence of pleasure!

PROTARCHUS: Nay, Socrates, I only repeat what I hear.

SOCRATES: And is there no difference, my friend, between that pleasure which is associated with right opinion and knowledge, and that which is often found in all of us associated with falsehood and ignorance?

PROTARCHUS: There must be a very great difference, between them.

SOCRATES: Then, now let us proceed to contemplate this difference.

PROTARCHUS: Lead, and I will follow.

SOCRATES: Well, then, my view is—

PROTARCHUS: What is it?

SOCRATES: We agree—do we not?—that there is such a thing as false, and also such a thing as true opinion?

PROTARCHUS: Yes.

SOCRATES: And pleasure and pain, as I was just now saying, are often consequent upon these—upon true and false opinion, I mean.

PROTARCHUS: Very true.

SOCRATES: And do not opinion and the endeavour to form an opinion always spring from memory and perception?

PROTARCHUS: Certainly.

SOCRATES: Might we imagine the process to be something of this nature?

PROTARCHUS: Of what nature?

SOCRATES: An object may be often seen at a distance not very clearly, and the seer may want to determine what it is which he sees.

PROTARCHUS: Very likely.

SOCRATES: Soon he begins to interrogate himself.

PROTARCHUS: In what manner?

SOCRATES: He asks himself—'What is that which appears to be standing by the rock under the tree?' This is the question which he may be supposed to put to himself when he sees such an appearance.

PROTARCHUS: True.

SOCRATES: To which he may guess the right answer, saying as if in a whisper to himself—'It is a man.'

PROTARCHUS: Very good.

SOCRATES: Or again, he may be misled, and then he will say—'No, it is a figure made by the shepherds.'

PROTARCHUS: Yes.

SOCRATES: And if he has a companion, he repeats his thought to him in articulate sounds, and what was before an opinion, has now become a proposition.

PROTARCHUS: Certainly.

SOCRATES: But if he be walking alone when these thoughts occur to him, he may not unfrequently keep them in his mind for a considerable time.

PROTARCHUS: Very true.

SOCRATES: Well, now, I wonder whether you would agree in my explanation of this phenomenon.

PROTARCHUS: What is your explanation?

SOCRATES: I think that the soul at such times is like a book.

PROTARCHUS: How so?

SOCRATES: Memory and perception meet, and they and their attendant feelings seem to almost to write down words in the soul, and when the inscribing feeling writes truly, then true opinion and true propositions which are the expressions of opinion come into our souls—but when the scribe within us writes falsely, the result is false.

PROTARCHUS: I quite assent and agree to your statement.

SOCRATES: I must bespeak your favour also for another artist, who is busy at the same time in the chambers of the soul.

PROTARCHUS: Who is he?

SOCRATES: The painter, who, after the scribe has done his work, draws images in the soul of the things which he has described.

PROTARCHUS: But when and how does he do this?

SOCRATES: When a man, besides receiving from sight or some other sense certain opinions or statements, sees in his mind the images of the subjects of them;—is not this a very common mental phenomenon?

PROTARCHUS: Certainly.

SOCRATES: And the images answering to true opinions and words are true, and to false opinions and words false; are they not?

PROTARCHUS: They are.

SOCRATES: If we are right so far, there arises a further question.

PROTARCHUS: What is it?

SOCRATES: Whether we experience the feeling of which I am speaking only in relation to the present and the past, or in relation to the future also?

PROTARCHUS: I should say in relation to all times alike.

SOCRATES: Have not purely mental pleasures and pains been described already as in some cases anticipations of the bodily ones; from which we may infer that anticipatory pleasures and pains have to do with the future?

PROTARCHUS: Most true.

SOCRATES: And do all those writings and paintings which, as we were saying a little while ago, are produced in us, relate to the past and present only, and not to the future?

PROTARCHUS: To the future, very much.

SOCRATES: When you say, 'Very much,' you mean to imply that all these representations are hopes about the future, and that mankind are filled with hopes in every stage of existence?

PROTARCHUS: Exactly.

SOCRATES: Answer me another question.

PROTARCHUS: What question?

SOCRATES: A just and pious and good man is the friend of the gods; is he not?

PROTARCHUS: Certainly he is.

SOCRATES: And the unjust and utterly bad man is the reverse?

PROTARCHUS: True.

SOCRATES: And all men, as we were saying just now, are always filled with hopes?

PROTARCHUS: Certainly.

SOCRATES: And these hopes, as they are termed, are propositions which exist in the minds of each of us?

PROTARCHUS: Yes.

SOCRATES: And the fancies of hope are also pictured in us; a man may often have a vision of a heap of gold, and pleasures ensuing, and in the picture there may be a likeness of himself mightily rejoicing over his good fortune.

PROTARCHUS: True.

SOCRATES: And may we not say that the good, being friends of the gods, have generally true pictures presented to them, and the bad false pictures?

PROTARCHUS: Certainly.

SOCRATES: The bad, too, have pleasures painted in their fancy as well as the good; but I presume that they are false pleasures.

PROTARCHUS: They are.

SOCRATES: The bad then commonly delight in false pleasures, and the good in true pleasures?

PROTARCHUS: Doubtless.

SOCRATES: Then upon this view there are false pleasures in the souls of men which are a ludicrous imitation of the true, and there are pains of a similar character?

PROTARCHUS: There are.

SOCRATES: And did we not allow that a man who had an opinion at all had a real opinion, but often about things which had no existence either in the past, present, or future?

PROTARCHUS: Quite true.

SOCRATES: And this was the source of false opinion and opining; am I not right?

PROTARCHUS: Yes.

SOCRATES: And must we not attribute to pleasure and pain a similar real but illusory character?

PROTARCHUS: How do you mean?

SOCRATES: I mean to say that a man must be admitted to have real pleasure who is pleased with anything or anyhow; and he may be pleased about things which neither have nor have ever had any real existence, and, more often than not, are never likely to exist.

PROTARCHUS: Yes, Socrates, that again is undeniable.

SOCRATES: And may not the same be said about fear and anger and the like; are they not often false?

PROTARCHUS: Quite so.

SOCRATES: And can opinions be good or bad except in as far as they are true or false?

PROTARCHUS: In no other way.

SOCRATES: Nor can pleasures be conceived to be bad except in so far as they are false.

PROTARCHUS: Nay, Socrates, that is the very opposite of truth; for no one would call pleasures and pains bad because they are false, but by reason of some other great corruption to which they are liable.

SOCRATES: Well, of pleasures which are corrupt and caused by corruption we will hereafter speak, if we care to continue the enquiry; for the present I would rather show by another argument that there are many false pleasures existing or coming into existence in us, because this may assist our final decision.

PROTARCHUS: Very true; that is to say, if there are such pleasures.

SOCRATES: I think that there are, Protarchus; but this is an opinion which should be well assured, and not rest upon a mere assertion.

PROTARCHUS: Very good.

SOCRATES: Then now, like wrestlers, let us approach and grasp this new argument.

PROTARCHUS: Proceed.

SOCRATES: We were maintaining a little while since, that when desires, as they are termed, exist in us, then the body has separate feelings apart from the soul—do you remember?

PROTARCHUS: Yes, I remember that you said so.

SOCRATES: And the soul was supposed to desire the opposite of the bodily state, while the body was the source of any pleasure or pain which was experienced.

PROTARCHUS: True.

SOCRATES: Then now you may infer what happens in such cases.

PROTARCHUS: What am I to infer?

SOCRATES: That in such cases pleasures and pains come simultaneously; and there is a juxtaposition of the opposite sensations which correspond to them, as has been already shown.

PROTARCHUS: Clearly.

SOCRATES: And there is another point to which we have agreed.

PROTARCHUS: What is it?

SOCRATES: That pleasure and pain both admit of more and less, and that they are of the class of infinites.

PROTARCHUS: Certainly, we said so.

SOCRATES: But how can we rightly judge of them?

PROTARCHUS: How can we?

SOCRATES: Is it our intention to judge of their comparative importance and intensity, measuring pleasure against pain, and pain against pain, and pleasure against pleasure?

PROTARCHUS: Yes, such is our intention, and we shall judge of them accordingly.

SOCRATES: Well, take the case of sight. Does not the nearness or distance of magnitudes obscure their true proportions, and make us opine falsely; and do we not find the same illusion happening in the case of pleasures and pains?

PROTARCHUS: Yes, Socrates, and in a degree far greater.

SOCRATES: Then what we are now saying is the opposite of what we were saying before.

PROTARCHUS: What was that?

SOCRATES: Then the opinions were true and false, and infected the pleasures and pains with their own falsity.

PROTARCHUS: Very true.

SOCRATES: But now it is the pleasures which are said to be true and false because they are seen at various distances, and subjected to comparison; the pleasures appear to be greater and more vehement when placed side by side with the pains, and the pains when placed side by side with the pleasures.

PROTARCHUS: Certainly, and for the reason which you mention.

SOCRATES: And suppose you part off from pleasures and pains the element which makes them appear to be greater or less than they really are: you will acknowledge that this element is illusory, and you will never say that the corresponding excess or defect of pleasure or pain is real or true.

PROTARCHUS: Certainly not.

SOCRATES: Next let us see whether in another direction we may not find pleasures and pains existing and appearing in living beings, which are still more false than these.

PROTARCHUS: What are they, and how shall we find them?

SOCRATES: If I am not mistaken, I have often repeated that pains and aches and suffering and uneasiness of all sorts arise out of a corruption of nature caused by concretions, and dissolutions, and repletions, and evacuations, and also by growth and decay?

PROTARCHUS: Yes, that has been often said.

SOCRATES: And we have also agreed that the restoration of the natural state is pleasure?

PROTARCHUS: Right.

SOCRATES: But now let us suppose an interval of time at which the body experiences none of these changes.

PROTARCHUS: When can that be, Socrates?

SOCRATES: Your question, Protarchus, does not help the argument.

PROTARCHUS: Why not, Socrates?

SOCRATES: Because it does not prevent me from repeating mine.

PROTARCHUS: And what was that?

SOCRATES: Why, Protarchus, admitting that there is no such interval, I may ask what would be the necessary consequence if there were?

PROTARCHUS: You mean, what would happen if the body were not changed either for good or bad?

SOCRATES: Yes.

PROTARCHUS: Why then, Socrates, I should suppose that there would be neither pleasure nor pain.

SOCRATES: Very good; but still, if I am not mistaken, you do assert that we must always be experiencing one of them; that is what the wise tell us; for, say they, all things are ever flowing up and down.

PROTARCHUS: Yes, and their words are of no mean authority.

SOCRATES: Of course, for they are no mean authorities themselves; and I should like to avoid the brunt of their argument. Shall I tell you how I mean to escape from them? And you shall be the partner of my flight.

PROTARCHUS: How?

SOCRATES: To them we will say: 'Good; but are we, or living things in general, always conscious of what happens to us—for example, of our growth, or the like? Are we not, on the contrary, almost wholly unconscious of this and similar phenomena?' You must answer for them.

PROTARCHUS: The latter alternative is the true one.

SOCRATES: Then we were not right in saying, just now, that motions going up and down cause pleasures and pains?

PROTARCHUS: True.

SOCRATES: A better and more unexceptionable way of speaking will be—

PROTARCHUS: What?

SOCRATES: If we say that the great changes produce pleasures and pains, but that the moderate and lesser ones do neither.

PROTARCHUS: That, Socrates, is the more correct mode of speaking.

SOCRATES: But if this be true, the life to which I was just now referring again appears.

PROTARCHUS: What life?

SOCRATES: The life which we affirmed to be devoid either of pain or of joy.

PROTARCHUS: Very true.

SOCRATES: We may assume then that there are three lives, one pleasant, one painful, and the third which is neither; what say you?

PROTARCHUS: I should say as you do that there are three of them.

SOCRATES: But if so, the negation of pain will not be the same with pleasure.

PROTARCHUS: Certainly not.

SOCRATES: Then when you hear a person saying, that always to live without pain is the pleasantest of all things, what would you understand him to mean by that statement?

PROTARCHUS: I think that by pleasure he must mean the negative of pain.

SOCRATES: Let us take any three things; or suppose that we embellish a little and call the first gold, the second silver, and there shall be a third which is neither.

PROTARCHUS: Very good.

SOCRATES: Now, can that which is neither be either gold or silver?

PROTARCHUS: Impossible.

SOCRATES: No more can that neutral or middle life be rightly or reasonably spoken or thought of as pleasant or painful.

PROTARCHUS: Certainly not.

SOCRATES: And yet, my friend, there are, as we know, persons who say and think so.

PROTARCHUS: Certainly.

SOCRATES: And do they think that they have pleasure when they are free from pain?

PROTARCHUS: They say so.

SOCRATES: And they must think or they would not say that they have pleasure.

PROTARCHUS: I suppose not.

SOCRATES: And yet if pleasure and the negation of pain are of distinct natures, they are wrong.

PROTARCHUS: But they are undoubtedly of distinct natures.

SOCRATES: Then shall we take the view that they are three, as we were just now saying, or that they are two only—the one being a state of pain, which is an evil, and the other a cessation of pain, which is of itself a good, and is called pleasant?

PROTARCHUS: But why, Socrates, do we ask the question at all? I do not see the reason.

SOCRATES: You, Protarchus, have clearly never heard of certain enemies of our friend Philebus.

PROTARCHUS: And who may they be?

SOCRATES: Certain persons who are reputed to be masters in natural philosophy, who deny the very existence of pleasure.

PROTARCHUS: Indeed!

SOCRATES: They say that what the school of Philebus calls pleasures are all of them only avoidances of pain.

PROTARCHUS: And would you, Socrates, have us agree with them?

SOCRATES: Why, no, I would rather use them as a sort of diviners, who divine the truth, not by rules of art, but by an instinctive repugnance and extreme detestation which a noble nature has of the power of pleasure, in which they think that there is nothing sound, and her seductive influence is declared by them to be witchcraft, and not pleasure. This is the use which you may make of them. And when you have considered the various grounds of their dislike, you shall hear from me what I deem to be true pleasures. Having thus examined the nature of pleasure from both points of view, we will bring her up for judgment.

PROTARCHUS: Well said.

SOCRATES: Then let us enter into an alliance with these philosophers and follow in the track of their dislike. I imagine that they would say something of this sort; they would begin at the beginning, and ask whether, if we wanted to know the nature of any quality, such as hardness, we should be more likely to discover it by looking at the hardest things, rather than at the least hard? You, Protarchus, shall answer these severe gentlemen as you answer me.

PROTARCHUS: By all means, and I reply to them, that you should look at the greatest instances.

SOCRATES: Then if we want to see the true nature of pleasures as a class, we should not look at the most diluted pleasures, but at the most extreme and most vehement?

PROTARCHUS: In that every one will agree.

SOCRATES: And the obvious instances of the greatest pleasures, as we have often said, are the pleasures of the body?

PROTARCHUS: Certainly.

SOCRATES: And are they felt by us to be or become greater, when we are sick or when we are in health? And here we must be careful in our answer, or we shall come to grief.

PROTARCHUS: How will that be?

SOCRATES: Why, because we might be tempted to answer, 'When we are in health.'

PROTARCHUS: Yes, that is the natural answer.

SOCRATES: Well, but are not those pleasures the greatest of which mankind have the greatest desires?

PROTARCHUS: True.

SOCRATES: And do not people who are in a fever, or any similar illness, feel cold or thirst or other bodily affections more intensely? Am I not right in saying that they have a deeper want and greater pleasure in the satisfaction of their want?

PROTARCHUS: That is obvious as soon as it is said.

SOCRATES: Well, then, shall we not be right in saying, that if a person would wish to see the greatest pleasures he ought to go and look, not at health, but at disease? And here you must distinguish:—do not imagine that I mean to ask whether those who are very ill have more pleasures than those who are well, but understand that I am speaking of the magnitude of pleasure; I want to know where pleasures are found to be most intense. For, as I say, we have to discover what is pleasure, and what they mean by pleasure who deny her very existence.

PROTARCHUS: I think I follow you.

SOCRATES: You will soon have a better opportunity of showing whether you do or not, Protarchus. Answer now, and tell me whether you see, I will not say more, but more intense and excessive pleasures in wantonness than in temperance? Reflect before you speak.

PROTARCHUS: I understand you, and see that there is a great difference between them; the temperate are restrained by the wise man's aphorism of 'Never too much,' which is their rule, but excess of pleasure possessing the minds of fools and wantons becomes madness and makes them shout with delight.

SOCRATES: Very good, and if this be true, then the greatest pleasures and pains will clearly be found in some vicious state of soul and body, and not in a virtuous state.

PROTARCHUS: Certainly.

SOCRATES: And ought we not to select some of these for examination, and see what makes them the greatest?

PROTARCHUS: To be sure we ought.

SOCRATES: Take the case of the pleasures which arise out of certain disorders.

PROTARCHUS: What disorders?

SOCRATES: The pleasures of unseemly disorders, which our severe friends utterly detest.

PROTARCHUS: What pleasures?

SOCRATES: Such, for example, as the relief of itching and other ailments by scratching, which is the only remedy required. For what in Heaven's name is the feeling to be called which is thus produced in us?—Pleasure or pain?

PROTARCHUS: A villainous mixture of some kind, Socrates, I should say.

SOCRATES: I did not introduce the argument, O Protarchus, with any personal reference to Philebus, but because, without the consideration of these and similar pleasures, we shall not be able to determine the point at issue.

PROTARCHUS: Then we had better proceed to analyze this family of pleasures.

SOCRATES: You mean the pleasures which are mingled with pain?

PROTARCHUS: Exactly.

SOCRATES: There are some mixtures which are of the body, and only in the body, and others which are of the soul, and only in the soul; while there are other mixtures of pleasures with pains, common both to soul and body, which in their composite state are called sometimes pleasures and sometimes pains.

PROTARCHUS: How is that?

SOCRATES: Whenever, in the restoration or in the derangement of nature, a man experiences two opposite feelings; for example, when he is cold and is growing warm, or again, when he is hot and is becoming cool, and he wants to have the one and be rid of the other;—the sweet has a bitter, as the common saying is, and both together fasten upon him and create irritation and in time drive him to distraction.

PROTARCHUS: That description is very true to nature.

SOCRATES: And in these sorts of mixtures the pleasures and pains are sometimes equal, and sometimes one or other of them predominates?

PROTARCHUS: True.

SOCRATES: Of cases in which the pain exceeds the pleasure, an example is afforded by itching, of which we were just now speaking, and by the tingling which we feel when the boiling and fiery element is within, and the rubbing and motion only relieves the surface, and does not reach the parts affected; then if you put them to the fire, and as a last resort apply cold to them, you may often produce the most intense pleasure or pain in the inner parts, which contrasts and mingles with the pain or pleasure, as the case may be, of the outer parts; and this is due to the forcible separation of what is united, or to the union of what is separated, and to the juxtaposition of pleasure and pain.

PROTARCHUS: Quite so.

SOCRATES: Sometimes the element of pleasure prevails in a man, and the slight undercurrent of pain makes him tingle, and causes a gentle irritation; or again, the excessive infusion of pleasure creates an excitement in him,—he even leaps for joy, he assumes all sorts of attitudes, he changes all manner of colours, he gasps for breath, and is quite amazed, and utters the most irrational exclamations.

PROTARCHUS: Yes, indeed.

SOCRATES: He will say of himself, and others will say of him, that he is dying with these delights; and the more dissipated and good-for-nothing he is, the more vehemently he pursues them in every way; of all pleasures he declares them to be the greatest; and he reckons him who lives in the most constant enjoyment of them to be the happiest of mankind.

PROTARCHUS: That, Socrates, is a very true description of the opinions of the majority about pleasures.

SOCRATES: Yes, Protarchus, quite true of the mixed pleasures, which arise out of the communion of external and internal sensations in the body; there are also cases in which the mind contributes an opposite element to the body, whether of pleasure or pain, and the two unite and form one mixture. Concerning these I have already remarked, that when a man is empty he desires to be full, and has pleasure in hope and pain in vacuity. But now I must further add what I omitted before, that in all these and similar emotions in which body and mind are opposed (and they are innumerable), pleasure and pain coalesce in one.

PROTARCHUS: I believe that to be quite true.

SOCRATES: There still remains one other sort of admixture of pleasures and pains.

PROTARCHUS: What is that?

SOCRATES: The union which, as we were saying, the mind often experiences of purely mental feelings.

PROTARCHUS: What do you mean?

SOCRATES: Why, do we not speak of anger, fear, desire, sorrow, love, emulation, envy, and the like, as pains which belong to the soul only?

PROTARCHUS: Yes.

SOCRATES: And shall we not find them also full of the most wonderful pleasures? need I remind you of the anger

'Which stirs even a wise man to violence, And is sweeter than honey and the honeycomb?'

And you remember how pleasures mingle with pains in lamentation and bereavement?

PROTARCHUS: Yes, there is a natural connexion between them.

SOCRATES: And you remember also how at the sight of tragedies the spectators smile through their tears?

PROTARCHUS: Certainly I do.

SOCRATES: And are you aware that even at a comedy the soul experiences a mixed feeling of pain and pleasure?

PROTARCHUS: I do not quite understand you.

SOCRATES: I admit, Protarchus, that there is some difficulty in recognizing this mixture of feelings at a comedy.

PROTARCHUS: There is, I think.

SOCRATES: And the greater the obscurity of the case the more desirable is the examination of it, because the difficulty in detecting other cases of mixed pleasures and pains will be less.

PROTARCHUS: Proceed.

SOCRATES: I have just mentioned envy; would you not call that a pain of the soul?

PROTARCHUS: Yes.

SOCRATES: And yet the envious man finds something in the misfortunes of his neighbours at which he is pleased?

PROTARCHUS: Certainly.

SOCRATES: And ignorance, and what is termed clownishness, are surely an evil?

PROTARCHUS: To be sure.

SOCRATES: From these considerations learn to know the nature of the ridiculous.

PROTARCHUS: Explain.

SOCRATES: The ridiculous is in short the specific name which is used to describe the vicious form of a certain habit; and of vice in general it is that kind which is most at variance with the inscription at Delphi.

PROTARCHUS: You mean, Socrates, 'Know thyself.'

SOCRATES: I do; and the opposite would be, 'Know not thyself.'

PROTARCHUS: Certainly.

SOCRATES: And now, O Protarchus, try to divide this into three.

PROTARCHUS: Indeed I am afraid that I cannot.

SOCRATES: Do you mean to say that I must make the division for you?

PROTARCHUS: Yes, and what is more, I beg that you will.

SOCRATES: Are there not three ways in which ignorance of self may be shown?

PROTARCHUS: What are they?

SOCRATES: In the first place, about money; the ignorant may fancy himself richer than he is.

PROTARCHUS: Yes, that is a very common error.

SOCRATES: And still more often he will fancy that he is taller or fairer than he is, or that he has some other advantage of person which he really has not.

PROTARCHUS: Of course.

SOCRATES: And yet surely by far the greatest number err about the goods of the mind; they imagine themselves to be much better men than they are.

PROTARCHUS: Yes, that is by far the commonest delusion.

SOCRATES: And of all the virtues, is not wisdom the one which the mass of mankind are always claiming, and which most arouses in them a spirit of contention and lying conceit of wisdom?

PROTARCHUS: Certainly.

SOCRATES: And may not all this be truly called an evil condition?

PROTARCHUS: Very evil.

SOCRATES: But we must pursue the division a step further, Protarchus, if we would see in envy of the childish sort a singular mixture of pleasure and pain.

PROTARCHUS: How can we make the further division which you suggest?

SOCRATES: All who are silly enough to entertain this lying conceit of themselves may of course be divided, like the rest of mankind, into two classes—one having power and might; and the other the reverse.

PROTARCHUS: Certainly.

SOCRATES: Let this, then, be the principle of division; those of them who are weak and unable to revenge themselves, when they are laughed at, may be truly called ridiculous, but those who can defend themselves may be more truly described as strong and formidable; for ignorance in the powerful is hateful and horrible, because hurtful to others both in reality and in fiction, but powerless ignorance may be reckoned, and in truth is, ridiculous.

PROTARCHUS: That is very true, but I do not as yet see where is the admixture of pleasures and pains.

SOCRATES: Well, then, let us examine the nature of envy.

PROTARCHUS: Proceed.

SOCRATES: Is not envy an unrighteous pleasure, and also an unrighteous pain?

PROTARCHUS: Most true.

SOCRATES: There is nothing envious or wrong in rejoicing at the misfortunes of enemies?

PROTARCHUS: Certainly not.

SOCRATES: But to feel joy instead of sorrow at the sight of our friends' misfortunes—is not that wrong?

PROTARCHUS: Undoubtedly.

SOCRATES: Did we not say that ignorance was always an evil?

PROTARCHUS: True.

SOCRATES: And the three kinds of vain conceit in our friends which we enumerated—the vain conceit of beauty, of wisdom, and of wealth, are ridiculous if they are weak, and detestable when they are powerful: May we not say, as I was saying before, that our friends who are in this state of mind, when harmless to others, are simply ridiculous?

PROTARCHUS: They are ridiculous.

SOCRATES: And do we not acknowledge this ignorance of theirs to be a misfortune?

PROTARCHUS: Certainly.

SOCRATES: And do we feel pain or pleasure in laughing at it?

PROTARCHUS: Clearly we feel pleasure.

SOCRATES: And was not envy the source of this pleasure which we feel at the misfortunes of friends?

PROTARCHUS: Certainly.

SOCRATES: Then the argument shows that when we laugh at the folly of our friends, pleasure, in mingling with envy, mingles with pain, for envy has been acknowledged by us to be mental pain, and laughter is pleasant; and so we envy and laugh at the same instant.

PROTARCHUS: True.

SOCRATES: And the argument implies that there are combinations of pleasure and pain in lamentations, and in tragedy and comedy, not only on the stage, but on the greater stage of human life; and so in endless other cases.

PROTARCHUS: I do not see how any one can deny what you say, Socrates, however eager he may be to assert the opposite opinion.

SOCRATES: I mentioned anger, desire, sorrow, fear, love, emulation, envy, and similar emotions, as examples in which we should find a mixture of the two elements so often named; did I not?

PROTARCHUS: Yes.

SOCRATES: We may observe that our conclusions hitherto have had reference only to sorrow and envy and anger.

PROTARCHUS: I see.

SOCRATES: Then many other cases still remain?

PROTARCHUS: Certainly.

SOCRATES: And why do you suppose me to have pointed out to you the admixture which takes place in comedy? Why but to convince you that there was no difficulty in showing the mixed nature of fear and love and similar affections; and I thought that when I had given you the illustration, you would have let me off, and have acknowledged as a general truth that the body without the soul, and the soul without the body, as well as the two united, are susceptible of all sorts of admixtures of pleasures and pains; and so further discussion would have been unnecessary. And now I want to know whether I may depart; or will you keep me here until midnight? I fancy that I may obtain my release without many words;—if I promise that to-morrow I will give you an account of all these cases. But at present I would rather sail in another direction, and go to other matters which remain to be settled, before the judgment can be given which Philebus demands.

PROTARCHUS: Very good, Socrates; in what remains take your own course.

SOCRATES: Then after the mixed pleasures the unmixed should have their turn; this is the natural and necessary order.

PROTARCHUS: Excellent.

SOCRATES: These, in turn, then, I will now endeavour to indicate; for with the maintainers of the opinion that all pleasures are a cessation of pain, I do not agree, but, as I was saying, I use them as witnesses, that there are pleasures which seem only and are not, and there are others again which have great power and appear in many forms, yet are intermingled with pains, and are partly alleviations of agony and distress, both of body and mind.

PROTARCHUS: Then what pleasures, Socrates, should we be right in conceiving to be true?

SOCRATES: True pleasures are those which are given by beauty of colour and form, and most of those which arise from smells; those of sound, again, and in general those of which the want is painless and unconscious, and of which the fruition is palpable to sense and pleasant and unalloyed with pain.

PROTARCHUS: Once more, Socrates, I must ask what you mean.

SOCRATES: My meaning is certainly not obvious, and I will endeavour to be plainer. I do not mean by beauty of form such beauty as that of animals or pictures, which the many would suppose to be my meaning; but, says the argument, understand me to mean straight lines and circles, and the plane or solid figures which are formed out of them by turning-lathes and rulers and measurers of angles; for these I affirm to be not only relatively beautiful, like other things, but they are eternally and absolutely beautiful, and they have peculiar pleasures, quite unlike the pleasures of scratching. And there are colours which are of the same character, and have similar pleasures; now do you understand my meaning?

PROTARCHUS: I am trying to understand, Socrates, and I hope that you will try to make your meaning clearer.

SOCRATES: When sounds are smooth and clear, and have a single pure tone, then I mean to say that they are not relatively but absolutely beautiful, and have natural pleasures associated with them.

PROTARCHUS: Yes, there are such pleasures.

SOCRATES: The pleasures of smell are of a less ethereal sort, but they have no necessary admixture of pain; and all pleasures, however and wherever experienced, which are unattended by pains, I assign to an analogous class. Here then are two kinds of pleasures.

PROTARCHUS: I understand.

SOCRATES: To these may be added the pleasures of knowledge, if no hunger of knowledge and no pain caused by such hunger precede them.

PROTARCHUS: And this is the case.

SOCRATES: Well, but if a man who is full of knowledge loses his knowledge, are there not pains of forgetting?

PROTARCHUS: Not necessarily, but there may be times of reflection, when he feels grief at the loss of his knowledge.

SOCRATES: Yes, my friend, but at present we are enumerating only the natural perceptions, and have nothing to do with reflection.

PROTARCHUS: In that case you are right in saying that the loss of knowledge is not attended with pain.

SOCRATES: These pleasures of knowledge, then, are unmixed with pain; and they are not the pleasures of the many but of a very few.

PROTARCHUS: Quite true.

SOCRATES: And now, having fairly separated the pure pleasures and those which may be rightly termed impure, let us further add to our description of them, that the pleasures which are in excess have no measure, but that those which are not in excess have measure; the great, the excessive, whether more or less frequent, we shall be right in referring to the class of the infinite, and of the more and less, which pours through body and soul alike; and the others we shall refer to the class which has measure.

PROTARCHUS: Quite right, Socrates.

SOCRATES: Still there is something more to be considered about pleasures.

PROTARCHUS: What is it?

SOCRATES: When you speak of purity and clearness, or of excess, abundance, greatness and sufficiency, in what relation do these terms stand to truth?

PROTARCHUS: Why do you ask, Socrates?

SOCRATES: Because, Protarchus, I should wish to test pleasure and knowledge in every possible way, in order that if there be a pure and impure element in either of them, I may present the pure element for judgment, and then they will be more easily judged of by you and by me and by all of us.

PROTARCHUS: Most true.

SOCRATES: Let us investigate all the pure kinds; first selecting for consideration a single instance.

PROTARCHUS: What instance shall we select?

SOCRATES: Suppose that we first of all take whiteness.

PROTARCHUS: Very good.

SOCRATES: How can there be purity in whiteness, and what purity? Is that purest which is greatest or most in quantity, or that which is most unadulterated and freest from any admixture of other colours?

PROTARCHUS: Clearly that which is most unadulterated.

SOCRATES: True, Protarchus; and so the purest white, and not the greatest or largest in quantity, is to be deemed truest and most beautiful?

PROTARCHUS: Right.

SOCRATES: And we shall be quite right in saying that a little pure white is whiter and fairer and truer than a great deal that is mixed.

PROTARCHUS: Perfectly right.

SOCRATES: There is no need of adducing many similar examples in illustration of the argument about pleasure; one such is sufficient to prove to us that a small pleasure or a small amount of pleasure, if pure or unalloyed with pain, is always pleasanter and truer and fairer than a great pleasure or a great amount of pleasure of another kind.

PROTARCHUS: Assuredly; and the instance you have given is quite sufficient.

SOCRATES: But what do you say of another question:—have we not heard that pleasure is always a generation, and has no true being? Do not certain ingenious philosophers teach this doctrine, and ought not we to be grateful to them?

PROTARCHUS: What do they mean?

SOCRATES: I will explain to you, my dear Protarchus, what they mean, by putting a question.

PROTARCHUS: Ask, and I will answer.

SOCRATES: I assume that there are two natures, one self-existent, and the other ever in want of something.

PROTARCHUS: What manner of natures are they?

SOCRATES: The one majestic ever, the other inferior.

PROTARCHUS: You speak riddles.

SOCRATES: You have seen loves good and fair, and also brave lovers of them.

PROTARCHUS: I should think so.

SOCRATES: Search the universe for two terms which are like these two and are present everywhere.

PROTARCHUS: Yet a third time I must say, Be a little plainer, Socrates.

SOCRATES: There is no difficulty, Protarchus; the argument is only in play, and insinuates that some things are for the sake of something else (relatives), and that other things are the ends to which the former class subserve (absolutes).

PROTARCHUS: Your many repetitions make me slow to understand.

SOCRATES: As the argument proceeds, my boy, I dare say that the meaning will become clearer.

PROTARCHUS: Very likely.

SOCRATES: Here are two new principles.

PROTARCHUS: What are they?

SOCRATES: One is the generation of all things, and the other is essence.

PROTARCHUS: I readily accept from you both generation and essence.

SOCRATES: Very right; and would you say that generation is for the sake of essence, or essence for the sake of generation?

PROTARCHUS: You want to know whether that which is called essence is, properly speaking, for the sake of generation?

SOCRATES: Yes.

PROTARCHUS: By the gods, I wish that you would repeat your question.

SOCRATES: I mean, O my Protarchus, to ask whether you would tell me that ship-building is for the sake of ships, or ships for the sake of ship-building? and in all similar cases I should ask the same question.

PROTARCHUS: Why do you not answer yourself, Socrates?

SOCRATES: I have no objection, but you must take your part.

PROTARCHUS: Certainly.

SOCRATES: My answer is, that all things instrumental, remedial, material, are given to us with a view to generation, and that each generation is relative to, or for the sake of, some being or essence, and that the whole of generation is relative to the whole of essence.

PROTARCHUS: Assuredly.

SOCRATES: Then pleasure, being a generation, must surely be for the sake of some essence?

PROTARCHUS: True.

SOCRATES: And that for the sake of which something else is done must be placed in the class of good, and that which is done for the sake of something else, in some other class, my good friend.

PROTARCHUS: Most certainly.

SOCRATES: Then pleasure, being a generation, will be rightly placed in some other class than that of good?

PROTARCHUS: Quite right.

SOCRATES: Then, as I said at first, we ought to be very grateful to him who first pointed out that pleasure was a generation only, and had no true being at all; for he is clearly one who laughs at the notion of pleasure being a good.

PROTARCHUS: Assuredly.

SOCRATES: And he would surely laugh also at those who make generation their highest end.

PROTARCHUS: Of whom are you speaking, and what do they mean?

SOCRATES: I am speaking of those who when they are cured of hunger or thirst or any other defect by some process of generation are delighted at the process as if it were pleasure; and they say that they would not wish to live without these and other feelings of a like kind which might be mentioned.

PROTARCHUS: That is certainly what they appear to think.

SOCRATES: And is not destruction universally admitted to be the opposite of generation?

PROTARCHUS: Certainly.

SOCRATES: Then he who chooses thus, would choose generation and destruction rather than that third sort of life, in which, as we were saying, was neither pleasure nor pain, but only the purest possible thought.

PROTARCHUS: He who would make us believe pleasure to be a good is involved in great absurdities, Socrates.

SOCRATES: Great, indeed; and there is yet another of them.

PROTARCHUS: What is it?

SOCRATES: Is there not an absurdity in arguing that there is nothing good or noble in the body, or in anything else, but that good is in the soul only, and that the only good of the soul is pleasure; and that courage or temperance or understanding, or any other good of the soul, is not really a good?—and is there not yet a further absurdity in our being compelled to say that he who has a feeling of pain and not of pleasure is bad at the time when he is suffering pain, even though he be the best of men; and again, that he who has a feeling of pleasure, in so far as he is pleased at the time when he is pleased, in that degree excels in virtue?

PROTARCHUS: Nothing, Socrates, can be more irrational than all this.

SOCRATES: And now, having subjected pleasure to every sort of test, let us not appear to be too sparing of mind and knowledge: let us ring their metal bravely, and see if there be unsoundness in any part, until we have found out what in them is of the purest nature; and then the truest elements both of pleasure and knowledge may be brought up for judgment.

PROTARCHUS: Right.

SOCRATES: Knowledge has two parts,—the one productive, and the other educational?

PROTARCHUS: True.

SOCRATES: And in the productive or handicraft arts, is not one part more akin to knowledge, and the other less; and may not the one part be regarded as the pure, and the other as the impure?

PROTARCHUS: Certainly.

SOCRATES: Let us separate the superior or dominant elements in each of them.

PROTARCHUS: What are they, and how do you separate them?

SOCRATES: I mean to say, that if arithmetic, mensuration, and weighing be taken away from any art, that which remains will not be much.

PROTARCHUS: Not much, certainly.

SOCRATES: The rest will be only conjecture, and the better use of the senses which is given by experience and practice, in addition to a certain power of guessing, which is commonly called art, and is perfected by attention and pains.

PROTARCHUS: Nothing more, assuredly.

SOCRATES: Music, for instance, is full of this empiricism; for sounds are harmonized, not by measure, but by skilful conjecture; the music of the flute is always trying to guess the pitch of each vibrating note, and is therefore mixed up with much that is doubtful and has little which is certain.

PROTARCHUS: Most true.

SOCRATES: And the same will be found to hold good of medicine and husbandry and piloting and generalship.

PROTARCHUS: Very true.

SOCRATES: The art of the builder, on the other hand, which uses a number of measures and instruments, attains by their help to a greater degree of accuracy than the other arts.

PROTARCHUS: How is that?

SOCRATES: In ship-building and house-building, and in other branches of the art of carpentering, the builder has his rule, lathe, compass, line, and a most ingenious machine for straightening wood.

PROTARCHUS: Very true, Socrates.

SOCRATES: Then now let us divide the arts of which we were speaking into two kinds,—the arts which, like music, are less exact in their results, and those which, like carpentering, are more exact.

PROTARCHUS: Let us make that division.

SOCRATES: Of the latter class, the most exact of all are those which we just now spoke of as primary.

PROTARCHUS: I see that you mean arithmetic, and the kindred arts of weighing and measuring.

SOCRATES: Certainly, Protarchus; but are not these also distinguishable into two kinds?

PROTARCHUS: What are the two kinds?

SOCRATES: In the first place, arithmetic is of two kinds, one of which is popular, and the other philosophical.

PROTARCHUS: How would you distinguish them?

SOCRATES: There is a wide difference between them, Protarchus; some arithmeticians reckon unequal units; as for example, two armies, two oxen, two very large things or two very small things. The party who are opposed to them insist that every unit in ten thousand must be the same as every other unit.

PROTARCHUS: Undoubtedly there is, as you say, a great difference among the votaries of the science; and there may be reasonably supposed to be two sorts of arithmetic.

SOCRATES: And when we compare the art of mensuration which is used in building with philosophical geometry, or the art of computation which is used in trading with exact calculation, shall we say of either of the pairs that it is one or two?

PROTARCHUS: On the analogy of what has preceded, I should be of opinion that they were severally two.

SOCRATES: Right; but do you understand why I have discussed the subject?

PROTARCHUS: I think so, but I should like to be told by you.

SOCRATES: The argument has all along been seeking a parallel to pleasure, and true to that original design, has gone on to ask whether one sort of knowledge is purer than another, as one pleasure is purer than another.

PROTARCHUS: Clearly; that was the intention.

SOCRATES: And has not the argument in what has preceded, already shown that the arts have different provinces, and vary in their degrees of certainty?

PROTARCHUS: Very true.

SOCRATES: And just now did not the argument first designate a particular art by a common term, thus making us believe in the unity of that art; and then again, as if speaking of two different things, proceed to enquire whether the art as pursed by philosophers, or as pursued by non-philosophers, has more of certainty and purity?

PROTARCHUS: That is the very question which the argument is asking.

SOCRATES: And how, Protarchus, shall we answer the enquiry?

PROTARCHUS: O Socrates, we have reached a point at which the difference of clearness in different kinds of knowledge is enormous.

SOCRATES: Then the answer will be the easier.

PROTARCHUS: Certainly; and let us say in reply, that those arts into which arithmetic and mensuration enter, far surpass all others; and that of these the arts or sciences which are animated by the pure philosophic impulse are infinitely superior in accuracy and truth.

SOCRATES: Then this is your judgment; and this is the answer which, upon your authority, we will give to all masters of the art of misinterpretation?

PROTARCHUS: What answer?

SOCRATES: That there are two arts of arithmetic, and two of mensuration; and also several other arts which in like manner have this double nature, and yet only one name.

PROTARCHUS: Let us boldly return this answer to the masters of whom you speak, Socrates, and hope for good luck.

SOCRATES: We have explained what we term the most exact arts or sciences.

PROTARCHUS: Very good.

SOCRATES: And yet, Protarchus, dialectic will refuse to acknowledge us, if we do not award to her the first place.

PROTARCHUS: And pray, what is dialectic?

SOCRATES: Clearly the science which has to do with all that knowledge of which we are now speaking; for I am sure that all men who have a grain of intelligence will admit that the knowledge which has to do with being and reality, and sameness and unchangeableness, is by far the truest of all. But how would you decide this question, Protarchus?

PROTARCHUS: I have often heard Gorgias maintain, Socrates, that the art of persuasion far surpassed every other; this, as he says, is by far the best of them all, for to it all things submit, not by compulsion, but of their own free will. Now, I should not like to quarrel either with you or with him.

SOCRATES: You mean to say that you would like to desert, if you were not ashamed?

PROTARCHUS: As you please.

SOCRATES: May I not have led you into a misapprehension?

PROTARCHUS: How?

SOCRATES: Dear Protarchus, I never asked which was the greatest or best or usefullest of arts or sciences, but which had clearness and accuracy, and the greatest amount of truth, however humble and little useful an art. And as for Gorgias, if you do not deny that his art has the advantage in usefulness to mankind, he will not quarrel with you for saying that the study of which I am speaking is superior in this particular of essential truth; as in the comparison of white colours, a little whiteness, if that little be only pure, was said to be superior in truth to a great mass which is impure. And now let us give our best attention and consider well, not the comparative use or reputation of the sciences, but the power or faculty, if there be such, which the soul has of loving the truth, and of doing all things for the sake of it; let us search into the pure element of mind and intelligence, and then we shall be able to say whether the science of which I have been speaking is most likely to possess the faculty, or whether there be some other which has higher claims.

PROTARCHUS: Well, I have been considering, and I can hardly think that any other science or art has a firmer grasp of the truth than this.

SOCRATES: Do you say so because you observe that the arts in general and those engaged in them make use of opinion, and are resolutely engaged in the investigation of matters of opinion? Even he who supposes himself to be occupied with nature is really occupied with the things of this world, how created, how acting or acted upon. Is not this the sort of enquiry in which his life is spent?

PROTARCHUS: True.

SOCRATES: He is labouring, not after eternal being, but about things which are becoming, or which will or have become.

PROTARCHUS: Very true.

SOCRATES: And can we say that any of these things which neither are nor have been nor will be unchangeable, when judged by the strict rule of truth ever become certain?

PROTARCHUS: Impossible.

SOCRATES: How can anything fixed be concerned with that which has no fixedness?

PROTARCHUS: How indeed?

SOCRATES: Then mind and science when employed about such changing things do not attain the highest truth?

PROTARCHUS: I should imagine not.

SOCRATES: And now let us bid farewell, a long farewell, to you or me or Philebus or Gorgias, and urge on behalf of the argument a single point.

PROTARCHUS: What point?

SOCRATES: Let us say that the stable and pure and true and unalloyed has to do with the things which are eternal and unchangeable and unmixed, or if not, at any rate what is most akin to them has; and that all other things are to be placed in a second or inferior class.

PROTARCHUS: Very true.

SOCRATES: And of the names expressing cognition, ought not the fairest to be given to the fairest things?

PROTARCHUS: That is natural.

SOCRATES: And are not mind and wisdom the names which are to be honoured most?

PROTARCHUS: Yes.

SOCRATES: And these names may be said to have their truest and most exact application when the mind is engaged in the contemplation of true being?

PROTARCHUS: Certainly.

SOCRATES: And these were the names which I adduced of the rivals of pleasure?

PROTARCHUS: Very true, Socrates.

SOCRATES: In the next place, as to the mixture, here are the ingredients, pleasure and wisdom, and we may be compared to artists who have their materials ready to their hands.

PROTARCHUS: Yes.

SOCRATES: And now we must begin to mix them?

PROTARCHUS: By all means.

SOCRATES: But had we not better have a preliminary word and refresh our memories?

PROTARCHUS: Of what?

SOCRATES: Of that which I have already mentioned. Well says the proverb, that we ought to repeat twice and even thrice that which is good.

PROTARCHUS: Certainly.

SOCRATES: Well then, by Zeus, let us proceed, and I will make what I believe to be a fair summary of the argument.

PROTARCHUS: Let me hear.

SOCRATES: Philebus says that pleasure is the true end of all living beings, at which all ought to aim, and moreover that it is the chief good of all, and that the two names 'good' and 'pleasant' are correctly given to one thing and one nature; Socrates, on the other hand, begins by denying this, and further says, that in nature as in name they are two, and that wisdom partakes more than pleasure of the good. Is not and was not this what we were saying, Protarchus?

PROTARCHUS: Certainly.

SOCRATES: And is there not and was there not a further point which was conceded between us?

PROTARCHUS: What was it?

SOCRATES: That the good differs from all other things.

PROTARCHUS: In what respect?

SOCRATES: In that the being who possesses good always everywhere and in all things has the most perfect sufficiency, and is never in need of anything else.

PROTARCHUS: Exactly.

SOCRATES: And did we not endeavour to make an imaginary separation of wisdom and pleasure, assigning to each a distinct life, so that pleasure was wholly excluded from wisdom, and wisdom in like manner had no part whatever in pleasure?

PROTARCHUS: We did.

SOCRATES: And did we think that either of them alone would be sufficient?

PROTARCHUS: Certainly not.

SOCRATES: And if we erred in any point, then let any one who will, take up the enquiry again and set us right; and assuming memory and wisdom and knowledge and true opinion to belong to the same class, let him consider whether he would desire to possess or acquire,—I will not say pleasure, however abundant or intense, if he has no real perception that he is pleased, nor any consciousness of what he feels, nor any recollection, however momentary, of the feeling,—but would he desire to have anything at all, if these faculties were wanting to him? And about wisdom I ask the same question; can you conceive that any one would choose to have all wisdom absolutely devoid of pleasure, rather than with a certain degree of pleasure, or all pleasure devoid of wisdom, rather than with a certain degree of wisdom?

PROTARCHUS: Certainly not, Socrates; but why repeat such questions any more?

SOCRATES: Then the perfect and universally eligible and entirely good cannot possibly be either of them?

PROTARCHUS: Impossible.

SOCRATES: Then now we must ascertain the nature of the good more or less accurately, in order, as we were saying, that the second place may be duly assigned.

PROTARCHUS: Right.

SOCRATES: Have we not found a road which leads towards the good?

PROTARCHUS: What road?

SOCRATES: Supposing that a man had to be found, and you could discover in what house he lived, would not that be a great step towards the discovery of the man himself?

PROTARCHUS: Certainly.

SOCRATES: And now reason intimates to us, as at our first beginning, that we should seek the good, not in the unmixed life but in the mixed.

PROTARCHUS: True.

SOCRATES: There is greater hope of finding that which we are seeking in the life which is well mixed than in that which is not?

PROTARCHUS: Far greater.

SOCRATES: Then now let us mingle, Protarchus, at the same time offering up a prayer to Dionysus or Hephaestus, or whoever is the god who presides over the ceremony of mingling.

PROTARCHUS: By all means.

SOCRATES: Are not we the cup-bearers? and here are two fountains which are flowing at our side: one, which is pleasure, may be likened to a fountain of honey; the other, wisdom, a sober draught in which no wine mingles, is of water unpleasant but healthful; out of these we must seek to make the fairest of all possible mixtures.

PROTARCHUS: Certainly.

SOCRATES: Tell me first;—should we be most likely to succeed if we mingled every sort of pleasure with every sort of wisdom?

PROTARCHUS: Perhaps we might.

SOCRATES: But I should be afraid of the risk, and I think that I can show a safer plan.

PROTARCHUS: What is it?

SOCRATES: One pleasure was supposed by us to be truer than another, and one art to be more exact than another.

PROTARCHUS: Certainly.

SOCRATES: There was also supposed to be a difference in sciences; some of them regarding only the transient and perishing, and others the permanent and imperishable and everlasting and immutable; and when judged by the standard of truth, the latter, as we thought, were truer than the former.

PROTARCHUS: Very good and right.

SOCRATES: If, then, we were to begin by mingling the sections of each class which have the most of truth, will not the union suffice to give us the loveliest of lives, or shall we still want some elements of another kind?

PROTARCHUS: I think that we ought to do what you suggest.

SOCRATES: Let us suppose a man who understands justice, and has reason as well as understanding about the true nature of this and of all other things.

PROTARCHUS: We will suppose such a man.

SOCRATES: Will he have enough of knowledge if he is acquainted only with the divine circle and sphere, and knows nothing of our human spheres and circles, but uses only divine circles and measures in the building of a house?

PROTARCHUS: The knowledge which is only superhuman, Socrates, is ridiculous in man.

SOCRATES: What do you mean? Do you mean that you are to throw into the cup and mingle the impure and uncertain art which uses the false measure and the false circle?

PROTARCHUS: Yes, we must, if any of us is ever to find his way home.

SOCRATES: And am I to include music, which, as I was saying just now, is full of guesswork and imitation, and is wanting in purity?

PROTARCHUS: Yes, I think that you must, if human life is to be a life at all.

SOCRATES: Well, then, suppose that I give way, and, like a doorkeeper who is pushed and overborne by the mob, I open the door wide, and let knowledge of every sort stream in, and the pure mingle with the impure?

PROTARCHUS: I do not know, Socrates, that any great harm would come of having them all, if only you have the first sort.

SOCRATES: Well, then, shall I let them all flow into what Homer poetically terms 'a meeting of the waters'?

PROTARCHUS: By all means.

SOCRATES: There—I have let them in, and now I must return to the fountain of pleasure. For we were not permitted to begin by mingling in a single stream the true portions of both according to our original intention; but the love of all knowledge constrained us to let all the sciences flow in together before the pleasures.

PROTARCHUS: Quite true.

SOCRATES: And now the time has come for us to consider about the pleasures also, whether we shall in like manner let them go all at once, or at first only the true ones.

PROTARCHUS: It will be by far the safer course to let flow the true ones first.

SOCRATES: Let them flow, then; and now, if there are any necessary pleasures, as there were arts and sciences necessary, must we not mingle them?

PROTARCHUS: Yes; the necessary pleasures should certainly be allowed to mingle.

SOCRATES: The knowledge of the arts has been admitted to be innocent and useful always; and if we say of pleasures in like manner that all of them are good and innocent for all of us at all times, we must let them all mingle?

PROTARCHUS: What shall we say about them, and what course shall we take?

SOCRATES: Do not ask me, Protarchus; but ask the daughters of pleasure and wisdom to answer for themselves.

PROTARCHUS: How?

SOCRATES: Tell us, O beloved—shall we call you pleasures or by some other name?—would you rather live with or without wisdom? I am of opinion that they would certainly answer as follows:

PROTARCHUS: How?

SOCRATES: They would answer, as we said before, that for any single class to be left by itself pure and isolated is not good, nor altogether possible; and that if we are to make comparisons of one class with another and choose, there is no better companion than knowledge of things in general, and likewise the perfect knowledge, if that may be, of ourselves in every respect.

PROTARCHUS: And our answer will be:—In that ye have spoken well.

SOCRATES: Very true. And now let us go back and interrogate wisdom and mind: Would you like to have any pleasures in the mixture? And they will reply:—'What pleasures do you mean?'

PROTARCHUS: Likely enough.

SOCRATES: And we shall take up our parable and say: Do you wish to have the greatest and most vehement pleasures for your companions in addition to the true ones? 'Why, Socrates,' they will say, 'how can we? seeing that they are the source of ten thousand hindrances to us; they trouble the souls of men, which are our habitation, with their madness; they prevent us from coming to the birth, and are commonly the ruin of the children which are born to us, causing them to be forgotten and unheeded; but the true and pure pleasures, of which you spoke, know to be of our family, and also

those pleasures which accompany health and temperance, and which every Virtue, like a goddess, has in her train to follow her about wherever she goes,—mingle these and not the others; there would be great want of sense in any one who desires to see a fair and perfect mixture, and to find in it what is the highest good in man and in the universe, and to divine what is the true form of good—there would be great want of sense in his allowing the pleasures, which are always in the company of folly and vice, to mingle with mind in the cup.'—Is not this a very rational and suitable reply, which mind has made, both on her own behalf, as well as on the behalf of memory and true opinion?

PROTARCHUS: Most certainly.

SOCRATES: And still there must be something more added, which is a necessary ingredient in every mixture.

PROTARCHUS: What is that?

SOCRATES: Unless truth enter into the composition, nothing can truly be created or subsist.

PROTARCHUS: Impossible.

SOCRATES: Quite impossible; and now you and Philebus must tell me whether anything is still wanting in the mixture, for to my way of thinking the argument is now completed, and may be compared to an incorporeal law, which is going to hold fair rule over a living body.

PROTARCHUS: I agree with you, Socrates.

SOCRATES: And may we not say with reason that we are now at the vestibule of the habitation of the good?

PROTARCHUS: I think that we are.

SOCRATES: What, then, is there in the mixture which is most precious, and which is the principal cause why such a state is universally beloved by all? When we have discovered it, we will proceed to ask whether this omnipresent nature is more akin to pleasure or to mind.

PROTARCHUS: Quite right; in that way we shall be better able to judge.

SOCRATES: And there is no difficulty in seeing the cause which renders any mixture either of the highest value or of none at all.

PROTARCHUS: What do you mean?

SOCRATES: Every man knows it.

PROTARCHUS: What?

SOCRATES: He knows that any want of measure and symmetry in any mixture whatever must always of necessity be fatal, both to the elements and to the mixture, which is then not a mixture, but only a confused medley which brings confusion on the possessor of it.

PROTARCHUS: Most true.

SOCRATES: And now the power of the good has retired into the region of the beautiful; for measure and symmetry are beauty and virtue all the world over.

PROTARCHUS: True.

SOCRATES: Also we said that truth was to form an element in the mixture.

PROTARCHUS: Certainly.

SOCRATES: Then, if we are not able to hunt the good with one idea only, with three we may catch our prey; Beauty, Symmetry, Truth are the three, and these taken together we may regard as the single cause of the mixture, and the mixture as being good by reason of the infusion of them.

PROTARCHUS: Quite right.

SOCRATES: And now, Protarchus, any man could decide well enough whether pleasure or wisdom is more akin to the highest good, and more honourable among gods and men.

PROTARCHUS: Clearly, and yet perhaps the argument had better be pursued to the end.

SOCRATES: We must take each of them separately in their relation to pleasure and mind, and pronounce upon them; for we ought to see to which of the two they are severally most akin.

PROTARCHUS: You are speaking of beauty, truth, and measure?

SOCRATES: Yes, Protarchus, take truth first, and, after passing in review mind, truth, pleasure, pause awhile and make answer to yourself—as to whether pleasure or mind is more akin to truth.

PROTARCHUS: There is no need to pause, for the difference between them is palpable; pleasure is the veriest impostor in the world; and it is said that in the pleasures of love, which appear to be the greatest, perjury is excused by the gods; for pleasures, like children, have not the least particle of reason in them; whereas mind is either the same as truth, or the most like truth, and the truest.

SOCRATES: Shall we next consider measure, in like manner, and ask whether pleasure has more of this than wisdom, or wisdom than pleasure?

PROTARCHUS: Here is another question which may be easily answered; for I imagine that nothing can ever be more immoderate than the transports of pleasure, or more in conformity with measure than mind and knowledge.

SOCRATES: Very good; but there still remains the third test: Has mind a greater share of beauty than pleasure, and is mind or pleasure the fairer of the two?

PROTARCHUS: No one, Socrates, either awake or dreaming, ever saw or imagined mind or wisdom to be in aught unseemly, at any time, past, present, or future.

SOCRATES: Right.

PROTARCHUS: But when we see some one indulging in pleasures, perhaps in the greatest of pleasures, the ridiculous or disgraceful nature of the action makes us ashamed; and so we put them out of sight, and consign them to darkness, under the idea that they ought not to meet the eye of day.

SOCRATES: Then, Protarchus, you will proclaim everywhere, by word of mouth to this company, and by messengers bearing the tidings far and wide, that pleasure is not the first of possessions, nor yet the second, but that in measure, and the mean, and the suitable, and the like, the eternal nature has been found.

PROTARCHUS: Yes, that seems to be the result of what has been now said.

SOCRATES: In the second class is contained the symmetrical and beautiful and perfect or sufficient, and all which are of that family.

PROTARCHUS: True.

SOCRATES: And if you reckon in the third class mind and wisdom, you will not be far wrong, if I divine aright.

PROTARCHUS: I dare say.

SOCRATES: And would you not put in the fourth class the goods which we were affirming to appertain specially to the soul—sciences and arts and true opinions as we called them? These come after the third class, and form the fourth, as they are certainly more akin to good than pleasure is.

PROTARCHUS: Surely.

SOCRATES: The fifth class are the pleasures which were defined by us as painless, being the pure pleasures of the soul herself, as we termed them, which accompany, some the sciences, and some the senses.

PROTARCHUS: Perhaps.

SOCRATES: And now, as Orpheus says,

> 'With the sixth generation cease the glory of my song.'

Here, at the sixth award, let us make an end; all that remains is to set the crown on our discourse.

PROTARCHUS: True.

SOCRATES: Then let us sum up and reassert what has been said, thus offering the third libation to the saviour Zeus.

PROTARCHUS: How?

SOCRATES: Philebus affirmed that pleasure was always and absolutely the good.

PROTARCHUS: I understand; this third libation, Socrates, of which you spoke, meant a recapitulation.

SOCRATES: Yes, but listen to the sequel; convinced of what I have just been saying, and feeling indignant at the doctrine, which is maintained, not by Philebus only, but by thousands of others, I affirmed that mind was far better and far more excellent, as an element of human life, than pleasure.

PROTARCHUS: True.

SOCRATES: But, suspecting that there were other things which were also better, I went on to say that if there was anything better than either, then I would claim the second place for mind over pleasure, and pleasure would lose the second place as well as the first.

PROTARCHUS: You did.

SOCRATES: Nothing could be more satisfactorily shown than the unsatisfactory nature of both of them.

PROTARCHUS: Very true.

SOCRATES: The claims both of pleasure and mind to be the absolute good have been entirely disproven in this argument, because they are both wanting in self-sufficiency and also in adequacy and perfection.

PROTARCHUS: Most true.

SOCRATES: But, though they must both resign in favour of another, mind is ten thousand times nearer and more akin to the nature of the conqueror than pleasure.

PROTARCHUS: Certainly.

SOCRATES: And, according to the judgment which has now been given, pleasure will rank fifth.

PROTARCHUS: True.

SOCRATES: But not first; no, not even if all the oxen and horses and animals in the world by their pursuit of enjoyment proclaim her to be so;—although the many trusting in them, as diviners trust in

birds, determine that pleasures make up the good of life, and deem the lusts of animals to be better witnesses than the inspirations of divine philosophy.

PROTARCHUS: And now, Socrates, we tell you that the truth of what you have been saying is approved by the judgment of all of us.

SOCRATES: And will you let me go?

PROTARCHUS: There is a little which yet remains, and I will remind you of it, for I am sure that you will not be the first to go away from an argument.

PROTAGORAS

By Plato

Translated by Benjamin Jowett

INTRODUCTION.

The Protagoras, like several of the Dialogues of Plato, is put into the mouth of Socrates, who describes a conversation which had taken place between himself and the great Sophist at the house of Callias—'the man who had spent more upon the Sophists than all the rest of the world'—and in which the learned Hippias and the grammarian Prodicus had also shared, as well as Alcibiades and Critias, both of whom said a few words—in the presence of a distinguished company consisting of disciples of Protagoras and of leading Athenians belonging to the Socratic circle. The dialogue commences with a request on the part of Hippocrates that Socrates would introduce him to the celebrated teacher. He has come before the dawn had risen—so fervid is his zeal. Socrates moderates his excitement and advises him to find out 'what Protagoras will make of him,' before he becomes his pupil.

They go together to the house of Callias; and Socrates, after explaining the purpose of their visit to Protagoras, asks the question, 'What he will make of Hippocrates.' Protagoras answers, 'That he will make him a better and a wiser man.' 'But in what will he be better?'—Socrates desires to have a more precise answer. Protagoras replies, 'That he will teach him prudence in affairs private and public; in short, the science or knowledge of human life.'

This, as Socrates admits, is a noble profession; but he is or rather would have been doubtful, whether such knowledge can be taught, if Protagoras had not assured him of the fact, for two reasons: (1) Because the Athenian people, who recognize in their assemblies the distinction between the skilled and the unskilled in the arts, do not distinguish between the trained politician and the untrained; (2) Because the wisest and best Athenian citizens do not teach their sons political virtue. Will Protagoras answer these objections?

Protagoras explains his views in the form of an apologue, in which, after Prometheus had given men the arts, Zeus is represented as sending Hermes to them, bearing with him Justice and Reverence. These are not, like the arts, to be imparted to a few only, but all men are to be partakers of them. Therefore the Athenian people are right in distinguishing between the skilled and unskilled in the arts, and not between skilled and unskilled politicians. (1) For all men have the political virtues to a certain degree, and are obliged to say that they have them, whether they have them or not. A man would be thought a madman who professed an art which he did not know; but he would be equally thought a madman if he did not profess a virtue which he had not. (2) And that the political virtues can be taught and acquired, in the opinion of the Athenians, is proved by the fact that they punish evil-doers, with a view to prevention, of course—mere retribution is for beasts, and not for men. (3) Again, would parents who teach her sons lesser matters leave them ignorant of the common duty of citizens? To the doubt of Socrates the best answer is the fact, that the education of youth in virtue begins almost as soon as they can speak, and is continued by the state when they pass out of the parental control. (4) Nor need we wonder that wise and good fathers sometimes have foolish and worthless sons. Virtue, as we were saying, is not the private possession of any man, but is shared by all, only

however to the extent of which each individual is by nature capable. And, as a matter of fact, even the worst of civilized mankind will appear virtuous and just, if we compare them with savages. (5) The error of Socrates lies in supposing that there are no teachers of virtue, whereas all men are teachers in a degree. Some, like Protagoras, are better than others, and with this result we ought to be satisfied.

Socrates is highly delighted with the explanation of Protagoras. But he has still a doubt lingering in his mind. Protagoras has spoken of the virtues: are they many, or one? are they parts of a whole, or different names of the same thing? Protagoras replies that they are parts, like the parts of a face, which have their several functions, and no one part is like any other part. This admission, which has been somewhat hastily made, is now taken up and cross-examined by Socrates:—

'Is justice just, and is holiness holy? And are justice and holiness opposed to one another?'—'Then justice is unholy.' Protagoras would rather say that justice is different from holiness, and yet in a certain point of view nearly the same. He does not, however, escape in this way from the cunning of Socrates, who inveigles him into an admission that everything has but one opposite. Folly, for example, is opposed to wisdom; and folly is also opposed to temperance; and therefore temperance and wisdom are the same. And holiness has been already admitted to be nearly the same as justice. Temperance, therefore, has now to be compared with justice.

Protagoras, whose temper begins to get a little ruffled at the process to which he has been subjected, is aware that he will soon be compelled by the dialectics of Socrates to admit that the temperate is the just. He therefore defends himself with his favourite weapon; that is to say, he makes a long speech not much to the point, which elicits the applause of the audience.

Here occurs a sort of interlude, which commences with a declaration on the part of Socrates that he cannot follow a long speech, and therefore he must beg Protagoras to speak shorter. As Protagoras declines to accommodate him, he rises to depart, but is detained by Callias, who thinks him unreasonable in not allowing Protagoras the liberty which he takes himself of speaking as he likes. But Alcibiades answers that the two cases are not parallel. For Socrates admits his inability to speak long; will Protagoras in like manner acknowledge his inability to speak short?

Counsels of moderation are urged first in a few words by Critias, and then by Prodicus in balanced and sententious language: and Hippias proposes an umpire. But who is to be the umpire? rejoins Socrates; he would rather suggest as a compromise that Protagoras shall ask and he will answer, and that when Protagoras is tired of asking he himself will ask and Protagoras shall answer. To this the latter yields a reluctant assent.

Protagoras selects as his thesis a poem of Simonides of Ceos, in which he professes to find a contradiction. First the poet says,

> 'Hard is it to become good,'

and then reproaches Pittacus for having said, 'Hard is it to be good.' How is this to be reconciled? Socrates, who is familiar with the poem, is embarrassed at first, and invokes the aid of Prodicus, the countryman of Simonides, but apparently only with the intention of flattering him into absurdities. First

a distinction is drawn between (Greek) to be, and (Greek) to become: to become good is difficult; to be good is easy. Then the word difficult or hard is explained to mean 'evil' in the Cean dialect. To all this Prodicus assents; but when Protagoras reclaims, Socrates slily withdraws Prodicus from the fray, under the pretence that his assent was only intended to test the wits of his adversary. He then proceeds to give another and more elaborate explanation of the whole passage. The explanation is as follows:—

The Lacedaemonians are great philosophers (although this is a fact which is not generally known); and the soul of their philosophy is brevity, which was also the style of primitive antiquity and of the seven sages. Now Pittacus had a saying, 'Hard is it to be good:' and Simonides, who was jealous of the fame of this saying, wrote a poem which was designed to controvert it. No, says he, Pittacus; not 'hard to be good,' but 'hard to become good.' Socrates proceeds to argue in a highly impressive manner that the whole composition is intended as an attack upon Pittacus. This, though manifestly absurd, is accepted by the company, and meets with the special approval of Hippias, who has however a favourite interpretation of his own, which he is requested by Alcibiades to defer.

The argument is now resumed, not without some disdainful remarks of Socrates on the practice of introducing the poets, who ought not to be allowed, any more than flute-girls, to come into good society. Men's own thoughts should supply them with the materials for discussion. A few soothing flatteries are addressed to Protagoras by Callias and Socrates, and then the old question is repeated, 'Whether the virtues are one or many?' To which Protagoras is now disposed to reply, that four out of the five virtues are in some degree similar; but he still contends that the fifth, courage, is unlike the rest. Socrates proceeds to undermine the last stronghold of the adversary, first obtaining from him the admission that all virtue is in the highest degree good:—

The courageous are the confident; and the confident are those who know their business or profession: those who have no such knowledge and are still confident are madmen. This is admitted. Then, says Socrates, courage is knowledge—an inference which Protagoras evades by drawing a futile distinction between the courageous and the confident in a fluent speech.

Socrates renews the attack from another side: he would like to know whether pleasure is not the only good, and pain the only evil? Protagoras seems to doubt the morality or propriety of assenting to this; he would rather say that 'some pleasures are good, some pains are evil,' which is also the opinion of the generality of mankind. What does he think of knowledge? Does he agree with the common opinion that knowledge is overcome by passion? or does he hold that knowledge is power? Protagoras agrees that knowledge is certainly a governing power.

This, however, is not the doctrine of men in general, who maintain that many who know what is best, act contrary to their knowledge under the influence of pleasure. But this opposition of good and evil is really the opposition of a greater or lesser amount of pleasure. Pleasures are evils because they end in pain, and pains are goods because they end in pleasures. Thus pleasure is seen to be the only good; and the only evil is the preference of the lesser pleasure to the greater. But then comes in the illusion of distance. Some art of mensuration is required in order to show us pleasures and pains in their true proportion. This art of mensuration is a kind of knowledge, and knowledge is thus proved once more to be the governing principle of human life, and ignorance the origin of all evil: for no one prefers the less pleasure to the greater, or the greater pain to the less, except from ignorance. The

argument is drawn out in an imaginary 'dialogue within a dialogue,' conducted by Socrates and Protagoras on the one part, and the rest of the world on the other. Hippias and Prodicus, as well as Protagoras, admit the soundness of the conclusion.

Socrates then applies this new conclusion to the case of courage—the only virtue which still holds out against the assaults of the Socratic dialectic. No one chooses the evil or refuses the good except through ignorance. This explains why cowards refuse to go to war:—because they form a wrong estimate of good, and honour, and pleasure. And why are the courageous willing to go to war?—because they form a right estimate of pleasures and pains, of things terrible and not terrible. Courage then is knowledge, and cowardice is ignorance. And the five virtues, which were originally maintained to have five different natures, after having been easily reduced to two only, at last coalesce in one. The assent of Protagoras to this last position is extracted with great difficulty.

Socrates concludes by professing his disinterested love of the truth, and remarks on the singular manner in which he and his adversary had changed sides. Protagoras began by asserting, and Socrates by denying, the teachableness of virtue, and now the latter ends by affirming that virtue is knowledge, which is the most teachable of all things, while Protagoras has been striving to show that virtue is not knowledge, and this is almost equivalent to saying that virtue cannot be taught. He is not satisfied with the result, and would like to renew the enquiry with the help of Protagoras in a different order, asking (1) What virtue is, and (2) Whether virtue can be taught. Protagoras declines this offer, but commends Socrates' earnestness and his style of discussion.

The Protagoras is often supposed to be full of difficulties. These are partly imaginary and partly real. The imaginary ones are (1) Chronological,—which were pointed out in ancient times by Athenaeus, and are noticed by Schleiermacher and others, and relate to the impossibility of all the persons in the Dialogue meeting at any one time, whether in the year 425 B.C., or in any other. But Plato, like all writers of fiction, aims only at the probable, and shows in many Dialogues (e.g. the Symposium and Republic, and already in the Laches) an extreme disregard of the historical accuracy which is sometimes demanded of him. (2) The exact place of the Protagoras among the Dialogues, and the date of composition, have also been much disputed. But there are no criteria which afford any real grounds for determining the date of composition; and the affinities of the Dialogues, when they are not indicated by Plato himself, must always to a great extent remain uncertain. (3) There is another class of difficulties, which may be ascribed to preconceived notions of commentators, who imagine that Protagoras the Sophist ought always to be in the wrong, and his adversary Socrates in the right; or that in this or that passage—e.g. in the explanation of good as pleasure—Plato is inconsistent with himself; or that the Dialogue fails in unity, and has not a proper beginning, middle, and ending. They seem to forget that Plato is a dramatic writer who throws his thoughts into both sides of the argument, and certainly does not aim at any unity which is inconsistent with freedom, and with a natural or even wild manner of treating his subject; also that his mode of revealing the truth is by lights and shadows, and far-off and opposing points of view, and not by dogmatic statements or definite results.

The real difficulties arise out of the extreme subtlety of the work, which, as Socrates says of the poem of Simonides, is a most perfect piece of art. There are dramatic contrasts and interests, threads of philosophy broken and resumed, satirical reflections on mankind, veils thrown over truths which are lightly suggested, and all woven together in a single design, and moving towards one end.

In the introductory scene Plato raises the expectation that a 'great personage' is about to appear on the stage; perhaps with a further view of showing that he is destined to be overthrown by a greater still, who makes no pretensions. Before introducing Hippocrates to him, Socrates thinks proper to warn the youth against the dangers of 'influence,' of which the invidious nature is recognized by Protagoras himself. Hippocrates readily adopts the suggestion of Socrates that he shall learn of Protagoras only the accomplishments which befit an Athenian gentleman, and let alone his 'sophistry.' There is nothing however in the introduction which leads to the inference that Plato intended to blacken the character of the Sophists; he only makes a little merry at their expense.

The 'great personage' is somewhat ostentatious, but frank and honest. He is introduced on a stage which is worthy of him—at the house of the rich Callias, in which are congregated the noblest and wisest of the Athenians. He considers openness to be the best policy, and particularly mentions his own liberal mode of dealing with his pupils, as if in answer to the favourite accusation of the Sophists that they received pay. He is remarkable for the good temper which he exhibits throughout the discussion under the trying and often sophistical cross-examination of Socrates. Although once or twice ruffled, and reluctant to continue the discussion, he parts company on perfectly good terms, and appears to be, as he says of himself, the 'least jealous of mankind.'

Nor is there anything in the sentiments of Protagoras which impairs this pleasing impression of the grave and weighty old man. His real defect is that he is inferior to Socrates in dialectics. The opposition between him and Socrates is not the opposition of good and bad, true and false, but of the old art of rhetoric and the new science of interrogation and argument; also of the irony of Socrates and the self-assertion of the Sophists. There is quite as much truth on the side of Protagoras as of Socrates; but the truth of Protagoras is based on common sense and common maxims of morality, while that of Socrates is paradoxical or transcendental, and though full of meaning and insight, hardly intelligible to the rest of mankind. Here as elsewhere is the usual contrast between the Sophists representing average public opinion and Socrates seeking for increased clearness and unity of ideas. But to a great extent Protagoras has the best of the argument and represents the better mind of man.

For example: (1) one of the noblest statements to be found in antiquity about the preventive nature of punishment is put into his mouth; (2) he is clearly right also in maintaining that virtue can be taught (which Socrates himself, at the end of the Dialogue, is disposed to concede); and also (3) in his explanation of the phenomenon that good fathers have bad sons; (4) he is right also in observing that the virtues are not like the arts, gifts or attainments of special individuals, but the common property of all: this, which in all ages has been the strength and weakness of ethics and politics, is deeply seated in human nature; (5) there is a sort of half-truth in the notion that all civilized men are teachers of virtue; and more than a half-truth (6) in ascribing to man, who in his outward conditions is more helpless than the other animals, the power of self-improvement; (7) the religious allegory should be noticed, in which the arts are said to be given by Prometheus (who stole them), whereas justice and reverence and the political virtues could only be imparted by Zeus; (8) in the latter part of the Dialogue, when Socrates is arguing that 'pleasure is the only good,' Protagoras deems it more in accordance with his character to maintain that 'some pleasures only are good;' and admits that 'he, above all other men, is bound to say "that wisdom and knowledge are the highest of human things."'

There is no reason to suppose that in all this Plato is depicting an imaginary Protagoras; he seems to be showing us the teaching of the Sophists under the milder aspect under which he once regarded

them. Nor is there any reason to doubt that Socrates is equally an historical character, paradoxical, ironical, tiresome, but seeking for the unity of virtue and knowledge as for a precious treasure; willing to rest this even on a calculation of pleasure, and irresistible here, as everywhere in Plato, in his intellectual superiority.

The aim of Socrates, and of the Dialogue, is to show the unity of virtue. In the determination of this question the identity of virtue and knowledge is found to be involved. But if virtue and knowledge are one, then virtue can be taught; the end of the Dialogue returns to the beginning. Had Protagoras been allowed by Plato to make the Aristotelian distinction, and say that virtue is not knowledge, but is accompanied with knowledge; or to point out with Aristotle that the same quality may have more than one opposite; or with Plato himself in the Phaedo to deny that good is a mere exchange of a greater pleasure for a less—the unity of virtue and the identity of virtue and knowledge would have required to be proved by other arguments.

The victory of Socrates over Protagoras is in every way complete when their minds are fairly brought together. Protagoras falls before him after two or three blows. Socrates partially gains his object in the first part of the Dialogue, and completely in the second. Nor does he appear at any disadvantage when subjected to 'the question' by Protagoras. He succeeds in making his two 'friends,' Prodicus and Hippias, ludicrous by the way; he also makes a long speech in defence of the poem of Simonides, after the manner of the Sophists, showing, as Alcibiades says, that he is only pretending to have a bad memory, and that he and not Protagoras is really a master in the two styles of speaking; and that he can undertake, not one side of the argument only, but both, when Protagoras begins to break down. Against the authority of the poets with whom Protagoras has ingeniously identified himself at the commencement of the Dialogue, Socrates sets up the proverbial philosophers and those masters of brevity the Lacedaemonians. The poets, the Laconizers, and Protagoras are satirized at the same time.

Not having the whole of this poem before us, it is impossible for us to answer certainly the question of Protagoras, how the two passages of Simonides are to be reconciled. We can only follow the indications given by Plato himself. But it seems likely that the reconcilement offered by Socrates is a caricature of the methods of interpretation which were practised by the Sophists—for the following reasons: (1) The transparent irony of the previous interpretations given by Socrates. (2) The ludicrous opening of the speech in which the Lacedaemonians are described as the true philosophers, and Laconic brevity as the true form of philosophy, evidently with an allusion to Protagoras' long speeches. (3) The manifest futility and absurdity of the explanation of (Greek), which is hardly consistent with the rational interpretation of the rest of the poem. The opposition of (Greek) and (Greek) seems also intended to express the rival doctrines of Socrates and Protagoras, and is a facetious commentary on their differences. (4) The general treatment in Plato both of the Poets and the Sophists, who are their interpreters, and whom he delights to identify with them. (5) The depreciating spirit in which Socrates speaks of the introduction of the poets as a substitute for original conversation, which is intended to contrast with Protagoras' exaltation of the study of them—this again is hardly consistent with the serious defence of Simonides. (6) the marked approval of Hippias, who is supposed at once to catch the familiar sound, just as in the previous conversation Prodicus is represented as ready to accept any distinctions of language however absurd. At the same time Hippias is desirous of substituting a new interpretation of his own; as if the words might really be

made to mean anything, and were only to be regarded as affording a field for the ingenuity of the interpreter.

This curious passage is, therefore, to be regarded as Plato's satire on the tedious and hypercritical arts of interpretation which prevailed in his own day, and may be compared with his condemnation of the same arts when applied to mythology in the Phaedrus, and with his other parodies, e.g. with the two first speeches in the Phaedrus and with the Menexenus. Several lesser touches of satire may be observed, such as the claim of philosophy advanced for the Lacedaemonians, which is a parody of the claims advanced for the Poets by Protagoras; the mistake of the Laconizing set in supposing that the Lacedaemonians are a great nation because they bruise their ears; the far-fetched notion, which is 'really too bad,' that Simonides uses the Lesbian (?) word, (Greek), because he is addressing a Lesbian. The whole may also be considered as a satire on those who spin pompous theories out of nothing. As in the arguments of the Euthydemus and of the Cratylus, the veil of irony is never withdrawn; and we are left in doubt at last how far in this interpretation of Simonides Socrates is 'fooling,' how far he is in earnest.

All the interests and contrasts of character in a great dramatic work like the Protagoras are not easily exhausted. The impressiveness of the scene should not be lost upon us, or the gradual substitution of Socrates in the second part for Protagoras in the first. The characters to whom we are introduced at the beginning of the Dialogue all play a part more or less conspicuous towards the end. There is Alcibiades, who is compelled by the necessity of his nature to be a partisan, lending effectual aid to Socrates; there is Critias assuming the tone of impartiality; Callias, here as always inclining to the Sophists, but eager for any intellectual repast; Prodicus, who finds an opportunity for displaying his distinctions of language, which are valueless and pedantic, because they are not based on dialectic; Hippias, who has previously exhibited his superficial knowledge of natural philosophy, to which, as in both the Dialogues called by his name, he now adds the profession of an interpreter of the Poets. The two latter personages have been already damaged by the mock heroic description of them in the introduction. It may be remarked that Protagoras is consistently presented to us throughout as the teacher of moral and political virtue; there is no allusion to the theories of sensation which are attributed to him in the Theaetetus and elsewhere, or to his denial of the existence of the gods in a well-known fragment ascribed to him; he is the religious rather than the irreligious teacher in this Dialogue. Also it may be observed that Socrates shows him as much respect as is consistent with his own ironical character; he admits that the dialectic which has overthrown Protagoras has carried himself round to a conclusion opposed to his first thesis. The force of argument, therefore, and not Socrates or Protagoras, has won the day.

But is Socrates serious in maintaining (1) that virtue cannot be taught; (2) that the virtues are one; (3) that virtue is the knowledge of pleasures and pains present and future? These propositions to us have an appearance of paradox—they are really moments or aspects of the truth by the help of which we pass from the old conventional morality to a higher conception of virtue and knowledge. That virtue cannot be taught is a paradox of the same sort as the profession of Socrates that he knew nothing. Plato means to say that virtue is not brought to a man, but must be drawn out of him; and cannot be taught by rhetorical discourses or citations from the poets. The second question, whether the virtues are one or many, though at first sight distinct, is really a part of the same subject; for if the virtues are to be taught, they must be reducible to a common principle; and this common principle is found to be knowledge. Here, as Aristotle remarks, Socrates and Plato outstep the truth—they make

a part of virtue into the whole. Further, the nature of this knowledge, which is assumed to be a knowledge of pleasures and pains, appears to us too superficial and at variance with the spirit of Plato himself. Yet, in this, Plato is only following the historical Socrates as he is depicted to us in Xenophon's Memorabilia. Like Socrates, he finds on the surface of human life one common bond by which the virtues are united,—their tendency to produce happiness,—though such a principle is afterwards repudiated by him.

It remains to be considered in what relation the Protagoras stands to the other Dialogues of Plato. That it is one of the earlier or purely Socratic works—perhaps the last, as it is certainly the greatest of them—is indicated by the absence of any allusion to the doctrine of reminiscence; and also by the different attitude assumed towards the teaching and persons of the Sophists in some of the later Dialogues. The Charmides, Laches, Lysis, all touch on the question of the relation of knowledge to virtue, and may be regarded, if not as preliminary studies or sketches of the more important work, at any rate as closely connected with it. The Io and the lesser Hippias contain discussions of the Poets, which offer a parallel to the ironical criticism of Simonides, and are conceived in a similar spirit. The affinity of the Protagoras to the Meno is more doubtful. For there, although the same question is discussed, 'whether virtue can be taught,' and the relation of Meno to the Sophists is much the same as that of Hippocrates, the answer to the question is supplied out of the doctrine of ideas; the real Socrates is already passing into the Platonic one. At a later stage of the Platonic philosophy we shall find that both the paradox and the solution of it appear to have been retracted. The Phaedo, the Gorgias, and the Philebus offer further corrections of the teaching of the Protagoras; in all of them the doctrine that virtue is pleasure, or that pleasure is the chief or only good, is distinctly renounced.

Thus after many preparations and oppositions, both of the characters of men and aspects of the truth, especially of the popular and philosophical aspect; and after many interruptions and detentions by the way, which, as Theodorus says in the Theaetetus, are quite as agreeable as the argument, we arrive at the great Socratic thesis that virtue is knowledge. This is an aspect of the truth which was lost almost as soon as it was found; and yet has to be recovered by every one for himself who would pass the limits of proverbial and popular philosophy. The moral and intellectual are always dividing, yet they must be reunited, and in the highest conception of them are inseparable. The thesis of Socrates is not merely a hasty assumption, but may be also deemed an anticipation of some 'metaphysic of the future,' in which the divided elements of human nature are reconciled.

PROTAGORAS

PERSONS OF THE DIALOGUE: Socrates, who is the narrator of the Dialogue to his Companion. Hippocrates, Alcibiades and Critias. Protagoras, Hippias and Prodicus (Sophists). Callias, a wealthy Athenian.

SCENE: The House of Callias.

COMPANION: Where do you come from, Socrates? And yet I need hardly ask the question, for I know that you have been in chase of the fair Alcibiades. I saw him the day before yesterday; and he had got a beard like a man,—and he is a man, as I may tell you in your ear. But I thought that he was still very charming.

SOCRATES: What of his beard? Are you not of Homer's opinion, who says

> 'Youth is most charming when the beard first appears'?

And that is now the charm of Alcibiades.

COMPANION: Well, and how do matters proceed? Have you been visiting him, and was he gracious to you?

SOCRATES: Yes, I thought that he was very gracious; and especially to-day, for I have just come from him, and he has been helping me in an argument. But shall I tell you a strange thing? I paid no attention to him, and several times I quite forgot that he was present.

COMPANION: What is the meaning of this? Has anything happened between you and him? For surely you cannot have discovered a fairer love than he is; certainly not in this city of Athens.

SOCRATES: Yes, much fairer.

COMPANION: What do you mean—a citizen or a foreigner?

SOCRATES: A foreigner.

COMPANION: Of what country?

SOCRATES: Of Abdera.

COMPANION: And is this stranger really in your opinion a fairer love than the son of Cleinias?

SOCRATES: And is not the wiser always the fairer, sweet friend?

COMPANION: But have you really met, Socrates, with some wise one?

SOCRATES: Say rather, with the wisest of all living men, if you are willing to accord that title to Protagoras.

COMPANION: What! Is Protagoras in Athens?

SOCRATES: Yes; he has been here two days.

COMPANION: And do you just come from an interview with him?

SOCRATES: Yes; and I have heard and said many things.

COMPANION: Then, if you have no engagement, suppose that you sit down and tell me what passed, and my attendant here shall give up his place to you.

SOCRATES: To be sure; and I shall be grateful to you for listening.

COMPANION: Thank you, too, for telling us.

SOCRATES: That is thank you twice over. Listen then:—

Last night, or rather very early this morning, Hippocrates, the son of Apollodorus and the brother of Phason, gave a tremendous thump with his staff at my door; some one opened to him, and he came rushing in and bawled out: Socrates, are you awake or asleep?

I knew his voice, and said: Hippocrates, is that you? and do you bring any news?

Good news, he said; nothing but good.

Delightful, I said; but what is the news? and why have you come hither at this unearthly hour?

He drew nearer to me and said: Protagoras is come.

Yes, I replied; he came two days ago: have you only just heard of his arrival?

Yes, by the gods, he said; but not until yesterday evening.

At the same time he felt for the truckle-bed, and sat down at my feet, and then he said: Yesterday quite late in the evening, on my return from Oenoe whither I had gone in pursuit of my runaway slave Satyrus, as I meant to have told you, if some other matter had not come in the way;—on my return, when we had done supper and were about to retire to rest, my brother said to me: Protagoras is come. I was going to you at once, and then I thought that the night was far spent. But the moment sleep left me after my fatigue, I got up and came hither direct.

I, who knew the very courageous madness of the man, said: What is the matter? Has Protagoras robbed you of anything?

He replied, laughing: Yes, indeed he has, Socrates, of the wisdom which he keeps from me.

But, surely, I said, if you give him money, and make friends with him, he will make you as wise as he is himself.

Would to heaven, he replied, that this were the case! He might take all that I have, and all that my friends have, if he pleased. But that is why I have come to you now, in order that you may speak to him on my behalf; for I am young, and also I have never seen nor heard him; (when he visited Athens before I was but a child;) and all men praise him, Socrates; he is reputed to be the most

accomplished of speakers. There is no reason why we should not go to him at once, and then we shall find him at home. He lodges, as I hear, with Callias the son of Hipponicus: let us start.

I replied: Not yet, my good friend; the hour is too early. But let us rise and take a turn in the court and wait about there until day-break; when the day breaks, then we will go. For Protagoras is generally at home, and we shall be sure to find him; never fear.

Upon this we got up and walked about in the court, and I thought that I would make trial of the strength of his resolution. So I examined him and put questions to him. Tell me, Hippocrates, I said, as you are going to Protagoras, and will be paying your money to him, what is he to whom you are going? and what will he make of you? If, for example, you had thought of going to Hippocrates of Cos, the Asclepiad, and were about to give him your money, and some one had said to you: You are paying money to your namesake Hippocrates, O Hippocrates; tell me, what is he that you give him money? how would you have answered?

I should say, he replied, that I gave money to him as a physician.

And what will he make of you?

A physician, he said.

And if you were resolved to go to Polycleitus the Argive, or Pheidias the Athenian, and were intending to give them money, and some one had asked you: What are Polycleitus and Pheidias? and why do you give them this money?—how would you have answered?

I should have answered, that they were statuaries.

And what will they make of you?

A statuary, of course.

Well now, I said, you and I are going to Protagoras, and we are ready to pay him money on your behalf. If our own means are sufficient, and we can gain him with these, we shall be only too glad; but if not, then we are to spend the money of your friends as well. Now suppose, that while we are thus enthusiastically pursuing our object some one were to say to us: Tell me, Socrates, and you Hippocrates, what is Protagoras, and why are you going to pay him money,—how should we answer? I know that Pheidias is a sculptor, and that Homer is a poet; but what appellation is given to Protagoras? how is he designated?

They call him a Sophist, Socrates, he replied.

Then we are going to pay our money to him in the character of a Sophist?

Certainly.

But suppose a person were to ask this further question: And how about yourself? What will Protagoras make of you, if you go to see him?

He answered, with a blush upon his face (for the day was just beginning to dawn, so that I could see him): Unless this differs in some way from the former instances, I suppose that he will make a Sophist of me.

By the gods, I said, and are you not ashamed at having to appear before the Hellenes in the character of a Sophist?

Indeed, Socrates, to confess the truth, I am.

But you should not assume, Hippocrates, that the instruction of Protagoras is of this nature: may you not learn of him in the same way that you learned the arts of the grammarian, or musician, or trainer, not with the view of making any of them a profession, but only as a part of education, and because a private gentleman and freeman ought to know them?

Just so, he said; and that, in my opinion, is a far truer account of the teaching of Protagoras.

I said: I wonder whether you know what you are doing?

And what am I doing?

You are going to commit your soul to the care of a man whom you call a Sophist. And yet I hardly think that you know what a Sophist is; and if not, then you do not even know to whom you are committing your soul and whether the thing to which you commit yourself be good or evil.

I certainly think that I do know, he replied.

Then tell me, what do you imagine that he is?

I take him to be one who knows wise things, he replied, as his name implies.

And might you not, I said, affirm this of the painter and of the carpenter also: Do not they, too, know wise things? But suppose a person were to ask us: In what are the painters wise? We should answer: In what relates to the making of likenesses, and similarly of other things. And if he were further to ask: What is the wisdom of the Sophist, and what is the manufacture over which he presides?—how should we answer him?

How should we answer him, Socrates? What other answer could there be but that he presides over the art which makes men eloquent?

Yes, I replied, that is very likely true, but not enough; for in the answer a further question is involved: Of what does the Sophist make a man talk eloquently? The player on the lyre may be supposed to make a man talk eloquently about that which he makes him understand, that is about playing the lyre. Is not that true?

Yes.

Then about what does the Sophist make him eloquent? Must not he make him eloquent in that which he understands?

Yes, that may be assumed.

And what is that which the Sophist knows and makes his disciple know?

Indeed, he said, I cannot tell.

Then I proceeded to say: Well, but are you aware of the danger which you are incurring? If you were going to commit your body to some one, who might do good or harm to it, would you not carefully consider and ask the opinion of your friends and kindred, and deliberate many days as to whether you should give him the care of your body? But when the soul is in question, which you hold to be of far more value than the body, and upon the good or evil of which depends the well-being of your all,—about this you never consulted either with your father or with your brother or with any one of us who are your companions. But no sooner does this foreigner appear, than you instantly commit your soul to his keeping. In the evening, as you say, you hear of him, and in the morning you go to him, never deliberating or taking the opinion of any one as to whether you ought to intrust yourself to him or not;—you have quite made up your mind that you will at all hazards be a pupil of Protagoras, and are prepared to expend all the property of yourself and of your friends in carrying out at any price this determination, although, as you admit, you do not know him, and have never spoken with him: and you call him a Sophist, but are manifestly ignorant of what a Sophist is; and yet you are going to commit yourself to his keeping.

When he heard me say this, he replied: No other inference, Socrates, can be drawn from your words.

I proceeded: Is not a Sophist, Hippocrates, one who deals wholesale or retail in the food of the soul? To me that appears to be his nature.

And what, Socrates, is the food of the soul?

Surely, I said, knowledge is the food of the soul; and we must take care, my friend, that the Sophist does not deceive us when he praises what he sells, like the dealers wholesale or retail who sell the food of the body; for they praise indiscriminately all their goods, without knowing what are really beneficial or hurtful: neither do their customers know, with the exception of any trainer or physician who may happen to buy of them. In like manner those who carry about the wares of knowledge, and make the round of the cities, and sell or retail them to any customer who is in want of them, praise them all alike; though I should not wonder, O my friend, if many of them were really ignorant of their effect upon the soul; and their customers equally ignorant, unless he who buys of them happens to be a physician of the soul. If, therefore, you have understanding of what is good and evil, you may safely buy knowledge of Protagoras or of any one; but if not, then, O my friend, pause, and do not hazard your dearest interests at a game of chance. For there is far greater peril in buying knowledge than in buying meat and drink: the one you purchase of the wholesale or retail dealer, and carry them away in other vessels, and before you receive them into the body as food, you may deposit them at home

and call in any experienced friend who knows what is good to be eaten or drunken, and what not, and how much, and when; and then the danger of purchasing them is not so great. But you cannot buy the wares of knowledge and carry them away in another vessel; when you have paid for them you must receive them into the soul and go your way, either greatly harmed or greatly benefited; and therefore we should deliberate and take counsel with our elders; for we are still young—too young to determine such a matter. And now let us go, as we were intending, and hear Protagoras; and when we have heard what he has to say, we may take counsel of others; for not only is Protagoras at the house of Callias, but there is Hippias of Elis, and, if I am not mistaken, Prodicus of Ceos, and several other wise men.

To this we agreed, and proceeded on our way until we reached the vestibule of the house; and there we stopped in order to conclude a discussion which had arisen between us as we were going along; and we stood talking in the vestibule until we had finished and come to an understanding. And I think that the door-keeper, who was a eunuch, and who was probably annoyed at the great inroad of the Sophists, must have heard us talking. At any rate, when we knocked at the door, and he opened and saw us, he grumbled: They are Sophists—he is not at home; and instantly gave the door a hearty bang with both his hands. Again we knocked, and he answered without opening: Did you not hear me say that he is not at home, fellows? But, my friend, I said, you need not be alarmed; for we are not Sophists, and we are not come to see Callias, but we want to see Protagoras; and I must request you to announce us. At last, after a good deal of difficulty, the man was persuaded to open the door.

When we entered, we found Protagoras taking a walk in the cloister; and next to him, on one side, were walking Callias, the son of Hipponicus, and Paralus, the son of Pericles, who, by the mother's side, is his half-brother, and Charmides, the son of Glaucon. On the other side of him were Xanthippus, the other son of Pericles, Philippides, the son of Philomelus; also Antimoerus of Mende, who of all the disciples of Protagoras is the most famous, and intends to make sophistry his profession. A train of listeners followed him; the greater part of them appeared to be foreigners, whom Protagoras had brought with him out of the various cities visited by him in his journeys, he, like Orpheus, attracting them his voice, and they following (Compare Rep.). I should mention also that there were some Athenians in the company. Nothing delighted me more than the precision of their movements: they never got into his way at all; but when he and those who were with him turned back, then the band of listeners parted regularly on either side; he was always in front, and they wheeled round and took their places behind him in perfect order.

After him, as Homer says (Od.), 'I lifted up my eyes and saw' Hippias the Elean sitting in the opposite cloister on a chair of state, and around him were seated on benches Eryximachus, the son of Acumenus, and Phaedrus the Myrrhinusian, and Andron the son of Androtion, and there were strangers whom he had brought with him from his native city of Elis, and some others: they were putting to Hippias certain physical and astronomical questions, and he, ex cathedra, was determining their several questions to them, and discoursing of them.

Also, 'my eyes beheld Tantalus (Od.);' for Prodicus the Cean was at Athens: he had been lodged in a room which, in the days of Hipponicus, was a storehouse; but, as the house was full, Callias had cleared this out and made the room into a guest-chamber. Now Prodicus was still in bed, wrapped up in sheepskins and bedclothes, of which there seemed to be a great heap; and there was sitting by him on the couches near, Pausanias of the deme of Cerameis, and with Pausanias was a youth quite

young, who is certainly remarkable for his good looks, and, if I am not mistaken, is also of a fair and gentle nature. I thought that I heard him called Agathon, and my suspicion is that he is the beloved of Pausanias. There was this youth, and also there were the two Adeimantuses, one the son of Cepis, and the other of Leucolophides, and some others. I was very anxious to hear what Prodicus was saying, for he seems to me to be an all-wise and inspired man; but I was not able to get into the inner circle, and his fine deep voice made an echo in the room which rendered his words inaudible.

No sooner had we entered than there followed us Alcibiades the beautiful, as you say, and I believe you; and also Critias the son of Callaeschrus.

On entering we stopped a little, in order to look about us, and then walked up to Protagoras, and I said: Protagoras, my friend Hippocrates and I have come to see you.

Do you wish, he said, to speak with me alone, or in the presence of the company?

Whichever you please, I said; you shall determine when you have heard the purpose of our visit.

And what is your purpose? he said.

I must explain, I said, that my friend Hippocrates is a native Athenian; he is the son of Apollodorus, and of a great and prosperous house, and he is himself in natural ability quite a match for anybody of his own age. I believe that he aspires to political eminence; and this he thinks that conversation with you is most likely to procure for him. And now you can determine whether you would wish to speak to him of your teaching alone or in the presence of the company.

Thank you, Socrates, for your consideration of me. For certainly a stranger finding his way into great cities, and persuading the flower of the youth in them to leave company of their kinsmen or any other acquaintances, old or young, and live with him, under the idea that they will be improved by his conversation, ought to be very cautious; great jealousies are aroused by his proceedings, and he is the subject of many enmities and conspiracies. Now the art of the Sophist is, as I believe, of great antiquity; but in ancient times those who practised it, fearing this odium, veiled and disguised themselves under various names, some under that of poets, as Homer, Hesiod, and Simonides, some, of hierophants and prophets, as Orpheus and Musaeus, and some, as I observe, even under the name of gymnastic-masters, like Iccus of Tarentum, or the more recently celebrated Herodicus, now of Selymbria and formerly of Megara, who is a first-rate Sophist. Your own Agathocles pretended to be a musician, but was really an eminent Sophist; also Pythocleides the Cean; and there were many others; and all of them, as I was saying, adopted these arts as veils or disguises because they were afraid of the odium which they would incur. But that is not my way, for I do not believe that they effected their purpose, which was to deceive the government, who were not blinded by them; and as to the people, they have no understanding, and only repeat what their rulers are pleased to tell them. Now to run away, and to be caught in running away, is the very height of folly, and also greatly increases the exasperation of mankind; for they regard him who runs away as a rogue, in addition to any other objections which they have to him; and therefore I take an entirely opposite course, and acknowledge myself to be a Sophist and instructor of mankind; such an open acknowledgement appears to me to be a better sort of caution than concealment. Nor do I neglect other precautions, and therefore I hope, as I may say, by the favour of heaven that no harm will come of the

acknowledgment that I am a Sophist. And I have been now many years in the profession—for all my years when added up are many: there is no one here present of whom I might not be the father. Wherefore I should much prefer conversing with you, if you want to speak with me, in the presence of the company.

As I suspected that he would like to have a little display and glorification in the presence of Prodicus and Hippias, and would gladly show us to them in the light of his admirers, I said: But why should we not summon Prodicus and Hippias and their friends to hear us?

Very good, he said.

Suppose, said Callias, that we hold a council in which you may sit and discuss.—This was agreed upon, and great delight was felt at the prospect of hearing wise men talk; we ourselves took the chairs and benches, and arranged them by Hippias, where the other benches had been already placed. Meanwhile Callias and Alcibiades got Prodicus out of bed and brought in him and his companions.

When we were all seated, Protagoras said: Now that the company are assembled, Socrates, tell me about the young man of whom you were just now speaking.

I replied: I will begin again at the same point, Protagoras, and tell you once more the purport of my visit: this is my friend Hippocrates, who is desirous of making your acquaintance; he would like to know what will happen to him if he associates with you. I have no more to say.

Protagoras answered: Young man, if you associate with me, on the very first day you will return home a better man than you came, and better on the second day than on the first, and better every day than you were on the day before.

When I heard this, I said: Protagoras, I do not at all wonder at hearing you say this; even at your age, and with all your wisdom, if any one were to teach you what you did not know before, you would become better no doubt: but please to answer in a different way—I will explain how by an example. Let me suppose that Hippocrates, instead of desiring your acquaintance, wished to become acquainted with the young man Zeuxippus of Heraclea, who has lately been in Athens, and he had come to him as he has come to you, and had heard him say, as he has heard you say, that every day he would grow and become better if he associated with him: and then suppose that he were to ask him, 'In what shall I become better, and in what shall I grow?'—Zeuxippus would answer, 'In painting.' And suppose that he went to Orthagoras the Theban, and heard him say the same thing, and asked him, 'In what shall I become better day by day?' he would reply, 'In flute-playing.' Now I want you to make the same sort of answer to this young man and to me, who am asking questions on his account. When you say that on the first day on which he associates with you he will return home a better man, and on every day will grow in like manner,—in what, Protagoras, will he be better? and about what?

When Protagoras heard me say this, he replied: You ask questions fairly, and I like to answer a question which is fairly put. If Hippocrates comes to me he will not experience the sort of drudgery with which other Sophists are in the habit of insulting their pupils; who, when they have just escaped

from the arts, are taken and driven back into them by these teachers, and made to learn calculation, and astronomy, and geometry, and music (he gave a look at Hippias as he said this); but if he comes to me, he will learn that which he comes to learn. And this is prudence in affairs private as well as public; he will learn to order his own house in the best manner, and he will be able to speak and act for the best in the affairs of the state.

Do I understand you, I said; and is your meaning that you teach the art of politics, and that you promise to make men good citizens?

That, Socrates, is exactly the profession which I make.

Then, I said, you do indeed possess a noble art, if there is no mistake about this; for I will freely confess to you, Protagoras, that I have a doubt whether this art is capable of being taught, and yet I know not how to disbelieve your assertion. And I ought to tell you why I am of opinion that this art cannot be taught or communicated by man to man. I say that the Athenians are an understanding people, and indeed they are esteemed to be such by the other Hellenes. Now I observe that when we are met together in the assembly, and the matter in hand relates to building, the builders are summoned as advisers; when the question is one of ship-building, then the ship-wrights; and the like of other arts which they think capable of being taught and learned. And if some person offers to give them advice who is not supposed by them to have any skill in the art, even though he be good-looking, and rich, and noble, they will not listen to him, but laugh and hoot at him, until either he is clamoured down and retires of himself; or if he persist, he is dragged away or put out by the constables at the command of the prytanes. This is their way of behaving about professors of the arts. But when the question is an affair of state, then everybody is free to have a say—carpenter, tinker, cobbler, sailor, passenger; rich and poor, high and low—any one who likes gets up, and no one reproaches him, as in the former case, with not having learned, and having no teacher, and yet giving advice; evidently because they are under the impression that this sort of knowledge cannot be taught. And not only is this true of the state, but of individuals; the best and wisest of our citizens are unable to impart their political wisdom to others: as for example, Pericles, the father of these young men, who gave them excellent instruction in all that could be learned from masters, in his own department of politics neither taught them, nor gave them teachers; but they were allowed to wander at their own free will in a sort of hope that they would light upon virtue of their own accord. Or take another example: there was Cleinias the younger brother of our friend Alcibiades, of whom this very same Pericles was the guardian; and he being in fact under the apprehension that Cleinias would be corrupted by Alcibiades, took him away, and placed him in the house of Ariphron to be educated; but before six months had elapsed, Ariphron sent him back, not knowing what to do with him. And I could mention numberless other instances of persons who were good themselves, and never yet made any one else good, whether friend or stranger. Now I, Protagoras, having these examples before me, am inclined to think that virtue cannot be taught. But then again, when I listen to your words, I waver; and am disposed to think that there must be something in what you say, because I know that you have great experience, and learning, and invention. And I wish that you would, if possible, show me a little more clearly that virtue can be taught. Will you be so good?

That I will, Socrates, and gladly. But what would you like? Shall I, as an elder, speak to you as younger men in an apologue or myth, or shall I argue out the question?

To this several of the company answered that he should choose for himself.

Well, then, he said, I think that the myth will be more interesting.

Once upon a time there were gods only, and no mortal creatures. But when the time came that these also should be created, the gods fashioned them out of earth and fire and various mixtures of both elements in the interior of the earth; and when they were about to bring them into the light of day, they ordered Prometheus and Epimetheus to equip them, and to distribute to them severally their proper qualities. Epimetheus said to Prometheus: 'Let me distribute, and do you inspect.' This was agreed, and Epimetheus made the distribution. There were some to whom he gave strength without swiftness, while he equipped the weaker with swiftness; some he armed, and others he left unarmed; and devised for the latter some other means of preservation, making some large, and having their size as a protection, and others small, whose nature was to fly in the air or burrow in the ground; this was to be their way of escape. Thus did he compensate them with the view of preventing any race from becoming extinct. And when he had provided against their destruction by one another, he contrived also a means of protecting them against the seasons of heaven; clothing them with close hair and thick skins sufficient to defend them against the winter cold and able to resist the summer heat, so that they might have a natural bed of their own when they wanted to rest; also he furnished them with hoofs and hair and hard and callous skins under their feet. Then he gave them varieties of food,—herb of the soil to some, to others fruits of trees, and to others roots, and to some again he gave other animals as food. And some he made to have few young ones, while those who were their prey were very prolific; and in this manner the race was preserved. Thus did Epimetheus, who, not being very wise, forgot that he had distributed among the brute animals all the qualities which he had to give,—and when he came to man, who was still unprovided, he was terribly perplexed. Now while he was in this perplexity, Prometheus came to inspect the distribution, and he found that the other animals were suitably furnished, but that man alone was naked and shoeless, and had neither bed nor arms of defence. The appointed hour was approaching when man in his turn was to go forth into the light of day; and Prometheus, not knowing how he could devise his salvation, stole the mechanical arts of Hephaestus and Athene, and fire with them (they could neither have been acquired nor used without fire), and gave them to man. Thus man had the wisdom necessary to the support of life, but political wisdom he had not; for that was in the keeping of Zeus, and the power of Prometheus did not extend to entering into the citadel of heaven, where Zeus dwelt, who moreover had terrible sentinels; but he did enter by stealth into the common workshop of Athene and Hephaestus, in which they used to practise their favourite arts, and carried off Hephaestus' art of working by fire, and also the art of Athene, and gave them to man. And in this way man was supplied with the means of life. But Prometheus is said to have been afterwards prosecuted for theft, owing to the blunder of Epimetheus.

Now man, having a share of the divine attributes, was at first the only one of the animals who had any gods, because he alone was of their kindred; and he would raise altars and images of them. He was not long in inventing articulate speech and names; and he also constructed houses and clothes and shoes and beds, and drew sustenance from the earth. Thus provided, mankind at first lived dispersed, and there were no cities. But the consequence was that they were destroyed by the wild beasts, for they were utterly weak in comparison of them, and their art was only sufficient to provide them with the means of life, and did not enable them to carry on war against the animals: food they had, but not as yet the art of government, of which the art of war is a part. After a while the desire of

self-preservation gathered them into cities; but when they were gathered together, having no art of government, they evil intreated one another, and were again in process of dispersion and destruction. Zeus feared that the entire race would be exterminated, and so he sent Hermes to them, bearing reverence and justice to be the ordering principles of cities and the bonds of friendship and conciliation. Hermes asked Zeus how he should impart justice and reverence among men:—Should he distribute them as the arts are distributed; that is to say, to a favoured few only, one skilled individual having enough of medicine or of any other art for many unskilled ones? 'Shall this be the manner in which I am to distribute justice and reverence among men, or shall I give them to all?' 'To all,' said Zeus; 'I should like them all to have a share; for cities cannot exist, if a few only share in the virtues, as in the arts. And further, make a law by my order, that he who has no part in reverence and justice shall be put to death, for he is a plague of the state.'

And this is the reason, Socrates, why the Athenians and mankind in general, when the question relates to carpentering or any other mechanical art, allow but a few to share in their deliberations; and when any one else interferes, then, as you say, they object, if he be not of the favoured few; which, as I reply, is very natural. But when they meet to deliberate about political virtue, which proceeds only by way of justice and wisdom, they are patient enough of any man who speaks of them, as is also natural, because they think that every man ought to share in this sort of virtue, and that states could not exist if this were otherwise. I have explained to you, Socrates, the reason of this phenomenon.

And that you may not suppose yourself to be deceived in thinking that all men regard every man as having a share of justice or honesty and of every other political virtue, let me give you a further proof, which is this. In other cases, as you are aware, if a man says that he is a good flute-player, or skilful in any other art in which he has no skill, people either laugh at him or are angry with him, and his relations think that he is mad and go and admonish him; but when honesty is in question, or some other political virtue, even if they know that he is dishonest, yet, if the man comes publicly forward and tells the truth about his dishonesty, then, what in the other case was held by them to be good sense, they now deem to be madness. They say that all men ought to profess honesty whether they are honest or not, and that a man is out of his mind who says anything else. Their notion is, that a man must have some degree of honesty; and that if he has none at all he ought not to be in the world.

I have been showing that they are right in admitting every man as a counsellor about this sort of virtue, as they are of opinion that every man is a partaker of it. And I will now endeavour to show further that they do not conceive this virtue to be given by nature, or to grow spontaneously, but to be a thing which may be taught; and which comes to a man by taking pains. No one would instruct, no one would rebuke, or be angry with those whose calamities they suppose to be due to nature or chance; they do not try to punish or to prevent them from being what they are; they do but pity them. Who is so foolish as to chastise or instruct the ugly, or the diminutive, or the feeble? And for this reason. Because he knows that good and evil of this kind is the work of nature and of chance; whereas if a man is wanting in those good qualities which are attained by study and exercise and teaching, and has only the contrary evil qualities, other men are angry with him, and punish and reprove him—of these evil qualities one is impiety, another injustice, and they may be described generally as the very opposite of political virtue. In such cases any man will be angry with another, and reprimand him,—clearly because he thinks that by study and learning, the virtue in which the other is deficient may be acquired. If you will think, Socrates, of the nature of punishment, you will see at once that in the opinion of mankind virtue may be acquired; no one punishes the evil-doer under

the notion, or for the reason, that he has done wrong,—only the unreasonable fury of a beast acts in that manner. But he who desires to inflict rational punishment does not retaliate for a past wrong which cannot be undone; he has regard to the future, and is desirous that the man who is punished, and he who sees him punished, may be deterred from doing wrong again. He punishes for the sake of prevention, thereby clearly implying that virtue is capable of being taught. This is the notion of all who retaliate upon others either privately or publicly. And the Athenians, too, your own citizens, like other men, punish and take vengeance on all whom they regard as evil doers; and hence, we may infer them to be of the number of those who think that virtue may be acquired and taught. Thus far, Socrates, I have shown you clearly enough, if I am not mistaken, that your countrymen are right in admitting the tinker and the cobbler to advise about politics, and also that they deem virtue to be capable of being taught and acquired.

There yet remains one difficulty which has been raised by you about the sons of good men. What is the reason why good men teach their sons the knowledge which is gained from teachers, and make them wise in that, but do nothing towards improving them in the virtues which distinguish themselves? And here, Socrates, I will leave the apologue and resume the argument. Please to consider: Is there or is there not some one quality of which all the citizens must be partakers, if there is to be a city at all? In the answer to this question is contained the only solution of your difficulty; there is no other. For if there be any such quality, and this quality or unity is not the art of the carpenter, or the smith, or the potter, but justice and temperance and holiness and, in a word, manly virtue—if this is the quality of which all men must be partakers, and which is the very condition of their learning or doing anything else, and if he who is wanting in this, whether he be a child only or a grown-up man or woman, must be taught and punished, until by punishment he becomes better, and he who rebels against instruction and punishment is either exiled or condemned to death under the idea that he is incurable—if what I am saying be true, good men have their sons taught other things and not this, do consider how extraordinary their conduct would appear to be. For we have shown that they think virtue capable of being taught and cultivated both in private and public; and, notwithstanding, they have their sons taught lesser matters, ignorance of which does not involve the punishment of death: but greater things, of which the ignorance may cause death and exile to those who have no training or knowledge of them—aye, and confiscation as well as death, and, in a word, may be the ruin of families—those things, I say, they are supposed not to teach them,—not to take the utmost care that they should learn. How improbable is this, Socrates!

Education and admonition commence in the first years of childhood, and last to the very end of life. Mother and nurse and father and tutor are vying with one another about the improvement of the child as soon as ever he is able to understand what is being said to him: he cannot say or do anything without their setting forth to him that this is just and that is unjust; this is honourable, that is dishonourable; this is holy, that is unholy; do this and abstain from that. And if he obeys, well and good; if not, he is straightened by threats and blows, like a piece of bent or warped wood. At a later stage they send him to teachers, and enjoin them to see to his manners even more than to his reading and music; and the teachers do as they are desired. And when the boy has learned his letters and is beginning to understand what is written, as before he understood only what was spoken, they put into his hands the works of great poets, which he reads sitting on a bench at school; in these are contained many admonitions, and many tales, and praises, and encomia of ancient famous men, which he is required to learn by heart, in order that he may imitate or emulate them and desire to become like them. Then, again, the teachers of the lyre take similar care that their young disciple is

temperate and gets into no mischief; and when they have taught him the use of the lyre, they introduce him to the poems of other excellent poets, who are the lyric poets; and these they set to music, and make their harmonies and rhythms quite familiar to the children's souls, in order that they may learn to be more gentle, and harmonious, and rhythmical, and so more fitted for speech and action; for the life of man in every part has need of harmony and rhythm. Then they send them to the master of gymnastic, in order that their bodies may better minister to the virtuous mind, and that they may not be compelled through bodily weakness to play the coward in war or on any other occasion. This is what is done by those who have the means, and those who have the means are the rich; their children begin to go to school soonest and leave off latest. When they have done with masters, the state again compels them to learn the laws, and live after the pattern which they furnish, and not after their own fancies; and just as in learning to write, the writing-master first draws lines with a style for the use of the young beginner, and gives him the tablet and makes him follow the lines, so the city draws the laws, which were the invention of good lawgivers living in the olden time; these are given to the young man, in order to guide him in his conduct whether he is commanding or obeying; and he who transgresses them is to be corrected, or, in other words, called to account, which is a term used not only in your country, but also in many others, seeing that justice calls men to account. Now when there is all this care about virtue private and public, why, Socrates, do you still wonder and doubt whether virtue can be taught? Cease to wonder, for the opposite would be far more surprising.

But why then do the sons of good fathers often turn out ill? There is nothing very wonderful in this; for, as I have been saying, the existence of a state implies that virtue is not any man's private possession. If so—and nothing can be truer—then I will further ask you to imagine, as an illustration, some other pursuit or branch of knowledge which may be assumed equally to be the condition of the existence of a state. Suppose that there could be no state unless we were all flute-players, as far as each had the capacity, and everybody was freely teaching everybody the art, both in private and public, and reproving the bad player as freely and openly as every man now teaches justice and the laws, not concealing them as he would conceal the other arts, but imparting them—for all of us have a mutual interest in the justice and virtue of one another, and this is the reason why every one is so ready to teach justice and the laws;—suppose, I say, that there were the same readiness and liberality among us in teaching one another flute-playing, do you imagine, Socrates, that the sons of good flute-players would be more likely to be good than the sons of bad ones? I think not. Would not their sons grow up to be distinguished or undistinguished according to their own natural capacities as flute-players, and the son of a good player would often turn out to be a bad one, and the son of a bad player to be a good one, all flute-players would be good enough in comparison of those who were ignorant and unacquainted with the art of flute-playing? In like manner I would have you consider that he who appears to you to be the worst of those who have been brought up in laws and humanities, would appear to be a just man and a master of justice if he were to be compared with men who had no education, or courts of justice, or laws, or any restraints upon them which compelled them to practise virtue—with the savages, for example, whom the poet Pherecrates exhibited on the stage at the last year's Lenaean festival. If you were living among men such as the man-haters in his Chorus, you would be only too glad to meet with Eurybates and Phrynondas, and you would sorrowfully long to revisit the rascality of this part of the world. You, Socrates, are discontented, and why? Because all men are teachers of virtue, each one according to his ability; and you say Where are the teachers? You might as well ask, Who teaches Greek? For of that too there will not be any teachers found. Or you might ask, Who is to teach the sons of our artisans this same art which they have learned of their fathers? He and his fellow-workmen have taught them to the best of their ability,—but who will carry

them further in their arts? And you would certainly have a difficulty, Socrates, in finding a teacher of them; but there would be no difficulty in finding a teacher of those who are wholly ignorant. And this is true of virtue or of anything else; if a man is better able than we are to promote virtue ever so little, we must be content with the result. A teacher of this sort I believe myself to be, and above all other men to have the knowledge which makes a man noble and good; and I give my pupils their money's-worth, and even more, as they themselves confess. And therefore I have introduced the following mode of payment:—When a man has been my pupil, if he likes he pays my price, but there is no compulsion; and if he does not like, he has only to go into a temple and take an oath of the value of the instructions, and he pays no more than he declares to be their value.

Such is my Apologue, Socrates, and such is the argument by which I endeavour to show that virtue may be taught, and that this is the opinion of the Athenians. And I have also attempted to show that you are not to wonder at good fathers having bad sons, or at good sons having bad fathers, of which the sons of Polycleitus afford an example, who are the companions of our friends here, Paralus and Xanthippus, but are nothing in comparison with their father; and this is true of the sons of many other artists. As yet I ought not to say the same of Paralus and Xanthippus themselves, for they are young and there is still hope of them.

Protagoras ended, and in my ear

'So charming left his voice, that I the while Thought him still speaking; still stood fixed to hear (Borrowed by Milton, "Paradise Lost".).'

At length, when the truth dawned upon me, that he had really finished, not without difficulty I began to collect myself, and looking at Hippocrates, I said to him: O son of Apollodorus, how deeply grateful I am to you for having brought me hither; I would not have missed the speech of Protagoras for a great deal. For I used to imagine that no human care could make men good; but I know better now. Yet I have still one very small difficulty which I am sure that Protagoras will easily explain, as he has already explained so much. If a man were to go and consult Pericles or any of our great speakers about these matters, he might perhaps hear as fine a discourse; but then when one has a question to ask of any of them, like books, they can neither answer nor ask; and if any one challenges the least particular of their speech, they go ringing on in a long harangue, like brazen pots, which when they are struck continue to sound unless some one puts his hand upon them; whereas our friend Protagoras can not only make a good speech, as he has already shown, but when he is asked a question he can answer briefly; and when he asks he will wait and hear the answer; and this is a very rare gift. Now I, Protagoras, want to ask of you a little question, which if you will only answer, I shall be quite satisfied. You were saying that virtue can be taught;—that I will take upon your authority, and there is no one to whom I am more ready to trust. But I marvel at one thing about which I should like to have my mind set at rest. You were speaking of Zeus sending justice and reverence to men; and several times while you were speaking, justice, and temperance, and holiness, and all these qualities, were described by you as if together they made up virtue. Now I want you to tell me truly whether virtue is one whole, of which justice and temperance and holiness are parts; or whether all these are only the names of one and the same thing: that is the doubt which still lingers in my mind.

There is no difficulty, Socrates, in answering that the qualities of which you are speaking are the parts of virtue which is one.

And are they parts, I said, in the same sense in which mouth, nose, and eyes, and ears, are the parts of a face; or are they like the parts of gold, which differ from the whole and from one another only in being larger or smaller?

I should say that they differed, Socrates, in the first way; they are related to one another as the parts of a face are related to the whole face.

And do men have some one part and some another part of virtue? Or if a man has one part, must he also have all the others?

By no means, he said; for many a man is brave and not just, or just and not wise.

You would not deny, then, that courage and wisdom are also parts of virtue?

Most undoubtedly they are, he answered; and wisdom is the noblest of the parts.

And they are all different from one another? I said.

Yes.

And has each of them a distinct function like the parts of the face;—the eye, for example, is not like the ear, and has not the same functions; and the other parts are none of them like one another, either in their functions, or in any other way? I want to know whether the comparison holds concerning the parts of virtue. Do they also differ from one another in themselves and in their functions? For that is clearly what the simile would imply.

Yes, Socrates, you are right in supposing that they differ.

Then, I said, no other part of virtue is like knowledge, or like justice, or like courage, or like temperance, or like holiness?

No, he answered.

Well then, I said, suppose that you and I enquire into their natures. And first, you would agree with me that justice is of the nature of a thing, would you not? That is my opinion: would it not be yours also?

Mine also, he said.

And suppose that some one were to ask us, saying, 'O Protagoras, and you, Socrates, what about this thing which you were calling justice, is it just or unjust?'—and I were to answer, just: would you vote with me or against me?

With you, he said.

Thereupon I should answer to him who asked me, that justice is of the nature of the just: would not you?

Yes, he said.

And suppose that he went on to say: 'Well now, is there also such a thing as holiness?'—we should answer, 'Yes,' if I am not mistaken?

Yes, he said.

Which you would also acknowledge to be a thing—should we not say so?

He assented.

'And is this a sort of thing which is of the nature of the holy, or of the nature of the unholy?' I should be angry at his putting such a question, and should say, 'Peace, man; nothing can be holy if holiness is not holy.' What would you say? Would you not answer in the same way?

Certainly, he said.

And then after this suppose that he came and asked us, 'What were you saying just now? Perhaps I may not have heard you rightly, but you seemed to me to be saying that the parts of virtue were not the same as one another.' I should reply, 'You certainly heard that said, but not, as you imagine, by me; for I only asked the question; Protagoras gave the answer.' And suppose that he turned to you and said, 'Is this true, Protagoras? and do you maintain that one part of virtue is unlike another, and is this your position?'—how would you answer him?

I could not help acknowledging the truth of what he said, Socrates.

Well then, Protagoras, we will assume this; and now supposing that he proceeded to say further, 'Then holiness is not of the nature of justice, nor justice of the nature of holiness, but of the nature of unholiness; and holiness is of the nature of the not just, and therefore of the unjust, and the unjust is the unholy': how shall we answer him? I should certainly answer him on my own behalf that justice is holy, and that holiness is just; and I would say in like manner on your behalf also, if you would allow me, that justice is either the same with holiness, or very nearly the same; and above all I would assert that justice is like holiness and holiness is like justice; and I wish that you would tell me whether I may be permitted to give this answer on your behalf, and whether you would agree with me.

He replied, I cannot simply agree, Socrates, to the proposition that justice is holy and that holiness is just, for there appears to me to be a difference between them. But what matter? if you please I please; and let us assume, if you will I, that justice is holy, and that holiness is just.

Pardon me, I replied; I do not want this 'if you wish' or 'if you will' sort of conclusion to be proven, but I want you and me to be proven: I mean to say that the conclusion will be best proven if there be no 'if.'

Well, he said, I admit that justice bears a resemblance to holiness, for there is always some point of view in which everything is like every other thing; white is in a certain way like black, and hard is like soft, and the most extreme opposites have some qualities in common; even the parts of the face which, as we were saying before, are distinct and have different functions, are still in a certain point of

view similar, and one of them is like another of them. And you may prove that they are like one another on the same principle that all things are like one another; and yet things which are like in some particular ought not to be called alike, nor things which are unlike in some particular, however slight, unlike.

And do you think, I said in a tone of surprise, that justice and holiness have but a small degree of likeness?

Certainly not; any more than I agree with what I understand to be your view.

Well, I said, as you appear to have a difficulty about this, let us take another of the examples which you mentioned instead. Do you admit the existence of folly?

I do.

And is not wisdom the very opposite of folly?

That is true, he said.

And when men act rightly and advantageously they seem to you to be temperate?

Yes, he said.

And temperance makes them temperate?

Certainly.

And they who do not act rightly act foolishly, and in acting thus are not temperate?

I agree, he said.

Then to act foolishly is the opposite of acting temperately?

He assented.

And foolish actions are done by folly, and temperate actions by temperance?

He agreed.

And that is done strongly which is done by strength, and that which is weakly done, by weakness?

He assented.

And that which is done with swiftness is done swiftly, and that which is done with slowness, slowly?

He assented again.

And that which is done in the same manner, is done by the same; and that which is done in an opposite manner by the opposite?

He agreed.

Once more, I said, is there anything beautiful?

Yes.

To which the only opposite is the ugly?

There is no other.

And is there anything good?

There is.

To which the only opposite is the evil?

There is no other.

And there is the acute in sound?

True.

To which the only opposite is the grave?

There is no other, he said, but that.

Then every opposite has one opposite only and no more?

He assented.

Then now, I said, let us recapitulate our admissions. First of all we admitted that everything has one opposite and not more than one?

We did so.

And we admitted also that what was done in opposite ways was done by opposites?

Yes.

And that which was done foolishly, as we further admitted, was done in the opposite way to that which was done temperately?

Yes.

And that which was done temperately was done by temperance, and that which was done foolishly by folly?

He agreed.

And that which is done in opposite ways is done by opposites?

Yes.

And one thing is done by temperance, and quite another thing by folly?

Yes.

And in opposite ways?

Certainly.

And therefore by opposites:—then folly is the opposite of temperance?

Clearly.

And do you remember that folly has already been acknowledged by us to be the opposite of wisdom?

He assented.

And we said that everything has only one opposite?

Yes.

Then, Protagoras, which of the two assertions shall we renounce? One says that everything has but one opposite; the other that wisdom is distinct from temperance, and that both of them are parts of virtue; and that they are not only distinct, but dissimilar, both in themselves and in their functions, like the parts of a face. Which of these two assertions shall we renounce? For both of them together are certainly not in harmony; they do not accord or agree: for how can they be said to agree if everything is assumed to have only one opposite and not more than one, and yet folly, which is one, has clearly the two opposites—wisdom and temperance? Is not that true, Protagoras? What else would you say?

He assented, but with great reluctance.

Then temperance and wisdom are the same, as before justice and holiness appeared to us to be nearly the same. And now, Protagoras, I said, we must finish the enquiry, and not faint. Do you think that an unjust man can be temperate in his injustice?

I should be ashamed, Socrates, he said, to acknowledge this, which nevertheless many may be found to assert.

And shall I argue with them or with you? I replied.

I would rather, he said, that you should argue with the many first, if you will.

Whichever you please, if you will only answer me and say whether you are of their opinion or not. My object is to test the validity of the argument; and yet the result may be that I who ask and you who answer may both be put on our trial.

Protagoras at first made a show of refusing, as he said that the argument was not encouraging; at length, he consented to answer.

Now then, I said, begin at the beginning and answer me. You think that some men are temperate, and yet unjust?

Yes, he said; let that be admitted.

And temperance is good sense?

Yes.

And good sense is good counsel in doing injustice?

Granted.

If they succeed, I said, or if they do not succeed?

If they succeed.

And you would admit the existence of goods?

Yes.

And is the good that which is expedient for man?

Yes, indeed, he said: and there are some things which may be inexpedient, and yet I call them good.

I thought that Protagoras was getting ruffled and excited; he seemed to be setting himself in an attitude of war. Seeing this, I minded my business, and gently said:—

When you say, Protagoras, that things inexpedient are good, do you mean inexpedient for man only, or inexpedient altogether? and do you call the latter good?

Certainly not the last, he replied; for I know of many things—meats, drinks, medicines, and ten thousand other things, which are inexpedient for man, and some which are expedient; and some which are neither expedient nor inexpedient for man, but only for horses; and some for oxen only, and some for dogs; and some for no animals, but only for trees; and some for the roots of trees and not

for their branches, as for example, manure, which is a good thing when laid about the roots of a tree, but utterly destructive if thrown upon the shoots and young branches; or I may instance olive oil, which is mischievous to all plants, and generally most injurious to the hair of every animal with the exception of man, but beneficial to human hair and to the human body generally; and even in this application (so various and changeable is the nature of the benefit), that which is the greatest good to the outward parts of a man, is a very great evil to his inward parts: and for this reason physicians always forbid their patients the use of oil in their food, except in very small quantities, just enough to extinguish the disagreeable sensation of smell in meats and sauces.

When he had given this answer, the company cheered him. And I said: Protagoras, I have a wretched memory, and when any one makes a long speech to me I never remember what he is talking about. As then, if I had been deaf, and you were going to converse with me, you would have had to raise your voice; so now, having such a bad memory, I will ask you to cut your answers shorter, if you would take me with you.

What do you mean? he said: how am I to shorten my answers? shall I make them too short?

Certainly not, I said.

But short enough?

Yes, I said.

Shall I answer what appears to me to be short enough, or what appears to you to be short enough?

I have heard, I said, that you can speak and teach others to speak about the same things at such length that words never seemed to fail, or with such brevity that no one could use fewer of them. Please therefore, if you talk with me, to adopt the latter or more compendious method.

Socrates, he replied, many a battle of words have I fought, and if I had followed the method of disputation which my adversaries desired, as you want me to do, I should have been no better than another, and the name of Protagoras would have been nowhere.

I saw that he was not satisfied with his previous answers, and that he would not play the part of answerer any more if he could help; and I considered that there was no call upon me to continue the conversation; so I said: Protagoras, I do not wish to force the conversation upon you if you had rather not, but when you are willing to argue with me in such a way that I can follow you, then I will argue with you. Now you, as is said of you by others and as you say of yourself, are able to have discussions in shorter forms of speech as well as in longer, for you are a master of wisdom; but I cannot manage these long speeches: I only wish that I could. You, on the other hand, who are capable of either, ought to speak shorter as I beg you, and then we might converse. But I see that you are disinclined, and as I have an engagement which will prevent my staying to hear you at greater length (for I have to be in another place), I will depart; although I should have liked to have heard you.

Thus I spoke, and was rising from my seat, when Callias seized me by the right hand, and in his left hand caught hold of this old cloak of mine. He said: We cannot let you go, Socrates, for if you leave us there will be an end of our discussions: I must therefore beg you to remain, as there is nothing in the world that I should like better than to hear you and Protagoras discourse. Do not deny the company this pleasure.

Now I had got up, and was in the act of departure. Son of Hipponicus, I replied, I have always admired, and do now heartily applaud and love your philosophical spirit, and I would gladly comply with your request, if I could. But the truth is that I cannot. And what you ask is as great an impossibility to me, as if you bade me run a race with Crison of Himera, when in his prime, or with some one of the long or day course runners. To such a request I should reply that I would fain ask the same of my own legs; but they refuse to comply. And therefore if you want to see Crison and me in the same stadium, you must bid him slacken his speed to mine, for I cannot run quickly, and he can run slowly. And in like manner if you want to hear me and Protagoras discoursing, you must ask him to shorten his answers, and keep to the point, as he did at first; if not, how can there be any discussion? For discussion is one thing, and making an oration is quite another, in my humble opinion.

But you see, Socrates, said Callias, that Protagoras may fairly claim to speak in his own way, just as you claim to speak in yours.

Here Alcibiades interposed, and said: That, Callias, is not a true statement of the case. For our friend Socrates admits that he cannot make a speech—in this he yields the palm to Protagoras: but I should be greatly surprised if he yielded to any living man in the power of holding and apprehending an argument. Now if Protagoras will make a similar admission, and confess that he is inferior to Socrates in argumentative skill, that is enough for Socrates; but if he claims a superiority in argument as well, let him ask and answer—not, when a question is asked, slipping away from the point, and instead of answering, making a speech at such length that most of his hearers forget the question at issue (not that Socrates is likely to forget—I will be bound for that, although he may pretend in fun that he has a bad memory). And Socrates appears to me to be more in the right than Protagoras; that is my view, and every man ought to say what he thinks.

When Alcibiades had done speaking, some one—Critias, I believe—went on to say: O Prodicus and Hippias, Callias appears to me to be a partisan of Protagoras: and this led Alcibiades, who loves opposition, to take the other side. But we should not be partisans either of Socrates or of Protagoras; let us rather unite in entreating both of them not to break up the discussion.

Prodicus added: That, Critias, seems to me to be well said, for those who are present at such discussions ought to be impartial hearers of both the speakers; remembering, however, that impartiality is not the same as equality, for both sides should be impartially heard, and yet an equal meed should not be assigned to both of them; but to the wiser a higher meed should be given, and a lower to the less wise. And I as well as Critias would beg you, Protagoras and Socrates, to grant our request, which is, that you will argue with one another and not wrangle; for friends argue with friends out of good-will, but only adversaries and enemies wrangle. And then our meeting will be delightful; for in this way you, who are the speakers, will be most likely to win esteem, and not praise only, among us who are your audience; for esteem is a sincere conviction of the hearers' souls, but praise

is often an insincere expression of men uttering falsehoods contrary to their conviction. And thus we who are the hearers will be gratified and not pleased; for gratification is of the mind when receiving wisdom and knowledge, but pleasure is of the body when eating or experiencing some other bodily delight. Thus spoke Prodicus, and many of the company applauded his words.

Hippias the sage spoke next. He said: All of you who are here present I reckon to be kinsmen and friends and fellow-citizens, by nature and not by law; for by nature like is akin to like, whereas law is the tyrant of mankind, and often compels us to do many things which are against nature. How great would be the disgrace then, if we, who know the nature of things, and are the wisest of the Hellenes, and as such are met together in this city, which is the metropolis of wisdom, and in the greatest and most glorious house of this city, should have nothing to show worthy of this height of dignity, but should only quarrel with one another like the meanest of mankind! I do pray and advise you, Protagoras, and you, Socrates, to agree upon a compromise. Let us be your peacemakers. And do not you, Socrates, aim at this precise and extreme brevity in discourse, if Protagoras objects, but loosen and let go the reins of speech, that your words may be grander and more becoming to you. Neither do you, Protagoras, go forth on the gale with every sail set out of sight of land into an ocean of words, but let there be a mean observed by both of you. Do as I say. And let me also persuade you to choose an arbiter or overseer or president; he will keep watch over your words and will prescribe their proper length.

This proposal was received by the company with universal approval; Callias said that he would not let me off, and they begged me to choose an arbiter. But I said that to choose an umpire of discourse would be unseemly; for if the person chosen was inferior, then the inferior or worse ought not to preside over the better; or if he was equal, neither would that be well; for he who is our equal will do as we do, and what will be the use of choosing him? And if you say, 'Let us have a better then,'—to that I answer that you cannot have any one who is wiser than Protagoras. And if you choose another who is not really better, and whom you only say is better, to put another over him as though he were an inferior person would be an unworthy reflection on him; not that, as far as I am concerned, any reflection is of much consequence to me. Let me tell you then what I will do in order that the conversation and discussion may go on as you desire. If Protagoras is not disposed to answer, let him ask and I will answer; and I will endeavour to show at the same time how, as I maintain, he ought to answer: and when I have answered as many questions as he likes to ask, let him in like manner answer me; and if he seems to be not very ready at answering the precise question asked of him, you and I will unite in entreating him, as you entreated me, not to spoil the discussion. And this will require no special arbiter—all of you shall be arbiters.

This was generally approved, and Protagoras, though very much against his will, was obliged to agree that he would ask questions; and when he had put a sufficient number of them, that he would answer in his turn those which he was asked in short replies. He began to put his questions as follows:—

I am of opinion, Socrates, he said, that skill in poetry is the principal part of education; and this I conceive to be the power of knowing what compositions of the poets are correct, and what are not, and how they are to be distinguished, and of explaining when asked the reason of the difference. And I propose to transfer the question which you and I have been discussing to the domain of poetry; we

will speak as before of virtue, but in reference to a passage of a poet. Now Simonides says to Scopas the son of Creon the Thessalian:

'Hardly on the one hand can a man become truly good, built four-square in hands and feet and mind, a work without a flaw.'

Do you know the poem? or shall I repeat the whole?

There is no need, I said; for I am perfectly well acquainted with the ode,—I have made a careful study of it.

Very well, he said. And do you think that the ode is a good composition, and true?

Yes, I said, both good and true.

But if there is a contradiction, can the composition be good or true?

No, not in that case, I replied.

And is there not a contradiction? he asked. Reflect.

Well, my friend, I have reflected.

And does not the poet proceed to say, 'I do not agree with the word of Pittacus, albeit the utterance of a wise man: Hardly can a man be good'? Now you will observe that this is said by the same poet.

I know it.

And do you think, he said, that the two sayings are consistent?

Yes, I said, I think so (at the same time I could not help fearing that there might be something in what he said). And you think otherwise?

Why, he said, how can he be consistent in both? First of all, premising as his own thought, 'Hardly can a man become truly good'; and then a little further on in the poem, forgetting, and blaming Pittacus and refusing to agree with him, when he says, 'Hardly can a man be good,' which is the very same thing. And yet when he blames him who says the same with himself, he blames himself; so that he must be wrong either in his first or his second assertion.

Many of the audience cheered and applauded this. And I felt at first giddy and faint, as if I had received a blow from the hand of an expert boxer, when I heard his words and the sound of the cheering; and to confess the truth, I wanted to get time to think what the meaning of the poet really was. So I turned to Prodicus and called him. Prodicus, I said, Simonides is a countryman of yours, and you ought to come to his aid. I must appeal to you, like the river Scamander in Homer, who, when beleaguered by Achilles, summons the Simois to aid him, saying:

'Brother dear, let us both together stay the force of the hero (Il.).'

And I summon you, for I am afraid that Protagoras will make an end of Simonides. Now is the time to rehabilitate Simonides, by the application of your philosophy of synonyms, which enables you to distinguish 'will' and 'wish,' and make other charming distinctions like those which you drew just now. And I should like to know whether you would agree with me; for I am of opinion that there is no contradiction in the words of Simonides. And first of all I wish that you would say whether, in your opinion, Prodicus, 'being' is the same as 'becoming.'

Not the same, certainly, replied Prodicus.

Did not Simonides first set forth, as his own view, that 'Hardly can a man become truly good'?

Quite right, said Prodicus.

And then he blames Pittacus, not, as Protagoras imagines, for repeating that which he says himself, but for saying something different from himself. Pittacus does not say as Simonides says, that hardly can a man become good, but hardly can a man be good: and our friend Prodicus would maintain that being, Protagoras, is not the same as becoming; and if they are not the same, then Simonides is not inconsistent with himself. I dare say that Prodicus and many others would say, as Hesiod says,

> 'On the one hand, hardly can a man become good,
> For the gods have made virtue the reward of toil,
> But on the other hand, when you have climbed the height,
> Then, to retain virtue, however difficult the acquisition, is easy
> —(Works and Days).'

Prodicus heard and approved; but Protagoras said: Your correction, Socrates, involves a greater error than is contained in the sentence which you are correcting.

Alas! I said, Protagoras; then I am a sorry physician, and do but aggravate a disorder which I am seeking to cure.

Such is the fact, he said.

How so? I asked.

The poet, he replied, could never have made such a mistake as to say that virtue, which in the opinion of all men is the hardest of all things, can be easily retained.

Well, I said, and how fortunate are we in having Prodicus among us, at the right moment; for he has a wisdom, Protagoras, which, as I imagine, is more than human and of very ancient date, and may be as old as Simonides or even older. Learned as you are in many things, you appear to know nothing of this; but I know, for I am a disciple of his. And now, if I am not mistaken, you do not understand the word 'hard' (chalepon) in the sense which Simonides intended; and I must correct you, as Prodicus corrects me when I use the word 'awful' (deinon) as a term of praise. If I say that Protagoras or any one else is an 'awfully' wise man, he asks me if I am not ashamed of calling that which is good 'awful';

and then he explains to me that the term 'awful' is always taken in a bad sense, and that no one speaks of being 'awfully' healthy or wealthy, or of 'awful' peace, but of 'awful' disease, 'awful' war, 'awful' poverty, meaning by the term 'awful,' evil. And I think that Simonides and his countrymen the Ceans, when they spoke of 'hard' meant 'evil,' or something which you do not understand. Let us ask Prodicus, for he ought to be able to answer questions about the dialect of Simonides. What did he mean, Prodicus, by the term 'hard'?

Evil, said Prodicus.

And therefore, I said, Prodicus, he blames Pittacus for saying, 'Hard is the good,' just as if that were equivalent to saying, Evil is the good.

Yes, he said, that was certainly his meaning; and he is twitting Pittacus with ignorance of the use of terms, which in a Lesbian, who has been accustomed to speak a barbarous language, is natural.

Do you hear, Protagoras, I asked, what our friend Prodicus is saying? And have you an answer for him?

You are entirely mistaken, Prodicus, said Protagoras; and I know very well that Simonides in using the word 'hard' meant what all of us mean, not evil, but that which is not easy—that which takes a great deal of trouble: of this I am positive.

I said: I also incline to believe, Protagoras, that this was the meaning of Simonides, of which our friend Prodicus was very well aware, but he thought that he would make fun, and try if you could maintain your thesis; for that Simonides could never have meant the other is clearly proved by the context, in which he says that God only has this gift. Now he cannot surely mean to say that to be good is evil, when he afterwards proceeds to say that God only has this gift, and that this is the attribute of him and of no other. For if this be his meaning, Prodicus would impute to Simonides a character of recklessness which is very unlike his countrymen. And I should like to tell you, I said, what I imagine to be the real meaning of Simonides in this poem, if you will test what, in your way of speaking, would be called my skill in poetry; or if you would rather, I will be the listener.

To this proposal Protagoras replied: As you please;—and Hippias, Prodicus, and the others told me by all means to do as I proposed.

Then now, I said, I will endeavour to explain to you my opinion about this poem of Simonides. There is a very ancient philosophy which is more cultivated in Crete and Lacedaemon than in any other part of Hellas, and there are more philosophers in those countries than anywhere else in the world. This, however, is a secret which the Lacedaemonians deny; and they pretend to be ignorant, just because they do not wish to have it thought that they rule the world by wisdom, like the Sophists of whom Protagoras was speaking, and not by valour of arms; considering that if the reason of their superiority were disclosed, all men would be practising their wisdom. And this secret of theirs has never been discovered by the imitators of Lacedaemonian fashions in other cities, who go about with their ears bruised in imitation of them, and have the caestus bound on their arms, and are always in training, and wear short cloaks; for they imagine that these are the practices which have enabled the Lacedaemonians to conquer the other Hellenes. Now when the Lacedaemonians want to unbend and

hold free conversation with their wise men, and are no longer satisfied with mere secret intercourse, they drive out all these laconizers, and any other foreigners who may happen to be in their country, and they hold a philosophical seance unknown to strangers; and they themselves forbid their young men to go out into other cities—in this they are like the Cretans—in order that they may not unlearn the lessons which they have taught them. And in Lacedaemon and Crete not only men but also women have a pride in their high cultivation. And hereby you may know that I am right in attributing to the Lacedaemonians this excellence in philosophy and speculation: If a man converses with the most ordinary Lacedaemonian, he will find him seldom good for much in general conversation, but at any point in the discourse he will be darting out some notable saying, terse and full of meaning, with unerring aim; and the person with whom he is talking seems to be like a child in his hands. And many of our own age and of former ages have noted that the true Lacedaemonian type of character has the love of philosophy even stronger than the love of gymnastics; they are conscious that only a perfectly educated man is capable of uttering such expressions. Such were Thales of Miletus, and Pittacus of Mitylene, and Bias of Priene, and our own Solon, and Cleobulus the Lindian, and Myson the Chenian; and seventh in the catalogue of wise men was the Lacedaemonian Chilo. All these were lovers and emulators and disciples of the culture of the Lacedaemonians, and any one may perceive that their wisdom was of this character; consisting of short memorable sentences, which they severally uttered. And they met together and dedicated in the temple of Apollo at Delphi, as the first-fruits of their wisdom, the far-famed inscriptions, which are in all men's mouths—'Know thyself,' and 'Nothing too much.'

Why do I say all this? I am explaining that this Lacedaemonian brevity was the style of primitive philosophy. Now there was a saying of Pittacus which was privately circulated and received the approbation of the wise, 'Hard is it to be good.' And Simonides, who was ambitious of the fame of wisdom, was aware that if he could overthrow this saying, then, as if he had won a victory over some famous athlete, he would carry off the palm among his contemporaries. And if I am not mistaken, he composed the entire poem with the secret intention of damaging Pittacus and his saying.

Let us all unite in examining his words, and see whether I am speaking the truth. Simonides must have been a lunatic, if, in the very first words of the poem, wanting to say only that to become good is hard, he inserted (Greek) 'on the one hand' ('on the one hand to become good is hard'); there would be no reason for the introduction of (Greek), unless you suppose him to speak with a hostile reference to the words of Pittacus. Pittacus is saying 'Hard is it to be good,' and he, in refutation of this thesis, rejoins that the truly hard thing, Pittacus, is to become good, not joining 'truly' with 'good,' but with 'hard.' Not, that the hard thing is to be truly good, as though there were some truly good men, and there were others who were good but not truly good (this would be a very simple observation, and quite unworthy of Simonides); but you must suppose him to make a trajection of the word 'truly' (Greek), construing the saying of Pittacus thus (and let us imagine Pittacus to be speaking and Simonides answering him): 'O my friends,' says Pittacus, 'hard is it to be good,' and Simonides answers, 'In that, Pittacus, you are mistaken; the difficulty is not to be good, but on the one hand, to become good, four-square in hands and feet and mind, without a flaw—that is hard truly.' This way of reading the passage accounts for the insertion of (Greek) 'on the one hand,' and for the position at the end of the clause of the word 'truly,' and all that follows shows this to be the meaning. A great deal might be said in praise of the details of the poem, which is a charming piece of workmanship, and very finished, but such minutiae would be tedious. I should like, however, to point out the general intention of the poem, which is certainly designed in every part to be a refutation of the saying of

Pittacus. For he speaks in what follows a little further on as if he meant to argue that although there is a difficulty in becoming good, yet this is possible for a time, and only for a time. But having become good, to remain in a good state and be good, as you, Pittacus, affirm, is not possible, and is not granted to man; God only has this blessing; 'but man cannot help being bad when the force of circumstances overpowers him.' Now whom does the force of circumstance overpower in the command of a vessel?—not the private individual, for he is always overpowered; and as one who is already prostrate cannot be overthrown, and only he who is standing upright but not he who is prostrate can be laid prostrate, so the force of circumstances can only overpower him who, at some time or other, has resources, and not him who is at all times helpless. The descent of a great storm may make the pilot helpless, or the severity of the season the husbandman or the physician; for the good may become bad, as another poet witnesses:—

'The good are sometimes good and sometimes bad.'

But the bad does not become bad; he is always bad. So that when the force of circumstances overpowers the man of resources and skill and virtue, then he cannot help being bad. And you, Pittacus, are saying, 'Hard is it to be good.' Now there is a difficulty in becoming good; and yet this is possible: but to be good is an impossibility—

'For he who does well is the good man, and he who does ill is the bad.'

But what sort of doing is good in letters? and what sort of doing makes a man good in letters? Clearly the knowing of them. And what sort of well-doing makes a man a good physician? Clearly the knowledge of the art of healing the sick. 'But he who does ill is the bad.' Now who becomes a bad physician? Clearly he who is in the first place a physician, and in the second place a good physician; for he may become a bad one also: but none of us unskilled individuals can by any amount of doing ill become physicians, any more than we can become carpenters or anything of that sort; and he who by doing ill cannot become a physician at all, clearly cannot become a bad physician. In like manner the good may become deteriorated by time, or toil, or disease, or other accident (the only real doing ill is to be deprived of knowledge), but the bad man will never become bad, for he is always bad; and if he were to become bad, he must previously have been good. Thus the words of the poem tend to show that on the one hand a man cannot be continuously good, but that he may become good and may also become bad; and again that

'They are the best for the longest time whom the gods love.'

All this relates to Pittacus, as is further proved by the sequel. For he adds:—

'Therefore I will not throw away my span of life to no purpose in searching after the impossible, hoping in vain to find a perfectly faultless man among those who partake of the fruit of the broad-bosomed earth: if I find him, I will send you word.'

(this is the vehement way in which he pursues his attack upon Pittacus throughout the whole poem):

'But him who does no evil, voluntarily I praise and love;—not even the gods war against necessity.'

All this has a similar drift, for Simonides was not so ignorant as to say that he praised those who did no evil voluntarily, as though there were some who did evil voluntarily. For no wise man, as I believe, will allow that any human being errs voluntarily, or voluntarily does evil and dishonourable actions; but they are very well aware that all who do evil and dishonourable things do them against their will. And Simonides never says that he praises him who does no evil voluntarily; the word 'voluntarily' applies to himself. For he was under the impression that a good man might often compel himself to love and praise another, and to be the friend and approver of another; and that there might be an involuntary love, such as a man might feel to an unnatural father or mother, or country, or the like. Now bad men, when their parents or country have any defects, look on them with malignant joy, and find fault with them and expose and denounce them to others, under the idea that the rest of mankind will be less likely to take themselves to task and accuse them of neglect; and they blame their defects far more than they deserve, in order that the odium which is necessarily incurred by them may be increased: but the good man dissembles his feelings, and constrains himself to praise them; and if they have wronged him and he is angry, he pacifies his anger and is reconciled, and compels himself to love and praise his own flesh and blood. And Simonides, as is probable, considered that he himself had often had to praise and magnify a tyrant or the like, much against his will, and he also wishes to imply to Pittacus that he does not censure him because he is censorious.

'For I am satisfied' he says, 'when a man is neither bad nor very stupid; and when he knows justice (which is the health of states), and is of sound mind, I will find no fault with him, for I am not given to finding fault, and there are innumerable fools'

(implying that if he delighted in censure he might have abundant opportunity of finding fault).

'All things are good with which evil is unmingled.'

In these latter words he does not mean to say that all things are good which have no evil in them, as you might say 'All things are white which have no black in them,' for that would be ridiculous; but he means to say that he accepts and finds no fault with the moderate or intermediate state.

('I do not hope' he says, 'to find a perfectly blameless man among those who partake of the fruits of the broad-bosomed earth (if I find him, I will send you word); in this sense I praise no man. But he who is moderately good, and does no evil, is good enough for me, who love and approve every one')

(and here observe that he uses a Lesbian word, epainemi (approve), because he is addressing Pittacus,

'Who love and APPROVE every one VOLUNTARILY, who does no evil:'

and that the stop should be put after 'voluntarily'); 'but there are some whom I involuntarily praise and love. And you, Pittacus, I would never have blamed, if you had spoken what was moderately good and true; but I do blame you because, putting on the appearance of truth, you are speaking falsely about the highest matters.'—And this, I said, Prodicus and Protagoras, I take to be the meaning of Simonides in this poem.

Hippias said: I think, Socrates, that you have given a very good explanation of the poem; but I have also an excellent interpretation of my own which I will propound to you, if you will allow me.

Nay, Hippias, said Alcibiades; not now, but at some other time. At present we must abide by the compact which was made between Socrates and Protagoras, to the effect that as long as Protagoras is willing to ask, Socrates should answer; or that if he would rather answer, then that Socrates should ask.

I said: I wish Protagoras either to ask or answer as he is inclined; but I would rather have done with poems and odes, if he does not object, and come back to the question about which I was asking you at first, Protagoras, and by your help make an end of that. The talk about the poets seems to me like a commonplace entertainment to which a vulgar company have recourse; who, because they are not able to converse or amuse one another, while they are drinking, with the sound of their own voices and conversation, by reason of their stupidity, raise the price of flute-girls in the market, hiring for a great sum the voice of a flute instead of their own breath, to be the medium of intercourse among them: but where the company are real gentlemen and men of education, you will see no flute-girls, nor dancing-girls, nor harp-girls; and they have no nonsense or games, but are contented with one another's conversation, of which their own voices are the medium, and which they carry on by turns and in an orderly manner, even though they are very liberal in their potations. And a company like this of ours, and men such as we profess to be, do not require the help of another's voice, or of the poets whom you cannot interrogate about the meaning of what they are saying; people who cite them declaring, some that the poet has one meaning, and others that he has another, and the point which is in dispute can never be decided. This sort of entertainment they decline, and prefer to talk with one another, and put one another to the proof in conversation. And these are the models which I desire that you and I should imitate. Leaving the poets, and keeping to ourselves, let us try the mettle of one another and make proof of the truth in conversation. If you have a mind to ask, I am ready to answer; or if you would rather, do you answer, and give me the opportunity of resuming and completing our unfinished argument.

I made these and some similar observations; but Protagoras would not distinctly say which he would do. Thereupon Alcibiades turned to Callias, and said:—Do you think, Callias, that Protagoras is fair in refusing to say whether he will or will not answer? for I certainly think that he is unfair; he ought either to proceed with the argument, or distinctly refuse to proceed, that we may know his intention; and then Socrates will be able to discourse with some one else, and the rest of the company will be free to talk with one another.

I think that Protagoras was really made ashamed by these words of Alcibiades, and when the prayers of Callias and the company were superadded, he was at last induced to argue, and said that I might ask and he would answer.

So I said: Do not imagine, Protagoras, that I have any other interest in asking questions of you but that of clearing up my own difficulties. For I think that Homer was very right in saying that

> 'When two go together, one sees before the other (Il.),'

for all men who have a companion are readier in deed, word, or thought; but if a man

'Sees a thing when he is alone,'

he goes about straightway seeking until he finds some one to whom he may show his discoveries, and who may confirm him in them. And I would rather hold discourse with you than with any one, because I think that no man has a better understanding of most things which a good man may be expected to understand, and in particular of virtue. For who is there, but you?—who not only claim to be a good man and a gentleman, for many are this, and yet have not the power of making others good—whereas you are not only good yourself, but also the cause of goodness in others. Moreover such confidence have you in yourself, that although other Sophists conceal their profession, you proclaim in the face of Hellas that you are a Sophist or teacher of virtue and education, and are the first who demanded pay in return. How then can I do otherwise than invite you to the examination of these subjects, and ask questions and consult with you? I must, indeed. And I should like once more to have my memory refreshed by you about the questions which I was asking you at first, and also to have your help in considering them. If I am not mistaken the question was this: Are wisdom and temperance and courage and justice and holiness five names of the same thing? or has each of the names a separate underlying essence and corresponding thing having a peculiar function, no one of them being like any other of them? And you replied that the five names were not the names of the same thing, but that each of them had a separate object, and that all these objects were parts of virtue, not in the same way that the parts of gold are like each other and the whole of which they are parts, but as the parts of the face are unlike the whole of which they are parts and one another, and have each of them a distinct function. I should like to know whether this is still your opinion; or if not, I will ask you to define your meaning, and I shall not take you to task if you now make a different statement. For I dare say that you may have said what you did only in order to make trial of me.

I answer, Socrates, he said, that all these qualities are parts of virtue, and that four out of the five are to some extent similar, and that the fifth of them, which is courage, is very different from the other four, as I prove in this way: You may observe that many men are utterly unrighteous, unholy, intemperate, ignorant, who are nevertheless remarkable for their courage.

Stop, I said; I should like to think about that. When you speak of brave men, do you mean the confident, or another sort of nature?

Yes, he said; I mean the impetuous, ready to go at that which others are afraid to approach.

In the next place, you would affirm virtue to be a good thing, of which good thing you assert yourself to be a teacher.

Yes, he said; I should say the best of all things, if I am in my right mind.

And is it partly good and partly bad, I said, or wholly good?

Wholly good, and in the highest degree.

Tell me then; who are they who have confidence when diving into a well?

I should say, the divers.

And the reason of this is that they have knowledge?

Yes, that is the reason.

And who have confidence when fighting on horseback—the skilled horseman or the unskilled?

The skilled.

And who when fighting with light shields—the peltasts or the nonpeltasts?

The peltasts. And that is true of all other things, he said, if that is your point: those who have knowledge are more confident than those who have no knowledge, and they are more confident after they have learned than before.

And have you not seen persons utterly ignorant, I said, of these things, and yet confident about them?

Yes, he said, I have seen such persons far too confident.

And are not these confident persons also courageous?

In that case, he replied, courage would be a base thing, for the men of whom we are speaking are surely madmen.

Then who are the courageous? Are they not the confident?

Yes, he said; to that statement I adhere.

And those, I said, who are thus confident without knowledge are really not courageous, but mad; and in that case the wisest are also the most confident, and being the most confident are also the bravest, and upon that view again wisdom will be courage.

Nay, Socrates, he replied, you are mistaken in your remembrance of what was said by me. When you asked me, I certainly did say that the courageous are the confident; but I was never asked whether the confident are the courageous; if you had asked me, I should have answered 'Not all of them': and what I did answer you have not proved to be false, although you proceeded to show that those who have knowledge are more courageous than they were before they had knowledge, and more courageous than others who have no knowledge, and were then led on to think that courage is the same as wisdom. But in this way of arguing you might come to imagine that strength is wisdom. You might begin by asking whether the strong are able, and I should say 'Yes'; and then whether those who know how to wrestle are not more able to wrestle than those who do not know how to wrestle, and more able after than before they had learned, and I should assent. And when I had admitted this, you might use my admissions in such a way as to prove that upon my view wisdom is strength; whereas in that case I should not have admitted, any more than in the other, that the able are strong, although I have admitted that the strong are able. For there is a difference between ability and strength; the former is given by knowledge as well as by madness or rage, but strength comes from nature and a healthy state of the body. And in like manner I say of confidence and courage, that they

are not the same; and I argue that the courageous are confident, but not all the confident courageous. For confidence may be given to men by art, and also, like ability, by madness and rage; but courage comes to them from nature and the healthy state of the soul.

I said: You would admit, Protagoras, that some men live well and others ill?

He assented.

And do you think that a man lives well who lives in pain and grief?

He does not.

But if he lives pleasantly to the end of his life, will he not in that case have lived well?

He will.

Then to live pleasantly is a good, and to live unpleasantly an evil?

Yes, he said, if the pleasure be good and honourable.

And do you, Protagoras, like the rest of the world, call some pleasant things evil and some painful things good?—for I am rather disposed to say that things are good in as far as they are pleasant, if they have no consequences of another sort, and in as far as they are painful they are bad.

I do not know, Socrates, he said, whether I can venture to assert in that unqualified manner that the pleasant is the good and the painful the evil. Having regard not only to my present answer, but also to the whole of my life, I shall be safer, if I am not mistaken, in saying that there are some pleasant things which are not good, and that there are some painful things which are good, and some which are not good, and that there are some which are neither good nor evil.

And you would call pleasant, I said, the things which participate in pleasure or create pleasure?

Certainly, he said.

Then my meaning is, that in as far as they are pleasant they are good; and my question would imply that pleasure is a good in itself.

According to your favourite mode of speech, Socrates, 'Let us reflect about this,' he said; and if the reflection is to the point, and the result proves that pleasure and good are really the same, then we will agree; but if not, then we will argue.

And would you wish to begin the enquiry? I said; or shall I begin?

You ought to take the lead, he said; for you are the author of the discussion.

May I employ an illustration? I said. Suppose some one who is enquiring into the health or some other bodily quality of another:—he looks at his face and at the tips of his fingers, and then he says, Uncover your chest and back to me that I may have a better view:—that is the sort of thing which I desire in this speculation. Having seen what your opinion is about good and pleasure, I am minded to say to you: Uncover your mind to me, Protagoras, and reveal your opinion about knowledge, that I may know whether you agree with the rest of the world. Now the rest of the world are of opinion that knowledge is a principle not of strength, or of rule, or of command: their notion is that a man may have knowledge, and yet that the knowledge which is in him may be overmastered by anger, or pleasure, or pain, or love, or perhaps by fear,—just as if knowledge were a slave, and might be dragged about anyhow. Now is that your view? or do you think that knowledge is a noble and commanding thing, which cannot be overcome, and will not allow a man, if he only knows the difference of good and evil, to do anything which is contrary to knowledge, but that wisdom will have strength to help him?

I agree with you, Socrates, said Protagoras; and not only so, but I, above all other men, am bound to say that wisdom and knowledge are the highest of human things.

Good, I said, and true. But are you aware that the majority of the world are of another mind; and that men are commonly supposed to know the things which are best, and not to do them when they might? And most persons whom I have asked the reason of this have said that when men act contrary to knowledge they are overcome by pain, or pleasure, or some of those affections which I was just now mentioning.

Yes, Socrates, he replied; and that is not the only point about which mankind are in error.

Suppose, then, that you and I endeavour to instruct and inform them what is the nature of this affection which they call 'being overcome by pleasure,' and which they affirm to be the reason why they do not always do what is best. When we say to them: Friends, you are mistaken, and are saying what is not true, they would probably reply: Socrates and Protagoras, if this affection of the soul is not to be called 'being overcome by pleasure,' pray, what is it, and by what name would you describe it?

But why, Socrates, should we trouble ourselves about the opinion of the many, who just say anything that happens to occur to them?

I believe, I said, that they may be of use in helping us to discover how courage is related to the other parts of virtue. If you are disposed to abide by our agreement, that I should show the way in which, as I think, our recent difficulty is most likely to be cleared up, do you follow; but if not, never mind.

You are quite right, he said; and I would have you proceed as you have begun.

Well then, I said, let me suppose that they repeat their question, What account do you give of that which, in our way of speaking, is termed being overcome by pleasure? I should answer thus: Listen, and Protagoras and I will endeavour to show you. When men are overcome by eating and drinking and other sensual desires which are pleasant, and they, knowing them to be evil, nevertheless indulge in them, would you not say that they were overcome by pleasure? They will not deny this. And suppose that you and I were to go on and ask them again: 'In what way do you say that they are

evil,—in that they are pleasant and give pleasure at the moment, or because they cause disease and poverty and other like evils in the future? Would they still be evil, if they had no attendant evil consequences, simply because they give the consciousness of pleasure of whatever nature?'—Would they not answer that they are not evil on account of the pleasure which is immediately given by them, but on account of the after consequences—diseases and the like?

I believe, said Protagoras, that the world in general would answer as you do.

And in causing diseases do they not cause pain? and in causing poverty do they not cause pain;—they would agree to that also, if I am not mistaken?

Protagoras assented.

Then I should say to them, in my name and yours: Do you think them evil for any other reason, except because they end in pain and rob us of other pleasures:—there again they would agree?

We both of us thought that they would.

And then I should take the question from the opposite point of view, and say: 'Friends, when you speak of goods being painful, do you not mean remedial goods, such as gymnastic exercises, and military service, and the physician's use of burning, cutting, drugging, and starving? Are these the things which are good but painful?'—they would assent to me?

He agreed.

'And do you call them good because they occasion the greatest immediate suffering and pain; or because, afterwards, they bring health and improvement of the bodily condition and the salvation of states and power over others and wealth?'—they would agree to the latter alternative, if I am not mistaken?

He assented.

'Are these things good for any other reason except that they end in pleasure, and get rid of and avert pain? Are you looking to any other standard but pleasure and pain when you call them good?'—they would acknowledge that they were not?

I think so, said Protagoras.

'And do you not pursue after pleasure as a good, and avoid pain as an evil?'

He assented.

'Then you think that pain is an evil and pleasure is a good: and even pleasure you deem an evil, when it robs you of greater pleasures than it gives, or causes pains greater than the pleasure. If, however, you call pleasure an evil in relation to some other end or standard, you will be able to show us that standard. But you have none to show.'

I do not think that they have, said Protagoras.

'And have you not a similar way of speaking about pain? You call pain a good when it takes away greater pains than those which it has, or gives pleasures greater than the pains: then if you have some standard other than pleasure and pain to which you refer when you call actual pain a good, you can show what that is. But you cannot.'

True, said Protagoras.

Suppose again, I said, that the world says to me: 'Why do you spend many words and speak in many ways on this subject?' Excuse me, friends, I should reply; but in the first place there is a difficulty in explaining the meaning of the expression 'overcome by pleasure'; and the whole argument turns upon this. And even now, if you see any possible way in which evil can be explained as other than pain, or good as other than pleasure, you may still retract. Are you satisfied, then, at having a life of pleasure which is without pain? If you are, and if you are unable to show any good or evil which does not end in pleasure and pain, hear the consequences:—If what you say is true, then the argument is absurd which affirms that a man often does evil knowingly, when he might abstain, because he is seduced and overpowered by pleasure; or again, when you say that a man knowingly refuses to do what is good because he is overcome at the moment by pleasure. And that this is ridiculous will be evident if only we give up the use of various names, such as pleasant and painful, and good and evil. As there are two things, let us call them by two names—first, good and evil, and then pleasant and painful. Assuming this, let us go on to say that a man does evil knowing that he does evil. But some one will ask, Why? Because he is overcome, is the first answer. And by what is he overcome? the enquirer will proceed to ask. And we shall not be able to reply 'By pleasure,' for the name of pleasure has been exchanged for that of good. In our answer, then, we shall only say that he is overcome. 'By what?' he will reiterate. By the good, we shall have to reply; indeed we shall. Nay, but our questioner will rejoin with a laugh, if he be one of the swaggering sort, 'That is too ridiculous, that a man should do what he knows to be evil when he ought not, because he is overcome by good. Is that, he will ask, because the good was worthy or not worthy of conquering the evil'? And in answer to that we shall clearly reply, Because it was not worthy; for if it had been worthy, then he who, as we say, was overcome by pleasure, would not have been wrong. 'But how,' he will reply, 'can the good be unworthy of the evil, or the evil of the good'? Is not the real explanation that they are out of proportion to one another, either as greater and smaller, or more and fewer? This we cannot deny. And when you speak of being overcome—'what do you mean,' he will say, 'but that you choose the greater evil in exchange for the lesser good?' Admitted. And now substitute the names of pleasure and pain for good and evil, and say, not as before, that a man does what is evil knowingly, but that he does what is painful knowingly, and because he is overcome by pleasure, which is unworthy to overcome. What measure is there of the relations of pleasure to pain other than excess and defect, which means that they become greater and smaller, and more and fewer, and differ in degree? For if any one says: 'Yes, Socrates, but immediate pleasure differs widely from future pleasure and pain'—To that I should reply: And do they differ in anything but in pleasure and pain? There can be no other measure of them. And do you, like a skilful weigher, put into the balance the pleasures and the pains, and their nearness and distance, and weigh them, and then say which outweighs the other. If you weigh pleasures against pleasures, you of course take the more and greater; or if you weigh pains against pains, you take the fewer and the less; or if pleasures against pains, then you choose that course of action in which the painful is exceeded by the pleasant, whether the distant by the near or the near by

the distant; and you avoid that course of action in which the pleasant is exceeded by the painful. Would you not admit, my friends, that this is true? I am confident that they cannot deny this.

He agreed with me.

Well then, I shall say, if you agree so far, be so good as to answer me a question: Do not the same magnitudes appear larger to your sight when near, and smaller when at a distance? They will acknowledge that. And the same holds of thickness and number; also sounds, which are in themselves equal, are greater when near, and lesser when at a distance. They will grant that also. Now suppose happiness to consist in doing or choosing the greater, and in not doing or in avoiding the less, what would be the saving principle of human life? Would not the art of measuring be the saving principle; or would the power of appearance? Is not the latter that deceiving art which makes us wander up and down and take the things at one time of which we repent at another, both in our actions and in our choice of things great and small? But the art of measurement would do away with the effect of appearances, and, showing the truth, would fain teach the soul at last to find rest in the truth, and would thus save our life. Would not mankind generally acknowledge that the art which accomplishes this result is the art of measurement?

Yes, he said, the art of measurement.

Suppose, again, the salvation of human life to depend on the choice of odd and even, and on the knowledge of when a man ought to choose the greater or less, either in reference to themselves or to each other, and whether near or at a distance; what would be the saving principle of our lives? Would not knowledge?—a knowledge of measuring, when the question is one of excess and defect, and a knowledge of number, when the question is of odd and even? The world will assent, will they not?

Protagoras himself thought that they would.

Well then, my friends, I say to them; seeing that the salvation of human life has been found to consist in the right choice of pleasures and pains,—in the choice of the more and the fewer, and the greater and the less, and the nearer and remoter, must not this measuring be a consideration of their excess and defect and equality in relation to each other?

This is undeniably true.

And this, as possessing measure, must undeniably also be an art and science?

They will agree, he said.

The nature of that art or science will be a matter of future consideration; but the existence of such a science furnishes a demonstrative answer to the question which you asked of me and Protagoras. At the time when you asked the question, if you remember, both of us were agreeing that there was nothing mightier than knowledge, and that knowledge, in whatever existing, must have the advantage over pleasure and all other things; and then you said that pleasure often got the advantage even over a man who has knowledge; and we refused to allow this, and you rejoined: O Protagoras and Socrates, what is the meaning of being overcome by pleasure if not this?—tell us what you call such

a state:—if we had immediately and at the time answered 'Ignorance,' you would have laughed at us. But now, in laughing at us, you will be laughing at yourselves: for you also admitted that men err in their choice of pleasures and pains; that is, in their choice of good and evil, from defect of knowledge; and you admitted further, that they err, not only from defect of knowledge in general, but of that particular knowledge which is called measuring. And you are also aware that the erring act which is done without knowledge is done in ignorance. This, therefore, is the meaning of being overcome by pleasure;—ignorance, and that the greatest. And our friends Protagoras and Prodicus and Hippias declare that they are the physicians of ignorance; but you, who are under the mistaken impression that ignorance is not the cause, and that the art of which I am speaking cannot be taught, neither go yourselves, nor send your children, to the Sophists, who are the teachers of these things—you take care of your money and give them none; and the result is, that you are the worse off both in public and private life:—Let us suppose this to be our answer to the world in general: And now I should like to ask you, Hippias, and you, Prodicus, as well as Protagoras (for the argument is to be yours as well as ours), whether you think that I am speaking the truth or not?

They all thought that what I said was entirely true.

Then you agree, I said, that the pleasant is the good, and the painful evil. And here I would beg my friend Prodicus not to introduce his distinction of names, whether he is disposed to say pleasurable, delightful, joyful. However, by whatever name he prefers to call them, I will ask you, most excellent Prodicus, to answer in my sense of the words.

Prodicus laughed and assented, as did the others.

Then, my friends, what do you say to this? Are not all actions honourable and useful, of which the tendency is to make life painless and pleasant? The honourable work is also useful and good?

This was admitted.

Then, I said, if the pleasant is the good, nobody does anything under the idea or conviction that some other thing would be better and is also attainable, when he might do the better. And this inferiority of a man to himself is merely ignorance, as the superiority of a man to himself is wisdom.

They all assented.

And is not ignorance the having a false opinion and being deceived about important matters?

To this also they unanimously assented.

Then, I said, no man voluntarily pursues evil, or that which he thinks to be evil. To prefer evil to good is not in human nature; and when a man is compelled to choose one of two evils, no one will choose the greater when he may have the less.

All of us agreed to every word of this.

Well, I said, there is a certain thing called fear or terror; and here, Prodicus, I should particularly like to know whether you would agree with me in defining this fear or terror as expectation of evil.

Protagoras and Hippias agreed, but Prodicus said that this was fear and not terror.

Never mind, Prodicus, I said; but let me ask whether, if our former assertions are true, a man will pursue that which he fears when he is not compelled? Would not this be in flat contradiction to the admission which has been already made, that he thinks the things which he fears to be evil; and no one will pursue or voluntarily accept that which he thinks to be evil?

That also was universally admitted.

Then, I said, these, Hippias and Prodicus, are our premisses; and I would beg Protagoras to explain to us how he can be right in what he said at first. I do not mean in what he said quite at first, for his first statement, as you may remember, was that whereas there were five parts of virtue none of them was like any other of them; each of them had a separate function. To this, however, I am not referring, but to the assertion which he afterwards made that of the five virtues four were nearly akin to each other, but that the fifth, which was courage, differed greatly from the others. And of this he gave me the following proof. He said: You will find, Socrates, that some of the most impious, and unrighteous, and intemperate, and ignorant of men are among the most courageous; which proves that courage is very different from the other parts of virtue. I was surprised at his saying this at the time, and I am still more surprised now that I have discussed the matter with you. So I asked him whether by the brave he meant the confident. Yes, he replied, and the impetuous or goers. (You may remember, Protagoras, that this was your answer.)

He assented.

Well then, I said, tell us against what are the courageous ready to go—against the same dangers as the cowards?

No, he answered.

Then against something different?

Yes, he said.

Then do cowards go where there is safety, and the courageous where there is danger?

Yes, Socrates, so men say.

Very true, I said. But I want to know against what do you say that the courageous are ready to go—against dangers, believing them to be dangers, or not against dangers?

No, said he; the former case has been proved by you in the previous argument to be impossible.

That, again, I replied, is quite true. And if this has been rightly proven, then no one goes to meet what he thinks to be dangers, since the want of self-control, which makes men rush into dangers, has been shown to be ignorance.

He assented.

And yet the courageous man and the coward alike go to meet that about which they are confident; so that, in this point of view, the cowardly and the courageous go to meet the same things.

And yet, Socrates, said Protagoras, that to which the coward goes is the opposite of that to which the courageous goes; the one, for example, is ready to go to battle, and the other is not ready.

And is going to battle honourable or disgraceful? I said.

Honourable, he replied.

And if honourable, then already admitted by us to be good; for all honourable actions we have admitted to be good.

That is true; and to that opinion I shall always adhere.

True, I said. But which of the two are they who, as you say, are unwilling to go to war, which is a good and honourable thing?

The cowards, he replied.

And what is good and honourable, I said, is also pleasant?

It has certainly been acknowledged to be so, he replied.

And do the cowards knowingly refuse to go to the nobler, and pleasanter, and better?

The admission of that, he replied, would belie our former admissions.

But does not the courageous man also go to meet the better, and pleasanter, and nobler?

That must be admitted.

And the courageous man has no base fear or base confidence?

True, he replied.

And if not base, then honourable?

He admitted this.

And if honourable, then good?

Yes.

But the fear and confidence of the coward or foolhardy or madman, on the contrary, are base?

He assented.

And these base fears and confidences originate in ignorance and uninstructedness?

True, he said.

Then as to the motive from which the cowards act, do you call it cowardice or courage?

I should say cowardice, he replied.

And have they not been shown to be cowards through their ignorance of dangers?

Assuredly, he said.

And because of that ignorance they are cowards?

He assented.

And the reason why they are cowards is admitted by you to be cowardice?

He again assented.

Then the ignorance of what is and is not dangerous is cowardice?

He nodded assent.

But surely courage, I said, is opposed to cowardice?

Yes.

Then the wisdom which knows what are and are not dangers is opposed to the ignorance of them?

To that again he nodded assent.

And the ignorance of them is cowardice?

To that he very reluctantly nodded assent.

And the knowledge of that which is and is not dangerous is courage, and is opposed to the ignorance of these things?

At this point he would no longer nod assent, but was silent.

And why, I said, do you neither assent nor dissent, Protagoras?

Finish the argument by yourself, he said.

I only want to ask one more question, I said. I want to know whether you still think that there are men who are most ignorant and yet most courageous?

You seem to have a great ambition to make me answer, Socrates, and therefore I will gratify you, and say, that this appears to me to be impossible consistently with the argument.

My only object, I said, in continuing the discussion, has been the desire to ascertain the nature and relations of virtue; for if this were clear, I am very sure that the other controversy which has been carried on at great length by both of us—you affirming and I denying that virtue can be taught—would also become clear. The result of our discussion appears to me to be singular. For if the argument had a human voice, that voice would be heard laughing at us and saying: 'Protagoras and Socrates, you are strange beings; there are you, Socrates, who were saying that virtue cannot be taught, contradicting yourself now by your attempt to prove that all things are knowledge, including justice, and temperance, and courage,—which tends to show that virtue can certainly be taught; for if virtue were other than knowledge, as Protagoras attempted to prove, then clearly virtue cannot be taught; but if virtue is entirely knowledge, as you are seeking to show, then I cannot but suppose that virtue is capable of being taught. Protagoras, on the other hand, who started by saying that it might be taught, is now eager to prove it to be anything rather than knowledge; and if this is true, it must be quite incapable of being taught.' Now I, Protagoras, perceiving this terrible confusion of our ideas, have a great desire that they should be cleared up. And I should like to carry on the discussion until we ascertain what virtue is, whether capable of being taught or not, lest haply Epimetheus should trip us up and deceive us in the argument, as he forgot us in the story; I prefer your Prometheus to your Epimetheus, for of him I make use, whenever I am busy about these questions, in Promethean care of my own life. And if you have no objection, as I said at first, I should like to have your help in the enquiry.

Protagoras replied: Socrates, I am not of a base nature, and I am the last man in the world to be envious. I cannot but applaud your energy and your conduct of an argument. As I have often said, I admire you above all men whom I know, and far above all men of your age; and I believe that you will become very eminent in philosophy. Let us come back to the subject at some future time; at present we had better turn to something else.

By all means, I said, if that is your wish; for I too ought long since to have kept the engagement of which I spoke before, and only tarried because I could not refuse the request of the noble Callias. So the conversation ended, and we went our way.

BOOK IV.

BOOK V.

BOOK VI.

BOOK VII.

BOOK VIII.

BOOK IX.

BOOK X.

INTRODUCTION AND ANALYSIS.

The Republic of Plato is the longest of his works with the exception of the Laws, and is certainly the greatest of them. There are nearer approaches to modern metaphysics in the Philebus and in the Sophist; the Politicus or Statesman is more ideal; the form and institutions of the State are more clearly drawn out in the Laws; as works of art, the Symposium and the Protagoras are of higher

excellence. But no other Dialogue of Plato has the same largeness of view and the same perfection of style; no other shows an equal knowledge of the world, or contains more of those thoughts which are new as well as old, and not of one age only but of all. Nowhere in Plato is there a deeper irony or a greater wealth of humour or imagery, or more dramatic power. Nor in any other of his writings is the attempt made to interweave life and speculation, or to connect politics with philosophy. The Republic is the centre around which the other Dialogues may be grouped; here philosophy reaches the highest point (cp, especially in Books V, VI, VII) to which ancient thinkers ever attained. Plato among the Greeks, like Bacon among the moderns, was the first who conceived a method of knowledge, although neither of them always distinguished the bare outline or form from the substance of truth; and both of them had to be content with an abstraction of science which was not yet realized. He was the greatest metaphysical genius whom the world has seen; and in him, more than in any other ancient thinker, the germs of future knowledge are contained. The sciences of logic and psychology, which have supplied so many instruments of thought to after-ages, are based upon the analyses of Socrates and Plato. The principles of definition, the law of contradiction, the fallacy of arguing in a circle, the distinction between the essence and accidents of a thing or notion, between means and ends, between causes and conditions; also the division of the mind into the rational, concupiscent, and irascible elements, or of pleasures and desires into necessary and unnecessary—these and other great forms of thought are all of them to be found in the Republic, and were probably first invented by Plato. The greatest of all logical truths, and the one of which writers on philosophy are most apt to lose sight, the difference between words and things, has been most strenuously insisted on by him (cp. Rep.; Polit.; Cratyl), although he has not always avoided the confusion of them in his own writings (e.g. Rep.). But he does not bind up truth in logical formulae,—logic is still veiled in metaphysics; and the science which he imagines to 'contemplate all truth and all existence' is very unlike the doctrine of the syllogism which Aristotle claims to have discovered (Soph. Elenchi).

Neither must we forget that the Republic is but the third part of a still larger design which was to have included an ideal history of Athens, as well as a political and physical philosophy. The fragment of the Critias has given birth to a world-famous fiction, second only in importance to the tale of Troy and the legend of Arthur; and is said as a fact to have inspired some of the early navigators of the sixteenth century. This mythical tale, of which the subject was a history of the wars of the Athenians against the Island of Atlantis, is supposed to be founded upon an unfinished poem of Solon, to which it would have stood in the same relation as the writings of the logographers to the poems of Homer. It would have told of a struggle for Liberty (cp. Tim.), intended to represent the conflict of Persia and Hellas. We may judge from the noble commencement of the Timaeus, from the fragment of the Critias itself, and from the third book of the Laws, in what manner Plato would have treated this high argument. We can only guess why the great design was abandoned; perhaps because Plato became sensible of some incongruity in a fictitious history, or because he had lost his interest in it, or because advancing years forbade the completion of it; and we may please ourselves with the fancy that had this imaginary narrative ever been finished, we should have found Plato himself sympathising with the struggle for Hellenic independence (cp. Laws), singing a hymn of triumph over Marathon and Salamis, perhaps making the reflection of Herodotus where he contemplates the growth of the Athenian empire—'How brave a thing is freedom of speech, which has made the Athenians so far exceed every other state of Hellas in greatness!' or, more probably, attributing the victory to the ancient good order of Athens and to the favor of Apollo and Athene (cp. Introd. to Critias).

Again, Plato may be regarded as the 'captain' ('arhchegoz') or leader of a goodly band of followers; for in the Republic is to be found the original of Cicero's De Republica, of St. Augustine's City of God, of the Utopia of Sir Thomas More, and of the numerous other imaginary States which are framed upon the same model. The extent to which Aristotle or the Aristotelian school were indebted to him in the Politics has been little recognised, and the recognition is the more necessary because it is not made by Aristotle himself. The two philosophers had more in common than they were conscious of; and probably some elements of Plato remain still undetected in Aristotle. In English philosophy too, many affinities may be traced, not only in the works of the Cambridge Platonists, but in great original writers like Berkeley or Coleridge, to Plato and his ideas. That there is a truth higher than experience, of which the mind bears witness to herself, is a conviction which in our own generation has been enthusiastically asserted, and is perhaps gaining ground. Of the Greek authors who at the Renaissance brought a new life into the world Plato has had the greatest influence. The Republic of Plato is also the first treatise upon education, of which the writings of Milton and Locke, Rousseau, Jean Paul, and Goethe are the legitimate descendants. Like Dante or Bunyan, he has a revelation of another life; like Bacon, he is profoundly impressed with the unity of knowledge; in the early Church he exercised a real influence on theology, and at the Revival of Literature on politics. Even the fragments of his words when 'repeated at second-hand' (Symp.) have in all ages ravished the hearts of men, who have seen reflected in them their own higher nature. He is the father of idealism in philosophy, in politics, in literature. And many of the latest conceptions of modern thinkers and statesmen, such as the unity of knowledge, the reign of law, and the equality of the sexes, have been anticipated in a dream by him.

The argument of the Republic is the search after Justice, the nature of which is first hinted at by Cephalus, the just and blameless old man—then discussed on the basis of proverbial morality by Socrates and Polemarchus—then caricatured by Thrasymachus and partially explained by Socrates—reduced to an abstraction by Glaucon and Adeimantus, and having become invisible in the individual reappears at length in the ideal State which is constructed by Socrates. The first care of the rulers is to be education, of which an outline is drawn after the old Hellenic model, providing only for an improved religion and morality, and more simplicity in music and gymnastic, a manlier strain of poetry, and greater harmony of the individual and the State. We are thus led on to the conception of a higher State, in which 'no man calls anything his own,' and in which there is neither 'marrying nor giving in marriage,' and 'kings are philosophers' and 'philosophers are kings;' and there is another and higher education, intellectual as well as moral and religious, of science as well as of art, and not of youth only but of the whole of life. Such a State is hardly to be realized in this world and quickly degenerates. To the perfect ideal succeeds the government of the soldier and the lover of honour, this again declining into democracy, and democracy into tyranny, in an imaginary but regular order having not much resemblance to the actual facts. When 'the wheel has come full circle' we do not begin again with a new period of human life; but we have passed from the best to the worst, and there we end. The subject is then changed and the old quarrel of poetry and philosophy which had been more lightly treated in the earlier books of the Republic is now resumed and fought out to a conclusion. Poetry is discovered to be an imitation thrice removed from the truth, and Homer, as well as the dramatic poets, having been condemned as an imitator, is sent into banishment along with them. And the idea of the State is supplemented by the revelation of a future life.

The division into books, like all similar divisions (Cp. Sir G.C. Lewis in the Classical Museum.), is probably later than the age of Plato. The natural divisions are five in number;—(1) Book I and the first

half of Book II down to the paragraph beginning, 'I had always admired the genius of Glaucon and Adeimantus,' which is introductory; the first book containing a refutation of the popular and sophistical notions of justice, and concluding, like some of the earlier Dialogues, without arriving at any definite result. To this is appended a restatement of the nature of justice according to common opinion, and an answer is demanded to the question—What is justice, stripped of appearances? The second division (2) includes the remainder of the second and the whole of the third and fourth books, which are mainly occupied with the construction of the first State and the first education. The third division (3) consists of the fifth, sixth, and seventh books, in which philosophy rather than justice is the subject of enquiry, and the second State is constructed on principles of communism and ruled by philosophers, and the contemplation of the idea of good takes the place of the social and political virtues. In the eighth and ninth books (4) the perversions of States and of the individuals who correspond to them are reviewed in succession; and the nature of pleasure and the principle of tyranny are further analysed in the individual man. The tenth book (5) is the conclusion of the whole, in which the relations of philosophy to poetry are finally determined, and the happiness of the citizens in this life, which has now been assured, is crowned by the vision of another.

Or a more general division into two parts may be adopted; the first (Books I - IV) containing the description of a State framed generally in accordance with Hellenic notions of religion and morality, while in the second (Books V - X) the Hellenic State is transformed into an ideal kingdom of philosophy, of which all other governments are the perversions. These two points of view are really opposed, and the opposition is only veiled by the genius of Plato. The Republic, like the Phaedrus (see Introduction to Phaedrus), is an imperfect whole; the higher light of philosophy breaks through the regularity of the Hellenic temple, which at last fades away into the heavens. Whether this imperfection of structure arises from an enlargement of the plan; or from the imperfect reconcilement in the writer's own mind of the struggling elements of thought which are now first brought together by him; or, perhaps, from the composition of the work at different times—are questions, like the similar question about the Iliad and the Odyssey, which are worth asking, but which cannot have a distinct answer. In the age of Plato there was no regular mode of publication, and an author would have the less scruple in altering or adding to a work which was known only to a few of his friends. There is no absurdity in supposing that he may have laid his labours aside for a time, or turned from one work to another; and such interruptions would be more likely to occur in the case of a long than of a short writing. In all attempts to determine the chronological order of the Platonic writings on internal evidence, this uncertainty about any single Dialogue being composed at one time is a disturbing element, which must be admitted to affect longer works, such as the Republic and the Laws, more than shorter ones. But, on the other hand, the seeming discrepancies of the Republic may only arise out of the discordant elements which the philosopher has attempted to unite in a single whole, perhaps without being himself able to recognise the inconsistency which is obvious to us. For there is a judgment of after ages which few great writers have ever been able to anticipate for themselves. They do not perceive the want of connexion in their own writings, or the gaps in their systems which are visible enough to those who come after them. In the beginnings of literature and philosophy, amid the first efforts of thought and language, more inconsistencies occur than now, when the paths of speculation are well worn and the meaning of words precisely defined. For consistency, too, is the growth of time; and some of the greatest creations of the human mind have been wanting in unity. Tried by this test, several of the Platonic Dialogues, according to our modern ideas, appear to be defective, but the deficiency is no proof that they were composed at different times or by different

hands. And the supposition that the Republic was written uninterruptedly and by a continuous effort is in some degree confirmed by the numerous references from one part of the work to another.

The second title, 'Concerning Justice,' is not the one by which the Republic is quoted, either by Aristotle or generally in antiquity, and, like the other second titles of the Platonic Dialogues, may therefore be assumed to be of later date. Morgenstern and others have asked whether the definition of justice, which is the professed aim, or the construction of the State is the principal argument of the work. The answer is, that the two blend in one, and are two faces of the same truth; for justice is the order of the State, and the State is the visible embodiment of justice under the conditions of human society. The one is the soul and the other is the body, and the Greek ideal of the State, as of the individual, is a fair mind in a fair body. In Hegelian phraseology the state is the reality of which justice is the idea. Or, described in Christian language, the kingdom of God is within, and yet developes into a Church or external kingdom; 'the house not made with hands, eternal in the heavens,' is reduced to the proportions of an earthly building. Or, to use a Platonic image, justice and the State are the warp and the woof which run through the whole texture. And when the constitution of the State is completed, the conception of justice is not dismissed, but reappears under the same or different names throughout the work, both as the inner law of the individual soul, and finally as the principle of rewards and punishments in another life. The virtues are based on justice, of which common honesty in buying and selling is the shadow, and justice is based on the idea of good, which is the harmony of the world, and is reflected both in the institutions of states and in motions of the heavenly bodies (cp. Tim.). The Timaeus, which takes up the political rather than the ethical side of the Republic, and is chiefly occupied with hypotheses concerning the outward world, yet contains many indications that the same law is supposed to reign over the State, over nature, and over man.

Too much, however, has been made of this question both in ancient and modern times. There is a stage of criticism in which all works, whether of nature or of art, are referred to design. Now in ancient writings, and indeed in literature generally, there remains often a large element which was not comprehended in the original design. For the plan grows under the author's hand; new thoughts occur to him in the act of writing; he has not worked out the argument to the end before he begins. The reader who seeks to find some one idea under which the whole may be conceived, must necessarily seize on the vaguest and most general. Thus Stallbaum, who is dissatisfied with the ordinary explanations of the argument of the Republic, imagines himself to have found the true argument 'in the representation of human life in a State perfected by justice, and governed according to the idea of good.' There may be some use in such general descriptions, but they can hardly be said to express the design of the writer. The truth is, that we may as well speak of many designs as of one; nor need anything be excluded from the plan of a great work to which the mind is naturally led by the association of ideas, and which does not interfere with the general purpose. What kind or degree of unity is to be sought after in a building, in the plastic arts, in poetry, in prose, is a problem which has to be determined relatively to the subject-matter. To Plato himself, the enquiry 'what was the intention of the writer,' or 'what was the principal argument of the Republic' would have been hardly intelligible, and therefore had better be at once dismissed (cp. the Introduction to the Phaedrus).

Is not the Republic the vehicle of three or four great truths which, to Plato's own mind, are most naturally represented in the form of the State? Just as in the Jewish prophets the reign of Messiah, or 'the day of the Lord,' or the suffering Servant or people of God, or the 'Sun of righteousness with healing in his wings' only convey, to us at least, their great spiritual ideals, so through the Greek State

Plato reveals to us his own thoughts about divine perfection, which is the idea of good—like the sun in the visible world;—about human perfection, which is justice—about education beginning in youth and continuing in later years—about poets and sophists and tyrants who are the false teachers and evil rulers of mankind—about 'the world' which is the embodiment of them—about a kingdom which exists nowhere upon earth but is laid up in heaven to be the pattern and rule of human life. No such inspired creation is at unity with itself, any more than the clouds of heaven when the sun pierces through them. Every shade of light and dark, of truth, and of fiction which is the veil of truth, is allowable in a work of philosophical imagination. It is not all on the same plane; it easily passes from ideas to myths and fancies, from facts to figures of speech. It is not prose but poetry, at least a great part of it, and ought not to be judged by the rules of logic or the probabilities of history. The writer is not fashioning his ideas into an artistic whole; they take possession of him and are too much for him. We have no need therefore to discuss whether a State such as Plato has conceived is practicable or not, or whether the outward form or the inward life came first into the mind of the writer. For the practicability of his ideas has nothing to do with their truth; and the highest thoughts to which he attains may be truly said to bear the greatest 'marks of design'—justice more than the external frame-work of the State, the idea of good more than justice. The great science of dialectic or the organisation of ideas has no real content; but is only a type of the method or spirit in which the higher knowledge is to be pursued by the spectator of all time and all existence. It is in the fifth, sixth, and seventh books that Plato reaches the 'summit of speculation,' and these, although they fail to satisfy the requirements of a modern thinker, may therefore be regarded as the most important, as they are also the most original, portions of the work.

It is not necessary to discuss at length a minor question which has been raised by Boeckh, respecting the imaginary date at which the conversation was held (the year 411 B.C. which is proposed by him will do as well as any other); for a writer of fiction, and especially a writer who, like Plato, is notoriously careless of chronology (cp. Rep., Symp., etc.), only aims at general probability. Whether all the persons mentioned in the Republic could ever have met at any one time is not a difficulty which would have occurred to an Athenian reading the work forty years later, or to Plato himself at the time of writing (any more than to Shakespeare respecting one of his own dramas); and need not greatly trouble us now. Yet this may be a question having no answer 'which is still worth asking,' because the investigation shows that we cannot argue historically from the dates in Plato; it would be useless therefore to waste time in inventing far-fetched reconcilements of them in order to avoid chronological difficulties, such, for example, as the conjecture of C.F. Hermann, that Glaucon and Adeimantus are not the brothers but the uncles of Plato (cp. Apol.), or the fancy of Stallbaum that Plato intentionally left anachronisms indicating the dates at which some of his Dialogues were written.

The principal characters in the Republic are Cephalus, Polemarchus, Thrasymachus, Socrates, Glaucon, and Adeimantus. Cephalus appears in the introduction only, Polemarchus drops at the end of the first argument, and Thrasymachus is reduced to silence at the close of the first book. The main discussion is carried on by Socrates, Glaucon, and Adeimantus. Among the company are Lysias (the orator) and Euthydemus, the sons of Cephalus and brothers of Polemarchus, an unknown Charmantides—these are mute auditors; also there is Cleitophon, who once interrupts, where, as in the Dialogue which bears his name, he appears as the friend and ally of Thrasymachus.

Cephalus, the patriarch of the house, has been appropriately engaged in offering a sacrifice. He is the pattern of an old man who has almost done with life, and is at peace with himself and with all

mankind. He feels that he is drawing nearer to the world below, and seems to linger around the memory of the past. He is eager that Socrates should come to visit him, fond of the poetry of the last generation, happy in the consciousness of a well-spent life, glad at having escaped from the tyranny of youthful lusts. His love of conversation, his affection, his indifference to riches, even his garrulity, are interesting traits of character. He is not one of those who have nothing to say, because their whole mind has been absorbed in making money. Yet he acknowledges that riches have the advantage of placing men above the temptation to dishonesty or falsehood. The respectful attention shown to him by Socrates, whose love of conversation, no less than the mission imposed upon him by the Oracle, leads him to ask questions of all men, young and old alike, should also be noted. Who better suited to raise the question of justice than Cephalus, whose life might seem to be the expression of it? The moderation with which old age is pictured by Cephalus as a very tolerable portion of existence is characteristic, not only of him, but of Greek feeling generally, and contrasts with the exaggeration of Cicero in the De Senectute. The evening of life is described by Plato in the most expressive manner, yet with the fewest possible touches. As Cicero remarks (Ep. ad Attic.), the aged Cephalus would have been out of place in the discussion which follows, and which he could neither have understood nor taken part in without a violation of dramatic propriety (cp. Lysimachus in the Laches).

His 'son and heir' Polemarchus has the frankness and impetuousness of youth; he is for detaining Socrates by force in the opening scene, and will not 'let him off' on the subject of women and children. Like Cephalus, he is limited in his point of view, and represents the proverbial stage of morality which has rules of life rather than principles; and he quotes Simonides (cp. Aristoph. Clouds) as his father had quoted Pindar. But after this he has no more to say; the answers which he makes are only elicited from him by the dialectic of Socrates. He has not yet experienced the influence of the Sophists like Glaucon and Adeimantus, nor is he sensible of the necessity of refuting them; he belongs to the pre-Socratic or pre-dialectical age. He is incapable of arguing, and is bewildered by Socrates to such a degree that he does not know what he is saying. He is made to admit that justice is a thief, and that the virtues follow the analogy of the arts. From his brother Lysias (contra Eratosth.) we learn that he fell a victim to the Thirty Tyrants, but no allusion is here made to his fate, nor to the circumstance that Cephalus and his family were of Syracusan origin, and had migrated from Thurii to Athens.

The 'Chalcedonian giant,' Thrasymachus, of whom we have already heard in the Phaedrus, is the personification of the Sophists, according to Plato's conception of them, in some of their worst characteristics. He is vain and blustering, refusing to discourse unless he is paid, fond of making an oration, and hoping thereby to escape the inevitable Socrates; but a mere child in argument, and unable to foresee that the next 'move' (to use a Platonic expression) will 'shut him up.' He has reached the stage of framing general notions, and in this respect is in advance of Cephalus and Polemarchus. But he is incapable of defending them in a discussion, and vainly tries to cover his confusion with banter and insolence. Whether such doctrines as are attributed to him by Plato were really held either by him or by any other Sophist is uncertain; in the infancy of philosophy serious errors about morality might easily grow up—they are certainly put into the mouths of speakers in Thucydides; but we are concerned at present with Plato's description of him, and not with the historical reality. The inequality of the contest adds greatly to the humour of the scene. The pompous and empty Sophist is utterly helpless in the hands of the great master of dialectic, who knows how to touch all the springs of vanity and weakness in him. He is greatly irritated by the irony of Socrates, but

his noisy and imbecile rage only lays him more and more open to the thrusts of his assailant. His determination to cram down their throats, or put 'bodily into their souls' his own words, elicits a cry of horror from Socrates. The state of his temper is quite as worthy of remark as the process of the argument. Nothing is more amusing than his complete submission when he has been once thoroughly beaten. At first he seems to continue the discussion with reluctance, but soon with apparent good-will, and he even testifies his interest at a later stage by one or two occasional remarks. When attacked by Glaucon he is humorously protected by Socrates 'as one who has never been his enemy and is now his friend.' From Cicero and Quintilian and from Aristotle's Rhetoric we learn that the Sophist whom Plato has made so ridiculous was a man of note whose writings were preserved in later ages. The play on his name which was made by his contemporary Herodicus (Aris. Rhet.), 'thou wast ever bold in battle,' seems to show that the description of him is not devoid of verisimilitude.

When Thrasymachus has been silenced, the two principal respondents, Glaucon and Adeimantus, appear on the scene: here, as in Greek tragedy (cp. Introd. to Phaedo), three actors are introduced. At first sight the two sons of Ariston may seem to wear a family likeness, like the two friends Simmias and Cebes in the Phaedo. But on a nearer examination of them the similarity vanishes, and they are seen to be distinct characters. Glaucon is the impetuous youth who can 'just never have enough of fechting' (cp. the character of him in Xen. Mem. iii. 6); the man of pleasure who is acquainted with the mysteries of love; the 'juvenis qui gaudet canibus,' and who improves the breed of animals; the lover of art and music who has all the experiences of youthful life. He is full of quickness and penetration, piercing easily below the clumsy platitudes of Thrasymachus to the real difficulty; he turns out to the light the seamy side of human life, and yet does not lose faith in the just and true. It is Glaucon who seizes what may be termed the ludicrous relation of the philosopher to the world, to whom a state of simplicity is 'a city of pigs,' who is always prepared with a jest when the argument offers him an opportunity, and who is ever ready to second the humour of Socrates and to appreciate the ridiculous, whether in the connoisseurs of music, or in the lovers of theatricals, or in the fantastic behaviour of the citizens of democracy. His weaknesses are several times alluded to by Socrates, who, however, will not allow him to be attacked by his brother Adeimantus. He is a soldier, and, like Adeimantus, has been distinguished at the battle of Megara (anno 456?)...The character of Adeimantus is deeper and graver, and the profounder objections are commonly put into his mouth. Glaucon is more demonstrative, and generally opens the game. Adeimantus pursues the argument further. Glaucon has more of the liveliness and quick sympathy of youth; Adeimantus has the maturer judgment of a grown-up man of the world. In the second book, when Glaucon insists that justice and injustice shall be considered without regard to their consequences, Adeimantus remarks that they are regarded by mankind in general only for the sake of their consequences; and in a similar vein of reflection he urges at the beginning of the fourth book that Socrates fails in making his citizens happy, and is answered that happiness is not the first but the second thing, not the direct aim but the indirect consequence of the good government of a State. In the discussion about religion and mythology, Adeimantus is the respondent, but Glaucon breaks in with a slight jest, and carries on the conversation in a lighter tone about music and gymnastic to the end of the book. It is Adeimantus again who volunteers the criticism of common sense on the Socratic method of argument, and who refuses to let Socrates pass lightly over the question of women and children. It is Adeimantus who is the respondent in the more argumentative, as Glaucon in the lighter and more imaginative portions of the Dialogue. For example, throughout the greater part of the sixth book, the causes of the corruption of philosophy and the conception of the idea of good are discussed with Adeimantus. Glaucon

resumes his place of principal respondent; but he has a difficulty in apprehending the higher education of Socrates, and makes some false hits in the course of the discussion. Once more Adeimantus returns with the allusion to his brother Glaucon whom he compares to the contentious State; in the next book he is again superseded, and Glaucon continues to the end.

Thus in a succession of characters Plato represents the successive stages of morality, beginning with the Athenian gentleman of the olden time, who is followed by the practical man of that day regulating his life by proverbs and saws; to him succeeds the wild generalization of the Sophists, and lastly come the young disciples of the great teacher, who know the sophistical arguments but will not be convinced by them, and desire to go deeper into the nature of things. These too, like Cephalus, Polemarchus, Thrasymachus, are clearly distinguished from one another. Neither in the Republic, nor in any other Dialogue of Plato, is a single character repeated.

The delineation of Socrates in the Republic is not wholly consistent. In the first book we have more of the real Socrates, such as he is depicted in the Memorabilia of Xenophon, in the earliest Dialogues of Plato, and in the Apology. He is ironical, provoking, questioning, the old enemy of the Sophists, ready to put on the mask of Silenus as well as to argue seriously. But in the sixth book his enmity towards the Sophists abates; he acknowledges that they are the representatives rather than the corrupters of the world. He also becomes more dogmatic and constructive, passing beyond the range either of the political or the speculative ideas of the real Socrates. In one passage Plato himself seems to intimate that the time had now come for Socrates, who had passed his whole life in philosophy, to give his own opinion and not to be always repeating the notions of other men. There is no evidence that either the idea of good or the conception of a perfect state were comprehended in the Socratic teaching, though he certainly dwelt on the nature of the universal and of final causes (cp. Xen. Mem.; Phaedo); and a deep thinker like him, in his thirty or forty years of public teaching, could hardly have failed to touch on the nature of family relations, for which there is also some positive evidence in the Memorabilia (Mem.) The Socratic method is nominally retained; and every inference is either put into the mouth of the respondent or represented as the common discovery of him and Socrates. But any one can see that this is a mere form, of which the affectation grows wearisome as the work advances. The method of enquiry has passed into a method of teaching in which by the help of interlocutors the same thesis is looked at from various points of view. The nature of the process is truly characterized by Glaucon, when he describes himself as a companion who is not good for much in an investigation, but can see what he is shown, and may, perhaps, give the answer to a question more fluently than another.

Neither can we be absolutely certain that Socrates himself taught the immortality of the soul, which is unknown to his disciple Glaucon in the Republic (cp. Apol.); nor is there any reason to suppose that he used myths or revelations of another world as a vehicle of instruction, or that he would have banished poetry or have denounced the Greek mythology. His favorite oath is retained, and a slight mention is made of the daemonium, or internal sign, which is alluded to by Socrates as a phenomenon peculiar to himself. A real element of Socratic teaching, which is more prominent in the Republic than in any of the other Dialogues of Plato, is the use of example and illustration (Greek): 'Let us apply the test of common instances.' 'You,' says Adeimantus, ironically, in the sixth book, 'are so unaccustomed to speak in images.' And this use of examples or images, though truly Socratic in origin, is enlarged by the genius of Plato into the form of an allegory or parable, which embodies in the concrete what has been already described, or is about to be described, in the abstract. Thus the

figure of the cave in Book VII is a recapitulation of the divisions of knowledge in Book VI. The composite animal in Book IX is an allegory of the parts of the soul. The noble captain and the ship and the true pilot in Book VI are a figure of the relation of the people to the philosophers in the State which has been described. Other figures, such as the dog, or the marriage of the portionless maiden, or the drones and wasps in the eighth and ninth books, also form links of connexion in long passages, or are used to recall previous discussions.

Plato is most true to the character of his master when he describes him as 'not of this world.' And with this representation of him the ideal state and the other paradoxes of the Republic are quite in accordance, though they cannot be shown to have been speculations of Socrates. To him, as to other great teachers both philosophical and religious, when they looked upward, the world seemed to be the embodiment of error and evil. The common sense of mankind has revolted against this view, or has only partially admitted it. And even in Socrates himself the sterner judgement of the multitude at times passes into a sort of ironical pity or love. Men in general are incapable of philosophy, and are therefore at enmity with the philosopher; but their misunderstanding of him is unavoidable: for they have never seen him as he truly is in his own image; they are only acquainted with artificial systems possessing no native force of truth—words which admit of many applications. Their leaders have nothing to measure with, and are therefore ignorant of their own stature. But they are to be pitied or laughed at, not to be quarrelled with; they mean well with their nostrums, if they could only learn that they are cutting off a Hydra's head. This moderation towards those who are in error is one of the most characteristic features of Socrates in the Republic. In all the different representations of Socrates, whether of Xenophon or Plato, and amid the differences of the earlier or later Dialogues, he always retains the character of the unwearied and disinterested seeker after truth, without which he would have ceased to be Socrates.

Leaving the characters we may now analyse the contents of the Republic, and then proceed to consider (1) The general aspects of this Hellenic ideal of the State, (2) The modern lights in which the thoughts of Plato may be read.

BOOK I. The Republic opens with a truly Greek scene—a festival in honour of the goddess Bendis which is held in the Piraeus; to this is added the promise of an equestrian torch-race in the evening. The whole work is supposed to be recited by Socrates on the day after the festival to a small party, consisting of Critias, Timaeus, Hermocrates, and another; this we learn from the first words of the Timaeus.

When the rhetorical advantage of reciting the Dialogue has been gained, the attention is not distracted by any reference to the audience; nor is the reader further reminded of the extraordinary length of the narrative. Of the numerous company, three only take any serious part in the discussion; nor are we informed whether in the evening they went to the torch-race, or talked, as in the Symposium, through the night. The manner in which the conversation has arisen is described as follows:—Socrates and his companion Glaucon are about to leave the festival when they are detained by a message from Polemarchus, who speedily appears accompanied by Adeimantus, the brother of Glaucon, and with playful violence compels them to remain, promising them not only the torch-race, but the pleasure of conversation with the young, which to Socrates is a far greater attraction. They return to the house of Cephalus, Polemarchus' father, now in extreme old age, who is found sitting upon a cushioned seat crowned for a sacrifice. 'You should come to me oftener, Socrates, for I am

too old to go to you; and at my time of life, having lost other pleasures, I care the more for conversation.' Socrates asks him what he thinks of age, to which the old man replies, that the sorrows and discontents of age are to be attributed to the tempers of men, and that age is a time of peace in which the tyranny of the passions is no longer felt. Yes, replies Socrates, but the world will say, Cephalus, that you are happy in old age because you are rich. 'And there is something in what they say, Socrates, but not so much as they imagine—as Themistocles replied to the Seriphian, "Neither you, if you had been an Athenian, nor I, if I had been a Seriphian, would ever have been famous," I might in like manner reply to you, Neither a good poor man can be happy in age, nor yet a bad rich man.' Socrates remarks that Cephalus appears not to care about riches, a quality which he ascribes to his having inherited, not acquired them, and would like to know what he considers to be the chief advantage of them. Cephalus answers that when you are old the belief in the world below grows upon you, and then to have done justice and never to have been compelled to do injustice through poverty, and never to have deceived anyone, are felt to be unspeakable blessings. Socrates, who is evidently preparing for an argument, next asks, What is the meaning of the word justice? To tell the truth and pay your debts? No more than this? Or must we admit exceptions? Ought I, for example, to put back into the hands of my friend, who has gone mad, the sword which I borrowed of him when he was in his right mind? 'There must be exceptions.' 'And yet,' says Polemarchus, 'the definition which has been given has the authority of Simonides.' Here Cephalus retires to look after the sacrifices, and bequeaths, as Socrates facetiously remarks, the possession of the argument to his heir, Polemarchus...

The description of old age is finished, and Plato, as his manner is, has touched the key-note of the whole work in asking for the definition of justice, first suggesting the question which Glaucon afterwards pursues respecting external goods, and preparing for the concluding mythus of the world below in the slight allusion of Cephalus. The portrait of the just man is a natural frontispiece or introduction to the long discourse which follows, and may perhaps imply that in all our perplexity about the nature of justice, there is no difficulty in discerning 'who is a just man.' The first explanation has been supported by a saying of Simonides; and now Socrates has a mind to show that the resolution of justice into two unconnected precepts, which have no common principle, fails to satisfy the demands of dialectic.

...He proceeds: What did Simonides mean by this saying of his? Did he mean that I was to give back arms to a madman? 'No, not in that case, not if the parties are friends, and evil would result. He meant that you were to do what was proper, good to friends and harm to enemies.' Every act does something to somebody; and following this analogy, Socrates asks, What is this due and proper thing which justice does, and to whom? He is answered that justice does good to friends and harm to enemies. But in what way good or harm? 'In making alliances with the one, and going to war with the other.' Then in time of peace what is the good of justice? The answer is that justice is of use in contracts, and contracts are money partnerships. Yes; but how in such partnerships is the just man of more use than any other man? 'When you want to have money safely kept and not used.' Then justice will be useful when money is useless. And there is another difficulty: justice, like the art of war or any other art, must be of opposites, good at attack as well as at defence, at stealing as well as at guarding. But then justice is a thief, though a hero notwithstanding, like Autolycus, the Homeric hero, who was 'excellent above all men in theft and perjury'—to such a pass have you and Homer and Simonides brought us; though I do not forget that the thieving must be for the good of friends and the harm of enemies. And still there arises another question: Are friends to be interpreted as real or

seeming; enemies as real or seeming? And are our friends to be only the good, and our enemies to be the evil? The answer is, that we must do good to our seeming and real good friends, and evil to our seeming and real evil enemies—good to the good, evil to the evil. But ought we to render evil for evil at all, when to do so will only make men more evil? Can justice produce injustice any more than the art of horsemanship can make bad horsemen, or heat produce cold? The final conclusion is, that no sage or poet ever said that the just return evil for evil; this was a maxim of some rich and mighty man, Periander, Perdiccas, or Ismenias the Theban (about B.C. 398-381)...

Thus the first stage of aphoristic or unconscious morality is shown to be inadequate to the wants of the age; the authority of the poets is set aside, and through the winding mazes of dialectic we make an approach to the Christian precept of forgiveness of injuries. Similar words are applied by the Persian mystic poet to the Divine being when the questioning spirit is stirred within him:—'If because I do evil, Thou punishest me by evil, what is the difference between Thee and me?' In this both Plato and Kheyam rise above the level of many Christian (?) theologians. The first definition of justice easily passes into the second; for the simple words 'to speak the truth and pay your debts' is substituted the more abstract 'to do good to your friends and harm to your enemies.' Either of these explanations gives a sufficient rule of life for plain men, but they both fall short of the precision of philosophy. We may note in passing the antiquity of casuistry, which not only arises out of the conflict of established principles in particular cases, but also out of the effort to attain them, and is prior as well as posterior to our fundamental notions of morality. The 'interrogation' of moral ideas; the appeal to the authority of Homer; the conclusion that the maxim, 'Do good to your friends and harm to your enemies,' being erroneous, could not have been the word of any great man, are all of them very characteristic of the Platonic Socrates.

...Here Thrasymachus, who has made several attempts to interrupt, but has hitherto been kept in order by the company, takes advantage of a pause and rushes into the arena, beginning, like a savage animal, with a roar. 'Socrates,' he says, 'what folly is this?—Why do you agree to be vanquished by one another in a pretended argument?' He then prohibits all the ordinary definitions of justice; to which Socrates replies that he cannot tell how many twelve is, if he is forbidden to say 2 x 6, or 3 x 4, or 6 x 2, or 4 x 3. At first Thrasymachus is reluctant to argue; but at length, with a promise of payment on the part of the company and of praise from Socrates, he is induced to open the game. 'Listen,' he says, 'my answer is that might is right, justice the interest of the stronger: now praise me.' Let me understand you first. Do you mean that because Polydamas the wrestler, who is stronger than we are, finds the eating of beef for his interest, the eating of beef is also for our interest, who are not so strong? Thrasymachus is indignant at the illustration, and in pompous words, apparently intended to restore dignity to the argument, he explains his meaning to be that the rulers make laws for their own interests. But suppose, says Socrates, that the ruler or stronger makes a mistake—then the interest of the stronger is not his interest. Thrasymachus is saved from this speedy downfall by his disciple Cleitophon, who introduces the word 'thinks;'—not the actual interest of the ruler, but what he thinks or what seems to be his interest, is justice. The contradiction is escaped by the unmeaning evasion: for though his real and apparent interests may differ, what the ruler thinks to be his interest will always remain what he thinks to be his interest.

Of course this was not the original assertion, nor is the new interpretation accepted by Thrasymachus himself. But Socrates is not disposed to quarrel about words, if, as he significantly insinuates, his adversary has changed his mind. In what follows Thrasymachus does in fact withdraw his admission

that the ruler may make a mistake, for he affirms that the ruler as a ruler is infallible. Socrates is quite ready to accept the new position, which he equally turns against Thrasymachus by the help of the analogy of the arts. Every art or science has an interest, but this interest is to be distinguished from the accidental interest of the artist, and is only concerned with the good of the things or persons which come under the art. And justice has an interest which is the interest not of the ruler or judge, but of those who come under his sway.

Thrasymachus is on the brink of the inevitable conclusion, when he makes a bold diversion. 'Tell me, Socrates,' he says, 'have you a nurse?' What a question! Why do you ask? 'Because, if you have, she neglects you and lets you go about drivelling, and has not even taught you to know the shepherd from the sheep. For you fancy that shepherds and rulers never think of their own interest, but only of their sheep or subjects, whereas the truth is that they fatten them for their use, sheep and subjects alike. And experience proves that in every relation of life the just man is the loser and the unjust the gainer, especially where injustice is on the grand scale, which is quite another thing from the petty rogueries of swindlers and burglars and robbers of temples. The language of men proves this—our 'gracious' and 'blessed' tyrant and the like—all which tends to show (1) that justice is the interest of the stronger; and (2) that injustice is more profitable and also stronger than justice.'

Thrasymachus, who is better at a speech than at a close argument, having deluged the company with words, has a mind to escape. But the others will not let him go, and Socrates adds a humble but earnest request that he will not desert them at such a crisis of their fate. 'And what can I do more for you?' he says; 'would you have me put the words bodily into your souls?' God forbid! replies Socrates; but we want you to be consistent in the use of terms, and not to employ 'physician' in an exact sense, and then again 'shepherd' or 'ruler' in an inexact,—if the words are strictly taken, the ruler and the shepherd look only to the good of their people or flocks and not to their own: whereas you insist that rulers are solely actuated by love of office. 'No doubt about it,' replies Thrasymachus. Then why are they paid? Is not the reason, that their interest is not comprehended in their art, and is therefore the concern of another art, the art of pay, which is common to the arts in general, and therefore not identical with any one of them? Nor would any man be a ruler unless he were induced by the hope of reward or the fear of punishment;—the reward is money or honour, the punishment is the necessity of being ruled by a man worse than himself. And if a State (or Church) were composed entirely of good men, they would be affected by the last motive only; and there would be as much 'nolo episcopari' as there is at present of the opposite...

The satire on existing governments is heightened by the simple and apparently incidental manner in which the last remark is introduced. There is a similar irony in the argument that the governors of mankind do not like being in office, and that therefore they demand pay.

...Enough of this: the other assertion of Thrasymachus is far more important—that the unjust life is more gainful than the just. Now, as you and I, Glaucon, are not convinced by him, we must reply to him; but if we try to compare their respective gains we shall want a judge to decide for us; we had better therefore proceed by making mutual admissions of the truth to one another.

Thrasymachus had asserted that perfect injustice was more gainful than perfect justice, and after a little hesitation he is induced by Socrates to admit the still greater paradox that injustice is virtue and justice vice. Socrates praises his frankness, and assumes the attitude of one whose only wish is to

understand the meaning of his opponents. At the same time he is weaving a net in which Thrasymachus is finally enclosed. The admission is elicited from him that the just man seeks to gain an advantage over the unjust only, but not over the just, while the unjust would gain an advantage over either. Socrates, in order to test this statement, employs once more the favourite analogy of the arts. The musician, doctor, skilled artist of any sort, does not seek to gain more than the skilled, but only more than the unskilled (that is to say, he works up to a rule, standard, law, and does not exceed it), whereas the unskilled makes random efforts at excess. Thus the skilled falls on the side of the good, and the unskilled on the side of the evil, and the just is the skilled, and the unjust is the unskilled.

There was great difficulty in bringing Thrasymachus to the point; the day was hot and he was streaming with perspiration, and for the first time in his life he was seen to blush. But his other thesis that injustice was stronger than justice has not yet been refuted, and Socrates now proceeds to the consideration of this, which, with the assistance of Thrasymachus, he hopes to clear up; the latter is at first churlish, but in the judicious hands of Socrates is soon restored to good-humour: Is there not honour among thieves? Is not the strength of injustice only a remnant of justice? Is not absolute injustice absolute weakness also? A house that is divided against itself cannot stand; two men who quarrel detract from one another's strength, and he who is at war with himself is the enemy of himself and the gods. Not wickedness therefore, but semi-wickedness flourishes in states,—a remnant of good is needed in order to make union in action possible,—there is no kingdom of evil in this world.

Another question has not been answered: Is the just or the unjust the happier? To this we reply, that every art has an end and an excellence or virtue by which the end is accomplished. And is not the end of the soul happiness, and justice the excellence of the soul by which happiness is attained? Justice and happiness being thus shown to be inseparable, the question whether the just or the unjust is the happier has disappeared.

Thrasymachus replies: 'Let this be your entertainment, Socrates, at the festival of Bendis.' Yes; and a very good entertainment with which your kindness has supplied me, now that you have left off scolding. And yet not a good entertainment—but that was my own fault, for I tasted of too many things. First of all the nature of justice was the subject of our enquiry, and then whether justice is virtue and wisdom, or evil and folly; and then the comparative advantages of just and unjust: and the sum of all is that I know not what justice is; how then shall I know whether the just is happy or not?...

Thus the sophistical fabric has been demolished, chiefly by appealing to the analogy of the arts. 'Justice is like the arts (1) in having no external interest, and (2) in not aiming at excess, and (3) justice is to happiness what the implement of the workman is to his work.' At this the modern reader is apt to stumble, because he forgets that Plato is writing in an age when the arts and the virtues, like the moral and intellectual faculties, were still undistinguished. Among early enquirers into the nature of human action the arts helped to fill up the void of speculation; and at first the comparison of the arts and the virtues was not perceived by them to be fallacious. They only saw the points of agreement in them and not the points of difference. Virtue, like art, must take means to an end; good manners are both an art and a virtue; character is naturally described under the image of a statue; and there are many other figures of speech which are readily transferred from art to morals. The next generation cleared up these perplexities; or at least supplied after ages with a further analysis of them. The contemporaries of Plato were in a state of transition, and had not yet fully realized the

common-sense distinction of Aristotle, that 'virtue is concerned with action, art with production' (Nic. Eth.), or that 'virtue implies intention and constancy of purpose,' whereas 'art requires knowledge only'. And yet in the absurdities which follow from some uses of the analogy, there seems to be an intimation conveyed that virtue is more than art. This is implied in the reductio ad absurdum that 'justice is a thief,' and in the dissatisfaction which Socrates expresses at the final result.

The expression 'an art of pay' which is described as 'common to all the arts' is not in accordance with the ordinary use of language. Nor is it employed elsewhere either by Plato or by any other Greek writer. It is suggested by the argument, and seems to extend the conception of art to doing as well as making. Another flaw or inaccuracy of language may be noted in the words 'men who are injured are made more unjust.' For those who are injured are not necessarily made worse, but only harmed or ill-treated.

The second of the three arguments, 'that the just does not aim at excess,' has a real meaning, though wrapped up in an enigmatical form. That the good is of the nature of the finite is a peculiarly Hellenic sentiment, which may be compared with the language of those modern writers who speak of virtue as fitness, and of freedom as obedience to law. The mathematical or logical notion of limit easily passes into an ethical one, and even finds a mythological expression in the conception of envy (Greek). Ideas of measure, equality, order, unity, proportion, still linger in the writings of moralists; and the true spirit of the fine arts is better conveyed by such terms than by superlatives.

> 'When workmen strive to do better than well,
> They do confound their skill in covetousness.' (King John.)

The harmony of the soul and body, and of the parts of the soul with one another, a harmony 'fairer than that of musical notes,' is the true Hellenic mode of conceiving the perfection of human nature.

In what may be called the epilogue of the discussion with Thrasymachus, Plato argues that evil is not a principle of strength, but of discord and dissolution, just touching the question which has been often treated in modern times by theologians and philosophers, of the negative nature of evil. In the last argument we trace the germ of the Aristotelian doctrine of an end and a virtue directed towards the end, which again is suggested by the arts. The final reconcilement of justice and happiness and the identity of the individual and the State are also intimated. Socrates reassumes the character of a 'know-nothing;' at the same time he appears to be not wholly satisfied with the manner in which the argument has been conducted. Nothing is concluded; but the tendency of the dialectical process, here as always, is to enlarge our conception of ideas, and to widen their application to human life.

BOOK II. Thrasymachus is pacified, but the intrepid Glaucon insists on continuing the argument. He is not satisfied with the indirect manner in which, at the end of the last book, Socrates had disposed of the question 'Whether the just or the unjust is the happier.' He begins by dividing goods into three classes:—first, goods desirable in themselves; secondly, goods desirable in themselves and for their results; thirdly, goods desirable for their results only. He then asks Socrates in which of the three classes he would place justice. In the second class, replies Socrates, among goods desirable for themselves and also for their results. 'Then the world in general are of another mind, for they say that justice belongs to the troublesome class of goods which are desirable for their results only. Socrates answers that this is the doctrine of Thrasymachus which he rejects. Glaucon thinks that

Thrasymachus was too ready to listen to the voice of the charmer, and proposes to consider the nature of justice and injustice in themselves and apart from the results and rewards of them which the world is always dinning in his ears. He will first of all speak of the nature and origin of justice; secondly, of the manner in which men view justice as a necessity and not a good; and thirdly, he will prove the reasonableness of this view.

'To do injustice is said to be a good; to suffer injustice an evil. As the evil is discovered by experience to be greater than the good, the sufferers, who cannot also be doers, make a compact that they will have neither, and this compact or mean is called justice, but is really the impossibility of doing injustice. No one would observe such a compact if he were not obliged. Let us suppose that the just and unjust have two rings, like that of Gyges in the well-known story, which make them invisible, and then no difference will appear in them, for every one will do evil if he can. And he who abstains will be regarded by the world as a fool for his pains. Men may praise him in public out of fear for themselves, but they will laugh at him in their hearts (Cp. Gorgias.)

'And now let us frame an ideal of the just and unjust. Imagine the unjust man to be master of his craft, seldom making mistakes and easily correcting them; having gifts of money, speech, strength—the greatest villain bearing the highest character: and at his side let us place the just in his nobleness and simplicity—being, not seeming—without name or reward—clothed in his justice only—the best of men who is thought to be the worst, and let him die as he has lived. I might add (but I would rather put the rest into the mouth of the panegyrists of injustice—they will tell you) that the just man will be scourged, racked, bound, will have his eyes put out, and will at last be crucified (literally impaled)—and all this because he ought to have preferred seeming to being. How different is the case of the unjust who clings to appearance as the true reality! His high character makes him a ruler; he can marry where he likes, trade where he likes, help his friends and hurt his enemies; having got rich by dishonesty he can worship the gods better, and will therefore be more loved by them than the just.'

I was thinking what to answer, when Adeimantus joined in the already unequal fray. He considered that the most important point of all had been omitted:—'Men are taught to be just for the sake of rewards; parents and guardians make reputation the incentive to virtue. And other advantages are promised by them of a more solid kind, such as wealthy marriages and high offices. There are the pictures in Homer and Hesiod of fat sheep and heavy fleeces, rich corn-fields and trees toppling with fruit, which the gods provide in this life for the just. And the Orphic poets add a similar picture of another. The heroes of Musaeus and Eumolpus lie on couches at a festival, with garlands on their heads, enjoying as the meed of virtue a paradise of immortal drunkenness. Some go further, and speak of a fair posterity in the third and fourth generation. But the wicked they bury in a slough and make them carry water in a sieve: and in this life they attribute to them the infamy which Glaucon was assuming to be the lot of the just who are supposed to be unjust.

'Take another kind of argument which is found both in poetry and prose:—"Virtue," as Hesiod says, "is honourable but difficult, vice is easy and profitable." You may often see the wicked in great prosperity and the righteous afflicted by the will of heaven. And mendicant prophets knock at rich men's doors, promising to atone for the sins of themselves or their fathers in an easy fashion with sacrifices and festive games, or with charms and invocations to get rid of an enemy good or bad by divine help and at a small charge;—they appeal to books professing to be written by Musaeus and

Orpheus, and carry away the minds of whole cities, and promise to "get souls out of purgatory;" and if we refuse to listen to them, no one knows what will happen to us.

'When a lively-minded ingenuous youth hears all this, what will be his conclusion? "Will he," in the language of Pindar, "make justice his high tower, or fortify himself with crooked deceit?" Justice, he reflects, without the appearance of justice, is misery and ruin; injustice has the promise of a glorious life. Appearance is master of truth and lord of happiness. To appearance then I will turn,—I will put on the show of virtue and trail behind me the fox of Archilochus. I hear some one saying that "wickedness is not easily concealed," to which I reply that "nothing great is easy." Union and force and rhetoric will do much; and if men say that they cannot prevail over the gods, still how do we know that there are gods? Only from the poets, who acknowledge that they may be appeased by sacrifices. Then why not sin and pay for indulgences out of your sin? For if the righteous are only unpunished, still they have no further reward, while the wicked may be unpunished and have the pleasure of sinning too. But what of the world below? Nay, says the argument, there are atoning powers who will set that matter right, as the poets, who are the sons of the gods, tell us; and this is confirmed by the authority of the State.

'How can we resist such arguments in favour of injustice? Add good manners, and, as the wise tell us, we shall make the best of both worlds. Who that is not a miserable caitiff will refrain from smiling at the praises of justice? Even if a man knows the better part he will not be angry with others; for he knows also that more than human virtue is needed to save a man, and that he only praises justice who is incapable of injustice.

'The origin of the evil is that all men from the beginning, heroes, poets, instructors of youth, have always asserted "the temporal dispensation," the honours and profits of justice. Had we been taught in early youth the power of justice and injustice inherent in the soul, and unseen by any human or divine eye, we should not have needed others to be our guardians, but every one would have been the guardian of himself. This is what I want you to show, Socrates;—other men use arguments which rather tend to strengthen the position of Thrasymachus that "might is right;" but from you I expect better things. And please, as Glaucon said, to exclude reputation; let the just be thought unjust and the unjust just, and do you still prove to us the superiority of justice'...

The thesis, which for the sake of argument has been maintained by Glaucon, is the converse of that of Thrasymachus—not right is the interest of the stronger, but right is the necessity of the weaker. Starting from the same premises he carries the analysis of society a step further back;—might is still right, but the might is the weakness of the many combined against the strength of the few.

There have been theories in modern as well as in ancient times which have a family likeness to the speculations of Glaucon; e.g. that power is the foundation of right; or that a monarch has a divine right to govern well or ill; or that virtue is self-love or the love of power; or that war is the natural state of man; or that private vices are public benefits. All such theories have a kind of plausibility from their partial agreement with experience. For human nature oscillates between good and evil, and the motives of actions and the origin of institutions may be explained to a certain extent on either hypothesis according to the character or point of view of a particular thinker. The obligation of maintaining authority under all circumstances and sometimes by rather questionable means is felt strongly and has become a sort of instinct among civilized men. The divine right of kings, or more

generally of governments, is one of the forms under which this natural feeling is expressed. Nor again is there any evil which has not some accompaniment of good or pleasure; nor any good which is free from some alloy of evil; nor any noble or generous thought which may not be attended by a shadow or the ghost of a shadow of self-interest or of self-love. We know that all human actions are imperfect; but we do not therefore attribute them to the worse rather than to the better motive or principle. Such a philosophy is both foolish and false, like that opinion of the clever rogue who assumes all other men to be like himself. And theories of this sort do not represent the real nature of the State, which is based on a vague sense of right gradually corrected and enlarged by custom and law (although capable also of perversion), any more than they describe the origin of society, which is to be sought in the family and in the social and religious feelings of man. Nor do they represent the average character of individuals, which cannot be explained simply on a theory of evil, but has always a counteracting element of good. And as men become better such theories appear more and more untruthful to them, because they are more conscious of their own disinterestedness. A little experience may make a man a cynic; a great deal will bring him back to a truer and kindlier view of the mixed nature of himself and his fellow men.

The two brothers ask Socrates to prove to them that the just is happy when they have taken from him all that in which happiness is ordinarily supposed to consist. Not that there is (1) any absurdity in the attempt to frame a notion of justice apart from circumstances. For the ideal must always be a paradox when compared with the ordinary conditions of human life. Neither the Stoical ideal nor the Christian ideal is true as a fact, but they may serve as a basis of education, and may exercise an ennobling influence. An ideal is none the worse because 'some one has made the discovery' that no such ideal was ever realized. And in a few exceptional individuals who are raised above the ordinary level of humanity, the ideal of happiness may be realized in death and misery. This may be the state which the reason deliberately approves, and which the utilitarian as well as every other moralist may be bound in certain cases to prefer.

Nor again, (2) must we forget that Plato, though he agrees generally with the view implied in the argument of the two brothers, is not expressing his own final conclusion, but rather seeking to dramatize one of the aspects of ethical truth. He is developing his idea gradually in a series of positions or situations. He is exhibiting Socrates for the first time undergoing the Socratic interrogation. Lastly, (3) the word 'happiness' involves some degree of confusion because associated in the language of modern philosophy with conscious pleasure or satisfaction, which was not equally present to his mind.

Glaucon has been drawing a picture of the misery of the just and the happiness of the unjust, to which the misery of the tyrant in Book IX is the answer and parallel. And still the unjust must appear just; that is 'the homage which vice pays to virtue.' But now Adeimantus, taking up the hint which had been already given by Glaucon, proceeds to show that in the opinion of mankind justice is regarded only for the sake of rewards and reputation, and points out the advantage which is given to such arguments as those of Thrasymachus and Glaucon by the conventional morality of mankind. He seems to feel the difficulty of 'justifying the ways of God to man.' Both the brothers touch upon the question, whether the morality of actions is determined by their consequences; and both of them go beyond the position of Socrates, that justice belongs to the class of goods not desirable for themselves only, but desirable for themselves and for their results, to which he recalls them. In their attempt to view justice as an internal principle, and in their condemnation of the poets, they anticipate

him. The common life of Greece is not enough for them; they must penetrate deeper into the nature of things.

It has been objected that justice is honesty in the sense of Glaucon and Adeimantus, but is taken by Socrates to mean all virtue. May we not more truly say that the old-fashioned notion of justice is enlarged by Socrates, and becomes equivalent to universal order or well-being, first in the State, and secondly in the individual? He has found a new answer to his old question (Protag.), 'whether the virtues are one or many,' viz. that one is the ordering principle of the three others. In seeking to establish the purely internal nature of justice, he is met by the fact that man is a social being, and he tries to harmonise the two opposite theses as well as he can. There is no more inconsistency in this than was inevitable in his age and country; there is no use in turning upon him the cross lights of modern philosophy, which, from some other point of view, would appear equally inconsistent. Plato does not give the final solution of philosophical questions for us; nor can he be judged of by our standard.

The remainder of the Republic is developed out of the question of the sons of Ariston. Three points are deserving of remark in what immediately follows:—First, that the answer of Socrates is altogether indirect. He does not say that happiness consists in the contemplation of the idea of justice, and still less will he be tempted to affirm the Stoical paradox that the just man can be happy on the rack. But first he dwells on the difficulty of the problem and insists on restoring man to his natural condition, before he will answer the question at all. He too will frame an ideal, but his ideal comprehends not only abstract justice, but the whole relations of man. Under the fanciful illustration of the large letters he implies that he will only look for justice in society, and that from the State he will proceed to the individual. His answer in substance amounts to this,—that under favourable conditions, i.e. in the perfect State, justice and happiness will coincide, and that when justice has been once found, happiness may be left to take care of itself. That he falls into some degree of inconsistency, when in the tenth book he claims to have got rid of the rewards and honours of justice, may be admitted; for he has left those which exist in the perfect State. And the philosopher 'who retires under the shelter of a wall' can hardly have been esteemed happy by him, at least not in this world. Still he maintains the true attitude of moral action. Let a man do his duty first, without asking whether he will be happy or not, and happiness will be the inseparable accident which attends him. 'Seek ye first the kingdom of God and his righteousness, and all these things shall be added unto you.'

Secondly, it may be remarked that Plato preserves the genuine character of Greek thought in beginning with the State and in going on to the individual. First ethics, then politics—this is the order of ideas to us; the reverse is the order of history. Only after many struggles of thought does the individual assert his right as a moral being. In early ages he is not ONE, but one of many, the citizen of a State which is prior to him; and he has no notion of good or evil apart from the law of his country or the creed of his church. And to this type he is constantly tending to revert, whenever the influence of custom, or of party spirit, or the recollection of the past becomes too strong for him.

Thirdly, we may observe the confusion or identification of the individual and the State, of ethics and politics, which pervades early Greek speculation, and even in modern times retains a certain degree of influence. The subtle difference between the collective and individual action of mankind seems to have escaped early thinkers, and we too are sometimes in danger of forgetting the conditions of united human action, whenever we either elevate politics into ethics, or lower ethics to the standard of

politics. The good man and the good citizen only coincide in the perfect State; and this perfection cannot be attained by legislation acting upon them from without, but, if at all, by education fashioning them from within.

...Socrates praises the sons of Ariston, 'inspired offspring of the renowned hero,' as the elegiac poet terms them; but he does not understand how they can argue so eloquently on behalf of injustice while their character shows that they are uninfluenced by their own arguments. He knows not how to answer them, although he is afraid of deserting justice in the hour of need. He therefore makes a condition, that having weak eyes he shall be allowed to read the large letters first and then go on to the smaller, that is, he must look for justice in the State first, and will then proceed to the individual. Accordingly he begins to construct the State.

Society arises out of the wants of man. His first want is food; his second a house; his third a coat. The sense of these needs and the possibility of satisfying them by exchange, draw individuals together on the same spot; and this is the beginning of a State, which we take the liberty to invent, although necessity is the real inventor. There must be first a husbandman, secondly a builder, thirdly a weaver, to which may be added a cobbler. Four or five citizens at least are required to make a city. Now men have different natures, and one man will do one thing better than many; and business waits for no man. Hence there must be a division of labour into different employments; into wholesale and retail trade; into workers, and makers of workmen's tools; into shepherds and husbandmen. A city which includes all this will have far exceeded the limit of four or five, and yet not be very large. But then again imports will be required, and imports necessitate exports, and this implies variety of produce in order to attract the taste of purchasers; also merchants and ships. In the city too we must have a market and money and retail trades; otherwise buyers and sellers will never meet, and the valuable time of the producers will be wasted in vain efforts at exchange. If we add hired servants the State will be complete. And we may guess that somewhere in the intercourse of the citizens with one another justice and injustice will appear.

Here follows a rustic picture of their way of life. They spend their days in houses which they have built for themselves; they make their own clothes and produce their own corn and wine. Their principal food is meal and flour, and they drink in moderation. They live on the best of terms with each other, and take care not to have too many children. 'But,' said Glaucon, interposing, 'are they not to have a relish?' Certainly; they will have salt and olives and cheese, vegetables and fruits, and chestnuts to roast at the fire. ''Tis a city of pigs, Socrates.' Why, I replied, what do you want more? 'Only the comforts of life,—sofas and tables, also sauces and sweets.' I see; you want not only a State, but a luxurious State; and possibly in the more complex frame we may sooner find justice and injustice. Then the fine arts must go to work—every conceivable instrument and ornament of luxury will be wanted. There will be dancers, painters, sculptors, musicians, cooks, barbers, tire-women, nurses, artists; swineherds and neatherds too for the animals, and physicians to cure the disorders of which luxury is the source. To feed all these superfluous mouths we shall need a part of our neighbour's land, and they will want a part of ours. And this is the origin of war, which may be traced to the same causes as other political evils. Our city will now require the slight addition of a camp, and the citizen will be converted into a soldier. But then again our old doctrine of the division of labour must not be forgotten. The art of war cannot be learned in a day, and there must be a natural aptitude for military duties. There will be some warlike natures who have this aptitude—dogs keen of scent, swift of foot to pursue, and strong of limb to fight. And as spirit is the foundation of courage, such natures, whether

of men or animals, will be full of spirit. But these spirited natures are apt to bite and devour one another; the union of gentleness to friends and fierceness against enemies appears to be an impossibility, and the guardian of a State requires both qualities. Who then can be a guardian? The image of the dog suggests an answer. For dogs are gentle to friends and fierce to strangers. Your dog is a philosopher who judges by the rule of knowing or not knowing; and philosophy, whether in man or beast, is the parent of gentleness. The human watchdogs must be philosophers or lovers of learning which will make them gentle. And how are they to be learned without education?

But what shall their education be? Is any better than the old-fashioned sort which is comprehended under the name of music and gymnastic? Music includes literature, and literature is of two kinds, true and false. 'What do you mean?' he said. I mean that children hear stories before they learn gymnastics, and that the stories are either untrue, or have at most one or two grains of truth in a bushel of falsehood. Now early life is very impressible, and children ought not to learn what they will have to unlearn when they grow up; we must therefore have a censorship of nursery tales, banishing some and keeping others. Some of them are very improper, as we may see in the great instances of Homer and Hesiod, who not only tell lies but bad lies; stories about Uranus and Saturn, which are immoral as well as false, and which should never be spoken of to young persons, or indeed at all; or, if at all, then in a mystery, after the sacrifice, not of an Eleusinian pig, but of some unprocurable animal. Shall our youth be encouraged to beat their fathers by the example of Zeus, or our citizens be incited to quarrel by hearing or seeing representations of strife among the gods? Shall they listen to the narrative of Hephaestus binding his mother, and of Zeus sending him flying for helping her when she was beaten? Such tales may possibly have a mystical interpretation, but the young are incapable of understanding allegory. If any one asks what tales are to be allowed, we will answer that we are legislators and not book-makers; we only lay down the principles according to which books are to be written; to write them is the duty of others.

And our first principle is, that God must be represented as he is; not as the author of all things, but of good only. We will not suffer the poets to say that he is the steward of good and evil, or that he has two casks full of destinies;—or that Athene and Zeus incited Pandarus to break the treaty; or that God caused the sufferings of Niobe, or of Pelops, or the Trojan war; or that he makes men sin when he wishes to destroy them. Either these were not the actions of the gods, or God was just, and men were the better for being punished. But that the deed was evil, and God the author, is a wicked, suicidal fiction which we will allow no one, old or young, to utter. This is our first and great principle—God is the author of good only.

And the second principle is like unto it:—With God is no variableness or change of form. Reason teaches us this; for if we suppose a change in God, he must be changed either by another or by himself. By another?—but the best works of nature and art and the noblest qualities of mind are least liable to be changed by any external force. By himself?—but he cannot change for the better; he will hardly change for the worse. He remains for ever fairest and best in his own image. Therefore we refuse to listen to the poets who tell us of Here begging in the likeness of a priestess or of other deities who prowl about at night in strange disguises; all that blasphemous nonsense with which mothers fool the manhood out of their children must be suppressed. But some one will say that God, who is himself unchangeable, may take a form in relation to us. Why should he? For gods as well as men hate the lie in the soul, or principle of falsehood; and as for any other form of lying which is used for a purpose and is regarded as innocent in certain exceptional cases—what need have the gods of

this? For they are not ignorant of antiquity like the poets, nor are they afraid of their enemies, nor is any madman a friend of theirs. God then is true, he is absolutely true; he changes not, he deceives not, by day or night, by word or sign. This is our second great principle—God is true. Away with the lying dream of Agamemnon in Homer, and the accusation of Thetis against Apollo in Aeschylus...

In order to give clearness to his conception of the State, Plato proceeds to trace the first principles of mutual need and of division of labour in an imaginary community of four or five citizens. Gradually this community increases; the division of labour extends to countries; imports necessitate exports; a medium of exchange is required, and retailers sit in the market-place to save the time of the producers. These are the steps by which Plato constructs the first or primitive State, introducing the elements of political economy by the way. As he is going to frame a second or civilized State, the simple naturally comes before the complex. He indulges, like Rousseau, in a picture of primitive life—an idea which has indeed often had a powerful influence on the imagination of mankind, but he does not seriously mean to say that one is better than the other (Politicus); nor can any inference be drawn from the description of the first state taken apart from the second, such as Aristotle appears to draw in the Politics. We should not interpret a Platonic dialogue any more than a poem or a parable in too literal or matter-of-fact a style. On the other hand, when we compare the lively fancy of Plato with the dried-up abstractions of modern treatises on philosophy, we are compelled to say with Protagoras, that the 'mythus is more interesting' (Protag.)

Several interesting remarks which in modern times would have a place in a treatise on Political Economy are scattered up and down the writings of Plato: especially Laws, Population; Free Trade; Adulteration; Wills and Bequests; Begging; Eryxias, (though not Plato's), Value and Demand; Republic, Division of Labour. The last subject, and also the origin of Retail Trade, is treated with admirable lucidity in the second book of the Republic. But Plato never combined his economic ideas into a system, and never seems to have recognized that Trade is one of the great motive powers of the State and of the world. He would make retail traders only of the inferior sort of citizens (Rep., Laws), though he remarks, quaintly enough (Laws), that 'if only the best men and the best women everywhere were compelled to keep taverns for a time or to carry on retail trade, etc., then we should knew how pleasant and agreeable all these things are.'

The disappointment of Glaucon at the 'city of pigs,' the ludicrous description of the ministers of luxury in the more refined State, and the afterthought of the necessity of doctors, the illustration of the nature of the guardian taken from the dog, the desirableness of offering some almost unprocurable victim when impure mysteries are to be celebrated, the behaviour of Zeus to his father and of Hephaestus to his mother, are touches of humour which have also a serious meaning. In speaking of education Plato rather startles us by affirming that a child must be trained in falsehood first and in truth afterwards. Yet this is not very different from saying that children must be taught through the medium of imagination as well as reason; that their minds can only develope gradually, and that there is much which they must learn without understanding. This is also the substance of Plato's view, though he must be acknowledged to have drawn the line somewhat differently from modern ethical writers, respecting truth and falsehood. To us, economies or accommodations would not be allowable unless they were required by the human faculties or necessary for the communication of knowledge to the simple and ignorant. We should insist that the word was inseparable from the intention, and that we must not be 'falsely true,' i.e. speak or act falsely in support of what was right or true. But Plato would

limit the use of fictions only by requiring that they should have a good moral effect, and that such a dangerous weapon as falsehood should be employed by the rulers alone and for great objects.

A Greek in the age of Plato attached no importance to the question whether his religion was an historical fact. He was just beginning to be conscious that the past had a history; but he could see nothing beyond Homer and Hesiod. Whether their narratives were true or false did not seriously affect the political or social life of Hellas. Men only began to suspect that they were fictions when they recognised them to be immoral. And so in all religions: the consideration of their morality comes first, afterwards the truth of the documents in which they are recorded, or of the events natural or supernatural which are told of them. But in modern times, and in Protestant countries perhaps more than in Catholic, we have been too much inclined to identify the historical with the moral; and some have refused to believe in religion at all, unless a superhuman accuracy was discernible in every part of the record. The facts of an ancient or religious history are amongst the most important of all facts; but they are frequently uncertain, and we only learn the true lesson which is to be gathered from them when we place ourselves above them. These reflections tend to show that the difference between Plato and ourselves, though not unimportant, is not so great as might at first sight appear. For we should agree with him in placing the moral before the historical truth of religion; and, generally, in disregarding those errors or misstatements of fact which necessarily occur in the early stages of all religions. We know also that changes in the traditions of a country cannot be made in a day; and are therefore tolerant of many things which science and criticism would condemn.

We note in passing that the allegorical interpretation of mythology, said to have been first introduced as early as the sixth century before Christ by Theagenes of Rhegium, was well established in the age of Plato, and here, as in the Phaedrus, though for a different reason, was rejected by him. That anachronisms whether of religion or law, when men have reached another stage of civilization, should be got rid of by fictions is in accordance with universal experience. Great is the art of interpretation; and by a natural process, which when once discovered was always going on, what could not be altered was explained away. And so without any palpable inconsistency there existed side by side two forms of religion, the tradition inherited or invented by the poets and the customary worship of the temple; on the other hand, there was the religion of the philosopher, who was dwelling in the heaven of ideas, but did not therefore refuse to offer a cock to Aesculapius, or to be seen saying his prayers at the rising of the sun. At length the antagonism between the popular and philosophical religion, never so great among the Greeks as in our own age, disappeared, and was only felt like the difference between the religion of the educated and uneducated among ourselves. The Zeus of Homer and Hesiod easily passed into the 'royal mind' of Plato (Philebus); the giant Heracles became the knight-errant and benefactor of mankind. These and still more wonderful transformations were readily effected by the ingenuity of Stoics and neo-Platonists in the two or three centuries before and after Christ. The Greek and Roman religions were gradually permeated by the spirit of philosophy; having lost their ancient meaning, they were resolved into poetry and morality; and probably were never purer than at the time of their decay, when their influence over the world was waning.

A singular conception which occurs towards the end of the book is the lie in the soul; this is connected with the Platonic and Socratic doctrine that involuntary ignorance is worse than voluntary. The lie in the soul is a true lie, the corruption of the highest truth, the deception of the highest part of the soul, from which he who is deceived has no power of delivering himself. For example, to represent God as false or immoral, or, according to Plato, as deluding men with appearances or as

the author of evil; or again, to affirm with Protagoras that 'knowledge is sensation,' or that 'being is becoming,' or with Thrasymachus 'that might is right,' would have been regarded by Plato as a lie of this hateful sort. The greatest unconsciousness of the greatest untruth, e.g. if, in the language of the Gospels (John), 'he who was blind' were to say 'I see,' is another aspect of the state of mind which Plato is describing. The lie in the soul may be further compared with the sin against the Holy Ghost (Luke), allowing for the difference between Greek and Christian modes of speaking. To this is opposed the lie in words, which is only such a deception as may occur in a play or poem, or allegory or figure of speech, or in any sort of accommodation,—which though useless to the gods may be useful to men in certain cases. Socrates is here answering the question which he had himself raised about the propriety of deceiving a madman; and he is also contrasting the nature of God and man. For God is Truth, but mankind can only be true by appearing sometimes to be partial, or false. Reserving for another place the greater questions of religion or education, we may note further, (1) the approval of the old traditional education of Greece; (2) the preparation which Plato is making for the attack on Homer and the poets; (3) the preparation which he is also making for the use of economies in the State; (4) the contemptuous and at the same time euphemistic manner in which here as below he alludes to the 'Chronique Scandaleuse' of the gods.

BOOK III. There is another motive in purifying religion, which is to banish fear; for no man can be courageous who is afraid of death, or who believes the tales which are repeated by the poets concerning the world below. They must be gently requested not to abuse hell; they may be reminded that their stories are both untrue and discouraging. Nor must they be angry if we expunge obnoxious passages, such as the depressing words of Achilles—'I would rather be a serving-man than rule over all the dead;' and the verses which tell of the squalid mansions, the senseless shadows, the flitting soul mourning over lost strength and youth, the soul with a gibber going beneath the earth like smoke, or the souls of the suitors which flutter about like bats. The terrors and horrors of Cocytus and Styx, ghosts and sapless shades, and the rest of their Tartarean nomenclature, must vanish. Such tales may have their use; but they are not the proper food for soldiers. As little can we admit the sorrows and sympathies of the Homeric heroes:—Achilles, the son of Thetis, in tears, throwing ashes on his head, or pacing up and down the sea-shore in distraction; or Priam, the cousin of the gods, crying aloud, rolling in the mire. A good man is not prostrated at the loss of children or fortune. Neither is death terrible to him; and therefore lamentations over the dead should not be practised by men of note; they should be the concern of inferior persons only, whether women or men. Still worse is the attribution of such weakness to the gods; as when the goddesses say, 'Alas! my travail!' and worst of all, when the king of heaven himself laments his inability to save Hector, or sorrows over the impending doom of his dear Sarpedon. Such a character of God, if not ridiculed by our young men, is likely to be imitated by them. Nor should our citizens be given to excess of laughter—'Such violent delights' are followed by a violent re-action. The description in the Iliad of the gods shaking their sides at the clumsiness of Hephaestus will not be admitted by us. 'Certainly not.'

Truth should have a high place among the virtues, for falsehood, as we were saying, is useless to the gods, and only useful to men as a medicine. But this employment of falsehood must remain a privilege of state; the common man must not in return tell a lie to the ruler; any more than the patient would tell a lie to his physician, or the sailor to his captain.

In the next place our youth must be temperate, and temperance consists in self-control and obedience to authority. That is a lesson which Homer teaches in some places: 'The Achaeans

marched on breathing prowess, in silent awe of their leaders;'—but a very different one in other places: 'O heavy with wine, who hast the eyes of a dog, but the heart of a stag.' Language of the latter kind will not impress self-control on the minds of youth. The same may be said about his praises of eating and drinking and his dread of starvation; also about the verses in which he tells of the rapturous loves of Zeus and Here, or of how Hephaestus once detained Ares and Aphrodite in a net on a similar occasion. There is a nobler strain heard in the words:—'Endure, my soul, thou hast endured worse.' Nor must we allow our citizens to receive bribes, or to say, 'Gifts persuade the gods, gifts reverend kings;' or to applaud the ignoble advice of Phoenix to Achilles that he should get money out of the Greeks before he assisted them; or the meanness of Achilles himself in taking gifts from Agamemnon; or his requiring a ransom for the body of Hector; or his cursing of Apollo; or his insolence to the river-god Scamander; or his dedication to the dead Patroclus of his own hair which had been already dedicated to the other river-god Spercheius; or his cruelty in dragging the body of Hector round the walls, and slaying the captives at the pyre: such a combination of meanness and cruelty in Cheiron's pupil is inconceivable. The amatory exploits of Peirithous and Theseus are equally unworthy. Either these so-called sons of gods were not the sons of gods, or they were not such as the poets imagine them, any more than the gods themselves are the authors of evil. The youth who believes that such things are done by those who have the blood of heaven flowing in their veins will be too ready to imitate their example.

Enough of gods and heroes;—what shall we say about men? What the poets and story-tellers say—that the wicked prosper and the righteous are afflicted, or that justice is another's gain? Such misrepresentations cannot be allowed by us. But in this we are anticipating the definition of justice, and had therefore better defer the enquiry.

The subjects of poetry have been sufficiently treated; next follows style. Now all poetry is a narrative of events past, present, or to come; and narrative is of three kinds, the simple, the imitative, and a composition of the two. An instance will make my meaning clear. The first scene in Homer is of the last or mixed kind, being partly description and partly dialogue. But if you throw the dialogue into the 'oratio obliqua,' the passage will run thus: The priest came and prayed Apollo that the Achaeans might take Troy and have a safe return if Agamemnon would only give him back his daughter; and the other Greeks assented, but Agamemnon was wroth, and so on—The whole then becomes descriptive, and the poet is the only speaker left; or, if you omit the narrative, the whole becomes dialogue. These are the three styles—which of them is to be admitted into our State? 'Do you ask whether tragedy and comedy are to be admitted?' Yes, but also something more—Is it not doubtful whether our guardians are to be imitators at all? Or rather, has not the question been already answered, for we have decided that one man cannot in his life play many parts, any more than he can act both tragedy and comedy, or be rhapsodist and actor at once? Human nature is coined into very small pieces, and as our guardians have their own business already, which is the care of freedom, they will have enough to do without imitating. If they imitate they should imitate, not any meanness or baseness, but the good only; for the mask which the actor wears is apt to become his face. We cannot allow men to play the parts of women, quarrelling, weeping, scolding, or boasting against the gods,—least of all when making love or in labour. They must not represent slaves, or bullies, or cowards, drunkards, or madmen, or blacksmiths, or neighing horses, or bellowing bulls, or sounding rivers, or a raging sea. A good or wise man will be willing to perform good and wise actions, but he will be ashamed to play an inferior part which he has never practised; and he will prefer to employ the descriptive style with as little imitation as possible. The man who has no self-respect, on the contrary,

will imitate anybody and anything; sounds of nature and cries of animals alike; his whole performance will be imitation of gesture and voice. Now in the descriptive style there are few changes, but in the dramatic there are a great many. Poets and musicians use either, or a compound of both, and this compound is very attractive to youth and their teachers as well as to the vulgar. But our State in which one man plays one part only is not adapted for complexity. And when one of these polyphonous pantomimic gentlemen offers to exhibit himself and his poetry we will show him every observance of respect, but at the same time tell him that there is no room for his kind in our State; we prefer the rough, honest poet, and will not depart from our original models (Laws).

Next as to the music. A song or ode has three parts,—the subject, the harmony, and the rhythm; of which the two last are dependent upon the first. As we banished strains of lamentation, so we may now banish the mixed Lydian harmonies, which are the harmonies of lamentation; and as our citizens are to be temperate, we may also banish convivial harmonies, such as the Ionian and pure Lydian. Two remain—the Dorian and Phrygian, the first for war, the second for peace; the one expressive of courage, the other of obedience or instruction or religious feeling. And as we reject varieties of harmony, we shall also reject the many-stringed, variously-shaped instruments which give utterance to them, and in particular the flute, which is more complex than any of them. The lyre and the harp may be permitted in the town, and the Pan's-pipe in the fields. Thus we have made a purgation of music, and will now make a purgation of metres. These should be like the harmonies, simple and suitable to the occasion. There are four notes of the tetrachord, and there are three ratios of metre, 3/2, 2/2, 2/1, which have all their characteristics, and the feet have different characteristics as well as the rhythms. But about this you and I must ask Damon, the great musician, who speaks, if I remember rightly, of a martial measure as well as of dactylic, trochaic, and iambic rhythms, which he arranges so as to equalize the syllables with one another, assigning to each the proper quantity. We only venture to affirm the general principle that the style is to conform to the subject and the metre to the style; and that the simplicity and harmony of the soul should be reflected in them all. This principle of simplicity has to be learnt by every one in the days of his youth, and may be gathered anywhere, from the creative and constructive arts, as well as from the forms of plants and animals.

Other artists as well as poets should be warned against meanness or unseemliness. Sculpture and painting equally with music must conform to the law of simplicity. He who violates it cannot be allowed to work in our city, and to corrupt the taste of our citizens. For our guardians must grow up, not amid images of deformity which will gradually poison and corrupt their souls, but in a land of health and beauty where they will drink in from every object sweet and harmonious influences. And of all these influences the greatest is the education given by music, which finds a way into the innermost soul and imparts to it the sense of beauty and of deformity. At first the effect is unconscious; but when reason arrives, then he who has been thus trained welcomes her as the friend whom he always knew. As in learning to read, first we acquire the elements or letters separately, and afterwards their combinations, and cannot recognize reflections of them until we know the letters themselves;—in like manner we must first attain the elements or essential forms of the virtues, and then trace their combinations in life and experience. There is a music of the soul which answers to the harmony of the world; and the fairest object of a musical soul is the fair mind in the fair body. Some defect in the latter may be excused, but not in the former. True love is the daughter of temperance, and temperance is utterly opposed to the madness of bodily pleasure. Enough has been said of music, which makes a fair ending with love.

Next we pass on to gymnastics; about which I would remark, that the soul is related to the body as a cause to an effect, and therefore if we educate the mind we may leave the education of the body in her charge, and need only give a general outline of the course to be pursued. In the first place the guardians must abstain from strong drink, for they should be the last persons to lose their wits. Whether the habits of the palaestra are suitable to them is more doubtful, for the ordinary gymnastic is a sleepy sort of thing, and if left off suddenly is apt to endanger health. But our warrior athletes must be wide-awake dogs, and must also be inured to all changes of food and climate. Hence they will require a simpler kind of gymnastic, akin to their simple music; and for their diet a rule may be found in Homer, who feeds his heroes on roast meat only, and gives them no fish although they are living at the sea-side, nor boiled meats which involve an apparatus of pots and pans; and, if I am not mistaken, he nowhere mentions sweet sauces. Sicilian cookery and Attic confections and Corinthian courtezans, which are to gymnastic what Lydian and Ionian melodies are to music, must be forbidden. Where gluttony and intemperance prevail the town quickly fills with doctors and pleaders; and law and medicine give themselves airs as soon as the freemen of a State take an interest in them. But what can show a more disgraceful state of education than to have to go abroad for justice because you have none of your own at home? And yet there IS a worse stage of the same disease—when men have learned to take a pleasure and pride in the twists and turns of the law; not considering how much better it would be for them so to order their lives as to have no need of a nodding justice. And there is a like disgrace in employing a physician, not for the cure of wounds or epidemic disorders, but because a man has by laziness and luxury contracted diseases which were unknown in the days of Asclepius. How simple is the Homeric practice of medicine. Eurypylus after he has been wounded drinks a posset of Pramnian wine, which is of a heating nature; and yet the sons of Asclepius blame neither the damsel who gives him the drink, nor Patroclus who is attending on him. The truth is that this modern system of nursing diseases was introduced by Herodicus the trainer; who, being of a sickly constitution, by a compound of training and medicine tortured first himself and then a good many other people, and lived a great deal longer than he had any right. But Asclepius would not practise this art, because he knew that the citizens of a well-ordered State have no leisure to be ill, and therefore he adopted the 'kill or cure' method, which artisans and labourers employ. 'They must be at their business,' they say, 'and have no time for coddling: if they recover, well; if they don't, there is an end of them.' Whereas the rich man is supposed to be a gentleman who can afford to be ill. Do you know a maxim of Phocylides—that 'when a man begins to be rich' (or, perhaps, a little sooner) 'he should practise virtue'? But how can excessive care of health be inconsistent with an ordinary occupation, and yet consistent with that practice of virtue which Phocylides inculcates? When a student imagines that philosophy gives him a headache, he never does anything; he is always unwell. This was the reason why Asclepius and his sons practised no such art. They were acting in the interest of the public, and did not wish to preserve useless lives, or raise up a puny offspring to wretched sires. Honest diseases they honestly cured; and if a man was wounded, they applied the proper remedies, and then let him eat and drink what he liked. But they declined to treat intemperate and worthless subjects, even though they might have made large fortunes out of them. As to the story of Pindar, that Asclepius was slain by a thunderbolt for restoring a rich man to life, that is a lie—following our old rule we must say either that he did not take bribes, or that he was not the son of a god.

Glaucon then asks Socrates whether the best physicians and the best judges will not be those who have had severally the greatest experience of diseases and of crimes. Socrates draws a distinction between the two professions. The physician should have had experience of disease in his own body,

for he cures with his mind and not with his body. But the judge controls mind by mind; and therefore his mind should not be corrupted by crime. Where then is he to gain experience? How is he to be wise and also innocent? When young a good man is apt to be deceived by evil-doers, because he has no pattern of evil in himself; and therefore the judge should be of a certain age; his youth should have been innocent, and he should have acquired insight into evil not by the practice of it, but by the observation of it in others. This is the ideal of a judge; the criminal turned detective is wonderfully suspicious, but when in company with good men who have experience, he is at fault, for he foolishly imagines that every one is as bad as himself. Vice may be known of virtue, but cannot know virtue. This is the sort of medicine and this the sort of law which will prevail in our State; they will be healing arts to better natures; but the evil body will be left to die by the one, and the evil soul will be put to death by the other. And the need of either will be greatly diminished by good music which will give harmony to the soul, and good gymnastic which will give health to the body. Not that this division of music and gymnastic really corresponds to soul and body; for they are both equally concerned with the soul, which is tamed by the one and aroused and sustained by the other. The two together supply our guardians with their twofold nature. The passionate disposition when it has too much gymnastic is hardened and brutalized, the gentle or philosophic temper which has too much music becomes enervated. While a man is allowing music to pour like water through the funnel of his ears, the edge of his soul gradually wears away, and the passionate or spirited element is melted out of him. Too little spirit is easily exhausted; too much quickly passes into nervous irritability. So, again, the athlete by feeding and training has his courage doubled, but he soon grows stupid; he is like a wild beast, ready to do everything by blows and nothing by counsel or policy. There are two principles in man, reason and passion, and to these, not to the soul and body, the two arts of music and gymnastic correspond. He who mingles them in harmonious concord is the true musician,—he shall be the presiding genius of our State.

The next question is, Who are to be our rulers? First, the elder must rule the younger; and the best of the elders will be the best guardians. Now they will be the best who love their subjects most, and think that they have a common interest with them in the welfare of the state. These we must select; but they must be watched at every epoch of life to see whether they have retained the same opinions and held out against force and enchantment. For time and persuasion and the love of pleasure may enchant a man into a change of purpose, and the force of grief and pain may compel him. And therefore our guardians must be men who have been tried by many tests, like gold in the refiner's fire, and have been passed first through danger, then through pleasure, and at every age have come out of such trials victorious and without stain, in full command of themselves and their principles; having all their faculties in harmonious exercise for their country's good. These shall receive the highest honours both in life and death. (It would perhaps be better to confine the term 'guardians' to this select class: the younger men may be called 'auxiliaries.')

And now for one magnificent lie, in the belief of which, Oh that we could train our rulers!—at any rate let us make the attempt with the rest of the world. What I am going to tell is only another version of the legend of Cadmus; but our unbelieving generation will be slow to accept such a story. The tale must be imparted, first to the rulers, then to the soldiers, lastly to the people. We will inform them that their youth was a dream, and that during the time when they seemed to be undergoing their education they were really being fashioned in the earth, who sent them up when they were ready; and that they must protect and cherish her whose children they are, and regard each other as brothers and sisters. 'I do not wonder at your being ashamed to propound such a fiction.' There is more

behind. These brothers and sisters have different natures, and some of them God framed to rule, whom he fashioned of gold; others he made of silver, to be auxiliaries; others again to be husbandmen and craftsmen, and these were formed by him of brass and iron. But as they are all sprung from a common stock, a golden parent may have a silver son, or a silver parent a golden son, and then there must be a change of rank; the son of the rich must descend, and the child of the artisan rise, in the social scale; for an oracle says 'that the State will come to an end if governed by a man of brass or iron.' Will our citizens ever believe all this? 'Not in the present generation, but in the next, perhaps, Yes.'

Now let the earthborn men go forth under the command of their rulers, and look about and pitch their camp in a high place, which will be safe against enemies from without, and likewise against insurrections from within. There let them sacrifice and set up their tents; for soldiers they are to be and not shopkeepers, the watchdogs and guardians of the sheep; and luxury and avarice will turn them into wolves and tyrants. Their habits and their dwellings should correspond to their education. They should have no property; their pay should only meet their expenses; and they should have common meals. Gold and silver we will tell them that they have from God, and this divine gift in their souls they must not alloy with that earthly dross which passes under the name of gold. They only of the citizens may not touch it, or be under the same roof with it, or drink from it; it is the accursed thing. Should they ever acquire houses or lands or money of their own, they will become householders and tradesmen instead of guardians, enemies and tyrants instead of helpers, and the hour of ruin, both to themselves and the rest of the State, will be at hand.

The religious and ethical aspect of Plato's education will hereafter be considered under a separate head. Some lesser points may be more conveniently noticed in this place.

1. The constant appeal to the authority of Homer, whom, with grave irony, Plato, after the manner of his age, summons as a witness about ethics and psychology, as well as about diet and medicine; attempting to distinguish the better lesson from the worse, sometimes altering the text from design; more than once quoting or alluding to Homer inaccurately, after the manner of the early logographers turning the Iliad into prose, and delighting to draw far-fetched inferences from his words, or to make ludicrous applications of them. He does not, like Heracleitus, get into a rage with Homer and Archilochus (Heracl.), but uses their words and expressions as vehicles of a higher truth; not on a system like Theagenes of Rhegium or Metrodorus, or in later times the Stoics, but as fancy may dictate. And the conclusions drawn from them are sound, although the premises are fictitious. These fanciful appeals to Homer add a charm to Plato's style, and at the same time they have the effect of a satire on the follies of Homeric interpretation. To us (and probably to himself), although they take the form of arguments, they are really figures of speech. They may be compared with modern citations from Scripture, which have often a great rhetorical power even when the original meaning of the words is entirely lost sight of. The real, like the Platonic Socrates, as we gather from the Memorabilia of Xenophon, was fond of making similar adaptations. Great in all ages and countries, in religion as well as in law and literature, has been the art of interpretation.

2. 'The style is to conform to the subject and the metre to the style.' Notwithstanding the fascination which the word 'classical' exercises over us, we can hardly maintain that this rule is observed in all the Greek poetry which has come down to us. We cannot deny that the thought often exceeds the power of lucid expression in Aeschylus and Pindar; or that rhetoric gets the better of the thought in

the Sophist-poet Euripides. Only perhaps in Sophocles is there a perfect harmony of the two; in him alone do we find a grace of language like the beauty of a Greek statue, in which there is nothing to add or to take away; at least this is true of single plays or of large portions of them. The connection in the Tragic Choruses and in the Greek lyric poets is not unfrequently a tangled thread which in an age before logic the poet was unable to draw out. Many thoughts and feelings mingled in his mind, and he had no power of disengaging or arranging them. For there is a subtle influence of logic which requires to be transferred from prose to poetry, just as the music and perfection of language are infused by poetry into prose. In all ages the poet has been a bad judge of his own meaning (Apol.); for he does not see that the word which is full of associations to his own mind is difficult and unmeaning to that of another; or that the sequence which is clear to himself is puzzling to others. There are many passages in some of our greatest modern poets which are far too obscure; in which there is no proportion between style and subject, in which any half-expressed figure, any harsh construction, any distorted collocation of words, any remote sequence of ideas is admitted; and there is no voice 'coming sweetly from nature,' or music adding the expression of feeling to thought. As if there could be poetry without beauty, or beauty without ease and clearness. The obscurities of early Greek poets arose necessarily out of the state of language and logic which existed in their age. They are not examples to be followed by us; for the use of language ought in every generation to become clearer and clearer. Like Shakespere, they were great in spite, not in consequence, of their imperfections of expression. But there is no reason for returning to the necessary obscurity which prevailed in the infancy of literature. The English poets of the last century were certainly not obscure; and we have no excuse for losing what they had gained, or for going back to the earlier or transitional age which preceded them. The thought of our own times has not out-stripped language; a want of Plato's 'art of measuring' is the rule cause of the disproportion between them.

3. In the third book of the Republic a nearer approach is made to a theory of art than anywhere else in Plato. His views may be summed up as follows:—True art is not fanciful and imitative, but simple and ideal,—the expression of the highest moral energy, whether in action or repose. To live among works of plastic art which are of this noble and simple character, or to listen to such strains, is the best of influences,—the true Greek atmosphere, in which youth should be brought up. That is the way to create in them a natural good taste, which will have a feeling of truth and beauty in all things. For though the poets are to be expelled, still art is recognized as another aspect of reason—like love in the Symposium, extending over the same sphere, but confined to the preliminary education, and acting through the power of habit; and this conception of art is not limited to strains of music or the forms of plastic art, but pervades all nature and has a wide kindred in the world. The Republic of Plato, like the Athens of Pericles, has an artistic as well as a political side.

There is hardly any mention in Plato of the creative arts; only in two or three passages does he even allude to them (Rep.; Soph.). He is not lost in rapture at the great works of Phidias, the Parthenon, the Propylea, the statues of Zeus or Athene. He would probably have regarded any abstract truth of number or figure as higher than the greatest of them. Yet it is hard to suppose that some influence, such as he hopes to inspire in youth, did not pass into his own mind from the works of art which he saw around him. We are living upon the fragments of them, and find in a few broken stones the standard of truth and beauty. But in Plato this feeling has no expression; he nowhere says that beauty is the object of art; he seems to deny that wisdom can take an external form (Phaedrus); he does not distinguish the fine from the mechanical arts. Whether or no, like some writers, he felt more than he expressed, it is at any rate remarkable that the greatest perfection of the fine arts should coincide with

an almost entire silence about them. In one very striking passage he tells us that a work of art, like the State, is a whole; and this conception of a whole and the love of the newly-born mathematical sciences may be regarded, if not as the inspiring, at any rate as the regulating principles of Greek art (Xen. Mem.; and Sophist).

4. Plato makes the true and subtle remark that the physician had better not be in robust health; and should have known what illness is in his own person. But the judge ought to have had no similar experience of evil; he is to be a good man who, having passed his youth in innocence, became acquainted late in life with the vices of others. And therefore, according to Plato, a judge should not be young, just as a young man according to Aristotle is not fit to be a hearer of moral philosophy. The bad, on the other hand, have a knowledge of vice, but no knowledge of virtue. It may be doubted, however, whether this train of reflection is well founded. In a remarkable passage of the Laws it is acknowledged that the evil may form a correct estimate of the good. The union of gentleness and courage in Book ii. at first seemed to be a paradox, yet was afterwards ascertained to be a truth. And Plato might also have found that the intuition of evil may be consistent with the abhorrence of it. There is a directness of aim in virtue which gives an insight into vice. And the knowledge of character is in some degree a natural sense independent of any special experience of good or evil.

5. One of the most remarkable conceptions of Plato, because un-Greek and also very different from anything which existed at all in his age of the world, is the transposition of ranks. In the Spartan state there had been enfranchisement of Helots and degradation of citizens under special circumstances. And in the ancient Greek aristocracies, merit was certainly recognized as one of the elements on which government was based. The founders of states were supposed to be their benefactors, who were raised by their great actions above the ordinary level of humanity; at a later period, the services of warriors and legislators were held to entitle them and their descendants to the privileges of citizenship and to the first rank in the state. And although the existence of an ideal aristocracy is slenderly proven from the remains of early Greek history, and we have a difficulty in ascribing such a character, however the idea may be defined, to any actual Hellenic state—or indeed to any state which has ever existed in the world—still the rule of the best was certainly the aspiration of philosophers, who probably accommodated a good deal their views of primitive history to their own notions of good government. Plato further insists on applying to the guardians of his state a series of tests by which all those who fell short of a fixed standard were either removed from the governing body, or not admitted to it; and this 'academic' discipline did to a certain extent prevail in Greek states, especially in Sparta. He also indicates that the system of caste, which existed in a great part of the ancient, and is by no means extinct in the modern European world, should be set aside from time to time in favour of merit. He is aware how deeply the greater part of mankind resent any interference with the order of society, and therefore he proposes his novel idea in the form of what he himself calls a 'monstrous fiction.' (Compare the ceremony of preparation for the two 'great waves' in Book v.) Two principles are indicated by him: first, that there is a distinction of ranks dependent on circumstances prior to the individual: second, that this distinction is and ought to be broken through by personal qualities. He adapts mythology like the Homeric poems to the wants of the state, making 'the Phoenician tale' the vehicle of his ideas. Every Greek state had a myth respecting its own origin; the Platonic republic may also have a tale of earthborn men. The gravity and verisimilitude with which the tale is told, and the analogy of Greek tradition, are a sufficient verification of the 'monstrous falsehood.' Ancient poetry had spoken of a gold and silver and brass and iron age succeeding one another, but Plato supposes these differences in the natures of men to exist together in a single state.

Mythology supplies a figure under which the lesson may be taught (as Protagoras says, 'the myth is more interesting'), and also enables Plato to touch lightly on new principles without going into details. In this passage he shadows forth a general truth, but he does not tell us by what steps the transposition of ranks is to be effected. Indeed throughout the Republic he allows the lower ranks to fade into the distance. We do not know whether they are to carry arms, and whether in the fifth book they are or are not included in the communistic regulations respecting property and marriage. Nor is there any use in arguing strictly either from a few chance words, or from the silence of Plato, or in drawing inferences which were beyond his vision. Aristotle, in his criticism on the position of the lower classes, does not perceive that the poetical creation is 'like the air, invulnerable,' and cannot be penetrated by the shafts of his logic (Pol.).

6. Two paradoxes which strike the modern reader as in the highest degree fanciful and ideal, and which suggest to him many reflections, are to be found in the third book of the Republic: first, the great power of music, so much beyond any influence which is experienced by us in modern times, when the art or science has been far more developed, and has found the secret of harmony, as well as of melody; secondly, the indefinite and almost absolute control which the soul is supposed to exercise over the body.

In the first we suspect some degree of exaggeration, such as we may also observe among certain masters of the art, not unknown to us, at the present day. With this natural enthusiasm, which is felt by a few only, there seems to mingle in Plato a sort of Pythagorean reverence for numbers and numerical proportion to which Aristotle is a stranger. Intervals of sound and number are to him sacred things which have a law of their own, not dependent on the variations of sense. They rise above sense, and become a connecting link with the world of ideas. But it is evident that Plato is describing what to him appears to be also a fact. The power of a simple and characteristic melody on the impressible mind of the Greek is more than we can easily appreciate. The effect of national airs may bear some comparison with it. And, besides all this, there is a confusion between the harmony of musical notes and the harmony of soul and body, which is so potently inspired by them.

The second paradox leads up to some curious and interesting questions—How far can the mind control the body? Is the relation between them one of mutual antagonism or of mutual harmony? Are they two or one, and is either of them the cause of the other? May we not at times drop the opposition between them, and the mode of describing them, which is so familiar to us, and yet hardly conveys any precise meaning, and try to view this composite creature, man, in a more simple manner? Must we not at any rate admit that there is in human nature a higher and a lower principle, divided by no distinct line, which at times break asunder and take up arms against one another? Or again, they are reconciled and move together, either unconsciously in the ordinary work of life, or consciously in the pursuit of some noble aim, to be attained not without an effort, and for which every thought and nerve are strained. And then the body becomes the good friend or ally, or servant or instrument of the mind. And the mind has often a wonderful and almost superhuman power of banishing disease and weakness and calling out a hidden strength. Reason and the desires, the intellect and the senses are brought into harmony and obedience so as to form a single human being. They are ever parting, ever meeting; and the identity or diversity of their tendencies or operations is for the most part unnoticed by us. When the mind touches the body through the appetites, we acknowledge the responsibility of the one to the other. There is a tendency in us which says 'Drink.' There is another which says, 'Do not drink; it is not good for you.' And we all of us know which is the rightful superior. We are also

responsible for our health, although into this sphere there enter some elements of necessity which may be beyond our control. Still even in the management of health, care and thought, continued over many years, may make us almost free agents, if we do not exact too much of ourselves, and if we acknowledge that all human freedom is limited by the laws of nature and of mind.

We are disappointed to find that Plato, in the general condemnation which he passes on the practice of medicine prevailing in his own day, depreciates the effects of diet. He would like to have diseases of a definite character and capable of receiving a definite treatment. He is afraid of invalidism interfering with the business of life. He does not recognize that time is the great healer both of mental and bodily disorders; and that remedies which are gradual and proceed little by little are safer than those which produce a sudden catastrophe. Neither does he see that there is no way in which the mind can more surely influence the body than by the control of eating and drinking; or any other action or occasion of human life on which the higher freedom of the will can be more simple or truly asserted.

7. Lesser matters of style may be remarked.

(1) The affected ignorance of music, which is Plato's way of expressing that he is passing lightly over the subject.

(2) The tentative manner in which here, as in the second book, he proceeds with the construction of the State.

(3) The description of the State sometimes as a reality, and then again as a work of imagination only; these are the arts by which he sustains the reader's interest.

(4) Connecting links, or the preparation for the entire expulsion of the poets in Book X.

(5) The companion pictures of the lover of litigation and the valetudinarian, the satirical jest about the maxim of Phocylides, the manner in which the image of the gold and silver citizens is taken up into the subject, and the argument from the practice of Asclepius, should not escape notice.

BOOK IV. Adeimantus said: 'Suppose a person to argue, Socrates, that you make your citizens miserable, and this by their own free-will; they are the lords of the city, and yet instead of having, like other men, lands and houses and money of their own, they live as mercenaries and are always mounting guard.' You may add, I replied, that they receive no pay but only their food, and have no money to spend on a journey or a mistress. 'Well, and what answer do you give?' My answer is, that our guardians may or may not be the happiest of men,—I should not be surprised to find in the long-run that they were,—but this is not the aim of our constitution, which was designed for the good of the whole and not of any one part. If I went to a sculptor and blamed him for having painted the eye, which is the noblest feature of the face, not purple but black, he would reply: 'The eye must be an eye, and you should look at the statue as a whole.' 'Now I can well imagine a fool's paradise, in which everybody is eating and drinking, clothed in purple and fine linen, and potters lie on sofas and have their wheel at hand, that they may work a little when they please; and cobblers and all the other classes of a State lose their distinctive character. And a State may get on without cobblers; but when the guardians degenerate into boon companions, then the ruin is complete. Remember that we are

not talking of peasants keeping holiday, but of a State in which every man is expected to do his own work. The happiness resides not in this or that class, but in the State as a whole. I have another remark to make:—A middle condition is best for artisans; they should have money enough to buy tools, and not enough to be independent of business. And will not the same condition be best for our citizens? If they are poor, they will be mean; if rich, luxurious and lazy; and in neither case contented. 'But then how will our poor city be able to go to war against an enemy who has money?' There may be a difficulty in fighting against one enemy; against two there will be none. In the first place, the contest will be carried on by trained warriors against well-to-do citizens: and is not a regular athlete an easy match for two stout opponents at least? Suppose also, that before engaging we send ambassadors to one of the two cities, saying, 'Silver and gold we have not; do you help us and take our share of the spoil;'—who would fight against the lean, wiry dogs, when they might join with them in preying upon the fatted sheep? 'But if many states join their resources, shall we not be in danger?' I am amused to hear you use the word 'state' of any but our own State. They are 'states,' but not 'a state'—many in one. For in every state there are two hostile nations, rich and poor, which you may set one against the other. But our State, while she remains true to her principles, will be in very deed the mightiest of Hellenic states.

To the size of the state there is no limit but the necessity of unity; it must be neither too large nor too small to be one. This is a matter of secondary importance, like the principle of transposition which was intimated in the parable of the earthborn men. The meaning there implied was that every man should do that for which he was fitted, and be at one with himself, and then the whole city would be united. But all these things are secondary, if education, which is the great matter, be duly regarded. When the wheel has once been set in motion, the speed is always increasing; and each generation improves upon the preceding, both in physical and moral qualities. The care of the governors should be directed to preserve music and gymnastic from innovation; alter the songs of a country, Damon says, and you will soon end by altering its laws. The change appears innocent at first, and begins in play; but the evil soon becomes serious, working secretly upon the characters of individuals, then upon social and commercial relations, and lastly upon the institutions of a state; and there is ruin and confusion everywhere. But if education remains in the established form, there will be no danger. A restorative process will be always going on; the spirit of law and order will raise up what has fallen down. Nor will any regulations be needed for the lesser matters of life—rules of deportment or fashions of dress. Like invites like for good or for evil. Education will correct deficiencies and supply the power of self-government. Far be it from us to enter into the particulars of legislation; let the guardians take care of education, and education will take care of all other things.

But without education they may patch and mend as they please; they will make no progress, any more than a patient who thinks to cure himself by some favourite remedy and will not give up his luxurious mode of living. If you tell such persons that they must first alter their habits, then they grow angry; they are charming people. 'Charming,—nay, the very reverse.' Evidently these gentlemen are not in your good graces, nor the state which is like them. And such states there are which first ordain under penalty of death that no one shall alter the constitution, and then suffer themselves to be flattered into and out of anything; and he who indulges them and fawns upon them, is their leader and saviour. 'Yes, the men are as bad as the states.' But do you not admire their cleverness? 'Nay, some of them are stupid enough to believe what the people tell them.' And when all the world is telling a man that he is six feet high, and he has no measure, how can he believe anything else? But don't get into a passion: to see our statesmen trying their nostrums, and fancying that they can cut off at a blow

the Hydra-like rogueries of mankind, is as good as a play. Minute enactments are superfluous in good states, and are useless in bad ones.

And now what remains of the work of legislation? Nothing for us; but to Apollo the god of Delphi we leave the ordering of the greatest of all things—that is to say, religion. Only our ancestral deity sitting upon the centre and navel of the earth will be trusted by us if we have any sense, in an affair of such magnitude. No foreign god shall be supreme in our realms...

Here, as Socrates would say, let us 'reflect on' (Greek) what has preceded: thus far we have spoken not of the happiness of the citizens, but only of the well-being of the State. They may be the happiest of men, but our principal aim in founding the State was not to make them happy. They were to be guardians, not holiday-makers. In this pleasant manner is presented to us the famous question both of ancient and modern philosophy, touching the relation of duty to happiness, of right to utility.

First duty, then happiness, is the natural order of our moral ideas. The utilitarian principle is valuable as a corrective of error, and shows to us a side of ethics which is apt to be neglected. It may be admitted further that right and utility are co-extensive, and that he who makes the happiness of mankind his object has one of the highest and noblest motives of human action. But utility is not the historical basis of morality; nor the aspect in which moral and religious ideas commonly occur to the mind. The greatest happiness of all is, as we believe, the far-off result of the divine government of the universe. The greatest happiness of the individual is certainly to be found in a life of virtue and goodness. But we seem to be more assured of a law of right than we can be of a divine purpose, that 'all mankind should be saved;' and we infer the one from the other. And the greatest happiness of the individual may be the reverse of the greatest happiness in the ordinary sense of the term, and may be realised in a life of pain, or in a voluntary death. Further, the word 'happiness' has several ambiguities; it may mean either pleasure or an ideal life, happiness subjective or objective, in this world or in another, of ourselves only or of our neighbours and of all men everywhere. By the modern founder of Utilitarianism the self-regarding and disinterested motives of action are included under the same term, although they are commonly opposed by us as benevolence and self-love. The word happiness has not the definiteness or the sacredness of 'truth' and 'right'; it does not equally appeal to our higher nature, and has not sunk into the conscience of mankind. It is associated too much with the comforts and conveniences of life; too little with 'the goods of the soul which we desire for their own sake.' In a great trial, or danger, or temptation, or in any great and heroic action, it is scarcely thought of. For these reasons 'the greatest happiness' principle is not the true foundation of ethics. But though not the first principle, it is the second, which is like unto it, and is often of easier application. For the larger part of human actions are neither right nor wrong, except in so far as they tend to the happiness of mankind (Introd. to Gorgias and Philebus).

The same question reappears in politics, where the useful or expedient seems to claim a larger sphere and to have a greater authority. For concerning political measures, we chiefly ask: How will they affect the happiness of mankind? Yet here too we may observe that what we term expediency is merely the law of right limited by the conditions of human society. Right and truth are the highest aims of government as well as of individuals; and we ought not to lose sight of them because we cannot directly enforce them. They appeal to the better mind of nations; and sometimes they are too much for merely temporal interests to resist. They are the watchwords which all men use in matters of public policy, as well as in their private dealings; the peace of Europe may be said to depend upon

them. In the most commercial and utilitarian states of society the power of ideas remains. And all the higher class of statesmen have in them something of that idealism which Pericles is said to have gathered from the teaching of Anaxagoras. They recognise that the true leader of men must be above the motives of ambition, and that national character is of greater value than material comfort and prosperity. And this is the order of thought in Plato; first, he expects his citizens to do their duty, and then under favourable circumstances, that is to say, in a well-ordered State, their happiness is assured. That he was far from excluding the modern principle of utility in politics is sufficiently evident from other passages; in which 'the most beneficial is affirmed to be the most honourable', and also 'the most sacred'.

We may note

(1) The manner in which the objection of Adeimantus here, is designed to draw out and deepen the argument of Socrates.

(2) The conception of a whole as lying at the foundation both of politics and of art, in the latter supplying the only principle of criticism, which, under the various names of harmony, symmetry, measure, proportion, unity, the Greek seems to have applied to works of art.

(3) The requirement that the State should be limited in size, after the traditional model of a Greek state; as in the Politics of Aristotle, the fact that the cities of Hellas were small is converted into a principle.

(4) The humorous pictures of the lean dogs and the fatted sheep, of the light active boxer upsetting two stout gentlemen at least, of the 'charming' patients who are always making themselves worse; or again, the playful assumption that there is no State but our own; or the grave irony with which the statesman is excused who believes that he is six feet high because he is told so, and having nothing to measure with is to be pardoned for his ignorance—he is too amusing for us to be seriously angry with him.

(5) The light and superficial manner in which religion is passed over when provision has been made for two great principles,—first, that religion shall be based on the highest conception of the gods, secondly, that the true national or Hellenic type shall be maintained...

Socrates proceeds: But where amid all this is justice? Son of Ariston, tell me where. Light a candle and search the city, and get your brother and the rest of our friends to help in seeking for her. 'That won't do,' replied Glaucon, 'you yourself promised to make the search and talked about the impiety of deserting justice.' Well, I said, I will lead the way, but do you follow. My notion is, that our State being perfect will contain all the four virtues—wisdom, courage, temperance, justice. If we eliminate the three first, the unknown remainder will be justice.

First then, of wisdom: the State which we have called into being will be wise because politic. And policy is one among many kinds of skill,—not the skill of the carpenter, or of the worker in metal, or of the husbandman, but the skill of him who advises about the interests of the whole State. Of such a kind is the skill of the guardians, who are a small class in number, far smaller than the blacksmiths;

but in them is concentrated the wisdom of the State. And if this small ruling class have wisdom, then the whole State will be wise.

Our second virtue is courage, which we have no difficulty in finding in another class—that of soldiers. Courage may be defined as a sort of salvation—the never-failing salvation of the opinions which law and education have prescribed concerning dangers. You know the way in which dyers first prepare the white ground and then lay on the dye of purple or of any other colour. Colours dyed in this way become fixed, and no soap or lye will ever wash them out. Now the ground is education, and the laws are the colours; and if the ground is properly laid, neither the soap of pleasure nor the lye of pain or fear will ever wash them out. This power which preserves right opinion about danger I would ask you to call 'courage,' adding the epithet 'political' or 'civilized' in order to distinguish it from mere animal courage and from a higher courage which may hereafter be discussed.

Two virtues remain; temperance and justice. More than the preceding virtues temperance suggests the idea of harmony. Some light is thrown upon the nature of this virtue by the popular description of a man as 'master of himself'—which has an absurd sound, because the master is also the servant. The expression really means that the better principle in a man masters the worse. There are in cities whole classes—women, slaves and the like—who correspond to the worse, and a few only to the better; and in our State the former class are held under control by the latter. Now to which of these classes does temperance belong? 'To both of them.' And our State if any will be the abode of temperance; and we were right in describing this virtue as a harmony which is diffused through the whole, making the dwellers in the city to be of one mind, and attuning the upper and middle and lower classes like the strings of an instrument, whether you suppose them to differ in wisdom, strength or wealth.

And now we are near the spot; let us draw in and surround the cover and watch with all our eyes, lest justice should slip away and escape. Tell me, if you see the thicket move first. 'Nay, I would have you lead.' Well then, offer up a prayer and follow. The way is dark and difficult; but we must push on. I begin to see a track. 'Good news.' Why, Glaucon, our dulness of scent is quite ludicrous! While we are straining our eyes into the distance, justice is tumbling out at our feet. We are as bad as people looking for a thing which they have in their hands. Have you forgotten our old principle of the division of labour, or of every man doing his own business, concerning which we spoke at the foundation of the State—what but this was justice? Is there any other virtue remaining which can compete with wisdom and temperance and courage in the scale of political virtue? For 'every one having his own' is the great object of government; and the great object of trade is that every man should do his own business. Not that there is much harm in a carpenter trying to be a cobbler, or a cobbler transforming himself into a carpenter; but great evil may arise from the cobbler leaving his last and turning into a guardian or legislator, or when a single individual is trainer, warrior, legislator, all in one. And this evil is injustice, or every man doing another's business. I do not say that as yet we are in a condition to arrive at a final conclusion. For the definition which we believe to hold good in states has still to be tested by the individual. Having read the large letters we will now come back to the small. From the two together a brilliant light may be struck out...

Socrates proceeds to discover the nature of justice by a method of residues. Each of the first three virtues corresponds to one of the three parts of the soul and one of the three classes in the State, although the third, temperance, has more of the nature of a harmony than the first two. If there be a

fourth virtue, that can only be sought for in the relation of the three parts in the soul or classes in the State to one another. It is obvious and simple, and for that very reason has not been found out. The modern logician will be inclined to object that ideas cannot be separated like chemical substances, but that they run into one another and may be only different aspects or names of the same thing, and such in this instance appears to be the case. For the definition here given of justice is verbally the same as one of the definitions of temperance given by Socrates in the Charmides, which however is only provisional, and is afterwards rejected. And so far from justice remaining over when the other virtues are eliminated, the justice and temperance of the Republic can with difficulty be distinguished. Temperance appears to be the virtue of a part only, and one of three, whereas justice is a universal virtue of the whole soul. Yet on the other hand temperance is also described as a sort of harmony, and in this respect is akin to justice. Justice seems to differ from temperance in degree rather than in kind; whereas temperance is the harmony of discordant elements, justice is the perfect order by which all natures and classes do their own business, the right man in the right place, the division and co-operation of all the citizens. Justice, again, is a more abstract notion than the other virtues, and therefore, from Plato's point of view, the foundation of them, to which they are referred and which in idea precedes them. The proposal to omit temperance is a mere trick of style intended to avoid monotony.

There is a famous question discussed in one of the earlier Dialogues of Plato (Protagoras; Arist. Nic. Ethics), 'Whether the virtues are one or many?' This receives an answer which is to the effect that there are four cardinal virtues (now for the first time brought together in ethical philosophy), and one supreme over the rest, which is not like Aristotle's conception of universal justice, virtue relative to others, but the whole of virtue relative to the parts. To this universal conception of justice or order in the first education and in the moral nature of man, the still more universal conception of the good in the second education and in the sphere of speculative knowledge seems to succeed. Both might be equally described by the terms 'law,' 'order,' 'harmony;' but while the idea of good embraces 'all time and all existence,' the conception of justice is not extended beyond man.

...Socrates is now going to identify the individual and the State. But first he must prove that there are three parts of the individual soul. His argument is as follows:—Quantity makes no difference in quality. The word 'just,' whether applied to the individual or to the State, has the same meaning. And the term 'justice' implied that the same three principles in the State and in the individual were doing their own business. But are they really three or one? The question is difficult, and one which can hardly be solved by the methods which we are now using; but the truer and longer way would take up too much of our time. 'The shorter will satisfy me.' Well then, you would admit that the qualities of states mean the qualities of the individuals who compose them? The Scythians and Thracians are passionate, our own race intellectual, and the Egyptians and Phoenicians covetous, because the individual members of each have such and such a character; the difficulty is to determine whether the several principles are one or three; whether, that is to say, we reason with one part of our nature, desire with another, are angry with another, or whether the whole soul comes into play in each sort of action. This enquiry, however, requires a very exact definition of terms. The same thing in the same relation cannot be affected in two opposite ways. But there is no impossibility in a man standing still, yet moving his arms, or in a top which is fixed on one spot going round upon its axis. There is no necessity to mention all the possible exceptions; let us provisionally assume that opposites cannot do or be or suffer opposites in the same relation. And to the class of opposites belong assent and dissent, desire and avoidance. And one form of desire is thirst and hunger: and here arises a new

point—thirst is thirst of drink, hunger is hunger of food; not of warm drink or of a particular kind of food, with the single exception of course that the very fact of our desiring anything implies that it is good. When relative terms have no attributes, their correlatives have no attributes; when they have attributes, their correlatives also have them. For example, the term 'greater' is simply relative to 'less,' and knowledge refers to a subject of knowledge. But on the other hand, a particular knowledge is of a particular subject. Again, every science has a distinct character, which is defined by an object; medicine, for example, is the science of health, although not to be confounded with health. Having cleared our ideas thus far, let us return to the original instance of thirst, which has a definite object—drink. Now the thirsty soul may feel two distinct impulses; the animal one saying 'Drink;' the rational one, which says 'Do not drink.' The two impulses are contradictory; and therefore we may assume that they spring from distinct principles in the soul. But is passion a third principle, or akin to desire? There is a story of a certain Leontius which throws some light on this question. He was coming up from the Piraeus outside the north wall, and he passed a spot where there were dead bodies lying by the executioner. He felt a longing desire to see them and also an abhorrence of them; at first he turned away and shut his eyes, then, suddenly tearing them open, he said,—'Take your fill, ye wretches, of the fair sight.' Now is there not here a third principle which is often found to come to the assistance of reason against desire, but never of desire against reason? This is passion or spirit, of the separate existence of which we may further convince ourselves by putting the following case:—When a man suffers justly, if he be of a generous nature he is not indignant at the hardships which he undergoes: but when he suffers unjustly, his indignation is his great support; hunger and thirst cannot tame him; the spirit within him must do or die, until the voice of the shepherd, that is, of reason, bidding his dog bark no more, is heard within. This shows that passion is the ally of reason. Is passion then the same with reason? No, for the former exists in children and brutes; and Homer affords a proof of the distinction between them when he says, 'He smote his breast, and thus rebuked his soul.'

And now, at last, we have reached firm ground, and are able to infer that the virtues of the State and of the individual are the same. For wisdom and courage and justice in the State are severally the wisdom and courage and justice in the individuals who form the State. Each of the three classes will do the work of its own class in the State, and each part in the individual soul; reason, the superior, and passion, the inferior, will be harmonized by the influence of music and gymnastic. The counsellor and the warrior, the head and the arm, will act together in the town of Mansoul, and keep the desires in proper subjection. The courage of the warrior is that quality which preserves a right opinion about dangers in spite of pleasures and pains. The wisdom of the counsellor is that small part of the soul which has authority and reason. The virtue of temperance is the friendship of the ruling and the subject principles, both in the State and in the individual. Of justice we have already spoken; and the notion already given of it may be confirmed by common instances. Will the just state or the just individual steal, lie, commit adultery, or be guilty of impiety to gods and men? 'No.' And is not the reason of this that the several principles, whether in the state or in the individual, do their own business? And justice is the quality which makes just men and just states. Moreover, our old division of labour, which required that there should be one man for one use, was a dream or anticipation of what was to follow; and that dream has now been realized in justice, which begins by binding together the three chords of the soul, and then acts harmoniously in every relation of life. And injustice, which is the insubordination and disobedience of the inferior elements in the soul, is the opposite of justice, and is inharmonious and unnatural, being to the soul what disease is to the body; for in the soul as

well as in the body, good or bad actions produce good or bad habits. And virtue is the health and beauty and well-being of the soul, and vice is the disease and weakness and deformity of the soul.

Again the old question returns upon us: Is justice or injustice the more profitable? The question has become ridiculous. For injustice, like mortal disease, makes life not worth having. Come up with me to the hill which overhangs the city and look down upon the single form of virtue, and the infinite forms of vice, among which are four special ones, characteristic both of states and of individuals. And the state which corresponds to the single form of virtue is that which we have been describing, wherein reason rules under one of two names—monarchy and aristocracy. Thus there are five forms in all, both of states and of souls...

In attempting to prove that the soul has three separate faculties, Plato takes occasion to discuss what makes difference of faculties. And the criterion which he proposes is difference in the working of the faculties. The same faculty cannot produce contradictory effects. But the path of early reasoners is beset by thorny entanglements, and he will not proceed a step without first clearing the ground. This leads him into a tiresome digression, which is intended to explain the nature of contradiction. First, the contradiction must be at the same time and in the same relation. Secondly, no extraneous word must be introduced into either of the terms in which the contradictory proposition is expressed: for example, thirst is of drink, not of warm drink. He implies, what he does not say, that if, by the advice of reason, or by the impulse of anger, a man is restrained from drinking, this proves that thirst, or desire under which thirst is included, is distinct from anger and reason. But suppose that we allow the term 'thirst' or 'desire' to be modified, and say an 'angry thirst,' or a 'revengeful desire,' then the two spheres of desire and anger overlap and become confused. This case therefore has to be excluded. And still there remains an exception to the rule in the use of the term 'good,' which is always implied in the object of desire. These are the discussions of an age before logic; and any one who is wearied by them should remember that they are necessary to the clearing up of ideas in the first development of the human faculties.

The psychology of Plato extends no further than the division of the soul into the rational, irascible, and concupiscent elements, which, as far as we know, was first made by him, and has been retained by Aristotle and succeeding ethical writers. The chief difficulty in this early analysis of the mind is to define exactly the place of the irascible faculty (Greek), which may be variously described under the terms righteous indignation, spirit, passion. It is the foundation of courage, which includes in Plato moral courage, the courage of enduring pain, and of surmounting intellectual difficulties, as well as of meeting dangers in war. Though irrational, it inclines to side with the rational: it cannot be aroused by punishment when justly inflicted: it sometimes takes the form of an enthusiasm which sustains a man in the performance of great actions. It is the 'lion heart' with which the reason makes a treaty. On the other hand it is negative rather than positive; it is indignant at wrong or falsehood, but does not, like Love in the Symposium and Phaedrus, aspire to the vision of Truth or Good. It is the peremptory military spirit which prevails in the government of honour. It differs from anger (Greek), this latter term having no accessory notion of righteous indignation. Although Aristotle has retained the word, yet we may observe that 'passion' (Greek) has with him lost its affinity to the rational and has become indistinguishable from 'anger' (Greek). And to this vernacular use Plato himself in the Laws seems to revert, though not always. By modern philosophy too, as well as in our ordinary conversation, the words anger or passion are employed almost exclusively in a bad sense; there is no connotation of a just or reasonable cause by which they are aroused. The feeling of 'righteous indignation' is too

partial and accidental to admit of our regarding it as a separate virtue or habit. We are tempted also to doubt whether Plato is right in supposing that an offender, however justly condemned, could be expected to acknowledge the justice of his sentence; this is the spirit of a philosopher or martyr rather than of a criminal.

We may observe how nearly Plato approaches Aristotle's famous thesis, that 'good actions produce good habits.' The words 'as healthy practices (Greek) produce health, so do just practices produce justice,' have a sound very like the Nicomachean Ethics. But we note also that an incidental remark in Plato has become a far-reaching principle in Aristotle, and an inseparable part of a great Ethical system.

There is a difficulty in understanding what Plato meant by 'the longer way': he seems to intimate some metaphysic of the future which will not be satisfied with arguing from the principle of contradiction. In the sixth and seventh books (compare Sophist and Parmenides) he has given us a sketch of such a metaphysic; but when Glaucon asks for the final revelation of the idea of good, he is put off with the declaration that he has not yet studied the preliminary sciences. How he would have filled up the sketch, or argued about such questions from a higher point of view, we can only conjecture. Perhaps he hoped to find some a priori method of developing the parts out of the whole; or he might have asked which of the ideas contains the other ideas, and possibly have stumbled on the Hegelian identity of the 'ego' and the 'universal.' Or he may have imagined that ideas might be constructed in some manner analogous to the construction of figures and numbers in the mathematical sciences. The most certain and necessary truth was to Plato the universal; and to this he was always seeking to refer all knowledge or opinion, just as in modern times we seek to rest them on the opposite pole of induction and experience. The aspirations of metaphysicians have always tended to pass beyond the limits of human thought and language: they seem to have reached a height at which they are 'moving about in worlds unrealized,' and their conceptions, although profoundly affecting their own minds, become invisible or unintelligible to others. We are not therefore surprized to find that Plato himself has nowhere clearly explained his doctrine of ideas; or that his school in a later generation, like his contemporaries Glaucon and Adeimantus, were unable to follow him in this region of speculation. In the Sophist, where he is refuting the scepticism which maintained either that there was no such thing as predication, or that all might be predicated of all, he arrives at the conclusion that some ideas combine with some, but not all with all. But he makes only one or two steps forward on this path; he nowhere attains to any connected system of ideas, or even to a knowledge of the most elementary relations of the sciences to one another.

BOOK V. I was going to enumerate the four forms of vice or decline in states, when Polemarchus—he was sitting a little farther from me than Adeimantus—taking him by the coat and leaning towards him, said something in an undertone, of which I only caught the words, 'Shall we let him off?' 'Certainly not,' said Adeimantus, raising his voice. Whom, I said, are you not going to let off? 'You,' he said. Why? 'Because we think that you are not dealing fairly with us in omitting women and children, of whom you have slily disposed under the general formula that friends have all things in common.' And was I not right? 'Yes,' he replied, 'but there are many sorts of communism or community, and we want to know which of them is right. The company, as you have just heard, are resolved to have a further explanation.' Thrasymachus said, 'Do you think that we have come hither to dig for gold, or to hear you discourse?' Yes, I said; but the discourse should be of a reasonable length. Glaucon added, 'Yes, Socrates, and there is reason in spending the whole of life in such discussions; but pray, without

more ado, tell us how this community is to be carried out, and how the interval between birth and education is to be filled up.' Well, I said, the subject has several difficulties—What is possible? is the first question. What is desirable? is the second. 'Fear not,' he replied, 'for you are speaking among friends.' That, I replied, is a sorry consolation; I shall destroy my friends as well as myself. Not that I mind a little innocent laughter; but he who kills the truth is a murderer. 'Then,' said Glaucon, laughing, 'in case you should murder us we will acquit you beforehand, and you shall be held free from the guilt of deceiving us.'

Socrates proceeds:—The guardians of our state are to be watch-dogs, as we have already said. Now dogs are not divided into hes and shes—we do not take the masculine gender out to hunt and leave the females at home to look after their puppies. They have the same employments—the only difference between them is that the one sex is stronger and the other weaker. But if women are to have the same employments as men, they must have the same education—they must be taught music and gymnastics, and the art of war. I know that a great joke will be made of their riding on horseback and carrying weapons; the sight of the naked old wrinkled women showing their agility in the palaestra will certainly not be a vision of beauty, and may be expected to become a famous jest. But we must not mind the wits; there was a time when they might have laughed at our present gymnastics. All is habit: people have at last found out that the exposure is better than the concealment of the person, and now they laugh no more. Evil only should be the subject of ridicule.

The first question is, whether women are able either wholly or partially to share in the employments of men. And here we may be charged with inconsistency in making the proposal at all. For we started originally with the division of labour; and the diversity of employments was based on the difference of natures. But is there no difference between men and women? Nay, are they not wholly different? THERE was the difficulty, Glaucon, which made me unwilling to speak of family relations. However, when a man is out of his depth, whether in a pool or in an ocean, he can only swim for his life; and we must try to find a way of escape, if we can.

The argument is, that different natures have different uses, and the natures of men and women are said to differ. But this is only a verbal opposition. We do not consider that the difference may be purely nominal and accidental; for example, a bald man and a hairy man are opposed in a single point of view, but you cannot infer that because a bald man is a cobbler a hairy man ought not to be a cobbler. Now why is such an inference erroneous? Simply because the opposition between them is partial only, like the difference between a male physician and a female physician, not running through the whole nature, like the difference between a physician and a carpenter. And if the difference of the sexes is only that the one beget and the other bear children, this does not prove that they ought to have distinct educations. Admitting that women differ from men in capacity, do not men equally differ from one another? Has not nature scattered all the qualities which our citizens require indifferently up and down among the two sexes? and even in their peculiar pursuits, are not women often, though in some cases superior to men, ridiculously enough surpassed by them? Women are the same in kind as men, and have the same aptitude or want of aptitude for medicine or gymnastic or war, but in a less degree. One woman will be a good guardian, another not; and the good must be chosen to be the colleagues of our guardians. If however their natures are the same, the inference is that their education must also be the same; there is no longer anything unnatural or impossible in a woman learning music and gymnastic. And the education which we give them will be the very best, far superior to that of cobblers, and will train up the very best women, and nothing can be more

advantageous to the State than this. Therefore let them strip, clothed in their chastity, and share in the toils of war and in the defence of their country; he who laughs at them is a fool for his pains.
